### *ERRATA.*

Page 7, col. iii., line 28 from bottom. For "half a million cards" read "fifty thousand titles."

Page 71, col. iii., line 13. For "Thorpe" read "Forsyth."

Page 106, col. ii., line 21 from bottom. Substitute the following for the entire line: may be taught more or less well." His reason is.

Page 107, col. i., line 38. For "drawing and modelling" read "drawing or modelling."

Page 136, col. ii., line 45. For "Homer" read "Horace."

Page 148, col. ii., lines 22, 23 from bottom. For "Lauzun died at Montrouge on the 1st of January, 1794," read "Lauzun was guillotined in Paris December 1, 1793."

Page 272, cols. ii., iii. In the notice of 'Supplements to Burnet's History,' passim. For "Mr. Foxcroft" read "Miss."

Page 287, col. ii., line 20; and line 6 from bottom. For "Doclen" read "Doelen."

Page 365, col. i., line 21 from bottom. For "Decorations" read "Decoration."

Page 398, col. ii., line 24 from bottom. For "Louis XIII." read "Louis IX."

# The Nation.

NEW YORK, THURSDAY, JULY 3, 1902.

## The Week.

If the late session did not produce another "billion-dollar Congress," it fell short only two hundred millions, surpassing the last session's appropriations by seventy millions. Little was said in protest, except by gray old watch-dogs of the Treasury like Congressman Cannon. It is part of the large lavishness which goes so well with the *nouveau-riche* assumptions of our latter-day Imperialists. Other phenomena mark the transition from our ancient spirit of jealous economy. President Cleveland was violently denounced for occasionally making use of a Government dispatch-boat. To-day the President not only uses that as a family convenience, but has also a "Presidential yacht" ready to be commissioned. Shall the King have his *Victoria and Albert*, and the Kaiser his *Hohenzollern*, and the American President not have his *Mayflower?* Uncle Sam proudly slaps his plethoric pocket and says he guesses not. We must leave the Administration a free hand, we are told; but a Government with a free hand, when that hand is full of the people's money, is one of the most alarming things known to prudent statesmen.

---

Solving a deadlock by deciding to do nothing was the method chosen to compose the difference between the two houses on the subject of providing a currency and banking system for the Philippines. The Senate, led by that unyielding champion of the gold standard, Senator Lodge, stood firmly for the silver standard in our Philippine possessions. The House was as stout for the gold standard. Both sides declared action to be of the most pressing importance. The reports of the War Department, of Gov. Taft, of the special commissioner sent to the islands, Mr. Conant, together with communications from Manila business houses, agreed that something must be done, and that quickly, to relieve the existing chaos. To all this, House and Senate alike assented. Each argued powerfully for the need of instant legislation. Each came forward with its own remedy for a confessedly acute situation. But agreement was found to be impossible—except the agreement to pass no law at all. So, with a great flourish of harmony, reports were made in either house recommending that the urgent relief which Manila is crying out for be coolly denied in any form whatever.

---

An official statement of the Administration's conception of what is the present political status of the Filipinos was filed by the Attorney-General in the Supreme Court of the District of Columbia on June 24, in the case of a Filipino desirous of becoming an American citizen by the usual process of naturalization. Since Congress has not yet fixed the political standing of the Filipinos or their civil rights, Mr. Knox holds that, like the Chinese, the applicant cannot take out naturalization papers, but must retain the "nationality of the Philippines." Exactly what that is, the Filipinos themselves have been trying to find out, by force of arms and in other ways. Even Buencamino, now so loyal to the American interests, could not restrain himself when before the Philippine Committee the other day. What are we? he asked—American citizens or not? The answer is that, in the eyes of the Administration, the courts, and the Attorney-General, the Filipinos are merely subjects of the republic, inhabitants of a conquered territory held by force of arms. Even Buencamino, for all his new-donned loyalty, cannot attain the rights accorded to the humblest Turk, or Czech, or Russian, or African. How pleasant all this will read in Tagalog or Ilocano! And how it must make the Filipinos love us to know that we consider their lands good enough to exploit, but themselves not fit for citizenship even when they come and live among us.

---

For a long time past, the War Department has amused itself by insisting that there is a state of war in the Philippines, while at the same moment assuring the country that civil governments and peace are reigning in nearly every province. Thus, Gen. Chaffee has been given certain rights and powers which appertain to a general commanding an army in the field only when a state of war exists. A still more striking example of this clever way of having peace and a state of war at the same time appears when one considers the judicial system of the islands. In many provinces—in fact, all through those under civil authority—military commissions are trying hundreds of Filipinos for causes which are plainly within the competence of the courts established by Gov. Taft's Commission. In each case the charges against the prisoner read: "in the Province of ————, then as now in a state of insurrection," although the province in question may have been repeatedly declared pacified. One such trial, brought to our attention, involves an alleged crime committed by three natives during the time when hostilities were at their height. In this case, however, the military commission of three members declined to try the prisoners, in view of the fact that a competent civil court was at work in the same town; counsel for the defence pleading the law and the readiness of the civil court as a bar to further proceedings. In Manila it was reported that this commission would be severely reprimanded for its action, despite the fact that the law is on its side. But this is an isolated case, for everywhere else the military courts are proceeding to condemn Filipinos without proper authorization of law.

---

Admiral Dewey's testimony last week before the Senate Committee on the Philippines establishes beyond dispute the spurious character of the so-called battle of Manila. His guns commanded the city absolutely, but the Spanish Governor-General wanted a little firing to salve his imperilled "honor," and so, to oblige his opponent, Admiral Dewey very politely and jauntily "killed a few people," as he puts it. Apparently no hunter could destroy a dozen squirrels with less compunction. Moreover, he expressed no regrets for the American soldiers needlessly killed in the land attack. Perhaps with him, as with the responsible generals, the high rewards bestowed upon the leaders of this sham battle quite overshadowed the casualty list. Yet this is one of the achievements of which we were so proud in 1898. Admiral Dewey made it plain that he in no way officially recognized the Philippine republic, and that he never saluted the Filipino flag. But he did not hesitate to tell of the arms which he handed over to Aguinaldo or of the cordial encouragement he gave to that leader. "He and I were always on the most friendly terms. We never had any differences. He considered me as his liberator and his friend," the Admiral declared. What wonder that when Aguinaldo found that, instead of a liberator, he was dealing with the Admiral of a people which wished to conquer and buy instead of to free, he should have used Dewey's rifles in defence of his countrymen? Perhaps the most striking part of the Admiral's testimony was his reiteration of his belief that the Filipinos are better fitted for self-government than the Cubans. Nor was the moral effect of this impaired by the voluntarily added opinion that neither people was qualified to govern itself. For Cuban capacity the American nation stands sponsor.

---

That our broken pledges to Cuba are to be a leading issue in the Congressional elections, the action of the House Democrats in caucus on Friday night makes plain. It will come as a rude awakening to Republican newspapers which have been hiding their heads in the sand, and flattering themselves that,

if they only kept still enough and lay low enough, the country would speedily forget the whole thing. As Senator Platt of Connecticut said on Friday, three-quarters of the people feel humiliated at the betrayal of Cuba by the Republicans. This recreancy of the party in power is what the House Democrats justly arraign. Senator Teller's argument will be heard in every Congressional district this fall—namely, that the Republicans are so tied hand and foot that they dare not touch any tariff duty which aids a Trust. This was also the main contention of the House Democrats. They made their resolutions apply strictly to the actual situation. Here was the pressing and continuing obligation resting upon Congress—to go to the aid of Cuba, and to strike off every protective tax on which monopoly grows fat. Why should Congress adjourn before doing its duty? That is the awkward question which the House Democrats put. Their caucus manifesto did not pretend to cover the whole field of party policy. As the Democrats in both houses had already voted solidly for Philippine independence, there was no need of a fresh deliverance on that subject. It was good strategy to remind the Republicans sharply of their sins of omission before they adjourned Congress, and ran away from what their own President has called the dictate of honor.

---

The United States Treasury begins its new fiscal year under pleasing auspices. The revenue for the twelvemonth just completed has passed all expectations. When last year's revenue reduction bill went into force in July, 1901, it was commonly estimated that its remission of taxes would cut off $40,000,000 from the nation's annual income. The internal revenue has, in fact, fallen short some $35,000,000 from the preceding fiscal year; but, in the meantime, a quite unlooked-for expansion of the customs revenue has produced on that account $16,000,000 more than in 1901. In other words, taxes producing forty millions annually have been abolished, and still the country's wealth and consuming power have increased so rapidly that the revenue yield has turned out only twenty-four millions short of the year preceding. This is a state of things to which a British Finance Minister could refer, in laying his budget before Parliament, as conclusive witness to strength in the Treasury and prosperity in the country.

---

It is interesting to remark, in the same connection, that the surplus cash in the hands of the Government, by Monday's returns, was the largest in the country's history. This surplus, including gold reserved against the legal tenders, reached in April, 1888, the sum of $341,400,000, which then surpassed all records. From that sum it declined, first through lavish disbursement for bond redemptions, then through an actual shortage in the revenue, until it reached at length the low level of $84,082,000 at the close of 1893. Not until near the close of last May did this Treasury surplus again reach the high mark of 1888. It stands to-day at $356,185,000. The surplus revenue of the fiscal year just closed was, in round numbers, $92,000,000; hence the seventy-million cut proposed by the measure which went into force on July 1 leaves at all events some margin. Not least among the gratifying elements in the Treasury's position is the proportion of gold which goes to make up the Treasury's cash reserve. Since last year the Treasury has had in its vaults much the largest sum of gold held by any single institution in the world. It closed the fiscal year 1901 with its gold holdings, like its total cash balance, at the high mark of its history.

---

Secretary Shaw has embodied in a Treasury order the principle frequently enunciated by the Board of Appraisers, viz., that American artists resident abroad are entitled to free entry of their own works. The Dingley bill accorded this not excessive favor to "artists residing temporarily abroad," and it was the word temporarily that made the trouble. The tendency at the Custom-house was not to assume that an artist's sojourn abroad was temporary, but, on the contrary, to maintain that after four or five years it must be regarded as permanent. Accordingly, many American artists resident in Europe have had private advice that they can bring home their own works only upon the condition of paying the regular duty on works of art; and we believe that in some instances the duty has actually been paid. Secretary Shaw's enlightened order practically declares that the privilege of free entry for an American artist goes with his American citizenship. If he has shown no intention of changing his allegiance, it is to be assumed that he means to return, and that his foreign residence is "temporary" in the sense of the law. If we are bound indefinitely to the absurdity of a tariff on works of art, it is at least a relief not to find ourselves in the position of punishing our artists for the foreign study and residence which are so valuable to them. In demonstrating that the application of a protective tariff is compatible with some measure of common sense, Secretary Shaw is serving party and public well.

---

In nominating Robert E. Pattison for Governor last week, the Pennsylvania Democrats put their best foot forward. Quay, it is evident, did not succeed in carrying out his expressed intention to "see to it" that the Democrats nominated some one who would be easy to beat. Having served two most successful terms as Governor of Pennsylvania, Mr. Pattison is well qualified, both by experience and by known ability, to fill the office for which he has been nominated. He showed exceptional courage last year in striking a blow at the "Quay" Democrats in Philadelphia, and forcing a reorganization of the party machinery in that city. He is easily the leading Democrat of the State, and there is much in his candidacy which will prove attractive to independent voters, though doubtless many of them will refuse to forget and forgive his submission to the Populistic tendencies which took possession of the Democratic National Convention in 1896.

---

By confining its platform solely to State issues, the Pennsylvania Convention adopted a wise and judicious course. The situation in that ring-ridden State fully justifies such a proceeding, if there were not other obvious reasons for it. Doubtless the platform will attract some independent Republican support which, finding little to prefer as between two such excellent candidates as Judge Pennypacker and ex-Gov. Pattison, would otherwise vote the Republican ticket. The promise of ballot reform, the most pressing political need in Pennsylvania, is made by both parties; but the Republicans have been so often faithless to such promises that it is difficult to find a reason for accepting this year's protestations. Quay is nominating the same old tools for seats in the Legislature, and Quay has in the past gained and held his power largely by election frauds. On the other hand, every argument, both of morality and expediency, urges the Democrats to bring about ballot reform. Their platform calls for a personal-registration law and a secret ballot, and ex-Gov. Pattison is pledged to carry this reform through if elected.

---

The hearts of the Michigan Republicans are true to President Roosevelt, but much truer to their own blood-bought beet. Their platform expresses "sincere admiration" for the "desire for justice" which Mr. Roosevelt has "brought to bear on all public affairs," but is resolutely hostile to "all efforts to destroy or emasculate" the protective tariff, as to any "plan that would interfere with the industries of the United States"—that is, to Roosevelt's Cuban policy. This reduces the Michigan admiration of justice to a fine willingness that others should be just. Do justice though the heavens fall, but not our particular heaven of beet-sugar. The action of the Michigan Republicans is, of course, a demonstration of the hold which Senator Burrows and Congressman Smith have on the party in that State. They are temporarily more fortunate than the

Kansas and Nebraska Senators who defied the President only to be rebuked by their own constituents. Michigan distinctly takes its place in the anti-Roosevelt column. In so doing it emphasizes the divided counsels by which the Republican party is rent. What position on Cuban reciprocity is it going to take in the Congressional elections? The managers would give much to know. They cannot be warmly for it in Massachusetts while furiously against it in Michigan. A dignified silence on the subject would seem to be the wiser course, combined with loud assertions that the great Republican party can be depended upon to solve rightly every question before the nation. Then if the voters have no sense of the ridiculous, all may yet be well.

---

In these days of vast benefactions to universities, it seems a little strange that Johns Hopkins University should have had great difficulty in raising the $1,000,000 which secures to it the gift of a beautiful permanent site on the outskirts of Baltimore. However, Johns Hopkins University has from the point of view of money-raising great disadvantages. The shade of the founder still discourages great givers. The alumni, the main resource in such matters, are largly college professors or members of the scantily paid professions. Perhaps, too, the fact that Johns Hopkins has held up very austere academic ideals in a genial Southern community may have had something to do with the too gradual relaxing of the purse-strings of the Baltimoreans. However that may be, it must be said that no university faculty so well deserves prosperity, while few have met with so much unmerited adversity. For this reason the opening of more prosperous days for Johns Hopkins University brings a peculiar pleasure to all friends of higher education in America. They will hope that it marks the beginning of a closer relation between the city of Baltimore and the University which has made Baltimore an honored name wherever men gather for the promotion of sound learning.

---

A pathetic interest attaches to the royal honors conferred while King Edward's life hung in the balance. While routine promotions are naturally the rule, many of the awards are of peculiar interest to Americans. That good sportsman, Sir Thomas Lipton, needed no baronetcy, but we are glad he has it. It may take a little time to think of Leslie Stephen and A. Conan Doyle as Sir Leslie and Sir Arthur, and the chance that brackets them with Sir Gilbert Parker and Sir Francis A. Burnand of *Punch* is a curious one. The first awards of the Order of Merit instituted by the King are of special significance. We cannot hold inferior to any order venerable through antiquity one of which the first members include Lord Roberts, Lord Kitchener, Lord Kelvin, Lord Lister, Mr. John Morley, George Watts, Lord Rayleigh, and Mr. Lecky.

---

Dispatches from Paris prove that Premier Combes has begun to keep the promises so plentifully made to his Radical majority. It was at the opening of Parliament that he said: "The Associations Law has reached the administrative and judicial stage. The Government will see to it that none of its provisions remain ineffective." The recent activity of the police in searching out unauthorized religious orders has been the prelude to a decree dissolving one hundred and thirty-five of them which have not complied with the requirements of the law. While this policy is in contrast to that of M. Waldeck-Rousseau, which was to rest content with the unenforced rigors of the law against the orders, it is still only a formal fulfilment of Premier Combes's promise. Of something like 16,000 religious establishments in France, rather more than half applied for authorization, a small number fled the country, and a larger number (notably, the influential Jesuit colleges) reorganized as quasi-secular corporations, in the hope of thus evading the law. In the light of these statistics, it becomes clear that the one hundred and thirty-five establishments which are closed by Presidential decree can include rather less than the fortieth part of those that are openly or covertly in contempt. One must suppose that the decree affects only notoriously disloyal orders. This beginning of an aggressively anti-clerical campaign will undoubtedly please the Radical-Socialist wing of M. Combes's majority, but they will feel that it is only the beginning. The real test of the anti-clerical zeal of the Ministry and of the expediency of the Associations Law will come when the Government seriously undertakes to ferret out the seven thousand or so unauthorized establishments.

---

Count von Bülow's open rebuke of the Prussian Agrarians for their extravagant tariff demands and for opposition to pending reciprocity treaties marks apparently a complete change of attitude. For months past the Chancellor has acted upon the principle of conciliating the squirearchy, which has accordingly been free to play havoc with Government measures, like the canal bills, and generally to obstruct legislation. The recent change of front was, it is said, ordered by the Emperor himself; and, in fact, it is more in keeping with the Emperor's policy of the mailed fist than with Von Bülow's mild parliamentary strategy. The high-handed policy has been, for the moment at least, justified by the passing of the bill accepting the Brussels sugar schedule, which had long languished in committee. There is a certain amount of risk in disciplining so compact and formidable a body as the Agrarians, but there is greater risk in allowing them unlimited rights of obstruction. As a rebellious element in the Conservative ranks, they are undoubtedly dangerous; yet coercion from the Emperor can hardly force them into secession since they have no natural allies among the Opposition groups. It appears, then, that in treating them frankly as insubordinates, the Chancellor and the Emperor have shown a very sagacious hardihood.

---

There never was very much doubt that the Triple Alliance, appointed to expire in May, 1903, would be again renewed in the original terms. Bismarck had made the bond too formal to be lightly repudiated, and the clashing interests of the signatory parties are more than offset by the threat of the Franco-Russian alliance, so recently and dramatically extended to the Far East. But it is fair to say that at no time in the past has the *Triplice* had a more artificial look than it has at the moment of its revival. If its terms have not changed, all the contracting Powers have changed greatly since 1896. In fact, the inclusion of Rumania in that year constitutes now one of the chief reasons for the further existence of the pact, for Rumania is the chief potential obstacle to the ulterior designs of Russia in the Levant. Without that partial renovation, the Bismarckian schedule would now with great difficulty find a *raison d'être* in the internal interests of any of the contracting Powers. Germany, for whose enhancement the alliance was contrived by the master mind of Bismarck, now has measurably outgrown the need of her allies. The two other parties, Austria and Italy, have, indeed, so little reason for standing by Germany in the event of a general war that one must consider their attitude towards the alliance to be Platonic in the extreme. Austria depends for the safeguarding of her interests in the Balkans, not upon the German army or the Italian fleet, but upon an *entente* with the Russian empire, guaranteed by the stalwart presence of Rumania in the road to Constantinople. In Italy, too, things have greatly changed since a master stroke of Bismarckian duplicity made France the enemy of Italy, and Italy Germany's ardent ally. The other day at Rome the Italian Foreign Minister, Signor Prinetti, closed an elaborate eulogium of the Triple Alliance with gratulations upon the complete accord between France and Italy. Within the year French and Italian fleets have exchanged visits, and Italy is invited by the French Foreign Office to make good in Tripoli the almost forgotten chagrin of the loss of Tunis.

### *THE SESSION OF CONGRESS.*

A review of the session of Congress just ending might well begin with the characterization which Junius made of the Duke of Grafton. Like him, it "did not rise to the dignity of being hated." Its sins were despicable rather than desperately wicked and alarming. It is hard to be angry with a body so feebly led as the present House, for example. And the sentiment which the Senate excites in an observant mind is not wrathful so much as it is sorrowful. Uncertainty, timidity, and ineffectiveness are, in truth, the words which one feels like using to describe both the personality and the work of the past session of Congress. To be entirely charitable, we will borrow Disraeli's phrase, and say that its movements have been those of "a man distracted by good intentions and difficult circumstances."

In any estimate of the character of a Congress, or of a man, we have to discriminate between what are called the negative and the positive virtues. The former call for no praise, though their absence merits the severest condemnation. No man, for example, can plume himself on speaking the truth, or being kind to his family, or showing gratitude for a favor. Those are but negative virtues; they carry with them no sense of complacency; every normal and honorable man is expected to exhibit them. So there are negative Congressional virtues which call for no laudation. It is expected of Congress that it will get through its routine work; will vote supplies for the ongoing of the Government; will observe the customary forms of public business. To expatiate with pride upon these regular and ordinary activities of Congress is like praising a man for not being a liar and an ingrate.

The true test comes with an inquiry into the positive virtues. How has Congress discharged the duties, not entirely perfunctory, which have been laid upon it? Badly, we think the fair verdict will be. It has not lived up to its own professions. It has wofully come short of the Presidential and party programme. It has, in one vital matter, thwarted the obvious wish of the country and brought to it deep mortification. This was bluntly, or inadvertently, confessed by Senator Hanna on Monday. He declared, in effect, that Congress had sadly disappointed just expectations, and would "hear from the people." This phrase ordinarily means that the party in power will be turned out; and a legitimate inference from Senator Hanna's language would be that he expects, possibly desires, to see a Democratic House elected next November. That, so far as we know, is the only effective way in which the voters can let the Republican party "hear" that they are dissatisfied with its course in Congress. However that may be, Senator Hanna's frank admission in open Senate is proof enough that Congress is not adjourning with any notion that it will receive an enthusiastic "Well done!" from the country.

Two highly important bills became law, but by a non-partisan vote. We refer to the bills for an Isthmian canal, and for a system of irrigation in the arid States and Territories. The party in power can take to itself no special credit for either. It must, however, have all the credit, or all the odium, for passing the Philippine Tariff Bill. This was made necessary by the decision of the Supreme Court undoing the previous unconstitutional legislation of the Republican party; but was a measure enacted in the teeth of the recommendations of Gov. Taft and Secretary Root, and was obviously forced upon the managers by the same protectionist mortgagees who prevented the mortgaged party from doing anything for Cuba. The bill for a civil government in the Philippines underwent many changes and recastings in conference, but emerges, we believe, with those parts of it which survive, in a promising form. It calls for an elected Philippine Assembly in the near future. It provides for the election of two Philippine Commissioners, who shall have a seat and a voice (but no vote) on the floor of Congress, like the delegates from Territories. This we can but hail as an advance towards that consultation of the wishes of the Philippine people to which we are bound to come, and towards that independence of the Philippine nation which will surely result from consulting its desires and interests, as well as our own. For standing out unyieldingly in behalf of those features of its own bill, the House deserves much credit.

It is, however, an appalling list of derelictions which has to be charged up to this session of Congress, as a whole. It left the party promises as a kind of standing catalogue of its sins of omission. It did nothing to carry out the President's leading recommendations. The Shipping Bill died of neglect or secret strangulation. No law to repress Trusts, or to compel them to publicity, was even reported. Army reform was done to death by spoils-seeking Senators. Even the bills to extinguish anarchy and to protect the President were left to expire. The new Department of Commerce could not be brought to birth. Banking reform was not even given a decent burial. A terrible record of failure, all this is, for the party which boasts that it is the only party which "does things."

But above every other shortcoming and disgrace must be placed the lamentable refusal of Congress to do justice and keep the nation's honor fair in the matter of Cuban reciprocity. It is not necessary to rehearse the long story of hypocrisy and betrayal. Suffice it to say that it is writ large before the eyes of the whole country, and that it will for ever be associated with the present Congress as the thing which gives it an indelibly shameful reputation. About this it is only necessary to use the epithets furnished by the foremost Republican newspapers, and by a Republican President himself, in order to set it forth in fitting terms. Whether it will lead to a Republican defeat this fall, we do not know, but we do know that it ought to. A stinging rebuke by the people is the only punishment for certain political crimes. It may be that Senator Hanna's remarks in the Senate show that he, like Pitt at one time, has "received some of the secret warnings that forebode the cyclone in which Governments go down," and that he foresees the defeat of his party for its sins. As to that, we make no prediction; but we are certain that if ever defeat was richly deserved, it is by a party which has made such a record for weakness, cowardice, and dishonor as the Republican party has made in the first session of the Fifty-seventh Congress.

### *REWARDS OF PUBLIC SERVICE.*

President Roosevelt made his Doctor's discourse at Harvard last week a sort of extemporized treatise "De Amicitia." Friend after friend he embalmed in the amber of his enthusiastic praise. Long, Moody, Hay, Lodge, Taft, Root, Wood—each of them became as if a Rough Rider in the President's affections. It surely is a most engaging trait in Mr. Roosevelt, this loyalty to his friends. It is in fine keeping with the spontaneity of an impulsive and whole-souled nature like his. True, the very objects of his emphatic laudation might sometimes wish the thing said a little differently. If we must pray Heaven to be saved from a candid friend, we should not neglect to include an humble petition to be delivered from a too indiscriminatingly exuberant friend.

Nothing, for example, could have been further from the President's intention than to impute to the public servants whom he glorified a single selfish or grudging thought; yet his words came very near doing it. "Look at the pitiful rewards of these men," he seemed to say; "why, they have actually lost money in the public service! And then see how they have been scrutinized and criticised. Is this the way to encourage devotion to the public good? They do these things better in England. Your Cromers and your Kitcheners come home to peerages and money grants, while Gen. Wood not only is out of pocket, but has been openly accused of having improperly spent Cuban money to aid one faction of the Republican party in its contest with the other. Is not this a shame, O my fellow-doctors?"

Now if the President fairly drives us to inquire what reward Gen. Wood has actually had, we think it can be easily

shown that the republic has not been ungrateful to him. The esteem and fame that have come to him have certainly been such as to crown labors more arduous than his. Public recognition has not erred, in his case, on the side of being too restrained. He has distinctly been one of our heroes. Mr. Roosevelt seems to imagine that Americans are deficient in the capacity for hero-worship. On the contrary, we create our heroes too easily—so easily that we recklessly break their images, knowing that plenty more will be forthcoming. But, strictly on the professional side, Gen. Wood's advancement has been phenomenal, his reward glittering. Four years ago he was an army surgeon; now he has been promoted over the heads of five hundred of his seniors in the regular army to be a brigadier-general, with every prospect of becoming General commanding. And it is this splendid and almost unparalleled rise that the President intimates is meagre, and almost offset by the fact that Gen. Wood has not been able to live on his salary and allowances! What the General himself thought of pecuniary inducements, compared with the great prize he has won, was shown in his deliberate refusal of a civilian position estimated to be worth $35,000 a year.

Nor can we think the President's implied plea for immunity from criticism one which a public man should urge, as if such immunity were a part of his reward. No might nor greatness in mortality ever escaped criticism, or ever will. It is one of the necessary incidents of the profession of public servant, whether he be King, President, or Secretary. To take it good-humoredly is an important part of a statesman's equipment. It brings no dread and provokes no bitterness in the real princes of mankind. They, as it has been said, "gain by that scrutiny which would kill and damn lesser beings." It is no sign of lack of appreciation of its great men that a people should jealously examine their public acts. For a democracy to do that is simply to do its duty. At any rate, it will not be denied. The "many-headed beast" will insist upon knowing all about the work of its rulers; and if they are too thin-skinned or too haughty to endure the constant peering and questioning, their place is not in high office.

What we miss most in President Roosevelt's ingenuous address is a recognition, which we should have expected from him above all others, of the fact that true public service is its own reward, which it reaps as it goes along, and that useful work is in itself the source of the highest human happiness. "There is no fun like work"—that discovery, says Walter Bagehot, has been the making of many a young English lord, who has found that Blue Books are really more fascinating than betting books, and the dust and drudgery of public office more attractive than polo or yachting or elegant dawdling. That is the truth which we must bear down upon in all our appeals to young men to enter upon public service. The work to be done is the thing; and the exhilaration of pegging away at it, the joy of striving and the satisfaction of accomplishment—these are the rewards which come with it automatically. Any one minded to cry out for the "stars and ribbons and the other toys with which we children of a larger growth amuse ourselves," shows thereby that he does not know the true zest of public work. He needs to be set down to read Emerson's essay on "Compensation." The only rewards worth having are those which come all in the day's work; and the public servant can hope for greater rewards than the common man only as his work is more difficult and important, calls out every power more fully, and sustains with a larger pleasure of struggle and achievement.

## *IMPERIALISM IN PEACE.*

Every instructed student of our public affairs during the past four years has known that the sharp test of an encroaching Imperial policy would come in the piping times of peace. Any Government can live while war is on; any party keep itself in power as long as the guns are thundering. The monarchy in bankrupt Spain and a Ministry of discordant and discredited Liberals held their heads high during the shock of battle in 1898. We have seen the English Conservatives wax strong on war. How greatly indebted our own Republican party felt itself to the war spirit we can perceive from the constant effort by the party leaders to inflame it and appeal to it in peace. All that is understood. War is the great preservative of feeble political leaders. They may face carnage with equanimity; but what tries their stuff is the daily task of humdrum statesmanship, the peaceful consolidation and administration in peace of the renowned victories of war. How are our new-fledged Imperialists meeting this crucial test?

Of course, the standing temptation of Imperialism at peace is to run into a vulgar kind of Cæsarism. Extravagance and ostentation are counted upon to do the work of war's alarms in tickling the popular fancy. This natural tendency of what he called "domestic Imperialism" was well defined by the Liberal leader, Sir Henry Campbell-Bannerman, in a speech which he made not long ago. Asking what were its methods and characteristics, he answered:

> "I will recite some of them. It magnifies the executive power; it acts upon the passions of the people; it conciliates them in classes and in localities by lavish expenditure; it occupies men's minds with display and amusement; it inspires a thirst for military glory; it captures the electorate by false assertions and illusory promises; and then, having by these means obtained a plébiscite and using electoral forms in the servile Parliament thus created, it crushes opposition and extinguishes liberty. And the irony of the thing is this—that all this is done in the name of the people themselves, and under the authority of their voice, so that the people, while boasting of being supreme, are enslaved."

Sir Henry did not maintain that this drift of Imperialism had shown more than the beginnings of its mischief in England; but he rightly contended that it was the duty of the English democracy to withstand such evils in their very incipiency. If he needed any feather for his arrow, it was promptly furnished by a taunt of the Conservative Chancellor of the Exchequer, who brutally said at Oldham that the reason the Liberals could not get a majority in the House of Commons was that "they have not got the money." We have heard such boastful Cæsarism—or Crœsusism—from purse-proud Imperialists of our own. And in legislation they have gone a suggestively long way towards justifying Sir Henry's description of the habit of domestic Imperialism. It is not without significance that a swollen River and Harbor Bill slips easily through Congress, and is signed by a half-unwilling President, just as war expenditures begin to diminish. And however carefully the Irrigation Bill may have been drawn, with no matter what purity of intention on the part of many of its advocates, the net result, in the States affected, will be to make the people think that they bid fair to get lavish appropriations from the general Government for interests purely of locality and of class. In other words, the bread and circuses which an Imperial policy has flung to the masses in war time, must be continued, under convenient but transparent disguises, in the days of peace.

This, too, is easy—as easy as lying. But how stands the case with that constructive statesmanship, that execution of announced purpose, that patient work of unexciting administration, upon which our eager Imperialists professed themselves so well prepared to enter after the Spanish war? This is the real labor of government, as it is the searching trial of Imperialism; and its most boastful advocates are not now singing pæans to their success in the actual experiment. If anything seemed simple, natural, and facile, it was that Imperialism should keep its pledge to Cuba. That was the uncomplicated knot which President Roosevelt set himself, with light heart, to unloose, familiar as his garter. But was ever an Imperial world-Power brought so low in so short a time? One feeble vegetable has stayed the majestic march of Empire. The domestic beet has dictated foreign policy. Greed frustrated generosity. And the same sinister influence intervenes, as Senator Hoar pointed out, to muddle the efforts of Imperialism to do something in the

way of peaceful legislation for the Filipinos. He saw very plainly in the Philippine Bill the demand of American wealth for the despoilment of the archipelago. So certain is it that the thirst for money-making through the Government, which war always sets burning, will seek to be quenched in peace by further draughts from the exhaustless fountain of a paternal and Imperialist Treasury.

Another sure sign of Imperialism at work in peace is the magnifying, not merely of the executive power, as Campbell-Bannerman said, but of the whole machinery and personnel of government. We seem to think that we shall be saved by the multiplication of offices; and office-holders themselves would like to be thought of as a sacred class, as much above fault-finding as a Chinese mandarin or an Egyptian priest of the Second Dynasty. This putting of the ruler's trust in the number and fidelity of his place-holders is a familiar symptom of Imperialism, when the drums are silent and the flags are furled. Louis Philippe said confidently to a friend who was warning him of the dangers besetting the French monarchy, "Do not trouble yourself, young man; France is a country which is kept in hand by its public functionaries." That note is suspiciously like the glorifying of patronage and exaltation of the office-holder to which our own Imperialists are so freely treating us.

In view of all these failures and temptations of Imperialism in peace, the question will be more and more impatiently asked by thoughtful citizens, "Why not retrace our steps?" It was a saying of that wise publicist Machiavelli, that it was the duty of every country, once in about ten years, to go back to first principles—to "recover the state" *(ripigliare lo stato)*. His ten years have not yet rolled round since we took our half-unconscious lurch towards Imperialism; but have not its disappointments, its unfulfilled prophecies, its accumulated embarrassments, its mortifications, and its perils, already had loose reign long enough? One thing is certain: either we shall soon see a sharp reaction, with a determined attempt to recover the state as we once knew it, or Imperialism will go on with accelerated momentum to work its harm and shame.

## *HOME RULE FOR CITIES.*

The decision of the Ohio Supreme Court, declaring invalid certain recent enactments relating to Cleveland and Toledo, is likely to result in a new epoch of municipal development in that State. It also has a general significance, because it strikes at the root of a vice from which cities suffer in almost all of the States—the vice of special legislation. That this is a vice, nobody would question. It has been recognized as such in almost every State Constitution drawn or amended during the last fifty years. The trouble has been that Constitutional provisions have been easily evaded, and in most cases the courts have declined to interfere. In the decision just announced, the Ohio court has really struck a blow for home rule in the cities of that State, and has perhaps pointed the way for important reforms elsewhere.

Defiance of the Constitutional provision against special legislation for particular cities has been especially flagrant in Ohio. Since 1850 the Constitution of that State has contained a clause directing that "the General Assembly shall provide for the organization of cities and incorporated villages by general laws"—a phrase clearly prohibiting special enactments. The Legislature of 1852 carried out this direction by dividing the cities of the State into two classes. Then the work of getting around the Constitution began. The two classes were subdivided from time to time into a large number of grades, until almost every city of any consequence in Ohio was awarded a grade by itself. Thus it became easy to legislate for a particular city under apparently Constitutional form, as for "all cities of the first class, third grade," etc., although every schoolboy knew that there was but one city in the State which corresponded to this description.

But even this method of evasion was not enough, and of late the "general laws" which have been enacted in Ohio have been growing more and more grotesque. Thus, the Legislature has directed that a city having a population of 11,004 shall have its police appointed in a particular way, while another city of 11,022, only eighteen more, has its police force appointed in an entirely different way, the needs of the politicians in different localities apparently being different. Another enactment reads: "Any city of the second class containing more than 30,000 inhabitants and located in a county having a Superior Court." This singled out the city of Dayton. In 1890 a bill was passed providing a form of municipal government "for cities having a population not less than 27,690 or more than 27,720." This "general" law, of course, applied to but one city, Youngstown.

It is obvious that a system like this placed all the cities at the mercy of the political influences dominant in the State. The result was inevitable—confusion and misgovernment. Singularly enough, until now the Supreme Court of the State has refused to interfere. The decisions each year, however, have taken on more and more a tone of apology. "It must be conceded that the method of classifying cities for the purpose of legislation has been carried to the very verge of Constitutional authority," said the court a few years ago; and more recently: "It is well, if not widely, known that most of the eminent judges who participated in the decisions upholding such classifications, lived to regret the decisions and to deplore the results which followed them."

To continue to sustain classifications and special enactments like these was too extreme an application of the doctrine of *stare decisis* to last, and it is to the credit of the present court that it has refused longer to be bound by it in this instance. Whether the court has determined to upset the entire classification now existing is not yet certain, but indications point that way. This would probably render necessary an extra session of the Legislature and the adoption of a general code, to apply to the cities of the State. Certainly, in all the States, a standard or norm of city government is much needed.

It is to be hoped that courts in other States where special legislation for particular cities is prohibited by the Constitution will follow the example of the Ohio court. In our own State, so far as we suffer from special legislation, the fault is rather with our Constitution than with our courts. Except as to the granting of certain franchises and other rights, the Legislature is not restrained in this State from passing laws affecting a particular city; the veto power awarded to the Mayors and, in the smaller cities, to the councils having been regarded as a sufficient check. It may be doubted if this veto power has so proved.

It is encouraging to note, however, that the tendency here and elsewhere is generally towards a greater autonomy for our cities. The recent "ripper" legislation in Pennsylvania is a marked exception to this rule, but the first attempt to imitate it in Ohio by taking away from the city of Toledo the right to control its own police force has been promptly checked by the court. The popular revolt which frustrated an effort in this State to impose a "State constabulary" upon this city is yet fresh in memory. In St. Louis, where the police force is still controlled by the State, there is an energetic movement which will doubtless before long result in reform. It has been said that the real governmental problem in this country is the municipal problem. It is certainly one to which we are giving increasing attention; and with more thorough scrutiny it seems to become more clear that, having received from the State its general powers and principles of control, the city, in order to reach its highest possibilities of development, must be left practically alone to work out its own salvation.

## *THE SMALL COLLEGE.*

Bowdoin College, which last week celebrated its centennial, is at present one of the best types of the American

small college. It has shown no tendency to outgrow or quarrel with its college estate, and it has set itself to developing the utmost efficiency along strictly collegiate lines. It has, however, followed modern educational tendencies more unreservedly than most of the other small colleges. By offering the three degrees of A.B., B.S. (Bachelor of Science), and B.L. (Bachelor of Letters), it has avoided the common confusion of designating diverse forms of education by the traditional Bachelor's degree in Arts; while in dividing its undergraduates into nine groups—as their preparation has emphasized ancient languages, modern languages, or natural science—it has frankly gone over to the elective system in its most logical form. Conservatives in the other small colleges of New England cannot fail to watch the effect of this experiment at Bowdoin with the greatest interest. It must serve either as an example or a warning for all the colleges of this class.

Last week at Bowdoin the thoughts of all were less with the future than with the past. Graduates named again proudly Longfellow and Hawthorne as Bowdoin's representatives in letters, and recalled the old studies and the democratic good fellowship which have for a century brought out of the raw undergraduate the scholar, the preacher, the lawyer, the physician, and the man of affairs. We hear much talk to-day about the passing of the small college, and are told that it cannot long compete with the undergraduate department of the university, which offers more and better courses and prepares directly for the various professional schools. We advise any one who trembles for the future of the small colleges simply to make a tour of them, and especially to visit one or several of them on occasions like the Bowdoin centennial. He will find an exuberance of life that hardly comports with a moribund condition.

Now, the strength of the small college, in the face of the manifest academic superiority of the universities, is naturally bewildering to the academically minded. Bowdoin has a score of professors in her undergraduate department, some 250 students, and something more than a hundred catalogued courses. By multiplying all these figures by ten one may get some rough idea of the difference in magnitude between Bowdoin and the undergraduate department of Harvard University. Assuming, what is probably the case, that the actual instruction at Bowdoin is quite as efficient as that at Harvard, it remains true that a Harvard undergraduate may study practically anything which his future career may dictate, while the Bowdoin undergraduate is restricted to fewer subjects and fewer branches within each subject. If a severely academic logic ruled lads who choose a college, or fathers who choose a college for their boys, there is no question that the doom of the small college would be already pronounced.

Fortunately, the heart still has its unreasonable reasons in these matters, and the choice of a college is only exceptionally made on academic lines. President Eliot knows better than to imagine that a quarter of his undergraduates have come to Harvard because of the elective system or any stately array of professors and courses. They have come because they wish to become Harvard men, an honor which many of them attain chiefly through elaborate evasion of the specific educational advantages which Harvard offers. In fact, the multiplication of courses and studies is valuable mainly to the small body of intellectuals which leavens an incoming class. Such an elaborate curriculum is arranged for those who have an intelligent plan of study and a life-work in view. An insignificant proportion of each college class has one or the other requisite for intelligent choice.

The inducement to enter a great university, for the average student, is the morale which that university inculcates. Here the small college competes on precisely even terms with the university. No one could attend the ceremonies at Brunswick without becoming convinced that Bowdoin turned out an uncommonly agreeable, cultured, and efficient kind of man. Many guests must have felt, as they looked upon that body of alumni, that they would be glad to have their boys Bowdoin men. This is the hold of every small college upon the community. And it is coming to be seen that the small colleges have distinct advantages for the development of men. The social life is so varied that it requires some kind of service of practically every student. The numbers are so small that every student must in some manner know and adjust himself to every other. It is a life in which a traditional code opposes itself mercilessly to personal conceit or idiosyncrasy, and in this way it approximates the conditions of life in the world.

The university undoubtedly produces a keener type by a kind of survival-of-the-fittest process, and it is probable that the exceptionally brilliant boy will more and more tend to prefer the university to the small college. But the university also admits the fact of unfitness too readily, and leaves a great number of men relatively isolated and at disadvantage. The small college deals more frankly and hopefully with averages. It foregoes the precocious undergraduate for the healthy and serviceable one. Of course, the small college is in every way bound to academic efficiency; this it fully realizes. But so long as it finds that its alumni prosper greatly in the world, and their service to community and State shows no noticeable inferiority to that rendered by the graduates of the university, so long the small college may accept with perfect complacency its apparent inferiority in all academical apparatus. For its strength lies beyond these things.

## MEETING OF THE AMERICAN LIBRARY ASSOCIATION.

June 30, 1902.

The twenty-fourth annual meeting of the American Library Association, lately held at Magnolia, was remarkably chiefly for its size. The largest previous meeting was attended by less than five hundred; this by over a thousand. The reason is plain. They met in Massachusetts, where every town but two has a library and some have several. The rest of New England is almost as bibliothecal, and New York is catching up. And Magnolia, though on the eastern edge of the continent, is easy of access and famed for its beauty, deservedly, as the visitors unanimously testified. There are disadvantages in such a crowd; if a general meeting is held, many cannot get in; if simultaneous sections are in session, one has to make a difficult choice between two interesting subjects. Yet these discomforts are far outweighed by the gain of sending the A. L. A. spirit into hundreds of new channels.

Perhaps the time has passed for startling novelties; but, as a whole, the papers were never more interesting. The old subjects were considered in a score of new ways. Cataloguing, for instance, in regard to which one would have thought nothing new could be said, got a new life from the Library of Congress. The final decision of cataloguing rules may not appear in itself to be of much importance. About the greater part of them there has come to be, after years of experiment, substantial agreement. Most of the other points have remained undecided simply because there were nearly equal advantages on each side. A small library might very well adopt one course, and, after a time, finding or fancying the other the best, might adopt that; even a large library might do so if it did not wait till it had accumulated too many cards needing change. But it is out of the question that the Library of Congress, adding to its catalogue half a million cards every year, and becoming, as it will soon, the cataloguer for all the libraries in the country, should pursue so vacillating a policy. It must settle disputed points as soon as it can, and, having once chosen, must adhere to its choice. The Library of Congress will legislate in cataloguing matters for the whole country—very appropriately. The other systems—Jewett's, Cutter's, Perkins's, the Library School's—cannot long hold their own against its momentum, for the libraries that take the Library of Congress cards—and no library can afford not to take them—will want to bring what they are obliged to add of their own make into harmony with what will soon form the bulk of their stock. Consequently, the attempt which a committee has been making for two years to formulate a code upon which all can agree, becomes in a way a matter of national concern. It was looked upon with great interest, and their work was generally approved. Something was, indeed, said of a distinction between rules for a written and for a printed

catalogue. It is useless. In fifty years there will be no written catalogue. Cataloguers will no more think of proposing to make them for libraries than a newsdealer would think of offering MSS. for sale at his stand. The Congressional Library will print for all, and the titles which it cannot supply will be typewritten by the libraries in strict accordance with its practice.

It is pleasant to turn from the early conventions in which central cataloguing was first a hopeless wish, and then a baseless hope, to the present, when, with American adaptability to circumstances, it is calmly taken as part of the ordinary course of nature. For this we must thank largely the energy of the Librarian of Congress and the devotion of his assistants. The work has been pressed under great disadvantages; a force has been organized, numberless questions of detail have been decided, the rules are now nearly completed. As a result, the author-catalogue is deserving of the highest praise. The subject-headings, however, are unreliable; they are not followed even by the Library itself, and, until a system can be perfected and followed, the cards would be better without them.

The President's address, like the overture to an opera, gave a résumé of the whole field, and introduced with lighter treatment the themes which were to be more fully elaborated later. One of the most important of these themes was children's reading. The conviction that the public is to be reached through those who will make the public of the future, has taken strong hold on librarians. If they can implant in them a reading habit by sending books to the schools and to homes, and foster a library habit by providing attractive children's rooms, they know that the library will have plenty of clients in the next generation, and their books will not stand unused upon the shelves. They need this assurance when those who use the libraries do not amount to one-fifth of the population in ordinary cities, and, in the largest, hardly reach one-tenth. The "home libraries"—that is, small collections of books placed in poor homes for neighborhood use, under charge of some suitable member of the family (there are some seventy in Boston) — have as yet been managed independently of public libraries by charitable societies. This is best; the libraries have all they can do in attending to the school libraries which they supply and to their own children's rooms. We hear much of child-study. They, too, have been conducting their child study by experiment and observation—not the observation that produces columns of figures, but the sympathetic observation which results in insight, and the experiments which lead to the adoption of better methods.

President Eliot's paper on "The Division of a Library into Books in Use and Books Not in Use" was in subject the same as the one he read before the Massachusetts Library Club last April on "Living Books and Dead." He referred to the rapid increase in the output of books, the gradual filling up of libraries, the slight value of much of their contents, and the cost of the larger buildings continually needed. He did not advocate the cremation of dead books; only their transfer to a book-cemetery on cheap land—and therefore at a distance from the main library—in a building severely unadorned, and therefore as cheap as fireproof construction will allow. There the corpses should repose, declassified so as to allow of close packing, put upon the shelves, in fact, in the order in which they arrive, and, so numbered (findable only by number), crowded in three rows on a shelf, and issued to those who want them enough to give their order a day beforehand, as in a German university library. The picture is not an attractive one, but it may be that it represents an objectionable expedient to which some libraries will be driven by poverty—an expedient, however, which should be distinctly recognized as undesirable, to be adopted only at the last moment and under stress.

For want of time, this paper was not discussed in meeting, but much conversation with librarians showed me that though they fully recognized the difficulties coming from increase of stock and from the mixing of live, moribund, and dead books, and although some of them for years had adopted the policy of separation, *within the building and with retention of the classification*, yet they were not satisfied with the remedy proposed—removal to a distance, especially if accompanied by declassification. They thought that a large part of what was gained by cheapness of land and building would be lost by reason of increased cost of administration, and that the residue would not pay for the inconvenience to readers and investigators—a loss which President Eliot, not being a librarian, did not and could not be expected to appreciate. Yet he himself had said, "What is worth keeping at all is worth keeping accessible." Books three deep on the shelves and in no order are not accessible. The objection to the plan is not so much the delay in getting books, which would seldom exceed twenty-four hours, as the uselessness of an entirely unclassified collection of books. Access to the shelves, which takes the place of a catalogue excellently well, is no substitute for classification when the number of books is large and the subject disorder absolute. In this scheme, access to the shelves is not to be thought of. No one but a carefully trained attendant can be trusted to deal with rows three deep. Only a well-trained reader can do any satisfactory work if embarrassed by the constant presence of an attendant. Besides, to provide a watcher for every worker would be extremely expensive. Free access, then, is out of the question. The student who needs to look over perhaps a hundred books on the chance of finding one that is to his purpose, must make his choice wholly through a catalogue. Whoever has done this knows the waste of time it entails and the great likelihood of missing something important. But only one who has worked with double-rowed books can understand the time and patience required to pick out, two-thirds of the time from the back rows, and to put away again, fifty or a hundred books, which must be sought all over the building, because the books on the same subject and likely to be wanted at the same time are not brought together as they would be in a classified library, but are most effectually scattered.

The saving, it will be noted, is largely in the cost of land. The construction in either case must be solid and fireproof. The storage can be just as close in a storage section of a main library building as in one five miles away. It is not beyond the resources of architecture to introduce such a stack in a part of the main building where all ornament can be dispensed with. The same reason that forbids cremation—that we do not know surely what book will be eternally useless—embarrasses separation. With segregation within the building and class order retained, a mistaken exclusion is of small account. On the proposed plan it is serious. Perhaps donors of libraries will bear this in mind in the amount of their gifts, and, when they cannot, will at least make their architects economize in show rather than impair what is, after all, the main purpose of the building.

## TAINE'S CORRESPONDENCE.

PARIS, June 18, 1902.

It may be said without exaggeration that the two men who exercised the most influence on the thinking generation of France in the last part of the nineteenth century were Renan and Taine. There are many signs that their influence is on the wane, but it is difficult to say by what new influences it is being replaced; in fact, there seems to be no leading mind capable of holding up to the youth of the country a high intellectual ideal. Political agitation has replaced the conflicts of thought. Those of our best writers who avoid this agitation take refuge, by a sort of reaction, in the most distant past, and oppose a sort of neo-Catholicism to the revolutionary ideas which they see everywhere in the ascendent. Having known Taine personally, and fully appreciating the honesty of his purpose, the seriousness of his intellect, and his constant striving after truth, I could not help being much interested in a volume just published under the title 'H. Taine: Sa Vie et sa Correspondance.' It embraces Taine's youthful correspondence, from the year 1847 to the year 1853. The editor tells us that it will be followed by two other volumes.

One of the dominant traits of Taine's character was his horror of publicity and of indiscretions concerning his private life. His life was always most honorable and he had nothing to conceal; but he did not like to appear in person before the public. When the painter Bonnat made his portrait, it was on condition that it should never be exhibited in his lifetime; he never allowed the illustrated papers to publish his portrait. When the *Journal des Débats* celebrated its centenary, it was with great difficulty that he consented to figure in a picture which represented all the writers for the paper. He specified in his will that "the only letters or correspondence among his papers which might be published were those which treated of purely general and speculative matters, such as philosophy, history, æsthetics, art, psychology; and, even in those, all the passages which touched on private lives were to be suppressed."

Taine was born on the 21st of April, 1828, at Vouziers, in the Ardennes. For several generations his ancestors had led at Rethel the quiet and modest life of the provincial bourgeoisie. His great-grandfather, Pierre Taine, a manufacturer, was called by his contemporaries the Philosopher. His maternal grandfather, M. Bezanson, had a scientific turn of mind; he occupied himself with magnetism, and Taine kept carefully treatises of philosophy, of mathematics, of

algebra which Bezanson wrote in the latter part of his life. His maternal aunts were provincial old maids, who lived in a very retired way, and seem to have had the hereditary tastes of the family for abstract ideas. Taine's father was a lawyer, very fond of the country; he often took his boy in his carriage when he had to traverse the beautiful woods of the Ardennes. He died young, and Taine was really brought up by his mother; the profoundest affection always kept mother and son united. One of his uncles, who had spent several years in the United States, taught him the English language, and thus rendered him an immense service, which he recognized by dedicating to him his 'Notes on England.' It is no exaggeration to say that English literature doubled, so to speak, Taine's intellectual horizon, and contributed in a great degree to form his intellect. He always spoke with pleasure of the service which his American uncle, as he called him, had rendered him in making him familiar with the English tongue.

In 1841, at the age of thirteen, Taine was sent to Paris for his classical education. He lived there in a *pension*, and attended lectures at the Collège Bourbon. There began a life of hard study and constant labor. His family wished him to become a notary; fortunately its modest fortune did not permit this object of provincial ambition to be attained, as the office has to be bought. We cannot imagine Taine a notary. He had himself no special vocation; he was fond of study, and his intellectual curiosity was disinterested. In the intervals of the lectures, he took long walks in the beautiful Parc Monceaux, which was then half abandoned; he sometimes was allowed to ramble in the neighborhood of Paris. He framed, as soon as he arrived in Paris, a plan of work which he rigorously executed. At college he formed friendships with the most distinguished pupils, and obtained great scholastic successes. He went through the years devoted to rhetoric and philosophy under the direction of an eminent professor, M. Hatzfeld, who became his friend. He was not content with the usual class duties; he undertook several personal exercises. Some of them have been preserved, such as a "History of the Church in France from the 11th to the 16th century," a chapter on the Reformation, a "History of the Tiers-État and of the Parlement," a "History of the French Party in France, from the Beginning of the Religious Wars to the Death of Richelieu," and some "Notes on French Literature." We see already in these essays the natural bent of his mind.

There is in every young man's student years one which may be compared to the budding of a tree. Speaking of the years 1846 and 1847, Taine wrote, twenty years afterwards:

"If we have grasped some critical and historical ideas, they were suggested to us by the class in rhetoric. We were told that the oration ought to fit the character of the orator, and we were thus led to study this character. We went to the Bibliothèque, to the Museum of the Louvre, to the Cabinet des Estampes; we discovered by degrees in what a modern differs from an ancient, a Christian from a pagan, a Roman from a Greek, a Roman contemporary with Augustus from a Roman contemporary with Scipio. We tried to explain these differences; we began to half understand true history, the history of the soul, the profound alteration which hearts and souls suffer according to the changes of the physical and moral medium in which they are placed."

We see here the substance of Taine's doctrine—the perpetual action of the *milieu*, the medium, on the individual. In studying this action he was led regularly to envelop his literary criticism and historical studies in an elaborate analysis of all the moral and physical forces which keep the human mind in a state of ever-changing equilibrium.

The volume of correspondence begins with a letter of thanks written by him on the 13th of August, 1847, to M. Hatzfeld, just after he had received the Prize of Honor at the *Concours Général:*

"To you," he says, "I owe my success. They bade me at school be clear, methodical, regular; you alone were not satisfied with words—you gave me the means to be so. If I succeed hereafter, it will be thanks to your lessons, for you have taught me to work and to regulate my mind. . . . I have Descartes in hand; I think I can promise you a great taste for philosophy and perhaps a little aptitude. If I am not mistaken, it seems to me that I have always had some facility for understanding abstract things and for discovering generalities."

After his year of philosophy, Taine was admitted to the Normal School in November, 1848. This school prepares its pupils for the professorships in the colleges and in the faculties of letters. Taine was at the head of a list of promotions which contained, among others, Challemel-Lacour, who became a journalist, an Ambassador, a Minister, and who died in 1896, President of the Senate; J. J. Weiss, a very distinguished journalist, who died in the same year; and Perraud, now Cardinal, a member of the French Academy. At the School, besides the work imposed by the rules, Taine continued his personal studies in literature, history, and philosophy. He remained three years at the School, at a time when there was a great fermentation of ideas, after the Revolution of 1848. Taine was not drawn into the political vortex of that period; he never had any taste for every-day politics; he confined himself more to his literary work. His letters to Prévost-Paradol, written at that time, which are extremely numerous, testify to the intense activity of his mind. He worked on himself, so to speak, as on a *tabula rasa;* he had no prejudices, no traditional or fixed opinions; he placed himself somewhat in the mental attitude of Descartes when the great philosopher wrote his 'Discours sur la Méthode.' He had an ardent love of truth; it is interesting to see so young a man write to his young friend in this vein:

"Who tells you that the truth is inaccessible? Is it because you have not found it? What you need is a method; I speak from experience. Things incomprehensible at first have become clear to me only when I applied myself to them in the proper way. I do not speak of the common method dinned into our ears in our first month of philosophy. There is a much higher method, much clearer, much surer—the method of Spinoza. Do not renounce the truth. . . . You will find how the contradictions of the philosophers which throw you in doubt, are essentially weak; how all the really great minds agree. Somebody said that philosophy, like mathematics, has been renewed and developed two or three times, but that it has not been changed; and it is quite true. There is a superior point of view from which the totality of things can be embraced and difficulties solved. Two or three great men have attained it, and to them we must attach ourselves. Therefore, take courage and be skeptical only by way of precaution."

The letters to Prévost-Paradol will probably be found the most interesting of this first volume. There are fourteen of them written in 1849, eleven in 1850. The other correspondents are Mademoiselle Virginie Taine; the mother and sisters of Taine; Prof. Ernest Havet, M. de Suckau. It may be said in truth that all these letters deserve to be read; they show the yeastiness, if I may use the word, of a young man eager for truth, anxious to find it by independent means, gradually, by intense application and systematic effort. In the year 1851 we find Taine professor at Nevers, and afterward at Poitiers; he was later appointed to Besançon, but asked for leave to return to Paris for his thesis as doctor in letters.

# Correspondence.

## MARY DYER.

To the Editor of The Nation:

Sir: May I, as one of Mary Dyer's numerous descendants and devoted admirers, thank Mr. Worthington C. Ford for his sympathetic appreciation of her case in 1659, and for the remarkably enlightening discovery which he has made public of a letter from her husband, my grandfather's great-grandfather's grandfather, William Dyer? I am grateful also to you, sir, for publishing the letter in full.

This letter is an arraignment of the Massachusetts General Court for "merciless crueltie" to the writer's wife. It is not precisely lawyer-like in its mood, but its expressions are those of one who had been trained in the law, and thus gives color to the connection between the writer and Sir James Dier, the pride of Somerset in Elizabethan days. If I am not mistaken, William Dyer was his great-nephew—so it appears from the Somerset visitation of 1623. The same commingling of intense moral indignation and indignant protest against grievous wrong with the meticulous precision of argument characteristic of the law shows in the closing words of William Dyer's letter to the same General Court of May 3, 1660, where he pleads with tears for the life of his "one most dearly beloved":

"I shall forbeare to troble yor Honrs wih words neyther am I in a capacity to expatiat myself att present: I only say this yor selues haue been & are or may bee husbands to wife or wiues so am I, yea to one most dearely beloued: oh do not you depriue me of her, but I pray giue her me once agen & I shall bee so much obleiged for euer, that I shall endeavor continually to utter my thankes & render yor Loue & Honr most renowned: pitty mee, I begg itt wth teares, and rest yors

"most humbly suppliant

"Wm. Dyre."

A point of more general interest, historically, is that the General Court of Massachusetts, having been arraigned for "merciless cruelty" by William Dyer (in the letter discovered by Mr. Ford and first published by you on May 29, 1902), on the 7th of September, 1659, felt called upon to make answer by a proclamation in rejoinder on October 18, 1659, as follows:

A DECLARATION | of the | GENERAL COURT | of the | MASSACHUSETTS | Holden at *Boston*

in *New England*, October 18, 1659. Concerning the Execution of two Quakers.

*Although the justice of our proceedings against* William Robinson, Marmaduke Stephenson *and* Mary Dyer, *Supported by the Authority of this Court, the Lawes of the Country; and the Law of God, may rather persuade us to expect incouragement from all prudent and pious men, then convince us of any necessity to Apologize for the same, yet for as much as men of weaker parts, out of pitty and commiseration (a commendable and Christian virtue yet easily abused and susceptible of sinister and dangerous impressions) for want of full information, may be less satisfied, & men of perverser principles, may take occasion hereby to calumniate us, and render us as bloody persecutors, to satisfie the one and stop the mouths of the other, we thought it requisite to declare.* That about three years since divers persons professing themselves *Quakers* (of whose pernicious Opinions and Practices we had received intelligence from good hands, from *Barbadoes* to *England*,) arrived at *Boston*, whose persons were only secured to be sent away by the first opportunity, without censure or punishment, although their professed tenets, turbulent and contemptuous behaviour to Authority would have justified a severer animadversion, yet the prudence of this Court was exercised onely in making provision to secure peace and order here established against their attempts whose design (we were well assurd of by our own experience, as well as by the example of their predecessors in *Munster*) was to undermine and ruin the same, And accordingly a Law was made and published prohibiting all Masters of Ships to bring any *Quakers* into this jurisdiction and themselves from comming in on penalty of the House of Correction till they could be sent away. Notwithstanding which by a back Door they found entrance, and the penalty inflicted on themselves, proving insufficient to restrain their impudent and insolent obtrusions, was increased by the loss of the ears of those that offended the second time, which also being too weak a defence against their impetuous fanatick fury, necessitated us to endeavour our security, and upon serious consideration after the former experiments, by their incessant assaults, a Law was made that such persons should be banished on pain of Death, according to the example of *England* in their provision against *Jesuites*, which sentence being regularly pronounced at the last Court of Assistants against the parties above named, and they either returning or continuing presumptuously in this jurisdiction, after the time limited, were apprehended, and owning themselves to be the persons banished, were sentenced (by the Court) to death, according to the Law aforesaid which hath been executed upon two of them: *Mary Dyer* upon the petition of her Son and the mercy and clemency of this Court, had liberty to depart within two dayes, which she hath accepted of.

The consideration of our gradual proceeding, will vindicate us from the clamorous accusations of severity; our own just and necessary defence calling upon us (other means fayling) to offer the poynt, which these persons have violently, and wilfully rushed upon, and thereby become *felons de se*, which might it have been prevented and the Soveraign Law *Salus populi* been preserved, our former proceedings, as well as the sparing *Mary Dyer*, upon an inconsiderable intercession, will manifestly evince, we desire their lives absent, rather then their death present.

Printed by their order in
NEW ENGLAND
*Edward Rawson*, Secretary.

Reprinted in *London*, 1659.

This Declaration was discovered by me bound up in a miscellaneous collection of pamphlets entitled "Quakers" and catalogued in the Bodleian Library "Woods 645." I published it with documents, one other among which had never been printed (see in the Public Record Office *Colonial Papers ix. 74*), in a series of notes on "William Dyer, a Somerset Royalist in New England," in the *Somerset & Dorset Notes & Queries* (1899-1900). Mr. Samuel Green of the Massachusetts Historical Society, to whom my discovery was communicated by the late lamented John Fiske, had no record of the printing of such a declaration in New England implied by the note on the Bodleian Broadsheet, "Reprinted in London, 1659." I therefore appended the note: "No traces exist of the original printing in New England here alluded to. Possibly the notion that this document was a reprint arose in England, where its apologetic temper would excite no surprise." Now that Mr. Ford has discovered William Dyer's arraignment of the General Court, delivered "into ye court by his wife M: D:" on September 7, 1659, the apologetic temper of the Declaration is explained, and it seems certain that the Declaration was first printed at Boston and then reprinted in London.

The fact should be borne in mind that we can understand the relentless animus of the colonial authorities of Massachusetts Bay in their persecution of Mary Dyer in 1659, and her execution in 1660, only by going back twenty-odd years and reading one of the darkest pages in the gruesome history of pious superstition—an episode which took place before William Dyer and his wife shook from their feet the dust of Massachusetts and joined in the foundation of Rhode Island. This episode is so revolting that it can hardly figure in history as it is now written, although it is blazoned forth in Governor Winthrop's Diary edited by Mr. Savage. Under Winthrop began the wanton persecution of Mary Dyer in the month of October, 1637, and, viewed in the lurid light of the annals of that year, her barbarous molestation and imprisonment of 1659, followed in 1660 by her execution, takes on all the aspect of an anti-climax.

Yours truly, LOUIS DYER.

OXFORD, June 10, 1902.

---

## SHAKSPERE SONNETS IN MS.

TO THE EDITOR OF THE NATION:

SIR: Mr. Dobell, the delightful disorder of whose shop in Charing Cross Road has doubtless furnished rich browsing for many of your book-loving readers, includes in his June catalogue an item of exceptional interest to vary the monotony of "quarto, calf, gilt, fine copy, neat," at so many £ s. d., and puts forth with this catalogue a facsimile leaf of a seventeenth-century miscellany that will be unusually interesting to Shakspere scholars. The miscellany is one of those early collections of MS. poems which in many cases furnish the only textual source for the somewhat fugitive lyric poetry of the late sixteenth and early seventeenth centuries. It embraces, among other copies, excerpts from Shakspere's Sonnets. The facsimile page shows three of these sonnets, two made up by running together lines from various sonnets, and one containing Sonnet CVII complete.

At the top of the page stands a couplet from Ben Jonson's verses prefatory to the Folio of 1623:

"Nature her selfe was proud of his designes
And Joy'd to weare the dressings of his lines."

with "Shakespeare" in the margin opposite. This varies from the couplet as it stands in the Folio in having "dressings" for "dressing"—the word ought to be plural, see the Oxford Dictionary 4 b. The handwriting of the couplet is apparently the same with that of the rest of the page, but the verses are written with a different pen, if one may judge from the facsimile.

Then follow three sonnets, unpunctuated, the first without title:

LX. 5 Natiuity once in ye maine of light
6 Crawles to maturity wherewith being Crownd
7 Crooked Eclipses gainst his glory fight
8 And Time that gaue doth now his gift confound
9 Time doth Transfix ye Flourish set on youth
10 And Delves ye Paralels in Beautys Brow
11 Feeds on ye raritys of Natures truth
12 And nothing stands but for his sith to mow

LXV. 3 O how shall beauty with this rage hold plea
4 Whose action is no stronger then A Flower
5 O how shall summers hungry breath hold out
6 Against ye wrackfull siege of battring days
7 When Rocks Impregnable are not so stout
8 Nor gates of steele so strong but time decays

The first part of this stanza is (as I have indicated at the side) from Sonnet LX; to this are joined vv. 3-8 from Sonnet LXV; the lack of rhyme between "plea" and "flower" marking the break. The first passage is substantially the same as that of the text of 1609, but in the second passage appear two interesting variants from the *textus receptus:*

"O how shall beauty with this rage hold plea"

is certainly smoother than

"How with this rage shall beautie hold a plea";

but "hungry breath" is as clearly a corruption of "hunny breath," a phrase which Shakspere makes use of in "Titus Andronicus" II. 4. 25. This latter variant is interesting, however, in showing the reading of the edition of 1640. The "wreckful" of our texts in v. 6 of Sonnet LXV is a modern impertinence; the Quarto, 1609, reads "wrackful" as does this MS. The modern substitute is just as pedantic as would be "wreck and ruin" for "rack and ruin." But poor Shakspere has had so much to suffer from being twisted into schoolmistress's English that perhaps such a small matter as this is hardly worth noting.

Following the above comes Shakspere's Sonnet CVII, with the title "A Monument," complete and substantially as in the Quarto of 1609, save that

"Whilst he Insults ore dul & sencelesse tribes"

stands in the MS. for

"While he insults ore dull and speachlesse tribes";

and

"When tombs of brasse and tyrants crests are spent"

appears in the MS. instead of

"When tyrants crests and tombs of brasse are spent."

The first of these variants, "sencelesse," is clearly inferior to the "speachlesse" of the *textus receptus*, for Shakspere is thinking of his articulate monument outliving those of dull and speechless tribes. The second, reversing the order of the clauses as they stand in the Quarto of 1609, gives a smoother verse. (It should be noted that, in Elizabethan English, "tyran" was a common form of the word, and its employment in v. 14 avoids the cacophonous *t*'s.)

The third Sonnet of the facsimile page has the title "Cruel," and runs:

I. 5 Thou Contracted to thine owne bright eys
6 Feedst thy light flame with selfe substantial fewell
7 Makeing a famine where aboundance lies
8 Thy selfe thy foe to thy sweet selfe too cruell
9 Thou that art now the worlds fresh ornament
10 And onely herauld to ye Gaudy spring

11 Within thine owne Bud Buriest thy Contend*
12 And tender Churle makes wast in niggarding
13 Pitty ye world or Els this Glutton bee
14 To Eat ye worlds due by ye world & thee
II. 1 When forty winters shall besiege† thy brow
2 And Dig deep tranches in thy beautyes field
3 Thy youths Proud liuery so gazd on now
4 Wil be A totterd‡ weed of small worth held
LIV. 5 The Canker bloomes haue ful as deepe a dy
6 As ye Perfumed tincture of ye roses

The figures in the margin again indicate the sources of the various parts of this imperfect sonnet and its appended couplet. The only substantial variants occur in its first verse, where Shakspere's "But," which connects v. 5 with the preceding quatrain, is omitted; in its second verse, where "light flame" appears for Shakspere's "lights flame"; and in its tenth verse, where "by ye world & thee" stands for Shakspere's "by the graue and thee."

In regard to this collection, the first thing to ascertain is whether it really belongs to the middle of the seventeenth century, as its handwriting would indicate, or is a later imitation of seventeenth-century handwriting. Unfortunately, such things are, and have come over the text of Shakspere as more than a summer cloud. The second is the value of its readings: are they representative of one of those collections of Shakspere's "sugared sonnets for his private friends," and thus an independent source for the text, even if corrupt? Or are they based upon one of the printed editions, 1609 or 1640? The brief selections on Mr. Dobell's page point suspiciously to the edition of 1640: "hungry breath" for the "hunny breath" of 1609 is one of the readings of the 1640 edition. The MS. likewise shows the tendency to give to particular sonnets, or groupings of sonnets, short titles which appear in the 1640 edition. There "A Living Monument" is the short title given to Sonnet LXV. "Love's Cruelty," which introduces Sonnets I, II, and III in edition 1640, is suspiciously like the "Cruel" in this collection.

However these questions may be solved, the MS. Mr. Dobell offers is exceedingly interesting and valuable, and we trust the price he sets on it will not keep it from coming to America. But, wherever it goes, let us hope that it will not share the fate of many such collections, and get into the hands of some rich literary eunuch who will guard it from publication. We want to know all we can about the text of the Sonnets, which were evidently printed by Thorpe in 1609 from an unusually correct MS. copy, yet have not the authority of Shakspere's own recensions. It would be worth the price asked to have the single perplexing printer's error in CXLVI—

"Poore soule, the center of my sinfull earth,
My sinful earth these rebbell powres that thee array,"

illumined by even such a farthing rushlight as a MS. like this might furnish.

M. H. L.

June 21, 1902.

# Notes.

Lists of the chief errata, as to facts and dates, in the 'Dictionary of National Biography' are soon to be published in consummation of that great work. Corrections (on these lines only) are requested to be sent without delay, addressed to the Dictionary at No. 15 Waterloo Place, S. W., London.

Messrs. Dent & Co. of London have in preparation and will publish in the autumn a collection of letters by Mr. H. J. Ross, a friend of Sir A. H. Layard, whom he helped to unearth Nineveh. His recollections will be of interest to American readers, as, among other things, are mentioned the relations of the American missionaries with the Nestorian Christians prior to the great massacre of 1843 by Bedr Khan Bey (the Full Moon [of religion]), chief and lord of Bukhtan, and his relative Nurullah Bey (the Light of God), chieftain of the Hakkary. At the close of the Crimean war, Mr. Ross was asked by the Government to undertake the sale of the large number of animals collected in Asia Minor and Turkish Arabia for the projected British campaign in Georgia, and he marched across the Taurus and the Anti-Taurus, from the Black Sea to the Mediterranean, at the head of a convoy extending for many miles. Pictures of a life now no longer existing in the East abound in these pages, which see the light after more than half a century.

The first volume of Dr. Charles Waldstein's 'The Argive Heræum' is now printing (Houghton, Mifflin & Co.), and subscribers may expect their copies at latest early in July. Much of the second volume is in type, and it may see the light before the close of the present year. Subscriptions (at $15 and $30 per volume, according to the binding) should be sent to Prof. J. R. Wheeler, Columbia University.

Autumn announcements of Houghton, Mifflin & Co. are T. W. Higginson's Life of Longfellow; a new volume of short stories by Thomas Bailey Aldrich; and a summary history of the Louisiana Purchase, by Dr. James K. Hosmer.

E. P. Dutton & Co. will publish in a few days 'The Home Aquarium,' by Eugene Smith.

Few men of letters have been held in higher personal esteem than the late Charles Dudley Warner. He was as genial a companion as any of the Bohemians; but his character was so pure and his ideals so high as to give him unusual claims to respect and admiration. The posthumous collection of essays and addresses entitled 'Fashions in Literature' (Dodd, Mead & Co.) is to be regarded as a memorial, and the variety of the author's interests is shown by the table of contents. There are literary studies, biographical essays, and addresses on the education of the negro, copyright, the indeterminate sentence, etc. Throughout them is diffused a sense of humor which relieves the strain of seriousness, and wins for the author the good will of his readers. They are even more distinguished by generous and elevated feeling and by good sense. The judgments pronounced are of permanent value; many of them are applicable to the problems of to-day. It would be easy to fill pages with quotations which will not lose their point during this century, at least; but the book should be owned by all who take a serious interest in the welfare of our country. It illustrates true patriotism in a manner which is charming as well as impressive, and softens our regret that the voice of the author is now silent with the reflection that his written words abide with us.

Mr. Edward P. Van Duzee, Librarian of the Grosvenor Library of Buffalo, N. Y., has compiled a Catalogue of Poetry in the English Language contained in that collection. The number of volumes and pamphlets recorded is 3,542 and 296 respectively, American somewhat preponderating over English. The list is classified, and will have its uses, though not the greatest, as there is no index.

Misses Stone and Fickett's 'Trees in Prose and Poetry' (Ginn & Co.) will serve an excellent purpose in the schools by way of supplementary reading. The compilation is not so easy as one might suppose. Lowell has proved a good quarry, and is here represented by his "Rhœcus," his "Birch Tree," and other appropriate selections. Bryant, George S. Burleigh, Whittier, Longfellow, are also on hand; and George P. Morris's "Woodman, spare that tree," might have been retained beside its Campbell parallel. Here is also much from Wordsworth, with Spenser, Tennyson, Hood, and Rossetti; nor is Heine's "Pine and Palm" wanting. There are pretty and instructive photographic views of trees.

We have received from P. S. King & Son, London, the second part of 'Smith's Index to the Leading Articles of the *Times*,' for the five years ending December 31, 1900. The first dealt with Names, the present deals with Places, geographically classified; and Sources and Subjects (logically classified) will furnish material for two concluding parts. This index may be of future service to the historian; a present use will be to enable the *Times's* "esteemed contemporaries" to compare its sentiments from year to year. It would seem as if some members of Parliament had constructed a private Chamberlain index for a like purpose.

The third edition of Paul Deussen's 'Die Elemente der Metaphysik,' just issued by F. A. Brockhaus in Leipzig, has been somewhat enlarged by the addition of an introductory essay "Ueber das Wesen des Idealismus," in which the author endeavors to show that the idealism of Kant, as supplemented by that of Schopenhauer, does not differ essentially from the ideas contained in the Upanishads of the Veda, the Dialogues of Plato, and the New Testament. Dr. Deussen is professor of philosophy in the University of Kiel, and the present volume is, in fact, a compend and conspectus of his academical lectures, intended primarily to serve as a guide to young men in this department of study. The work is encyclopædic in its character and scope, embracing a wide range of topics—physics, metaphysics, æsthetics, and ethics—which are discussed from various points of view, but always with reference to a common central principle underlying all phenomenal existence and constituting the fundamental element in mind, namely, the Will.

The second volume of Dr. Franz von Liszt's and Dr. Georg Crusen's 'Die Strafgesetzgebung der Gegenwart' (Berlin: Otto Liebmann) treats of penal legislation in non-European countries. Especially interesting and instructive is the account given of the penal codes of the South American states, of which that of the Republic of Ecuador presents the most surprising, indeed, scarcely credible, features of Jesuit government.

The Massachusetts Historical Society's

*Altered from or to "content" in same hand and ink. †Altered from or to "besiedg" in same hand and ink. ‡So also in Quarto of 1609; the form is common in Elizabethan English, and corresponds to Modern English "tattered."

fourteenth volume (new series) of Proceedings contains the record of meetings from March, 1901, to February, 1902, as well as several papers of interest and value. Among these are Worthington C. Ford's account of the genesis of the Monroe Doctrine, Charles Francis Adams's communication on John Quincy Adams and martial law, and James F. Rhodes's paper entitled "Who Burned Columbia?" Other contributions are two narratives of Sir William Phips's expedition against Canada in 1690, communicated by Samuel A. Green, and a collection of letters from Joseph Jones of Virginia to President Madison. A selection from the "Story Papers" contains letters of Justice Story, Webster, Everett, the Sumners, and others. There are biographical notices of Edward Griffin Porter, by Morton Dexter; of William Henry Whitmore, by William S. Appleton; of Augustus Lowell, by Thornton K. Lothrop; of Lucius Robinson Paige, by Henry F. Jenks; of Samuel Foster McCleary, by James M. Bugbee; of Robert Noxon Toppan, by Andrew McF. Davis; and of William Crowninshield Endicott, by his son and namesake—each accompanied by a portrait. A memoir of William Wetmore Story, by Charles Eliot Norton, and informal tributes to the memory of the Bishop of Oxford, John Fiske, Herbert B. Adams, Horace E. Scudder, and other deceased members are reported in full. A tardy appreciation of the late John Ward Dean appears in some remarks by William S. Appleton, who recognizes in him "perhaps the foremost antiquarian in these parts since the death of James Savage." He adds, "He ought to have been a member of this Society twenty years ago, and I hope and think that I am not the only one who regrets that his name is not on our roll."

Mr. George Ernest Bowman, Secretary of the Massachusetts Society of *Mayflower* Descendants, makes a remarkable showing for the success of this organization, in every respect, in his sixth report printed in the (retarded) January number of the *Mayflower Descendant* (Boston, 623 Tremont Building). One of the laborious undertakings is a card catalogue "of all persons, in every generation, whose descent from a *Mayflower* passenger we have verified by original records." This is going to be the great avenue to speedy settlement of every query regarding a suspected descent. All search of the records in any part of the Old Colony can be best conducted through the Society, for a fee which endows its Colonial Research Fund. Besides the card catalogue referred to, another is in progress of names and addresses of all persons now living who claim *Mayflower* descent; and a third takes in Unidentified Wives and Marriageable Women (limited strictly to families of Plymouth, Barnstable, and Bristol Counties). A table of members of the Society on page 45 shows John Alden's descendants in the ascendant (181), followed by Brewster's (172), Warren's (158), and Howland's (133). The frontispiece is a facsimile of Gov. Edward Winslow's will.

The Marine Biological Laboratory at Wood's Hole announces the resumption of the publication of the *Biological Bulletin*. It will contain original contributions on zoology, general biology, and physiology, reviews, and reports of work and lectures at the Laboratory, especially preliminary statements of important results. It will be open to contributions from any source, and is expected to fill, in America, the place occupied by the *Biologisches Centralblatt* and the *Anatomischer Anzeiger* in Germany by meeting the demand for the immediate publication of results.

The thirty-third annual report of the Cleveland Public Library Board is remarkable, possibly unique, in relating the construction and occupancy of a substantial and sightly building designed for temporary use pending the erection of a final home for the Library in connection with other civic buildings on an æsthetic scheme. The outlay for this transient receptacle will not exceed that for rented annexes had the old quarters been retained. We notice that in the children's department all books are bought on approval, "and in most cases read through before adding to the Library."

The journey through the Sudan east of the upper Nile to the Uganda Railway, which Major H. H. Austin describes in the *Geographical Journal* for June, was one of great hardship. Vast swamps alternated with desert tracts, where it was well-nigh impossible to get food or water. Near Lake Rudolf, several of the soldiers and porters were killed by the hostile natives. Much of the country passed through was fertile, but practically uninhabited, and big game abounded. "On several occasions we saw herds of magnificent elephants, and on two separate days were compelled to halt the whole caravan in order to allow these majestic brutes to cross our path in front of us." The object of the journey is not stated, but it is not impossible that the country eventually may be opened up by a railway, to whose construction, it is said, there are "no engineering difficulties." Among the remaining contents is a description, by Mr. W. B. Parsons, of the waterways and land routes between the Yang-tse and Canton. The most important of these in ancient times was the central route which crossed the mountains by a paved highway of unknown age. The traffic was so great that for thirty miles it is "lined with inns, shops, and stables almost continuously." Mr. Parsons is one of the very few foreigners who have been permitted to traverse Hu-nan, the most anti-foreign of Chinese provinces. He was even allowed to enter the capital, where he found shops generously supplied with all kinds of goods, native and foreign, including English medicines and American tinned vegetables and fruits.

The interest excited by our recent article on a museum of art photography, which we were prompted to write by Sir Martin Conway's discussion of the subject in his 'Domain of Art,' warrants our referring our readers to Sir Martin's letter regarding an exhibition of photographs at Liverpool in April, 1887 (see the *Nation* of May 5 in that year). His idea is at least as old as that. We learn, from a recent letter, that he has just examined at Berlin the remarkable Schweitzer collection of art reproductions in photography historically arranged—30,000 or more in number. "The fundamental necessities are," he adds, "approximate uniformity of size and relative smallness; also *thin* mounts, and facility for changing the order of the plates."

—Again we must record the death of a long-time contributor and warm friend of the *Nation*, in the very midst of his cheerful service. Mr. Dean Sage of Albany, who died suddenly on Monday, at his summer camp on the Ristigouche River, was a son of the late Henry W. Sage, the great benefactor of Cornell University, and himself in turn a liberal giver to that institution. While he had been prepared for college, he passed directly to the Albany Law School, and was admitted upon graduation to the bar; but this was by way of fitting himself for large business enterprises. He was a man of frank and generous disposition, impulsive and courageous in action, abounding in deeds of human kindness, fond of outdoor life, yet equally fond of books. Of these, in his special line of angling, he amassed a remarkable collection, which he increased some years ago with a sumptuous volume of his own on 'The Ristigouche and its Salmon-fishing,' and quite recently with half of the volume on Salmon and Trout confided to his care by Mr. Caspar Whitney. He had exceptional descriptive powers, and humor was the salt of his life. One of the traits which his invincible modesty concealed from the many was a genuine poetic gift, in consonance with his love of wild nature. He was sixty-one years of age, and will be greatly missed on both sides of the Atlantic.

—The July *Century* discusses two topics of prime interest to our future development, the Volcano Systems of the Western Hemisphere, and the Problem of Irrigation. The former of these topics is treated by Robert T. Hill of the Geological Survey, who was among the first to study on the ground the recent outburst of Mont Pelée. Five distinct regions of present volcanic activity are recognized on the Western hemisphere—the Andean group, of equatorial South America; the chain of cinder cones crossing the southern end of the Mexican plateau; the Central American group, on the Pacific side of Guatemala, San Salvador, and Costa Rica; the Windward Islands group, which has lately given so painful an interest to the whole subject, and the volcanoes of Alaska and the Aleutian Islands. It need hardly be said that Mr. Hill's diagrams and statements fully justify those who have so effectively used the volcanic argument against the Nicaraguan Canal route. Men whose knowledge of geography dates from the day of Humboldt's supremacy will note with interest Mr. Hill's demonstration that the supposed backbone of mountains extending north and south throughout the hemisphere does not exist, since the Andean system terminates in northern Colombia, and the Rocky Mountain system in the plateau south of the City of Mexico. The intervening system, for which the name Antillean is suggested, is different in origin, and lies directly across the trend of the great northern and southern systems. It will be a surprise to most readers to learn from Mr. Baker's paper on Irrigation that more than half the world's crops to-day are raised by means of an artificial water supply. The contrast between the desert as it is and the desert as it may be made where water is accessible, is strikingly shown by a description of the conditions in the famous Salt River valley of Arizona, where a few hundred miles of ditching, at a cost of about $3,000,000, has permitted the development of property valued at $30,000,000, and

sustaining a population of 25,000. Mr. Baker's paper gains interest from its appearance just as Congress has definitively committed the country to a policy of irrigation at the national expense.

—It is interesting to learn from the Editor's Study, in the July *Harper's*, that a magazine must have *organic unity*, both in the individual number and in the succession of numbers. The interest in this comes from the fact that, among American magazines of standing, *Harper's* goes to the extreme in the number and range of subjects crowded within a given number of pages. The title-page entries of the current issue number thirty-one, and the average space allotted to each entry is slightly over five pages, only a little more than half the average length of the fourteen items in the make-up of the current *Scribner's*. Evidently, the editor prefers to attack his problem of organic unity in its most difficult form, and it is doubtful whether many readers will feel that he has secured a complete solution. The lover of literary and linguistic studies will find much to his liking in Edmund Gosse's paper on "Elizabethan Dedications of Books," Professor Woodberry's discussion of the "Beginnings of American Literature," Professor Kittredge's remarks on the "Ways of Words in English Speech," and Mr. Howells's genial talk on "literary revivals," drawn forth by the rumored immanence of a Dickens renaissance. It is pleasing to be assured by Professor Woodberry that our colonial forbears were decidedly not an unliterary people, however scant their literary production; it is good to find Professor Kittredge holding the scales fairly on the level of a healthful and normal linguistic growth, as against purism on the one hand and lawlessness on the other; and, without regard to literary classification, we may unite with Mr. Howells in welcoming a revival of Dickens, if his essentially democratic and sympathetic spirit shall exert its legitimate influence "at a time when our earlier and nobler ideals of nationality seem to be endangered." But will the same type of reader peruse with a feeling of organic connection what Professor Newcomb has to say of the current activities of astronomers, or Mr. Overton W. Price's intensely practical discussion of the economic management and preservation of private forests? We fear that the editor will be able to prove the organic unity of his monthly budget only to a type of mind which the present-day specialism tends to render extinct.

—One could not wish more delightful summer reading than the July *Scribner's* presents in Will H. Low's account of his recent work "In an Old French Garden." If it were every artist's lot to immure himself for nine months of the year within the spacious, tastefully planned, and well-kept gardens of an old French estate, and ply his art surrounded by a few congenial spirits, alike enough in general aims to secure a common interest and yet sufficiently different in methods to lend spice to discussion and avert stagnation, few of us would not thank the Fates if they should put such a lot in our way. The text is accompanied by thirteen illustrations from Mr. Low's own paintings, each one representing some feature of the grounds described. William A. Coffin, in a letter to Mr. Sturgis, gives a general view of "Twenty-five Years of American Art." It is decidedly hopeful in tone. Public exhibitions, from Paris in 1878 to Buffalo in 1901, have shown constant and rapid progress, and American artists are more loyally supported by their own people, in his opinion, than those of any other country. And yet there are disadvantages. The hurry and restlessness of American life, shown in the excessive number of art exhibitions as in so many other ways, is not favorable to the pursuit of the artist's profession; our landscape painting is below the highest attainable standards in dignity and style; the virility produced by firm, strong drawing is lost in the desire for decorative effect; too often the painter has not the patience, perseverance, and grit to carry his work on through the various stages to completeness; there is too little sincere effort to secure in portrait work the nobility and beauty of such painters as Titian, Velasquez, and Rembrandt; and a misplaced kindness in criticism tends too much to encourage the weak to persist in their weakness. The reader whose interest carries him out into the wilds at this season of the year will not want to miss Arthur Heming's description of the run of the Abitibi Fur Brigade, the last remnant of the many extended canoe lines by which the Hudson's Bay Company was wont to gather in its annual harvest.

—'Among the Water Fowl,' by Herbert K. Job (Doubleday, Page & Co.), a pleasant narrative of the writer's experiences in the haunts of the larger water birds, contains much original and valuable material concerning the habits of these little-studied species. No author has been more familiar with their nesting habits. Mr. Job uses the camera instead of the gun and the scalpel, and he illustrates his text by a remarkable collection of excellent photographs. He has been afield in New England, the Dakotas, and Minnesota, and has visited the famous bird rock in the St. Lawrence, where nesting murres, kittewakes, and gannets line the ledges. In a shallow, grassy lake of North Dakota he found a nesting colony of more than 5,000 Franklin's gulls. The chapter describing this and other gull settlements will probably have most interest for the general reader. A chapter on grebes, which, from "their fish relations and habits of submergence," he calls the "Submerged Tenth," is also worth noting. "Here were the slums of a larger Grebe city than I had seen before. . . . As we looked off, we saw, some distance away, hosts of other grebes sitting or standing upon their floating nests. . . . Reaching the place, we found that a lane of water ('Broadway,' I called it) divided the city into an east and west side. On the 'east side,' along the edge of a tract of grass, the nests were crowded, four or five deep, for some distance. . . . Conditions here, as might be expected, were simply scandalous. Eggs lay rotting in the watery streets, in one spot as many as fifteen together; the result, probably, either of a storm or a squabble. Débris of all sorts was strewn around with utter indifference to the public health." The chapter most interesting to the ornithologist is on ducks and geese. Mr. Job writes of finding the nests and eggs of nineteen species of ducks, and the young of another —an experience that few students have surpassed.

—The constantly growing interest in physical geography, and the recognition of its educational value when scientifically presented, have been shown by the appearance of eight or nine new text-books on that subject in the past six years. The most recent of these is an 'Elementary Physical Geography' (Boston: Ginn & Co.), by Prof. William M. Davis of Harvard University, who has long been an admitted leader in the modern scientific development of the subject. It is chiefly, but not entirely, an abridgment of a larger and successful text-book by the same author, published four years ago. The treatment of the atmosphere, however, has been somewhat amplified, and there is a new chapter on "The Distribution of Plants, Animals, and Man"—additions which will certainly commend themselves to teachers. "Rational treatment" is the keynote to this book, as it was to its predecessor. "The ideas of cause and of consequence—one preceding, the other following, the physiographic fact—have been held constantly in mind by the author"; but he has wisely discerned that there are certain facts of great importance, *i. e.*, the rotation of the earth, the tides, etc., whose causes are not susceptible of elementary statement. Such facts must be described and their consequences considered while their causes are but lightly touched upon. In his compromises between complicated explanation and elementary statement, the author has been very successful. Certain subjects commonly given in similar books are omitted, because, as stated by the author, "elementary text-books should not present an encyclopædic richness." The numerous, well-selected illustrations, particularly those of land forms, are many of them original with Mr. Davis, and add greatly to the value of the book. Taken all in all, this seems the most satisfactory elementary text-book in physical geography yet published. Certainly in its treatment of the land it has not been surpassed, unless, perhaps, by the author's larger work, already referred to.

—Two learned societies at Oxford have recently been favored by reports of recent explorations in the Mediterranean basin. The Oxford Philological Society had a most notable account from Mr. Arthur Evans of the bearing of this year's discoveries upon the understanding of the strange Minoan characters found in such abundance in the "House of the Double-Axe" at Knossos. He exhibited facsimiles of three clay tablets found this year, upon each of which were three or four numbers the sum total of which (though the numbers varied) amounted in each case to 100; this plainly showed the inscriptions to have to do with percentages. Thanks to the rare enterprise of the Clarendon Press, Mr. Evans was able to exhibit to the society a large sheet of "Types for Prehistoric Script (Evans)," with a Synopsis of the "One-nick Two-line Pica fount" and of the "One-nick Great Primer fount." In producing these two founts, 203 characters (at first roughly outlined by Mr. Evans) were symmetrically redrawn and reduced by photography at the University Press. A line-block, made for each size, was then electrotyped, type-faces were cut out singly, and mounted on type-bodies,

and, from these, electrotype matrices were produced. Mr. Evans also exhibited to the Society a process-block reproduction in black and white line-drawing of the largest of the clay tablets upon which is the longest inscription yet found at Knossos; it was unearthed this year. At the end of two of the 25-odd lines of this inscription occur the signs for two numbers, 31 and 23, each being preceded by the "man" sign. Before this sign stand in each case the same three characters, the meaning of which must be "total," as there are plainly 31 units marked on the lines preceding the "total 'man' 31," and 23 units plainly recorded on the lines preceding "total 'man' 23." This is one of the ways in which some progress towards decipherment has already been made. Mr. Evans related another case in point. Having noticed in a museum of the Levant three specimens of the clay tablets found at Knossos, which he was confident ought to have been among the treasures handed over by him to the Museum at Candia, he scrutinized them carefully, and, by certain marks upon them (horizontal scores), he identified them as found in a definite magazine of the "House of the Double-Axe" where he had employed a workman, since discharged. These observations resulted in a term of imprisonment for the workman, who was, at the moment he was speaking, still "in durance vile"—thanks to the careful housekeeping of old King Minos, no less carefully interpreted by the modern discoverer of his storage-records.

—Mr. Evans pronounced the scores by which these abstracted tablets had been identified along with their "abstractor," to be hardly distinguishable from those on the component parts of a beautiful bracelet (of gold, lapislazuli, and turquoise) which Professor Flinders Petrie had shown two nights before in a lecture on the beginnings of Egyptian history given before the Oxford Architectural Society. By carefully noting the scores, Professor Petrie had been enabled to group them together as the almost prehistoric goldsmith required, and the beauty and symmetry of the resulting design were surely the method's best justification. The bracelet in question was unearthed in a tomb which had already been dealt with by M. Amélinau. Indeed, Professor Petrie and the Egypt Exploration Fund are certainly to be congratulated on the treasures discovered where recent researches were supposed to have left nothing to be found. Perhaps the most remarkable among Professor Petrie's new revelations was one which exemplifies the scientific perfectibility of archæological research, when its methods are constantly readjusted by one possessing the necessary experience and insight. Having to deal, during his campaign just closed, with a site which contained, in successive layers, the remains, easily distinguished, of successive kings of the First Egyptian Dynasty, and also, below all these, the remains of several continuous, prehistoric periods, Professor Petrie hit upon the leading idea of minutely classifying, by means of a card-catalogue, the whole mass of pottery belonging to all these successive layers. Having spared none of the minutest pains imaginable in his classification of successive forms, our discoverer then tabulated his results, and, by skilful grouping, obtained a sort of chronology by which the development in the manner of fashioning pots can be followed from beginnings far earlier than the Herodotean Menes down through successive prehistoric strata into the continuous line of the kings of the First Dynasty. A moment's reflection will show how invaluable such a careful scheme of "fictile" progression must be, as giving an independent hold upon early Egyptian chronology. In fact, Professor Petrie called attention to the interesting circumstance that he had already derived, from the materials thus classified, a striking confirmation of the too often rashly impugned chronology of early Egyptian history as handed down to us by Manetho. Now, less than ever, can it be maintained that Manetho's dynasties of Egypt were not, as he represents them, continuous and successive.

## BARTON'S SEMITIC ORIGINS.

*A Sketch of Semitic Origins, Social and Religious.* By G. A. Barton, A.M., Ph.D., Associate Professor of Biblical Literature and Semitic Languages in Bryn Mawr College. The Macmillan Co. 1902. Pp. xiv, 342.

In the preface to this book, Professor Barton confesses, ingenuously enough, that to many Semitists his undertaking will certainly appear premature, and a satisfactory solution of his problem impossible. But he also records his conviction that his studies have led him "to the discovery of the path trodden by the Semites in the journey from savagery to civilization." This is a large claim, and doubters will be many. The lamented Robertson Smith published, in a single monumental volume, lectures which he regarded as covering less than one-third of the scope of Professor Barton's book, and did not claim in these to have described a key which would open all the locks. He was a consummate scholar and the master of a perfectly balanced mind, and so, though we now know that his sociological authorities had in part misled him, his work remains and need never be done again. How it will be with Professor Barton's it is cheap guessing. To the present reviewer, his results should have appeared in the tentative form of articles in the transactions of some society, and been limited closely to a study of the Ishtar cult.

But the book is here, and some estimate of it must be attempted. It begins with the beginning of things in a chapter of investigation as to the cradle of the Semites. That is placed in North Africa, where the Hamites and Semites formed one people; no attempt is made to define that elusive term Hamite. From Africa the Semites, now separate from the Hamites, passed to Arabia and thence dispersed. The view is thus the ordinary Afro-Arabian one. The treatment of the subject is second-hand to a degree; Dr. Barton, indeed, makes no claim to authority either in ethnology or in Egyptology. The decision, therefore, with which he rejects the opinions of Erman and other Egyptologists of the first rank on Egyptian language and history is remarkable enough. The whole chapter is uncalled for, is premature, and unnecessary to his book. His thesis could begin, and, so far as his first-hand contributions are concerned, should have begun, with the Semites in Arabia.

That thesis may be put shortly as follows: We must presuppose a primitive stage among the Semites when they were formed into totemistic clans; the marriage relationship was vague and uncertain, and lasted, at best, for a very short term—practically beena marriages; descent was reckoned through women, who remained with their own kindred; there was no conception of chastity, rather a reverence for the powers and means of reproduction; women thus had positions of considerable independence and authority. From this developed, in one direction, a Nair type of polyandry of which comparatively slight traces have survived, and, on another, of Thibetan polyandry through the formation of the more daring and enterprising into warlike and trading clans. These went out from the oases, plundered, traded, and captured women, and passed in time from polyandry into polygamy. With the change came male kinship, a declension in the position of women, and the baal conception of marriage which was finally fixed in Islam. Further, Dr. Barton holds that even in the most primitive Arabia the pastoral and semi-agricultural stage had been reached with especial cultivation of the date-palm. This, it will be noticed, is a modification of Robertson Smith's view rendered necessary by the present change of attitude towards McLennan's hard-and-fast sociological law which laid down a regular development from promiscuity through polyandry to polygamy. Against the simple matriarchate, Dr. Barton lays stress on primitive beena marriages, slackened by frequency of divorce and a light attitude towards chastity, or, rather, a putting of unchastity, as an expression of fertility, under religious sanctions. We thus pass from Dr. Barton's sociological to his religious hypothesis.

The absolute beginnings of Semitic religion he does not attempt, but contents himself with the probability "that among them religion did not originate in ancestor-worship." The point round which his interest centres is the goddess Ishtar, for him the most primitive and original figure in the Semitic pantheon, and not an introduction from the non-Semitic world. Her worship is found among all the Semitic peoples, and Dr. Barton regards all Semitic deities which are not introductions from without as transformations or modifications of her. She was a mother-goddess, typifying the earth with its fertility; the patroness of sensuality, of the easily slipped and short-lived marriage tie, and even of absolutely promiscuous sexual intercourse. Originally, she was a water-goddess, the divinity of a never-failing spring, and beside her stood a son, a sacred palm-tree, to which she gave life. The picture is thus of the typical Arabian oasis, a spring in the desert, with a palm dependent upon it. With this connects the myth of Tammuz, who is represented at one time as the son of Ishtar, at another as the first of her series of husbands, and last as the lost husband of her youth. This development in the Semitic myth follows step by step the development in the Semitic family. In the earliest Semitic family, the chief figure would be the mother, and the chief male, her son—the spring and palm-tree. Then Tammuz came to be viewed as a rejected husband "when marriage was still temporary and women quite free, but

when the original family relations between Ishtar and Tammuz had been forgotten." In the third form of the myth is a reflection of the later, more permanent, marriage bond. All this certainly might be a great deal clearer and is far from final, but, as a working hypothesis, there is much to be said for it. The source of all Semitic religions, according to it, is found in one form or other of the sexual principle. The male and female date-palm, fecundated by the wind, struck the sexually minded Semite as an exhibition of divine approval. A spring was to him the veritable water of life. Circumcision was a consecration of the same principle. The miscellaneous sexual intercourse practised under divine sanction at so many shrines, especially the solemn sacrifice of virginity, of which we have record here and there in the Semitic world, is a survival from the old times with their primitive ideas of worship and of the divine. Religious conservatism here perpetuated practices which the feeling of the race had otherwise gradually rejected.

From this goddess Ishtar, then, by development, change, and combination came the other Semitic deities. As the tribes became more warlike and needed warlike leaders, as the system of male kinship developed, Ishtar tended to pass from a goddess into a god. Sometimes she survived independently in the middle of a pantheon that had grown up out of herself. So in Babylon; yet there Ishtar was a goddess of war quite as much as of love. At other times she remained as a consort of a male deity also developed from herself. These transformations Dr. Barton works out with great minuteness, and really produces a very considerable amount of evidence in their support. But into the details it would be out of place to enter here. It may be said in short (1) that he is too much inclined to support his hypotheses with other hypotheses and to go far afield for ethnological parallels. Thus, he finds the Sumerian hypothesis a useful means of explaining gods in Babylonia which he cannot reduce back to Ishtar, and supports his whole thesis on a comparison with the Aztec development, and (2) that he has apparently no idea of the variety of forces that were at work, producing and modifying early religious ideas. A chapter on survivals of the Ishtar cult goes even further in these directions, and reminds vividly of the dexterity and ingenuity of the more strenuous supporters of the sometime solar myth. But a goddess who can turn herself at any time into any of her own husbands or all of them or into her own son, remaining or not herself at the same time, has evidently Protean possibilities far ahead of any that the Sun ever enjoyed even in its most high and palmy state. The thing at times approaches closely to a *reductio ad absurdum*.

But the crowning triumph comes in the seventh chapter, and Jezebel and Elijah, had they but had the advantage of Dr. Barton's researches, might have made peace together, for their Yahwé himself is found to be simply another transformation of Ishtar, and therefore the same, at a few removes, as the Ashtart of Tyre. It is all very simple. The Kenite hypothesis carries Yahwé back to an Arabian tribal god. But that god, *ex hypothesi*, had been transformed from the mother-goddess, therefore, etc. Support is found in many things, circumcision, oath formulæ, the passover, and the characteristic phrase, "the *ashtaroth* of the flock," all the palm trees which have got into the Old Testament, and some trees which are not palms, the name Yahwé itself, Dr. Barton's view of the origin of which is much more original than he seems to think. Finally come a few pages on the later development of the religion of the Hebrews, and a sketchy and uncalled-for chapter in estimate of the influence, social and religious, of the Semites on the non-Semitic world. With the prophets and still more with Jesus any thought of a development is frankly abandoned. Their attitude and teaching are posited as utterly unaccounted for by their environment; practically the Hebrew revelation—and for Dr. Barton it was a revelation—began with them and not with Moses. This is a more thorough cutting of the knot than usual, and it is improbable that it will find favor either with revelationists or evolutionists.

It must be confessed that the impression produced by this book as a whole is not a satisfactory one. Admittedly Dr. Barton is not a specialist in ethnography, sociology, or Egyptian, but he acts very much as though he were, and picks out of books the points which fit his speculations, until the Ishtar cult, on which he may fairly claim to have specialized, runs risk of being obscured by the things meant to support it. Primitive sociology is still in far too uncertain a state to render safe such a course as this. With a little reading in current sociological hand-books, almost any hypothesis might be triumphantly established. Again, Dr. Barton's tone towards those who may not or do not agree with him might often be better. Such remarks as those at the top of page 306, the condescending attitude towards Driver on page 103, the worse than condescending towards Robertson on page 275, the comment at page 38 on those Egyptologists who do not admit totemism in Egypt—all these things are not in place. Again, for a low standard in scholarship we were prepared by the most unhappy Syriac and Arabic texts and translations in Dr. Barton's two papers in *Hebraica*, vols. ix. and x., but it might fairly be pleaded that these *bévues* date from eight years ago. On page 11 of this volume, however, we discover that his German, and on page 246 that his Greek, are equally shaky. Nor is the repeated occurrence of Qa'aba for Ka'ba calculated to restore confidence in his Arabic. His etymologies, too, on the Hebrew and Arabic side, are apt to be unfortunate. Thus, *Yahwé* as a hiphil may mean "he causes to come about, or happen"; it cannot mean "he gives life." The difference between the roots *haya* and *haya* is very marked; as great as between *werden* and *leben*. If Dr. Barton wishes to make a connection between Yahwé and the fundamental conception in the Ishtar myth, his course is plain through Arabic; the Kenites, *ex hypothesi*, spoke some form of Arabic. *Hawiya*, 'he loved passionately, desired,' is excellent Arabic, and as good a derivative for Yahwé as most of those that have been proposed. Again, Dr. Barton's etymology of Ishtar will hardly stand; it would have been better if he had remained by Robertson Smith's cautious statement. The Hebrew *'ashar* and Aramaic *'athar* do not connect with the Arabic *'athara*, but with *ghathara*. Further, the meaning of the Arabic *'athara* cannot be uncertain; it occurs in too various and different phrases. It means 'to trip over, to stumble over, or into'; from it *'āthūr* can be immediately derived as a pit dug for a trap, thence a deep trench either worn by a torrent or dug for irrigation. Whether *'athari* (or *'aththari*) is derived from the name *'Athtar* is a different question. The Arabic lexicographers (*Lisān*, vi., p. 215) assert that the tree is so called because it "stumbles on" the water necessary to it, and does not need to be irrigated. This may seem to us far-fetched, but it is dangerous to dogmatize on the connections of thought in the Arab mind. The subject which Dr. Barton, following Robertson Smith, has opened up is wide and difficult, but if he will read carefully the related passages in the *Lisān* (vi.. 214 ff.; xiii., 59 ff.; xix., 271)—Lane is not sufficient—he will learn a great deal of Arabic and other things besides. He appears to be of the school, too well represented among Orientalists, which lays more stress upon striking and original hypotheses than upon respect for grammar and lexicon. His power in suggestion and fruitful hypothesis is certain; we would entreat him not to cripple and discredit himself by such looseness of scholarship as this volume displays.

## THE HISTORY AND LITERATURE OF EDUCATION.

*Books on Education in the Libraries of Columbia University.* (Library Bulletins No. 2.) New York. 1901. Pp. 435.

*Source Book of the History of Education for the Greek and Roman Period.* By Paul Monroe. The Macmillan Co. 1901. Pp. 515.

*The Training of Teachers and Methods of Instruction.* Selected Papers by S. S. Laurie, A.M., LL.D., Professor of the Institutes and History of Education, University of Edinburgh. Cambridge (Eng.): University Press; New York: Macmillan. 1901. Pp. 295.

The Columbia catalogue of educational literature contains more than 13,500 titles, classified and indexed. It is, on the whole, a collection of very important literature, and shows the wide field with which the modern student of education must be familiar. Setting aside the conventional rubrics under which the books are classified, an analysis of the contents will be instructive. First is the large collection of literature containing facts—books on the history of education, present systems, the education of defectives, the training of teachers, methods of instruction, and the like. Second, the literature relating to development and physical health—child study, hygiene, and physical training. Third, the literature relating to the wider aspects of education—education and the church, education and the state, education and sociology, etc. Fourth, the works of the classic writers on education, containing the educational doctrines of the past and the ideals of the great schoolmasters—Plato, Comenius, Rousseau, Pestalozzi, Froebel, and Herbart. And, finally, a miscellaneous collection of literature relating to principles of education, the theory and practice of teaching, current problems, and the like.

Of this last class, probably, it may safely be said that 95 per cent. is of no special value except as showing the content of the pedagogue's mind, for whatever of truth it contains has been better expressed by somebody else, and what is untrue in it lacks even the merit of good fiction. For example, the German literature, which is well represented, consists largely of the restatement of old truth and the verbose discussion of dogmas that have become platitudes. A German writer himself quotes the satirist: "Mother Nature has been good to all; to the French she has given wine, to the Swiss milk, and to the Germans ink." No department of literature has shared more generously in this gift than educational literature; and thus it has come to pass that the only salvation for the student of education is the habit of ignoring most of what has been written upon the subject.

Education represents a universal human interest, but the literature of education is read only by the few. Everybody believes in education, yet few have faith in scientific pedagogy. All agree that education is one of the most vitally important things in a civilized country, and yet to the ordinary reader the history of education is most dry and uninteresting. The reason for this is not far to seek. The histories of education, the descriptions of school systems and of educational movements are for the most part mere catalogues of educational facts concerning school administration and organization, school curricula, special institutions, and technical methods. The wider relations are not seen. It is only when an educational system or an educational movement is studied in its genesis and in its social, political, and industrial relations that it becomes significant and interesting; but the ordinary writer upon education has been so close to the details that he has been quite unable to see these wider relations, to miss which is to miss everything really important, while to record them is to make the history of education one of the most vitally interesting of all subjects. In a word, the history of education and present systems of education should be studied as a part of the history of civilization and of culture, of *Culturgeschichte*. But so little scientific work has been done in this part of the field of education that it is practically impossible to write a satisfactory history. The necessary data are not at hand. The sources and authorities for such a history of education must first be made available.

Meantime, those who would give their students something better than the second-hand material of the ordinary history of pedagogy must send them to original sources. Professor Monroe, in his 'Source-Book,' has made these accessible for the classic period. The student of education, weary of the ambitious attempts to compass the whole history of education in one volume of a few hundred pages, will turn with relief to this writer, who attempts the modest but more important task of bringing together in approved translations the most important educational writings of the ancient Greeks and Romans. In his preface, the author states that he takes the term education in its narrower sense, "in the accepted historic meaning of the term, that of a definitely organized institutional attempt to realize in individuals the ideals controlling a given people"; and he limits his collection to works that bear more directly upon education in this narrower sense. The sources collected are of three classes: (1) those of more general character relating especially to the aims and ideals of education; (2) those which deal with education as the work of a specific institution; (3) the philosophical discussions of education as regards its function and means. Among the Greek writers from whom extracts are made are Thucydides, Aristophanes, Isocrates, Plato, Aristotle, Xenophon, and Plutarch. Among the Roman writers represented are Cicero, Nepos, Suetonius, Tacitus, Marcus Aurelius, Horace, Pliny the younger, Juvenal, and Quintilian. There is a good introduction to each chapter, and the whole constitutes a valuable handbook.

It seems a pity that the author should not have taken a somewhat wider view and devoted the whole volume to Greek sources. This would have made it possible to include other important writings relating to education in the broader sense; and illustrations might have been given of the other sources of historic evidence mentioned by the writer, "such as inscriptions, vase and mural paintings, and other works of art." Especially noteworthy is the omission of some of the important literature upon physical education. Since plays, games, and gymnastic exercises were such an important factor in the education of the Greek youth, the most important writings relating to this subject should have a large place. Homer's account of the great games and contests, and among the later Greeks the special monograph on physical education by Philostratus, as well as the dialogue on gymnastics, "Anacharsis and Solon," by Lucian, should be included. It would be desirable also to illustrate the psychology of the ancient Greeks, the science that lies at the foundation of practical pedagogy. For example, Aristotle's famous Essay upon Memory and Recollection might well find a place, a contribution containing substantially everything known about the psychology of association down to the special psychological studies of the last century.

Professor Laurie's book on 'The Training of Teachers and Methods of Instruction' is a reprint of a dozen or more addresses delivered by him on various occasions during the last twenty-five years. They deal with a wide range of subjects, from "The General Function of the Primary School" to "The University of the Future." Most of these have for some time been out of print. Like the literature referred to above, much of this book is a repetition; but it is necessary to repeat the same old truths to teachers, and Professor Laurie repeats very well. He recasts many of the old platitudes, imprints them with his own personality, brings out new aspects of truth, and withal writes with great discretion. The chapter on university education is important, and the description of the university of the future very interesting, although not quite adequate and convincing. The characteristic marks of this ideal are as follows: the university must embrace the whole tradition of philosophy, science, and learning, and each professor should "advance the bounds of his subject" and contribute his results to the world outside as well as teach "all who may come to him whether they intend to graduate or not." Further, the university must train for all the professions; as a guild of investigators and teachers it must be "a literary republic, self-governing and free." It "must train apprentices and specialists so as to secure the apostolic succession of competent representatives," and graduates should always remain members of the guild and "should be encouraged to return from time to time to find there (without payment) the last results of investigation." And, finally, the sum and consummation of all its teaching is the science of man and the conduct of life. "Literature, art, philosophy, religion—these constitute the true life of man, and they in some form or other enter into the culture of every youth who is to go forth as the legitimate son of the university and not as the bastard child of a specialist school"; but instruction in the practical applications of science which have to do with bodily needs, in contrast with intellectual interests, should be outside the universities, in separate technical colleges. "Degrees are mere accidents of a university," and "every professor and every subject should be accessible to the general public without reference to graduation." Universities in democratic countries must rest on the popular will, and exclusiveness in particular lines of study would be fatal. The University Extension system, however much despised by the monopolists of true culture and in spite of its attendant evils—especially examinations and marks—is a good movement and of old and respectable lineage, having been advocated by Bacon in the 'New Atlantis.' Thus, while conservative in his description of the university of the future, Professor Laurie holds to an ideal distinctly democratic, and he maintains "that the danger to which the university of the future is exposed is interference with liberty of thought and government on the part of the democracy."

*The Kindred of the Wild:* Book of Animal Life. Charles G. D. Roberts. Boston: L. C. Page & Co. 1902.

Despite the presage of his ambiguous title and the rather labored introductory chapter, the reader of Prof. Roberts's book, as he proceeds, cannot avoid the conviction that it is a masterpiece of its kind. An earlier volume by the same hand, 'The Heart of the Ancient Wood,' showed a most intimate and appreciative acquaintance with the habits and motives of the animal life of the woods. This one, which describes the life histories of various wild animals, does so with most extraordinary fidelity and breadth of knowledge. The author makes it evident that he knows whereof he writes, and writes from the fulness of his knowledge and interest, and for a public which can detect such errors of fact and flights of egotistic fancy as embellish the popular narratives of a certain favorite author on wild life and natural history.

The book begins with a story—in fact, all its chapters are stories—entitled, "The Moonlight Trails." These were the paths, regular and irregular, of rabits (hares?) in the snow among the firs, where they were wont to have social gatherings in the winter nights.

"From time to time two of these harmonious shapes would halt, sit upon their hind-quarters, erect their long, attentive

ears, glance about warily with their bulging eyes (which, in this position, could see behind as well as in front of their narrow heads), wrinkle those deft nostrils which were cunning to differentiate every scent upon the sharp air, and then browse hastily but with a cheerful relish at the spicy shoots of the young yellow birch. Feeding, however, was plainly not their chief purpose. Always within a few moments they would resume their leaping progress through the white glitter and the hard, black shadows. . . . Long ears, twinkling, round eyes softly shining, they leaped lightly hither and thither, pausing every now and then to touch each other with their sensitive noses, or to pound on the snow with their strong hind legs in mock challenge."

The story goes on to tell in what manner these rabbits were trapped, and gives an idea of the cruelty of that process of securing them.

"The Lord of the Air" is a tale of an eagle which, with his mate, had an eyrie on the top of a high mountain peak, from which watch-tower he made forays on the surrounding country for food for himself and his young family. He is thus described:

"His powerful beak, long and scythe-edged, curved over sharply at the end in a rending hook. His eyes, clear, direct, unacquainted with fear, had a certain hardness in their vitreous brilliancy, perhaps by reason of the sharp contrast between the bright gold iris and the unfathomable pupil; and the straight line of the low, overhanging brow gave them a savage intensity of penetration. His neck and tail were of the same snowy whiteness as his snake-like head, while the rest of his body was a deep shadowy brown close kin to black."

There follow most vivid descriptions of the eagle's manner of pursuit and overtaking of the various weaker creatures among which he sought his prey, and of his final capture by an ingenious trick, conceived and carried out by a half-breed. For a few weeks the bird remained in captivity, chained by the leg in an open shed that looked out on the river, whence, "across the forest hills, further than any human eye could see, a dim summit, as it were a faint blue cloud on the horizon, he could perceive—his own lost realm of Sugar Loaf. Hour after hour he would sit upon his rude perch, unstirring, unwinking, and gaze upon this faint blue cloud of his desire." The eagle finally escaped. "The air, as he bounded upward, whistled under his tremendous wing strokes. Up, up he mounted, leaving the men to gape after him flushed and foolish. Then he headed his flight for that faint blue cloud beyond the hills."

There are chapters on the moose, the wild goose, the cougar, the owl, the lynx, and other denizens of the forest and air, and the uniform and sustained excellence of all these cannot fail to excite the reader's admiration, especially of such as share the author's sympathetic feeling for animate Nature, and can realize from intimate contact with her how true an interpreter he is who writes this charming book.

The illustrations, by Charles Livingston Bull, are of varying degrees of merit, some of them being very good, and others failing entirely to express the ideas conveyed in the text. Perhaps those of the beasts of prey are the best. The rabbits (facing page 36) are very bad about the heads, and the drawings of the moose hardly appear to proceed from familiarity with the animal, especially that facing page 104, which resembles a rhinoceros as much as it does anything.

---

*Reminiscences of a Dramatic Critic.* By Henry Austin Clapp. Boston: Houghton, Mifflin & Co. 1902.

Mr. Clapp needs no introduction to those interested in the affairs of the American stage. For many years he has been recognized as one of the most trustworthy of theatrical critics, by virtue of his honesty, his good taste and judgment, his familiarity with dramatic history and literature, and his agreeable, discriminating, and expressive style as a writer. Naturally, his reminiscences make pleasant reading, and they are also valuable, especially to the younger generation of playgoers, as the deliberate opinions of a qualified observer of the respective merits of some of the greatest actors of the last thirty years. They do not pretend to be exhaustive—such players as Clara Morris, Lawrence Barrett, and Modjeska, not to speak of Bernhardt and other foreigners, not being mentioned at all; but it is nevertheless significant that they relate almost exclusively to the dead. Few living performers leave impressions upon the memory which are at once indelible and delightful.

As might have been expected, Mr. Clapp regards Boston as the centre of the theatrical world, and the Boston Museum of his youth as the perfect example of what a theatre should be. No one will dispute the brilliancy of that theatre's record during its best years, or its eminence as a temple of the higher kinds of drama. But it is permissible to doubt whether in its palmiest years it could offer such brilliant representations of the older comedy as were contemporaneously provided at Wallack's in New York. It may be admitted, however, that its stage exhibited a greater variety of entertainment, the performances of its admirable stock company being supplemented by those of visiting stars; whereas Wallack's, in those days, depended almost entirely upon its own resources. Again, it is not every old playgoer who will agree unreservedly with Mr. Clapp's somewhat over-enthusiastic estimate of William Warren. Beyond question, Mr. Warren was an actor of very rare parts, thoroughly trained, rich both in humor and in pathos, and uncommonly versatile, particularly in broadly contrasting comic characters; but that he was supreme in characters of the type of *Sir Peter Teazle, Old Dornton, Sir Anthony Absolute, Jesse Rural,* and *Sir Harcourt Courtly,* in which he was most highly esteemed in Boston, will scarcely be admitted by those able to compare his work with that of John Gilbert or William Chippendale. To say that a man who never entered the tragic or romantic field was a Théâtre-Français in himself is surely to be a little extravagant. Certainly, too, Mr. Clapp is in error when he says that J. L. Toole occupied upon the London stage a position analogous to that which Warren filled here. Toole was an actor of farce and burlesque, who never appeared in high comedy, except in some such part as *Moses* in "The School for Scandal," which he caricatured abominably. He had a vein of pathos, to be sure, but it was neither broad nor deep.

Nevertheless, Mr. Clapp is entirely right in quoting William Warren as a notable illustration of the finished actor produced under the old stock-company system and now almost extinct; and his explanation of the effects of that training in Warren's case is so clear and practical that it is rather astonishing to find in him an apparently earnest advocate of the establishment of conservatories for the education of actors, although he admits that much of what is taught in such institutions must be untaught or abandoned before success upon the real stage is possible. The point is not one that can be argued now. Conservatories, if the proper teachers could be found for them, and if they could be prevented from perpetuating all kinds of academic and fanciful traditions, might do some good. They might, at least, instruct our histrionic youth in certain elementary proprieties of speech and behavior. But, so far as the English-speaking stage is concerned, every great actor of the last hundred years has found his equipment and his inspiration in a stock company—the one and only real school of acting.

Mr. Clapp pays a fervent and judicious tribute to the genius and fine character of Edwin Booth, and also to Charlotte Cushman, of whom he justly says that all the other women of the American stage were mere children compared with her. He also comments acutely upon the art and work of Joseph Jefferson. Salvini he deems the greatest master of histrionic expression seen here in fifty years. That the superb Italian undoubtedly was. It is doubtful whether there has been any actor since Garrick to equal him. Mr. Clapp is especially enthusiastic over his *Conrad* in "La Morte Civile"—a masterpiece if ever there was one—his *Sampson,* and his *Sullivan,* but dissents from his reading of *Othello,* while acknowledging its overwhelming power. The controversy is an old one. Grant that the interpretation in its barbaric passion was not in full accord with the best Shaksperian tradition, or, what is more to the purpose, the Anglo-Saxon temperament, it was at any rate magnificent, Oriental, tremendous, and consistent, and maintained an illusion such as no other actor has created since the days of Kean and Cooke. To-day an actor changes his trousers and his moustache, and we call him versatile. Here was a man who shone with equal radiance in the Scriptural drama of Alfieri, the loftiest tragedy of Shakspere, the domestic drama of Giacometti, and in light contemporary comedy.

In an amusing chapter Mr. Clapp endeavors to analyze the character of Sothern's *Dundreary.* How Sothern would have chuckled over this! The part was compact of all kinds of shreds and patches and subject to constant alteration. In London it was one thing, in New York another, and in Boston, very likely, it was something else. On this side of the Atlantic it was always rather more exaggerated than on the other, in order to make the humor of it more obvious. At the London Haymarket it was an easily recognizable caricature, not too gross, of an existent type of foolish dandy. The technical execution of it was always exquisite. Of Fechter Mr. Clapp makes the somewhat startling assertion, founded upon a personal conversation with him, that he thought "whet" in "Whet thy almost blunted purpose," was identical with "wet," and meant that the *Ghost* wanted to "dampen" *Hamlet's* ardor. That the Anglo-German-French actor, left to his own resources, might have blundered thus is a

proposition that offers little difficulty; but Fechter was coached in "Hamlet" by J. M. H. Bellew, one of the finest Shaksperian reciters of his own or any other day, and that he should have left him in ignorance on a point so vital is extraordinary. Mr. Clapp says that Fechter did not know the significance of "blunted" either; and this is stranger still.

Some mention should be made of the criticisms on Adelaide Neilson, Janauschek, and Irving, but our notice has already exceeded its limits. Suffice it to say that they are worthy of their subjects. Indeed, the whole book is a capable and welcome addition to the literature of modern drama.

---

*Reminiscences of Sixty Years in Public Affairs.* By George S. Boutwell. Two vols. McClure, Phillips & Co. 1902.

The period which Mr. Boutwell's life has covered is in two respects of surpassing interest. Man's command over the forces of nature has been extended so rapidly as to have revolutionized our material civilization. Partly in consequence of this revolution, our system of government has shown signs of changing from a democracy to a plutocracy. With the peaceful transfer of political power from the aristocracy of Massachusetts to the middle classes Mr. Boutwell had much to do. With its forcible transfer in the Southern States he had also much to do. In the process the scope of government was greatly enlarged; the number of those obtaining from it assistance or support enormously increased, and the tendency to utilize it for private gain developed to a startling degree. The Republican party has practically controlled the Government for forty years, and, until war was declared against Spain, all its measures of any consequence had Mr. Boutwell's approval, and many of them were prepared and enacted through his agency. Yet he now finds the Government in the hands of the rich, the politicians largely venal, the colored men in the Southern States deprived of the suffrage, and the leaders of the Republican party sneering at the principles of the Declaration of Independence, and carrying on a bloody war in order to conquer a people struggling for freedom.

How comes it to pass that Mr. Boutwell finds himself now denounced as an apostate and a traitor for maintaining the cause of human rights as he has maintained it from the beginning? He does not directly answer this question; but it is possible to extract the answer from his account of his political career. He was in the first place a Democrat of the Jeffersonian school. Consistently with the principles of that school he was opposed to slavery, and acted with the "Free Soil" Democrats. So soon as the opportunity came, he took part in forming the Republican party, in order to prevent slavery from spreading. Then came secession, and he accepted the issue of war without hesitation. He favored the most radical measures, and held that the Southern States, when the war ended, were simply conquered territory, to be ruled by Congress and made into States at its discretion. He came into violent collision with President Johnson, and labored vigorously for his impeachment. He insisted on disfranchising many of the white men of the South and enfranchising the blacks. He favored the legislation compelling creditors to accept the dishonored promissory notes of the national Government as if they were gold; and he abandoned the principles of free trade and became a devoted protectionist.

The sincerity of Mr. Boutwell's devotion to the Union is unquestionable, and his uprightness not less. He has held office steadily for nearly sixty years, and can say that the offices have sought him and not he them. He was at Washington during a most corrupt period, but the smell of fire did not pass upon him. He has been sincerely devoted to the interests of the negroes and of the common people. He can say of what he has done, "I did it all for the best." That, however, was what Metternich said when he was flying from the ruins of the system that he had constructed. Some day we shall understand that the policy of protection is objectionable not because it is expensive, but because it is corrupting. It is intended to give special governmental favors to certain men and certain interests; the policy being justified by the claim that the prosperity of the favored individuals will conduce to the prosperity of the whole people. Whether this be true or not, it is now evident that the favored classes have become politically powerful, and that they maintain their control by the use of money. This is the natural result of protection, and those who insisted on that policy in the face of experience may now see it culminate in the revival of the colonial systems of former ages. When government is regarded as a dispenser of pecuniary advantage, plutocracy will be the legitimate outgrowth. Much the same may be said of the change in the Constitution attempted by the impeachment of President Johnson and effected by the legal-tender decision. The powers of Congress and of the general Government were greatly enlarged, and the decision of the Supreme Court in the Porto Rico cases was foreshadowed. The present attitude of Mr. Boutwell toward the Imperialist movement is heroic. It must have wrung his soul to turn against the party which he had so devotedly supported; but he had supported it through measures which contained the seeds of the evil crop which now alarms him who heedlessly sowed them.

Probably the most valuable feature of these reminiscences is the terse characterization of the men with whom Mr. Boutwell was brought into contact during his public career. Many of them have been long since forgotten, but the historian will prize these appreciations of a contemporary. Anecdotes are numerous, and Mr. Boutwell is not without humor; but it is often saturnine, and his judgments are affected by his stern partisanship. His panegyric on Gen. Grant will be read with interest; that on Gen. Banks not without amusement. Mr. Boutwell has little sympathy with the civil-service-reform movement, and when he became Governor of Massachusetts he applied the doctrine of rotation in office thoroughly; yet his argument against permanency of tenure deserves consideration. In his management of the Treasury Department he displayed, according to his own statements, which we do not hesita[illegible]tere virtue; but he was not a trained financier, and his confidence in his own wisdom led him to make blunders which a broader education might have helped him to avoid. He was responsible for the coinage of the trade dollar, which proved an expensive failure. He reasoned that, as there was more silver in it than in the Mexican dollar, the peoples of the Orient would at once adopt it in place of the coin to which they had been used. The thought of failure never occurred to him; but "unfortunately," he says, "the stolidity of the Chinese and the force of habit among that people were not considered by us."

This incident shows Mr. Boutwell's limitations as a statesman. He has done much useful work, and has in many ways acquitted himself honorably. But he exhibits the defects of the self-made man. When a boy he had little schooling; when a youth he read much and wisely, studying while others slept. He mingled much with men, and his force of will, his natural intelligence, his sterling integrity, soon made him respected. He lectured in the lyceums of the day assiduously, and partly through this introduction to the people of his State he became a trusted leader. He overthrew most of his opponents easily; they were perhaps no better educated politically than he was. But his mind, though powerful, was narrow, and he dealt with the great problems of the civil war with the equipment which had been forged to meet the needs of the town-meeting. His recollections are told in a rugged style and with some repetition—one volume would have been better than two; but they are interesting and valuable. Even if we cannot regard their author as a wise statesman, we cannot help admiring him as a man who was a successful politician without losing his integrity, and who was a sincere patriot even in his partisanship.

---

*Practical Forestry.* By John Gifford, Assistant Professor of Forestry, N. Y. State College of Forestry, Cornell University. D. Appleton & Co. 1902.

This volume is not practical in the sense of being a handbook for even the youngest amateur forester. It is designed rather to afford an intelligent insight into the sorts of work in which practical foresters engage, and to present a clear account of the materials with which they have to do. Naturally, the author deals somewhat in detail also with the approved methods of managing forests under our climatic and political conditions. Moreover, he treats the whole subject in an entertaining and convincing manner, and demonstrates the entire feasibility of modifying European silviculture to meet our special needs. As a general thing, our lumbermen have criticised Forestry harshly as being a fad of doctrinaires, totally inapplicable to our North American woods, and, we may say also, inapplicable in our state of mind. There is, of course, a hopeless difference between a well-kept forest in Germany and the wild tangle of severed branches and underbrush around a lumberman's camp here. In Germany every twig fit for the faggot is saved; here, even the larger branches are left as worthless. Worse than this is the wholly undiscriminating character of the general policy which sweeps out of existence trees of different ages, leaving no young ones to replace the lost. Early efforts to show the possibility of adopting some sensible system for caring for our forests were treated with a derision which was simply disheartening. The pioneers in this propaganda were regarded as cranks of the first order

and absolutely impracticable. They could not secure a respectful hearing. Abernethy used to say that few persons would take care of their digestion until death stared them in the face. It was not until the rapid exhaustion of some of our forests stared our landholders in the face that even a languid interest was taken in the possibility that the cranks might, after all, have something to say worth hearing. As soon as attention was once secured, many persons who had been most incredulous began to regard the general scheme with favor. At the present time there are successful forest schools, well manned with trained teachers, all acting in coöperation with the general Government.

Professor Gifford's book shows clearly the scope of the new profession, into which large numbers of intelligent students are now entering, and in which a good many graduates are likely to be successful. The time is still far distant, we fear, when sound rules of forestry will be applied to the timber districts which are under small owners, and still further off is the happy time when the important work of reforestation will be seriously undertaken on a remunerative scale. Our national forest association and the associations in the States are working in harmony and, as a rule, intelligently. The general Government and a few of the State Governments have well-considered policies in regard to this matter, and the forest schools are all excellent. In the great work of increasing public interest in forestry in general, and especially in these useful organizations, Professor Gifford's attractive book will, we hope, play an important part.

---

*The Path to Rome.* By H. Belloc. Longmans, Green & Co. 1902.

The dominant personal note which was a defect of taste in Mr. Belloc's clever studies of Danton and Robespierre is appropriate enough to his latest work. 'The Path to Rome,' in spite of its somewhat ambiguous title, is not a theological work, though it is the record of a pilgrimage, and the pilgrimage was the outcome of a vow.

"I said, 'I will start from the place where I served in arms for my sins; I will walk all the way and take advantage of no wheeled thing; I will sleep rough and cover thirty miles a day, and I will hear mass every morning; and I will be present at High Mass in St. Peter's on the Feast of St. Peter and St. Paul.' "

We regret to say that all these vows but one were made to be broken. But though he forsook the letter, Mr. Belloc observed the spirit of his resolutions, and did in fact start on foot from Toul in Lorraine, walked nearly the whole way, and under a summer sun at that, heard mass when it was perfectly convenient to do so, and finally reached Rome. His march lay along the Moselle to the Ballon d'Alsace, across the Jura into the plain of the Aar, and through German Switzerland. The straight path into Italy lies across the Gries Pass. This is impassable in June, and Mr. Belloc's foolhardy and unsuccessful attempt to cross it is one of the most interesting episodes in his narrative. He was reduced to the ordinary gates of the Furka and the St. Gothard.

In Switzerland his ignorance of German had made communication difficult, and he had hardly reached Italy when his inability to explain himself in Italian caused his arrest as a suspicious character. As he had already walked some hundreds of miles in the boots and lived and slept in the suit of linen clothes in which he set out, and carried no luggage but a stout club, the authorities would seem to have erred on the side of confidence when they released him on the mere utterance of the magic word "tourist."

It was twenty-five miles from Milan that Mr. Belloc proved false to the main purport of his vow, and committed the artistic blunder of taking the train as far as that city. Thence he passed by Lucca and Siena to Rome, taking the train only once more, and further indulging himself with two lifts in a cart. As an introduction to Italy, a long tramp over the sunbaked mud plains of Lombardy (Shelley's "waveless plain") under a July sun leaves everything to be desired. After the horrors of that alluvial plain,

"Do not blame me that Tuscany should have passed beneath me unnoticed, as the monotonous sea passes beneath a boat in full sail. Blame all those days of marching: hundreds upon hundreds of miles that exhausted the powers of the mind. Blame the fiery and angry sky of Etruria, that compelled most of my way to be taken at night. Blame St. Augustine, who misled me in his Confessions by talking like an African of 'the icy shores of Italy.' . . . Even the goodness of the Italian nature seemed parched up in those dry bottoms. At an inn where I ate they shouted at me, thinking in that way to make me understand; and their voices were as harsh as the grating of metal against stone."

At length he reached the outskirts of Rome:

"There was an open space; a tramway; a tram upon it about to be drawn by two lean, tired horses, whom in the heat many flies disturbed. There was dust on everything around. . . . Then (along a road perfectly straight, and bounded by factories, mean houses, and distempered walls: a road littered with many scraps of paper, bones, dirt, and refuse) I went on for several hundred yards, having the old wall of Rome before me all the time, till I came right under it at last."

To make a success of a long and solitary walking tour, a man must set out with a fund of pleasure in mere living, of scorn for discomfort, and perfect content with himself, to say nothing of physical soundness. All these were the happy portion of Mr. Belloc. Yet he will inspire no one to emulate his adventures. And the chief reason for this is that though he was well qualified to take such a journey, he lacks the power to tell the story of it. It is, of course, by sheer force of his own peculiar point of view and style that a writer can cast a glamour about the trivial incidents of the open road. We do not look to Mr. Belloc for the genius of Sterne or Stevenson, but we may be allowed to resent his neglect of such excellent material. "If you have come to this book for literature, you have come to the wrong booth and counter," he tells us; and more than once he seems to entertain himself with the certainty that the reader is finding his author's self-conscious manner irritating and tiresome. One may refuse to write literature, but why insist on being a bore when one has enough imagination and humor to be entertaining? A good deal of Mr. Belloc's worst writing is too elaborate to be reproduced here; a fair instance of pointless wit is at p. 220:

"You are not suddenly introduced to that country, but, as it were, inoculated and led on by degrees, which is a pity. For good things should come suddenly, like the demise of that wicked man, Mr. (*deleted by the censor*), who had oppressed the poor for some forty years, when he was shot dead from behind a hedge, and died in about the time it takes to boil an egg, and there was an end of him."

On the other hand, we quote a passage in which he is at his best:

"It was the first part of the afternoon when I got to a place called Meiringen, and I thought that there I would eat and drink a little more. So I steered into the main street, but there I found such a yelling and roaring as I had never heard before, and very damnable it was; as though men were determined to do common evil wherever God has given them a chance of living in awe and worship. For they were all bawling and howling, with great placards and tickets, and saying, 'This way to the Extraordinary Waterfall; that way to the Strange Cave. Come with me and you shall see the never-to-be-forgotten Falls of the Aar, and so forth.' So that my illusion of being alone in the roots of the world dropped off me very quickly, and I wondered how people could be so helpless and foolish as to travel about in Switzerland as tourists, and meet with all this vulgarity and beastliness. If a man goes to drink good wine, he does not say, 'So that the wine be good, I do not mind eating strong pepper and smelling hartshorn as I drink it'; and if a man goes to read good verse—for instance, Jean Richepin—he does not say, 'Go on playing the trombone, go on banging the cymbals; so long as I am reading good verse, I am content.' Yet men now go into the vast hills, and sleep and live in their recesses, and pretend to be indifferent to all the touts and shouters and hurry and hotels and high prices and abominations. Thank God it goes in grooves! I say it again, thank God, the railways are trenches that drain our modern marsh, for you have but to avoid railways, even by five miles, and you can get more peace than would fill a nosebag. All the world is my garden since they built railways and gave me leave to keep off them."

As a literary effort, Mr. Belloc's new book will never rank high. But his personality is interesting, and though he lacks the genius that transmutes, his picture of the route he travelled so painfully is likely to hold the attention of the reader. In a future edition we may venture to hope that he will cut out the tiresome dialogues between "Lector" and "Auctor," and the entirely irrelevant stories that block the path of his pilgrimage and interrupt the view.

The book is illustrated by sketches made on the march, good on the whole, though occasionally, like the philosophic by-play of the author, they are too trivial to be worth while.

---

*The Old Royal Palace of Whitehall.* By Edgar Sheppard, D.D. Longmans, Green & Co. 1902. Pp. xviii., 415.

Readers who have not been surfeited with the considerable number of books about London that have appeared of late, will find interest and pleasure in Dr. Sheppard's sumptuous volume. To the average Londoner of to-day, the old royal palace of Whitehall, if it exists at all, is probably confounded with the Banqueting Hall, now occupied by the United Service Institution. The Banqueting Hall, however, is only the last important remnant of what was once

an extensive series of buildings, which fire and the growth of the city have long since swept away. Dr. Sheppard's industrious researches have enabled him to reconstruct in description the Whitehall of a former time, and to exhibit the palace as the theatre of some of the most interesting events in English history.

The palace of Whitehall was for many years the London residence of the Archbishops of York, being known in consequence as York House or York Place. Under Cardinal Wolsey, who probably built or rebuilt considerable portions of it, it became distinguished "by a sumptuous magnificence that probably has never been equalled in the house of any other English subject, or surpassed in the palaces of many of its kings." Wolsey was the last archbishop to occupy the palace, and on his fall in 1529 it was taken over by the King, being treated by Henry VIII. as though it were a part of the Cardinal's private estate, although it was in fact a part of the patrimony of the see. In 1536 it was annexed to the ancient palace of Westminster. Henry VIII. took up his residence at Whitehall, and the palace continued to be the London residence of the sovereigns until the disastrous fire of 1698.

Under Henry VIII. the buildings were extended and improved, and the landed area considerably added to. By the time of James I., however, the palace was in a dilapidated condition, and the King contemplated its restoration and enlargement on a magnificent scale, but, with the exception of the Banqueting Hall, the elaborate plans of Inigo Jones were never carried out. Charles I. also contemplated reconstruction, and employed Rubens to paint the ceiling of the Banqueting Hall, but the unfortunate monarch accomplished little in the way of building. The palace had grown to immense size by the reign of Charles II. James II. made further additions and alterations, and William III. seriously considered rebuilding after the designs of Inigo Jones; but the destruction of nearly the entire collection of buildings, except the Banqueting Hall, by fire in 1698 put an end, not only to these plans, but to the further use of Whitehall as a royal residence. On the accession of George I. the Banqueting Hall was converted into a chapel royal, and was so used, save in the years 1829-37, until 1891, when it was lent by Queen Victoria to the United Service Institution.

Whitehall will always be most commonly associated with the execution of Charles I., and Dr. Sheppard devotes much attention to the difficult questions of the location of the scaffold and the determination of the window through which the King passed to his death. The palace was also, however, the home of Cromwell during most of the period of the Protectorate, and it was there that Cromwell died. Charles II. received the Lords and Commons there on his restoration, in 1660, and it was there that the same Lords and Commons met in 1688 "to settle the Prince of Orange upon the throne." William, however, disliked the palace as a residence, being always ill there, and in consequence Whitehall virtually ceased to be a royal residence after the abdication of James II.

The wealth of detailed information contained in Dr. Sheppard's book is, on the whole, well arranged and fairly digested, though at times the work savors too much of a compilation. The numerous full-page illustrations add greatly to its value. There is a careful index.

BOOKS OF THE WEEK.

Arnauné, Aug. La Monnaie, le Crédit et la Change. Paris: Félix Alcan. 8 fr.
Brown, W. G. Golf. Houghton, Mifflin & Co. 50 cents.

*JUST PUBLISHED:*

**SEIGNOBOS' ROME**

*A History of the Roman People.* By Prof. CHARLES SEIGNOBOS, author of "A Political History of Europe Since 1814." Translation edited by WILLIAM FAIRLEY, Ph.D. With illustrations and maps. 528 pp. 12mo. $1.25 *net.*

This school history has all the clearness characteristic of French historical writing, and is graphic in its style. It is an interesting book. Large use has been made of legendary and anecdotal material. The editor has carried the narrative down to Charlemagne and appended to each chapter a list of sources available in English and a very full set of parallel readings.

## ÉCOLE LIBRE DES SCIENCES POLITIQUES

(FREE SCHOOL OF POLITICAL SCIENCES)

**27 Rue Saint-Guillaume, PARIS** (*32d year, 1902-1903*)

I.—DIRECTOR.

M. **Emile BOUTMY,** Member of the Institut and Member of the High Council of Public Instruction.

II.—COMMITTEE OF IMPROVEMENT.

MM. **BOULANGER,** Senator, late First President of the Court of Accounts: **CAMBON,** Ambassador; **COULON,** Vice-President of the Council of State; **FLOURENS,** late Minister; **HANOTAUX,** of the French Academy, late Minister; **JANET,** of the Institut; **MAGNIN,** Vice-President of the Senate; **NISARD,** Ambassador; General **NIOX**; **PALLAIN,** Governor of the Bank of France; **RAMBAUD,** of the Institut, late Minister; **RENAUD,** First President of the Court of Accounts; **A. RIBOT,** Deputy, late President of the Council of Ministers; **Ch. TRANCHANT,** late Councillor of State.

III.—BODY OF PROFESSORS.

MM. **LEVASSEUR,** of the Institut; **Albert SOREL,** of the French Academy; **H. GAIDOZ,** Director at the School of High Studies; **LYON-CAEN,** of the Institut, Professor at the Faculty of Law; **RENAULT,** of the Institut, Professor at the Faculty of Law; **FUNCK-BRENTANO**; **ANATOLE LEROY-BEAULIEU,** of the Institut; **ALBERT VANDAL,** of the French Academy; **E. BOURGEOIS,** Debating Master at the Superior Normal School; **Ch. BENOIST,** Deputy; **J. FLACH,** Professor at the College of France; **TARDIEU,** Master of Petitions at the Council of State; **LEVAVASSEUR DE PRECOURT,** Hon. Master of Petitions at the Council of State; **CHEYSSON,** of the Institut Inspector-General of Roads and Bridges; **DE FOVILLE,** of the Institut, First Magistrate at the Court of Acounts; **René STOURM,** of the Institut, late Inspector of Finance; **Aug. ARNAUNE,** Director of the Mint; **BOULANGER,** Magistrate of the Court of Accounts; **COURTIN, PLAFFAIN,** Inspectors of Finance; **SILVESTRE,** late Director of Civil Affairs at Tonkin; **J. CHAILLEY-BERT,** etc.

SYNOPSIS OF COURSES.

Parliamentary and Legislative History of France, 1789-1875.
Laws of Nations—International Conventional Law.
Constitutional History of Europe and the United States.
Administrative Organization and Matters in France and Abroad.
History of European Diplomacy, 1713-1878.
Algerian and Colonial Legislation—Mussulmanic Law.
Political History of Europe during the last 15 years.
Legislation of Railways.
Colonial Policy of Europe since 1783.
Political Economy—Social Economy—Labor Legislation.
History of the United States of America, 1775-1900.
Political Questions and Economy in Eastern Asia.
Colonial Organization and Administration Compared.
Public Health and Important Public Works.
Geography and Ethnography—Statistical and Commercial Geography.
French and Foreign Finances.
Military Geography and Organization—Geography of French Possessions.
Money, Credit, and Exchange—Banking.
Foreign Commerce and Legislation of Customs.

GENERAL INFORMATION.

The instruction given at the School of Political Sciences is the natural crowning accomplishment of every liberal education. In each of its several branches, the pupil acquires the requisite competency for holding high State Offices (Diplomacy, Council of State, Court of Accounts, Inspection of Finances, Inspection of Colonies) in getting thoroughly prepared for the examinations and competitions which they call for, and is also trained for leading posts in all great private enterprises.

The pupils are admitted without examination, with the approbation of the Director and School Board: no university degrees are necessary.

Tuition comprises 2 years' course, which may be extended to 3 years. On completing his studies, every pupil who has successfully passed his examination receives his diploma.

**SCHOLAR YEAR, 1902-1903.**—The Scholar Year commences on 10th November, 1902, and closes on 6th June, 1903. Applications are received at the Secretary's Office from 3d November, 1902. Application for the whole Course gives right to all the regular and complementary Courses and Conferences, and also access to the Library (about 25,000 Volumes and 160 French and Foreign Reviews and Newspapers). Per annum, $60.

*A Special Pamphlet giving detailed information on the organization of the School and respecting the Professions for which the Pupil receives special training can be had by addressing to*

**L'ECOLE, 27 Rue Saint-Guillaume, PARIS.**

MARYLAND, Baltimore, 122 and 124 W. Franklin St.

*EDGEWORTH BOARDING and Day* School for Girls—39th year will begin September 26, 1901. Mrs. H. P. LEFEBVRE, Miss E. D. HUNTLEY, } Principals.

MASSACHUSETTS, Boston

*BOSTON UNIVERSITY Law School.* Address the Dean, SAMUEL C. BENNETT.

MASSACHUSETTS, Concord.

*CONCORD SCHOOL.* Special attention given to boys preparing for college. Location exceptionally attractive, near the historic village of Concord. Ball field, tennis-courts, and boathouse. A family school with individual attention. THOMAS H. ECKFELDT, Head Master.

MICHIGAN, Detroit, 73 Stinson Place.

*DETROIT HOME and DAY SCHOOL,* 25th Year. Prepares for all colleges open to women. 20 received in the school family. The Misses LIGGETT, Principals.

PENNSYLVANIA, Philadelphia, Germantown, 59 High St

*IVY HOUSE.* Preparatory to Bryn Mawr and other colleges. Address Miss MARY E. STEVENS.

PENNSYLVANIA, Rosemont, 1 mile from Bryn Mawr College.

*THE MISSES KIRK, formerly connected* with Bryn Mawr College, will begin the 4th year of their College Preparatory School for Girls in a new and larger house, on October 2, 1903. Number of boarders limited to twelve. Careful individual instruction.

SWITZERLAND, Geneva.

*A SELECT HOME SCHOOL for 6 American boys* in cultured French-Swiss home. Unique advantages. For pamphlet, etc., address J. C. DUFOUR, M.A., 20 Ave. de Lancy, Geneva.

*MISS ANABLE'S Boarding and Day* School for Girls. Established in 1848. Circular on application. Opens Sept. 26. 1350 Pine St., Phila., Pa.

**ROCK RIDGE** A SCHOOL FOR BOYS at Wellesley Hills Massachusetts

**SOUTHERN HOME SCHOOL for Girls, 915 North Charles Street, Baltimore, Md.** 61st year. Oct. 1, 1902. MISS DUFF, MISS PENDLETON, } Principals.

**St. Agnes School:** *ALBANY, N. Y.* Estab. 30 yrs. In the interest of the best education. For girls of all ages it combines the best **Physical, Moral, Intellectual, Domestic, and Religious Training,** with ideal **Home Living.** Built on high ground above the historic Hudson, equipped with every progressive feature of **Study** and **Recreation,** including a laboratory for scientific work, gymnasium, art studios, lecture hall, and library. High standards in art and music. Prospectus on request. **Miss Catherine R. Seabury,** Head of School.

**Mrs. Delafield and Mrs. Colvin's SCHOOL FOR GIRLS**

Successors to Miss Heloise E Hersey.

**An institution of the highest scholarship**

Offering exceptional surroundings and relationships to those who value them at an increased cost. Only thirty pupils with eleven teachers secures the most careful personal supervision. No pupil rec'd without a personal interview. *Terms.* $1.250 *a year.*

**25 and 46 Chestnut Street, Boston.**

**RESIDENCE CLASSES FOR THE STUDY OF ENGLISH.**

Arranged for teachers, special students, and those who wish to acquire practical skill in composition and literary art.

Subjects: Old and Middle English; Historical and Modern English Grammar; the critical study of literature and literary art by library and laboratory methods; English Prose Composition Residence in the family of Dr. and Mrs. Charles Davidson. Correspondence is invited. Address

Mrs. H. A. DAVIDSON, 1 Sprague Place, Albany, N. Y.

PENNSYLVANIA, Bryn Mawr.

**Miss Baldwin's School for Girls Preparatory to Bryn Mawr College**

Miss FLORENCE BALDWIN, Principal. Within 11 years more than 145 pupils have entered Bryn Mawr College from this school. Diploma given in both general and College Preparatory Courses. Fine fire-proof stone building. 25 acres of beautiful grounds. For circular, address the Secretary.

**Abbot Academy** ANDOVER, MASS.

A high-grade school for girls. Fine situation. Complete modern equipment. Fine buildings. Ample provision for outdoor exercise Personal attention of teachers. Address The Principal.

*Educational.*

**Lasell Seminary**

**AUBURNDALE, MASS.**

A school of the first class for young women. Gives thorough training in a liberal arts course planned wholly for young women, adding its specialty of Household Economics. Boston Masters in Music and Art. Annex department of household practice a decided success. For catalogue, address.

C. C. BRAGDON, Principal.

**THE HIGHLAND MILITARY ACADEMY,** Worcester, Mass. 47th year. Healthful location. Generous table. Preparation for college, scientific, or business life. Newly equipped laboratories. Athletic field. Small classes.
The Rt. Rev. ALEXANDER H. VINTON, D.D., Visitor.
JOSEPH ALDEN SHAW, A.M., Head Master.

*Teachers, etc.*

*WM. WEBER, B.D., Ph.D.* (Universities: Bonn, Strassburg, and Yale.) Instructor in Languages and Mathematics, 355 George St., New Haven, Conn. Coaching for entering any department of *Yale University* a specialty.

*School Agencies.*

*THE FISK TEACHERS' AGENCIES.* Everett O. Fisk & Co., Proprietors. 4 Ashburton Place, Boston, 1505 Pa. Ave., Washington, 156 Fifth Ave., New York, 414 Cent. Bldg., Minneapolis, 533 Cooper Bldg., Denver, 80 Third St., Portland, 203 Mich. Blvd., Chicago, 525 Stimson Block, Los Angeles, Hyde Blk., Spokane, 420 Parrott Bldg, San Francisco.

*ALBANY TEACHERS' AGENCY,* 81 Chapel St., Albany, N. Y.—Provides schools of all grades with competent teachers. Assists teachers in obtaining positions. Rents and sells School Property. Harlan P. French, Proprietor.

*SCHERMERHORN Teachers' Agency,* Teachers—Schools—Tutors—Governess—Property. Tel. 4658-18th. John C. Rockwell, Mgr., 3 E. 14th St., N. Y. C.

*Financial.*

**THEODORE WETMORE & CO.**

**REAL ESTATE, COMMERCIAL PAPER, STOCKS, BONDS, AND MORTGAGES.**

All cities are experiencing sharp advances in real estate. Now is the time to purchase Minneapolis real estate.
We offer some very desirable income-bearing properties, some of which we will sell for less than assessed value.

**MINNEAPOLIS, MINN.**

**Pulford, How & Company**

INCORPORATED

**Investment Bankers,**

**MORTGAGE LOANS, REAL ESTATE AND INSURANCE,**

**Trust Company Building, DULUTH, MINN.**

An experience of twenty-five years in local Realty makes our judgment competent in the safe selection of **Six Per Cent. Loans,** as well as the wise purchase of city property for investment. An unbroken record of success in the profitable handling of money for a large list of Eastern investors is the best reason for your confidence.

**LETTERS OF CREDIT.** We buy and sell bills of exchange and make Cable transfers of money on Europe, Australia, and South Africa; also make collections and issue Commercial and Travellers' Credits available in all parts of the world.
International Cheques. Certificates of Deposit.

**BROWN BROTHERS & CO.,**
NO. 59 WALL STREET, NEW YORK.

# The Nation

The New York *Nation*, founded in 1865, and conducted with rare editorial continuity to the present time, enlisted from the beginning the willing service of the best morality and enlightenment of the country. The leading colleges and universities have freely contributed to its staff of writers, have used it constantly for purposes of instruction, have made it the vehicle of interchange of sentiment, of literary inquiry, of advertisement for all good causes. It is kept on file at such institutions, and in every public library of importance, and is incessantly consulted. As a forum of general discussion it has never had a peer, and its total body of casual correspondence surpasses any of a like character ever brought together in this country. Its special correspondence has been not less remarkable, averaging more than a hundred letters yearly gathered from all quarters of the globe.

*The Nation's* literary criticism has, for carefulness, evenness, justice and style, earned it the first place on this side of the water, and, by the consensus of foreign opinion, put it on a par with the best authorities in any country.

In politics it has made the same mark, and even more profound; but here the recognition has been less ungrudging because the spirit of party condemns independent and disinterested criticism, such as is welcomed in all branches of the scientific pursuit of truth.

The list of writers for *The Nation* speaks for itself as to the intellectual and moral company to which its readers are habituated; and these readers are themselves a class apart.

The subscription price of *The Nation* is Three Dollars per annum. Published by New York Evening Post Co., Broadway and Fulton St., New York.

# LONGMANS, GREEN, & CO.'S NEW BOOKS

*PROFESSOR JAMES'S GIFFORD LECTURES*

## The Varieties of Religious Experience

**Being the Gifford Lectures on Natural Religion delivered in Edinburgh in 1901-1902**

**By WILLIAM JAMES, LL.D., etc.,**

Professor of Philosophy at Harvard University, Corresponding Member of the Institute of France and of the Royal Prussian Academy of Sciences. 8vo, pp. xii.-534, gilt top, $3.20 *net*. By mail $3.40.

## A Friend of Nelson: a Story

By HORACE G. HUTCHINSON, Author of "Peter Steele, the Cricketer," etc. Crown 8vo, $1.50 *net*. By mail, $1.60.

*(Just ready.*

*** This is a story of the early years of the last century, and is told in the first person by a young naval officer of Nelson's fleet. He has been intrusted with important despatches from the Admiral to the Government, but they are stolen from him by a Bonapartist spy, and are not recovered without much danger and difficulty. The officer falls into consequent disgrace with his superiors, but when later on he succeeds in saving Nelson's life by frustrating a Bonapartist scheme for his assassination, arranged by the same man that had stolen the despatches, he gets a ship and fights with his hero at Trafalgar.

A considerable part of the story deals with the time which was spent by the supposed writer at Brighton, describing incidentally the society there, including the Prince Regent and his *entourage*.

## The Brothers: A Fairy Masque

By C. F. KEARY, Author of "A Mariage de Convenance," etc. Crown 8vo, pp. xii.-148, $1.50.

## *The* Natural History of the British Surface-Feeding Ducks

**By JOHN GUILLE MILLAIS, F.Z.S., etc.**

Author of "The Wildfowler in Scotland," "A Breath from the Veldt," etc. With 6 Photogravures and 66 Plates (41 in Colors) from Drawings by the Author, Archibald Thorburn, and from Photographs. Royal 4to, cloth, gilt top, $40.00.

CONTENTS: The Mallard—The Gadwall—The Widgeon—The American Widgeon—The Shoveler—The Garganey—The Blue-Winged Teal—The Teal—The American Green-Winged Teal—The Pintail—Index.

This book is the result of many years' personal observation and study by the Author of the habits and modes of life and every circumstance connected with the periodical change of plumage of British Ducks, and should be of interest to ornithologists and all students of Natural History.

*** *The Edition is restricted to 600 copies for Great Britain and America, each one being numbered.*

*A Prospectus, with Specimens of the Illustrations, will be sent on application.*

**LONGMANS, GREEN, & CO., 91-93 Fifth Avenue, New York**

*For Sale and to Let.*

## For Sale at Duluth, Minnesota.

**One of the Finest School Properties in the Country.**

Building modern and convenient in all its appointments.
Surroundings ideal and beautiful.
A wide field for a preparatory school, and to the right party the price reasonable and terms of payment easy.
For information apply to
**L. MENDENHALL, Duluth, Minn.**

## IRONQUILL

**Some of the Rhymes of Ironquill.**

12mo, $1.50.

**G. P. PUTNAM'S SONS, NEW YORK.**

A Tale of the
THOSE BLACK DIAMOND MEN.
Anthracite Coal-Miners.

*Reading Case for the Nation,*

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

*EDWIN LAWRENCE GODKIN.*—Japan proof of Portrait, engraved on wood in the highest style of the art, sent, charges paid, on receipt of five dollars ($5) by GUSTAV KRUELL, 331 Main Street, East Orange, N. J.

# AN EDUCATIONAL DIRECTORY

I.—The NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in the NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

# The Nation.

*NEW YORK, THURSDAY, JULY 10, 1902.*

## The Week.

President Roosevelt's Fourth of July speech at Pittsburgh bore out the rumors that he would maintain a bold and unyielding tone in the matter of Cuban reciprocity. This he did, throwing "tact" to the winds. Party managers may well wring their hands over a President who bluntly says in public that he "regrets" what the party did, or failed to do, in Congress, and who defiantly tells them that the policy which they rejected will yet be adopted "as sure as fate." Fate has too many secrets in her grim keeping to make that an absolutely sure word of prophecy; but it is something to have an outspoken man in the Presidency, who thus throws down his gage to his political enemies in the presence of the people. What Mr. Roosevelt had to say about the Philippines was in line with the sentiments of his amnesty proclamation issued on Friday. The peace which all have so ardently desired has come at last; and the Administration's hope is that the army will have to be used no further in the archipelago except as a kind of temporary police force. The President intimated a parallel between our course in Cuba and that in the Philippines which is highly suggestive. If our goal is the same in either case—if, indeed, our conduct towards the Filipinos is to be made, in the end, on all fours with that towards the Cubans—then we may expect that the establishment of a civil government, in which the inhabitants are to have a share, will lead directly to their entire control of their own affairs. To that end the President is bound to strive, unless he is willing to see the Declaration of Independence made, as he said on Friday, a tissue of "meaningless platitudes." Mr. Roosevelt recurred emphatically at Pittsburgh to his former declaration about the need of special legislation by Congress to restrain Trusts and monopolies. His positive endorsement of Attorney-General Knox was something more than the flowery tribute which every member of the Cabinet is entitled to, on the Presidential travels, in his own home; it was a fresh definition of Mr. Roosevelt's platform.

---

Monday's dispatches from Manila again illustrated, and very clearly, the unreliability of the Philippine news upon which the American people depends for its information as to what is going on in the archipelago. The Associated Press telegrams state that Aguinaldo is in fear of his life, now that he has been released from confinement, and that he does not dare to call upon Acting Governor Wright except at night time. This timidity is due, it is stated, to apprehension lest the friends of the late Gen. Luna attempt to take his life. All this is very interesting, indeed, but the *Sun's* correspondent will have none of it. He telegraphs as follows: "Aguinaldo says he does not fear the vengeance of the friends of Gen. Luna, who, it is charged, was assassinated by Aguinaldo's orders." Yet it is from these two correspondents that all the telegraphic news comes which reaches the United States. If their situation requires respect for the civil and military authorities in the islands, there is nothing to prevent their toadying to the powers that be and praising them to the skies. They may make or unmake the reputation of any officer. In Manila the signs that the two correspondents cannot forget the existence of a press law would seem to be more or less conclusive. In the Gardener case, for instance, the amount of space given to the defendant is very small compared with that bestowed upon the other side, and the bias in favor of the Administration is quite plain.

---

Despite the confident assertions of a few weeks ago, that Gov. Taft would conclude his negotiations with the Vatican in "record" time for such diplomatic transactions, they are not yet completed. The stumbling-block is apparently the American request that *all* the friars be withdrawn. The cardinals would naturally like to have the friars of other than Spanish nationality remain, and enough of the Spanish to man the universities. None the less, the desire of the Vatican to keep on good terms with the United States is obvious as well as the wish to expedite matters. It is, of course, a dangerous precedent for Rome to set—this expropriation or forced sale of property of religious orders. At best some odium will cling to those who give up the rights of the four orders in return for cash, particularly as there is danger that such a wholesale withdrawal and the influx of American Protestants will seriously weaken the great power of the Church in the Philippines. While the cardinals of course realize that the United States has the whip hand, and are anxious to make as good a bargain as possible, some doubtless cannot forget that they are candidates for the Papal tiara. This is said to be particularly the case with Cardinal Rampolla, who, in addition to being Papal Secretary of State, is also protector of the Augustinians.

---

Dr. Henry C. Rowland, lately an assistant surgeon in the army, contributes to the current *McClure's Magazine* a noteworthy article, entitled "Fighting Life in the Philippines." In this he explains from the medical point of view how it is that American officers and soldiers can murder and torture natives. He is able to press home his points by personal observation in the field and in hospitals. Chronic homesickness he found was one of the most serious disorders with which the surgeon has to contend in the archipelago, for it frequently results in acute dementia. One excellent sergeant, for instance, suddenly became insane, fired upon his own comrades, and then deserted to the Filipinos. Two days later he returned unharmed, but confused and depressed. A corporal suddenly jumped out of a hut, sprang upon an innocent native, and beat him unmercifully until overpowered by ten fellow-soldiers, who took the madman to the hospital. Here he recovered within twenty-four hours. Still another reliable soldier was caught in the act of deliberately murdering a Filipino—just as the ex-soldier who surrendered himself in California the other day declares that he did. An officer who was ordered to the hospital raged and threatened to kill the medical officer. "Quantities of such cases might be cited," Dr. Rowland declares, "all going to prove conclusively that, under certain unaccustomed conditions, it is possible for men to behave in a manner entirely foreign to all prehabitual impulse, as the result of unusual influences upon which they have no gauge."

---

We observe that the Imperialists have left off their chuckling over Admiral Dewey's explanation that, when he said the Filipinos were more capable of self-government than the Cubans, he meant that neither people was capable of it. This was a rather roundabout and miss-fire joke at best, but it was never one which could do the Republicans any service. If Dewey is an infallible oracle, what becomes of that Cuban self-government which has been set up amid Republican rejoicings and self-gratulation? It is obviously a mistake and a sham, and a Republican Administration is much to be blamed for letting the Cubans cut loose at all. If, on the other hand, the opinion is maintained that the Cuban republic is doing very well, there stands the assertion of the Admiral that the Filipinos could make one do better. Moreover, here is a Republican Congress boasting of having given the Filipinos self-government at least to the extent of authorizing a Philippine Assembly. That is another blunder, if Dewey's dictum is impeccable. That officer, it is probable, shares the old military notion that the capacity for self-government

means only a willingness to obey the orders of a superior. He feels, with Wellington, that a Constitution is out of place on a man-of-war, and it is an easy step to deny impatiently that it is *in* place on a given piece of land—Malta, in Wellington's case, the Philippines in Dewey's.

---

Even short-memoried Americans can recall the time when Gen. Fitzhugh Lee was a great authority on Spanish misrule in Cuba. Widespread indignation used to be aroused in this country by his accounts of the evils from which the Cubans suffered. Yet we do not suppose that the picture he now draws of the miseries and threatened disasters of Cuba, resulting from the prostrate condition in which the United States left the industries and finances of that island, will either attract much attention or arouse deep feeling. At the same time, there can be no doubt that he speaks words of truth and soberness. His description of the unhappy posture of affairs in Havana is borne out by all the impartial evidence available. All disinterested observers agree that the new Government is in rough water and laboring heavily; that President Palma is at his wit's end to stave off national bankruptcy; that he is beset by hordes of clamorous office-seekers, for whom there are neither places nor money to pay their salaries; that the Treasury is empty and revenues falling; that loans are necessary, yet can be negotiated only at ruinous rates; that retrenchment is imperative, but is possible only in the departments of education, public works, and sanitation; that the negro citizens, especially the colored soldiers of the Cuban army, are demanding offices and back pay, and are threatening to make trouble if their desires are not heeded. Gen. Lee's assertion to this effect is only an echo of what we hear from returning travellers and correspondents, and of what is to be read daily in the columns of that impartial witness on the spot, the *Diario de la Marina* of Havana.

---

We got from the Cubans the Platt Amendment. That is down in black and white. It is a part of the Cuban Constitution. It binds the Cubans, while we remain absolutely free; and the promise that President McKinley and Secretary Root gave them in return, has been cynically broken. How ill at ease they are in such a situation, and how directly their plight provokes them to show a proud sensitiveness, may be seen in the request of the Cuban Government that we take away the stock of coal belonging to us, which was left on a dock at Havana. They do not want to have even the appearance of American control. Secretary Moody very properly undertakes to remove the coal. This should have a good effect. It should tend to make the Cubans discredit such an absurd dispatch as that published the other day by *El Mundo*, saying that President Roosevelt had telegraphed President Palma "forbidding" him to form a Cuban militia. Yet the Platt Amendment remains a continual cause of vexation to the Cubans. Under it, for example, they agree to maintain the American methods and standards of sanitation. If they did not, if yellow fever should be allowed to infest Havana again, there would be a speedy cry that the Cuban Government was a failure, and that annexation was forced on us in self-defence. But what the Cubans say is that the force of Major Gorgas is one very expensive to maintain; that it is as much for our benefit as theirs; and yet that we have disabled them from having a revenue adequate for such an outlay, while forbidding them to economize. No wonder they are sore. They will soon be called "ungrateful."

---

A full statement of Gen. Wood's payments from the Cuban Treasury, for the purpose of obtaining legislation from the Congress of the United States, was sent to the House on the eve of adjournment. The total is $15,626. Of this sum, $1,350 went to the Havana *Post*, an American paper, which evidently did not daily flatter the Military Governor without expecting something in return. Its rival, the Havana *Herald*, with the natural envy and spite of one not allowed to bask in official sunshine, openly asserted that the *Post* was subsidized from the palace, and that Gen. Wood, in his soldier's simplicity, was paying the full retail price, instead of getting his thousands of copies at a wholesale rate. Putting all this one side, it is obvious now that, with whatever good intentions the payments were ordered, they were indiscreet and improper. Quite apart from their secrecy, and from the boomerang effect which their unexpected publication had upon Congress, they were in violation of the one principle which should have ruled our military government in Cuba throughout. This is, that we were there as trustees, and that all Cuban revenues were in the nature of a trust fund. It is clear that, to-day, the Cubans would be only too glad to have that money back in their Treasury. If they had, and in addition the sums which Gen. Wood gave to buy off the opposition of Gomez and others, the Cuban Government would not be obliged to cancel its contract for the education of Cuban teachers in this country, for lack of $30,000.

---

The closing of the successful meeting of the Southern Educational Association in Chattanooga calls attention anew to the educational revival in the South. Unlike the annual conference of the Southern Education Board, this association is made up wholly of Southerners actually engaged in teaching work. Being free from Northern influence, its proceedings show all the more clearly how Southern teachers have become aroused to the great need of an upbuilding of the school systems of their section. The resolution passed by the association calling upon the State Legislatures to meet school districts half way in providing for district libraries, is merely a symptom of the liberal spirit everywhere manifesting itself. While such a school library would primarily benefit the scholars, it would also exert a great elevating influence upon the surrounding homes; and an appreciation by the parents of the work of the schools is one of the aims which the educators have most at heart. A South Carolina delegate to the Athens conference in May, for instance, declared that he would speak from every stump in the State, if necessary, to further the educational revival. It has suddenly become plain to teachers throughout the South that if really rapid progress is to be made, those of mature age, as well as the young, must be brought to a realization of the financial and practical, as well as moral and intellectual, advantages to be obtained through a sound education.

---

So marked is the growing liberality in educational matters in the South, particularly in accepting Northern aid in the building up of schools and colleges, that the crass narrow-mindedness of the Louisiana Legislature in the matter of school histories becomes the more glaring by contrast. This worthy body has decreed that no text-book shall be used in the schools of the State which does not give Rear-Admiral Schley full credit for the naval victory at Santiago. There has been some excuse in the deep-seated antagonisms of the civil-war period for the attempt to prescribe histories of that time written from the ultra-Confederate standpoint. But this effort to say what shall be or shall not be put into a school history in regard to the events of 1898, goes much further in the way of prejudice and illiberality than anything which has yet been reported. Doubtless we may yet hear of a Southern Legislature's decreeing that President Roosevelt's Administration shall become known to the youth of its State only as one of "infamy" and of "insult to the South," because of the Booker Washington dinner incident. Plainly the Louisiana Legislature is itself very much in need of an educational revival. We would suggest a course of lectures by James Ford Rhodes, Charles Francis Adams, and others upon the true meaning of history and the proper attitude of the historical writer. It would then learn the folly of its resolution, beside which King Canute's attempt to assert sovereignty over the ocean was an

act of wisdom. Rear-Admiral Schley's place in history will be decided by the verdict of his brother-officers, the adverse findings of the court of inquiry, and the opinion of unbiassed foreign experts.

---

Last week's report on the movement of national bank circulation during June has a special interest. It proves, if further proof were necessary, the intimate and unfortunate connection between this form of money supply and the condition of the Treasury, and it shows that the resulting evil has been for the present checked. At first glance, an uninformed observer might be puzzled to understand why such a connection should exist at all. But the order of events is as plain as a syllogism. Bank circulation depends on the Government bonds deposited by the banks as security for the notes. An excessive public surplus is usually dealt with here by redemption, on a considerable scale, of the public debt. The Treasury's bids for such a purpose force the bonds to an artificial price. The profit thereby guaranteed induces the banks to sell their bonds, as a result of which they have to reduce their circulation. All this is nothing new to us. In the fiscal year 1887, for instance, the surplus revenue was such as to draw very seriously on the money market, and $125,000,000 of bonds were bought in by the Treasury. In 1888, $71,000,000 were redeemed for the same reason; in 1889, $120,000,000; in 1890, $104,000,000; in 1891, $114,000,000. The result was contraction of $26,000,000 in bank notes during 1888, $31,000,000 in 1889, $25,000,000 in 1890, and $18,000,000 in 1891. With the Treasury piling up idle surplus, even after these lavish and at times extravagant bond-redemptions, something very like a real contraction of the outside money supply was in progress.

---

This contraction, it will be observed, was wholly independent of any conditions properly governing movement of circulation. Almost exactly the same phenomenon arose last autumn. Bank circulation based on bonds had expanded, between the enactment of the law of 1900 and the close of last September, $115,000,000. It still showed a general tendency to increase when the Treasury's unexpectedly heavy surplus, and its consequent large withdrawals from the money market, forced Mr. Gage to resume his bond-redemptions on an extensive scale. Between that date and the close of last March, the Treasury bought in $35,890,000 of its bonds. During exactly the same period, bonds of the national banks, deposited to secure outstanding notes, decreased in amount $11,100,000, with, of course, an equivalent contraction of circulation. The first act of Mr. Shaw was to stop the bond-redemptions, with a view to stopping the quite artificial contraction of the currency. Since March, not a dollar of the public debt has been redeemed. Retirement of notes continued for a month or two, probably for account of banks which wished to strengthen their cash reserves. Now it has stopped entirely; during June, there was an increase, for the first time in nine months, in bonds held by the banks to secure circulation, and outstanding notes increased. It is quite manifest, however, that even this normal movement is a result of accidental circumstances; that, had the Treasury surplus kept on draining an active money market, the contracting process could not have been arrested. The whole episode shows the fatal weakness of the present bank-note system—a system which for security is admirable, but, for the other normal functions of a currency, hopelessly out of joint.

---

An aged merchant in this city has planned a unique beneficence—an institution which shall succor worthy self-supporting people, temporarily under stress of poverty or of physical disability. This new charity will not compete directly with the present hospitals, for it will draw neither from the well-to-do classes nor from the very poor, but from the average independent wage-earners. Its organization will permit it to treat those cases of comparatively slight illness and of tedious convalescence which the hospitals undertake, if at all, only at a sacrifice of efficiency. The character of the trustees of the Winifred Masterson Burke Relief Foundation, so splendidly endowed, insures a wise administration of this unusual trust; while the fact that the donor, Mr. John M. Burke, gives the funds outright, and will during his remaining life serve upon the Board of Trustees, happily brings to the shaping of this novel benefaction the counsel of the mind and heart which conceived it. Mr. Burke's is comparatively an obscure name in this city. It is a redeeming feature of our restless civilization that, where thousands are moving heaven and earth for notoriety, there are always a few modest citizens of every city who are silently planning how to turn their personal prosperity to the general good, and who finally present a great scheme of benefaction with no more circumstance than they use in any customary transaction of their day's work.

---

The most important action thus far in connection with the meeting of the Colonial Premiers in London has been the Imperial Government's refusal to suspend the Constitution in Cape Colony. This decision is all the more striking in view of the fact that Lord Milner has gone on record, unofficially, but publicly, as desiring "to preserve the Colony from the disastrous consequences which are likely to result from the resumption of Parliamentary and party strife before the bitter passions excited by the war have had even a little time to subside." Of course, Lord Milner, like the forty-two members of the Cape Colony who petitioned for the suspension of the Constitution, wished it understood that their views implied "no defection from the principle of responsible government." But the English Cabinet has apparently realized that the South African public would not take a suspension in this broad-minded spirit, particularly that part of it which has lately been won over to peace by a promise of eventual total self-government. The truth is, that Lord Milner and his followers fear that in Cape Colony the Dutch and their sympathizers will be in the majority, and their kind of self-government does not include anything but English supremacy. The English party at the Cape is divided on the suspension proposal; the Premier, Sir Gordon Sprigg, being against it, partly in view of Lord Milner's promise in 1899 that there should be no curtailment of Constitutional liberties as a result of the war. Not only Sir Gordon Sprigg, but others of the visiting premiers, have had a hand in bringing about the decision, for fear of the bad effect such action as urged by Lord Milner would have upon their colonies. Aside from this personal reason, they have urged a policy which is in line with the best English Constitutional traditions.

---

The announcement that the King of Italy and the Czar will soon exchange visits, gains a piquancy from this added item, that, while Victor Emmanuel III. will find time to make the return trip by way of Berlin, he considers Vienna too inconvenient a stopping-place on the way to St. Petersburg. This certainly lends color to the repeated rumors of alienation between Austria and Italy. It is undoubtedly something of a chagrin to the tenant of the Quirinal that no Austrian sovereign or prince of the blood will make an official visit to Rome, for fear of disturbing the delicate but friendly relations which exist between the dual monarchy and the Vatican. It may be felt that a punctilio of this kind has no longer serious political weight; but the fact that the Italian King visits the Czar in the first instance, and elaborately omits to visit the intervening Emperor, shows at least that the Triple Alliance lacks something of its old fervor. Amateurs of prophecy about the Eastern question will not fail to point out the fact that Italy may well be seeking assurances from the arbiter of the East in the matter of Montenegro and Albania, where her interests clash directly with the supposed ambitions of Austria. But one does well to leave the Levant on the lap of the gods.

### *VACATION TRUST-HUNTING.*

All accounts agree that the President's Pittsburgh declaration about "great corporate fortunes" is but the preliminary to an active political campaign against Trusts. He is to devote his vacation to their pursuit. Instead of the Big Game of the Rockies, which has so often before been the trophy of his holiday bow and spear, he plans to return this time with the pelt of the *Octopus Vulgaris*. Representative Littlefield is to be called in as a brother-Nimrod. The Attorney-General is to visit Oyster Bay, not for the purpose of hunting the common or garden Trust which alone haunts that peaceful shore, but to help the President load his anti-Trust cartridges for his fall shooting on the Western stump. The idea is to equip him with a high-powered rifle, in the shape of a bill embodying his idea of the "new legislation" needed against Trusts, before which every Trust that roams the prairies shall go down.

We would not be thought to speak flippantly of the President's plans. He is, no doubt, in dead earnest. His sincerity, in the position which he has taken on this subject, is as unquestionable as his courage. We cannot, however, blind ourselves to the fact that a long-range summer fight with Trusts is a very different thing from coming to close grips with the monsters in the winter at Washington. From such a hand-to-hand contest the President and his party have just emerged, and the Trusts were not the ones to come out of it "considerable shuck up like" and "permiscuously chawed." The truth is, as a careful study of the habits of the Trust will show, that animal is what may be called an æstivating instead of a hibernating species. It sleeps peacefully the summer through, caring not for the loud cries of its assailants on stump or platform. But when the winter comes, with an actual bill in Congress, like Mr. Littlefield's of this year, then it appears all teeth and claws, and by the time the Trust gets through with that bill, its own father would not recognize it.

This well-known fact is what suggests the present political futility of President Roosevelt's aggressive movement against the Trusts. He intends, his friends say, to spike the Democratic gun. But he will need to be exceedingly careful lest he furnish that piece of artillery with an extra charge of powder. Just what is the cry which, it is evident, the Democrats will raise against the Republicans in the Congressional campaign of this autumn? Obviously, that the party in power, with an ample majority and abundant time, did not so much as report in Congress a single measure for the restraint of monopoly. Now, to bring out a vacation bill on the subject will look, in the first place, perilously like confessing that the Democratic charge is true. The retort will be ready to hand: "If you think such legislation is imperatively needed, why did you not enact it during the last session of Congress?" President Roosevelt can hardly reply that Congress was too busy heeding his urgent request for Cuban reciprocity! And simply to make a fresh promise of doing, in the crowded short session, what no time was found for in the long one, would put the party too much in the attitude of being the party, not that "does things," but that is always going to do things.

Another pitfall will lie at the President's feet. What is he going to say about the relation of the tariff to Trusts? He cannot be unaware of the line of attack which the Democrats will take up. They will maintain that the Republican party is so protection-mad that it dares not touch a customs duty even when it can be shown to inure to the benefit of a Trust. In support of this contention, they will point to a solid Democratic vote in Congress in favor of taking off the tariff from all Trust-made products, and a nearly solid Republican vote against it. Here is no question of problematic control of Trusts by special legislation, thrown at once into the courts. It is, rather, an opportunity to cut away at one sharp stroke a needless and noxious protection enjoyed by monopolies. How is the President to excuse his party's attitude on that subject? Can he expect to stir up agitation about Trusts, and yet be silent, and have his party silent, in regard to this one definite and perfectly feasible way of clipping their claws? When a man goes Trust-hunting, he must not put aside the most direct and immediately deadly weapon he might use; or, if he does, he must expect to have some awkward questions put to him, and will have to give a transparently clear explanation of his course.

In referring to these personal and political difficulties which the President is certain to encounter, we must not be charged with belittling or discouraging his enterprise. We consider it of the highest moment if it signifies that Mr. Roosevelt intends to assert his leadership, and that he means to break with the timid and selfish counsels of party managers in the matter of monopoly, as well as of Cuba. He understands perfectly by this time, we have no doubt, that he has nothing to hope, but everything to dread, from the bosses and the promoters. He has heard, we presume, of that magnate who said, in the bitterness of his wrath at President Roosevelt's suit against the Northern Securities Company, that he was prepared to spend $1,000,000 to prevent his renomination. To shrink before such threats would be neither safe nor shrewd for Mr. Roosevelt. Whatever the party leaders may think of him, he is extraordinarily popular with the Republican rank and file. We can interpret his announced programme in only one way: he means to go directly to the masses of his party, and secure for himself such a support as will enable him to obtain the legislation he thinks necessary for Cuba, or against monopoly, whether the party bosses will hear or forbear. It is a greatly daring plan, and it may fail; but it reveals the President as a man who does not shrink from the duty of leadership, and who knows how alone to assert and apply it —namely, by going over the heads of the managers to the people.

---

### *PROTECTION OF MINORITY STOCKHOLDERS.*

There is much in the present situation of the "small investor" to arouse sympathy. The rate of interest has fallen very low, and the rate of taxation has correspondingly risen; for a tax of 2 per cent. on property that pays 4 per cent. interest is twice as heavy as the same tax was when the property paid 8 per cent. The proper, and we might say natural, investment for moderate fortunes is in mortgages on real estate; but our system of double taxation renders this investment frequently impracticable. A citizen of New York may, it is true, put his money in a savings bank, which can then put it into an untaxed mortgage. But the bank will accept only a small sum from one depositor, the theory being that such institutions are for the accommodation of poor people. Thus the inducement to invest in corporate stocks is very strong. In most States such stocks are taxable but once, and as the taxes are generally paid by the corporation, the stockholder is relieved from annoyance.

But nowadays the stockholder finds that his security is elusive. He may learn any day that his property has been, or is to be, taken from him; and it does not make much difference whether the process is called stealing or reorganization, or enlargement of the field of the enterprise. True, he does not often lose the whole of his property; but he finds its status impaired. He can no longer dismiss his investments from his mind, as matters that, having been once properly investigated, need no more attention. He must decide whether he will pay an assessment or be "frozen out"; whether he will take other stocks in place of those with which he was satisfied; whether he will surrender stocks for bonds or bonds for stock.

Sometimes he does not need to decide. The matter is settled without consulting him. The holders of the second-mortgage bonds of a great railroad in the Southwest were told not long since that the directors had sold bonds amounting to $30,000,000, which became, in the judgment of some people, practically a prior lien. The stockholders of a great railroad in the South suddenly learned that the directors had decided to issue

bonds to a large amount for the purchase of the stock of a railroad of questionable value. Other instances will suggest themselves to every one. Many of what were known as "investment stocks" have become the footballs of speculators. "Buying for control" now constantly alarms the conservative investor. Before he knows it, men whom he believes unscrupulous and dishonest may have acquired a majority of the stock of a company in which he has a large interest, and he must wait in terror for the announcement of some scheme of plunder.

It is true that the directors of any industrial enterprise must have freedom of action. They must not be hampered when there is a sudden stress, nor be compelled to explain matters in which secrecy is important. But there are well-defined limits to their powers. There are established principles of law, of general application; and there are specific limitations in the charters of corporations. In his recent book, 'Facts and Comments,' Herbert Spencer comments on the disregard of the rights of the smaller number by the majority, and on the submissiveness with which such disregard is accepted. This, he says, is because

> "Freedom in its full power—the power to carry on the activities of life with no greater restrictions than those entailed by the claims of others to like power—is understood by very few. Men who take shares in a company formed for a specific purpose, and then think themselves bound by the vote of a two-thirds majority to undertake some other purpose, do not perceive that they are aggressed upon—do not see that those who have entered into a contract are not bound to do a thing which they have not contracted to do, and that therefore they are wronged."

Mr. Spencer concludes that the doctrine of the unlimited power of rulers, whether nominally despots or representatives of the majority of the people, has so infested the world that few are to be found to resist it. For the present, he thinks there is no probability of anything better, but a probability of something worse; "for the retrograde movement now going on towards the militant social type is inevitably accompanied, not by relaxation of authority, but by enforcement of it."

This is perhaps too gloomy a view; but if we do not presently see a defensive movement on the part of investors whose rights have been impaired by the malfeasance of their trustees, the event may justify Mr. Spencer. These wrongs have taken place on a rising market, and most men do not worry over increased liabilities while they see their stocks quoted at advancing figures. But the time to maintain a right is when it is attacked, and stockholders may well ask themselves if it is not their duty to resist such attacks as have recently been made. The fidelity insurance companies have not yet undertaken to protect stockholders against frauds committed by trustees who have used their fiduciary position for their own gain; but they may presently see their way to enter this field. The small stockholder can generally not afford to bring an action, which is necessarily of the most difficult character, nor are stockholders unacquainted with each other able to combine. Actions by the public prosecutors amount to nothing; there is hardly a case where such an action has really resulted in the punishment of an offender by anything more than a trifling penalty. It may be necessary to require the trustees of corporations to give substantial bonds for the faithful execution of their trusts, and the companies executing such bonds would be obliged to prosecute offenders. It is certainly for the interest of stockholders to hold promoters and members of syndicates to a sharp account; and in this case their duty and interest coincide. What is lacking is the determination to resist aggression.

## *MUNICIPAL LIGHTING.*

The working of the Massachusetts Municipal Lighting Act of 1891 is examined by Mr. A. D. Adams in the June number of the *Political Science Quarterly*. Up to the middle of 1900, thirty-seven cities and towns had voted for municipal ownership, but only seventeen had done more than this. Seven towns have constructed new works, no private plants having occupied the field; nine have bought the works of existing companies. In one case the town refused to buy a private generating plant, and it was moved away. Three towns agreed with the private concerns on terms of purchase and avoided litigation. In six cases the terms of purchase had to be settled by the court. The town of Middleboro bought by agreement a plant which did not pay operating expenses. Hull bought by agreement a plant which earned 3.7 per cent. Hudson bought a plant appraised by commissioners at $15,300, on which sum it paid 7 per cent.; but the plant was not found satisfactory, and a new one was built for $17,000. Wakefield bought a plant appraised at $144,680, on which capital it earned 1.2 per cent. Only Westfield seems to have made a good investment; but the 9.6 per cent. earned by its plant is none too much for interest and depreciation.

This record should certainly be sufficient to cool the ardor for municipal ownership, and most towns will probably wait to see further results of the experiment before trying it themselves. It is the opinion of Mr. Adams that the existing law is responsible for this flagging zeal. The law provides that, if the municipal Government decides to take up the lighting business, it must buy out whatever plants are already devoted to that business, if the owners are willing to sell. In order to prevent compulsion, no rights granted in the highways can be revoked while the question of municipal ownership is pending. Attempts have been made to modify the law, by repealing the clause requiring the purchase of existing plants, and by limiting the price paid to the cost of construction or the cost of replacement. These attempts have failed, but they will no doubt be renewed, and may result in some change in the law.

Superficially, the law may seem too favorable to the existing companies. Why should they be permitted to "unload" their investments on the public; and why should they be paid more than it would cost to replace their plants? The answer to these questions is not simple, but it is to many minds conclusive. In the first place, until within a short time, few supposed that municipal governments were competent to carry on business. Certain matters were necessarily in their charge, but it was not supposed that they would go outside of their routine; nor was their management generally so good as to make it seem desirable to enlarge their responsibilities. Under these circumstances the lighting companies were formed; and they would certainly not have been formed had the Government been regarded as a possible competitor. When business is carried on by any government, it can be carried on at a loss, the deficiency being made up by taxation. But private persons cannot carry on business in this way; if they cannot make a profit, they must stop. A governing body can thus crush competition, and it is the aim of those who believe in municipal ownership to establish municipal monopoly. But to ruin those who had undertaken to furnish light when they could not have expected the Government to compete in the business, seems highly unjust. The grant of rights in the streets and other privileges estops the Government from destroying these rights. The obligation of contracts is practically impaired, and equity would enjoin such a proceeding by a private party. The requirement that the municipality shall buy existing plants is merely a requirement that it shall not destroy their value without compensation.

For another reason this condition is proper. Light can be furnished more economically, as a rule, where only one concern is engaged in the business. The history of competing gas companies is well known. Their competition is illusory; and the community finally has to pay the cost of several plants, instead of one. Either a municipal plant would ruin an existing private plant, or both plants would be paid for by the public. The Legislature wisely prevents this result. The assertion that only the cost of production, or of reproduction, should be allowed as compensation, is

altogether inadmissible. Such a rule might be applied to companies formed hereafter, but it would be highly unjust to existing concerns. The element of good will is, in a growing community, very valuable. A plant is constructed with an eye to the future. It must be made large enough to more than supply the present demand, or it will have to be reconstructed at once. Capitalists discount future dividends. They will carry on an industry at a loss for some time if they are convinced that it will be eventually profitable. The dividends that they forego now they expect to obtain hereafter. Some allowance, however, should be made by investors for the cheapening of production; and the fact that a property has cost a certain sum does not prove that it is worth it, even when taken for public uses. Appraisal under the direction of the court is probably the fairest method of ascertaining value; and if such proceedings cannot be carried on without corruption, municipal ownership will certainly not be exempt from it. We doubt if the Massachusetts statute can be improved, even if it renders municipal ownership unattractive. As to the extent of the desire for it, we cannot regard that as indicated by the size of the petitions in its favor that have been presented.

## *CHAMBERLAIN AND THE PREMIERS.*

When Mr. Chamberlain and the Colonial Premiers assembled on Monday week, it was apparently a case of either side desiring the other to take the initiative. "Tirez les premiers, Messieurs," said Mr. Chamberlain, with true Fontenoy gallantry. But the others, not to be outdone, asked him what *he* had to propose. According to the dispatches, he had very little to suggest except "problems." But no empire that we know of —or republic, either—has to go hunting problems. Solutions are what we are all short of; and it seems to be agreed that Mr. Chamberlain was, for him, singularly halting and almost tongue-tied in the whole matter of preferential trade with the colonies.

The reason why he may have felt a certain embarrassment in speaking on this subject, is not far to seek. He was meeting with the colonists only a few days after the Chancellor of the Exchequer had, in the House of Commons, given the finishing blow to the whole scheme. Sir Michael Hicks-Beach was understood to have been outvoted on the grain duties, and the inference was that they were imposed as a peculiarly Chamberlainish plan for striking a bargain with the colonies. Indeed, Sir Michael himself had used language that looked that way. He had spoken vaguely of his willingness to make "a sacrifice" in order to promote trade with the colonies. But just when the talk was most confident about preferential tariffs within the empire, the Chancellor, who was expected to bless the project, rose to curse it. When charged, on June 18, with holding the same views as Prime Minister Seddon of New Zealand, he broke in, "I entirely repudiate that"; and later on said that the rumor of the Government's intention to lay discriminating taxes on imports was "an extraordinary delusion," and that "it is not our policy to endeavor to encourage trade with our colonies by initiating a tariff war with our largest customers." If, said Sir Michael with unfeeling sarcasm, the other colonies wanted to imitate Canada and give British goods a preferential tariff without any *quid pro quo*, he was not the man to say them nay; but as for the notion that England thought of changing the principles upon which her fiscal system was based, "I entirely disavow," he said, "any idea of that kind."

Mr. Chamberlain must have considered this excessively rude, coming as it did on the heels of his own speech at Birmingham. In that he had sneered at "adherence to old and antiquated methods" of building up international trade, and said, alluding directly to the grain duties, and the chance they gave to favor colonial trade at the expense of that of other countries:

> "If by adherence to economic pedantry, to old shibboleths, we are to lose those opportunities of closer union which are offered us by our colonies, if we are to put aside occasions now within our grasp, if we do not take every chance in our power to keep British trade in British hands, I am certain that we shall deserve the disasters which will infallibly come upon us."

After this, it must have been disheartening enough to have an economic pedant turn up in the person of Mr. Chamberlain's own Chancellor of the Exchequer, to damn his scheme out of hand.

It is an old dream of Mr. Chamberlain's, however, and he will doubtless continue to strive for its fulfilment with all the varied resources at his command. As long ago as 1896 he was holding out to the colonies the bait of an exclusive production of the "articles of enormous consumption" in England. In return, there was to be a removal by the colonies of "protective duties upon any product of British labor." Naturally, the first part of the programme has seemed fascinating to the colonies. One of the mottoes among the Canadian decorations designed for the coronation was, "Canada, the Granary of the Empire." Premier Seddon had no sooner landed in England than he began to talk about "a self-sustaining empire," in which the colonies should supply "all the foodstuffs." But it is obvious that the proposal has not been able to endure discussion. The "old shibboleths" of political economy, which so excite Mr. Chamberlain's disgust, are simply an embodiment of the wisdom garnered by long experience in international trade; and it is the voice of the experienced English ship-owner, the practical English manufacturer, and the English exporter that has made itself heard, and that has prevailed against the gaudy project on which Mr. Chamberlain has set his heart, and upon which he has almost staked his political fortunes. Sir Robert Giffen has buried it under an avalanche of fact and argument; and the biographer of Cobden, Mr. John Morley, has attacked it in and out of Parliament with all of Cobden's earnestness and logic and with more than Cobden's eloquence. One of Mr. Morley's happiest strokes was when, in picturing the certain decay of English trade as a result of even a disguised protection, he said, in clever allusion to Prime Minister Seddon:

> "You well know Macaulay's famous picture of the New Zealander—the traveller from New Zealand—standing in a vast solitude, and from the broken arches of London Bridge sketching the ruins of St. Paul's. What a pang would go through the heart of that New Zealander, when the time comes, if he thought that this mournful and dismal solitude, this breakdown of a great city, had been due to a policy adopted in consequence of the masterful blandishments of a New Zealander."

In two words, the argument against the fair-seeming proposal of preferential trade is that, to "prefer" the colonies is, in the act, to discriminate against other nations; that the trade of the latter is worth more than that of the former could possibly be; and that to tax, directly or indirectly, food and raw materials is to disable English manufacturers from competing in a world-market where they already experience severe competition. These truths appear to be so firmly fixed in the minds of leading Englishmen, and of the majority of the Cabinet itself, that we are likely to hear little more of the trumpeted scheme of an all-British tariff and an Imperial trade. The Premiers at the Conference can exchange only helpless platitudes on this subject, and will devote their time and strength to projects of intercolonial communications and Imperial defence. Even as to those, the prospect is that the proceedings will be largely Platonic.

## MR. BRYCE ON THE RELATION BETWEEN WHITES AND BLACKS.

OXFORD, June 20, 1902.

> "The tremendous problem presented by the Southern States of America, and the likelihood that similar problems will have to be solved elsewhere—as, for instance, in South Africa and the Philippine Isles—bid us ask, What should be the duty and the policy of a dominant race where it cannot fuse with a Backward race?"

These words are taken from Mr. Bryce's Romanes Lecture on "The Relations of the Advanced and the Backward Races of Mankind." To suggest an answer to this "tremendous problem" is, if not exactly the aim, yet certainly the effect, of the last and to my mind the most important of Mr. Bryce's utterances.

Nothing he has written or spoken is, whether one agrees with his views or not, likely to produce so much effect as the address delivered at Oxford on the 7th of

June. Of its importance and its weightiness it is hardly possible to speak in terms that are too strong. The address raises in a clear form the most perplexing question of the time. It happily raises this question (which may in no short time divide political parties in England) before the treatment of backward races has been forced upon the active attention of the English public and become involved in all the confusion of partisanship; and Mr. Bryce speaks with authority. He is in some sense an expert witness and an expert free from bias. He has devoted life-long attention to political and social inquiries. He has collected an infinity of knowledge from the storehouse of history. He possesses an unrivalled acquaintance with the actual conditions, as far as they can become known to a traveller, of different and distant countries. When he speaks of India, of the Mohammedan world, of Russia, of the Southern States of America, or of Mexico, he speaks of lands which he has seen and with the inhabitants whereof he is intimate. He is, further, nothing of a bookworm. To the knowledge gained from books, from thought, and from travel he adds the equally valuable knowledge of mankind gained from participation in the public life of England. When we add to all this that, throughout the United States, every word he prints is sure to be read by thousands of readers who will receive his teaching with a strong and perfectly legitimate prejudice in favor of the teacher, one may feel perfectly certain that his views with regard to the relation between blacks and whites will not fall to the ground without effect.

Mr. Bryce's policy, if I may use the term, rests on three principles which the whole of his lecture more or less supports and illustrates. First: The sentiment or prejudice of the whites against the intermixture of blood (or intermarriage) between whites and blacks is, at any rate where the whites belong to the Anglo-Saxon race, so strong that it cannot and perhaps ought not to be overcome. He apparently assumes it to be certain that, neither in the Southern States of America nor in South Africa, will the difficulty of adjusting the relation between whites and negroes ever be removed by fusion. This is a state of things which statesmen must accept as a fact, and recognize it, therefore, in their political arrangements.

Secondly. Fusion or intermarriage between races so widely different as are blacks and whites produces, on the whole, unsatisfactory results; to this statement there are, as Mr. Bryce is careful to insist, occasional and striking exceptions. Still, policy must be built on what is usual, not upon what is exceptional, in the course of things; and—what is of supreme importance—the unsatisfactory result produced by the mixture of whites and negroes, or of whites and Hindus, or of the American aborigines and negroes, goes a good way to supply a moral justification for the condemnation, by Anglo-Saxon sentiment, of intermarriage between whites and blacks. For "the matter ought to be regarded from the side neither of white nor of black, but of the future of mankind at large"; and for the future of mankind it is absolutely vital that "some races should be maintained at the highest level of efficiency, because the work they can do for thought, and art, and letters, for scientific discovery, and for raising the standard of conduct, will determine the general progress of humanity." If, therefore, we can suppose the blood of the races which are now most advanced to be diluted, and, so to speak, deteriorated by the blood of those of the most backward, there might be an irreparable loss to the world at large.

Thirdly. Sound policy must be based on the recognition of the unconquerable and probably justifiable aversion entertained by men of English race to the fusion by intermarriage of the white and the black races, combined with the recognition of the equal claim to justice of every man, whatever his race or color. This principle would, if I understand Mr. Bryce rightly, lead to the following consequences. Intermarriage between whites and blacks would be discouraged, if not absolutely forbidden. The line of conduct proposed

"dissuades any attempt to mix races so diverse as are the white Europeans and the negroes. The wisest men among the colored people of the Southern States of America do not desire the intermarriage of their race with the whites. They prefer to develop it as a separate people on its own lines, though, of course, by the help of the whites. . . . [The negro race] will cultivate self-respect better by standing on its own feet than by seeking blood alliances with whites, who would usually be of the meaner sort."

The negro race would, however, acquire complete legal—which is a different thing from political—equality.

"On the legal side of this question one thing is clear: the Backward race ought to receive all such private civil rights as it can use for its own benefit. It ought to have as full protection in person and property, as complete an access to all professions and occupations, as the more advanced race enjoys."

Political equality, in the democratic sense of the term, should hardly be aimed at; but,

"as regards political rights, race and blood should not be made the ground of discrimination. Where the bulk of the colored race are obviously unfit for political power, a qualification based on property and education might be established which should permit the upper section of the race to enjoy the suffrage. Such a qualification would doubtless exclude some of the poorest and most ignorant whites, and might on that ground be resisted. But it is better to face this difficulty than to wound and alienate the whole of the colored race by putting them without the pale of civic functions and duties."

Lastly, social relations must be left mainly subject to the control of public opinion:

"As regards social relations, law can do but little save in the way of expressing the view that the State takes of how its members should behave to one another. Good feeling and good manners cannot be imposed by statute. The best hope lies in the slow growth of a better sentiment."

Here, then, we have Mr. Bryce's policy. Its essential elements are the substitution of friendly separation for any attempt at fusion between the two races; the insuring to the blacks, not only in name, but in fact, of every private civil right which can be claimed by any citizen; the placing of political rights on a basis which, while it makes it possible for a few negroes of exceptional ability to take part in public life, secures, probably for years to come, the political predominance of the white race; and, lastly, the gradual amelioration of social relations between the advanced race and the backward race by the slow growth of better public feeling and opinion.

The "policy of isolation" has much to recommend it. It depends, however, for its moral justification on the assumption that "the mixture of races very dissimilar, and especially of European whites with blacks, tends rather to lower than to improve the resultant stock." But the validity of this assumption is disputed by some competent judges, and is not easy to reconcile with some of the phenomena—such, for example, as the genius occasionally displayed by men of mixed race, or the eminence attained in Mexico by leaders who have certainly in their veins a strain of Indian blood. Indeed, our author himself writes: "The subject of race mixture is one of extreme interest, to which, as far as I know, comparatively few data for positive conclusions exist"; and, if this be so, the policy of isolation or separation is at best an experiment that depends for its success on the soundness of a theory which itself rests upon a foundation of dubious strength. But this general objection must not be pressed too far. Appearances suggest the conclusion that race-mixture may generally produce evil, and the conviction of whites that intermarriage between themselves and persons of color can hardly be tolerated, is itself a fact of primary importance, which may establish in the eyes of statesmen the prudence of discouraging the fusion of widely differing races. Another general remark is, that Mr. Bryce's language as to "social relations" is extremely vague. "Good feeling and good manners cannot be imposed by statute"; but then, law ought to do "something in the way of expressing the view the State takes of how its members should behave to one another." The difficulty lies in reconciling these two aspects of law. No statute can force the whites of a Southern State to enter into intimate relations with their colored neighbors; but is the law to enact that whites and blacks shall not ride in the same carriage, or to tolerate the refusal of an innkeeper to supply a room to a gentleman of color? My object is not to answer these questions, but only to show that they and like inquiries need answering. The line between social and legal equality is in truth hard to draw. The formal recognition of equal legal rights when the real enjoyment thereof is denied, increases instead of lessening the irritation of the race which suffers from its denial.

Dismissing, however, altogether the more general criticisms on the policy of isolation, we shall find that it is open to at least four specific objections.

First. It permanently stereotypes the rigid division of the members of one community into two absolutely separate though it may be not actually hostile bodies. Is this sort of separation really compatible with the existence of a State, the members of which all possess equal legal rights, and all of whom, on certain requirements as to education and property being fulfilled, take their share in political life? It is difficult to answer this inquiry in the affirmative. The answer becomes the more perplexing when we note that the arrangements which are intended to insure the political predominance of the more advanced race, will, as time goes on, cease to be efficacious. Almost all blacks will, if fairly treated, come ultimately to possess the amount of education which may be re-

quired as a condition for exercising electoral rights; and in any country which is prosperous, the colored population who enjoy the benefit of equal laws and of fair treatment, will, in no long time, become possessed of a good deal of property. It is vain to suppose that either the educational test or the property qualification, if fairly worked, will permanently, in a modern State, at once admit the great body of the whites to political power and exclude from it the great body of the blacks. The political arrangements proposed by Mr. Bryce in regard to the suffrage are in themselves wise; they may produce good effects for a time. This is no small matter, for the lapse of time may educate the negroes and mitigate the racial prejudices of the whites. But constitutional devices which are ingenious and beneficial are, after all, merely devices for tiding over a period of transition.

Secondly: Social separation, combined with fair treatment of the negroes, will, it is of course hoped, as time goes on, mitigate or remove racial hostility. Every one interested in the progress of humanity must wish that this hope may turn out well founded. Unfortunately, the very circumstances which recommend the separation of two races who live together and are intended to be contented citizens of a common country, forbid the expectation that the policy of isolation will produce beneficial effects. Is it in accordance with human nature that a dominant class who hate the idea of intermixture of any kind with a race whom they hold to be their inferiors, will really and fairly allow to this race full legal equality? Grant that the blacks will obtain "full protection in person and property," though this is conceding a good deal; does any one really suppose that, under the system of isolation, they will obtain "as complete access to all professions and occupations, as wide a power of entering into contracts, as ready an access to the courts, as the more advanced race enjoys"? Neither knowledge of human nature nor a fair reading of history warrants any confidence in the answer which a philanthropist would wish to give to these inquiries. Rigid separation fosters that very pride of race and that contempt for men who, on the ground of color, are counted as inferiors, which statesmanship and humanity alike wish to remove; the considerations which justify the policy of separation will prevent the exercise of that perfect justice which alone is likely to make that policy beneficial.

Thirdly. The rigid separation between whites and blacks is hard to reconcile, not so much with the dogmas as with the essential character of Christianity. There is neither Greek nor Jew, circumcision nor uncircumcision, barbarian, Scythian, bondman, freeman; but Christ is all and in all. These words embody the essence of Christian faith; can they by any possibility be made consistent with customs, more rigid than law, forbidding men of different color to join together in the worship of the same God? In the long run, either the doctrine of brotherhood preached by the Church must break down the social separation maintained by the State, or the moral and intellectual inequality embodied in the customs of the State must reduce the sentiment of Christian brotherhood to an ineffective and, from its acknowledged unreality, hurtful dogma. This remark does not, be it noted, necessarily apply to the prohibition of intermarriage. If the conviction should ever become firmly established, among blacks no less than among whites, that fusion between the two races is an evil to each, moral sentiment will, as in other cases, rightly conform to well-established physical facts. But, though the ultimate prevalence of such a conviction is possible, it is by no means certain, and the possibility depends upon the complete establishment of a principle the truth whereof is still a matter of debate.

Fourthly. The policy of isolation is inconsistent with the fundamental assumption of democracy. The dogma of human equality in the only sense in which it can be entertained at all by any reasonable man, is the cornerstone of democratic government. It does not, of course, mean that all men are equal, either morally or intellectually: for the immense differences between one man and another, in both physical and intellectual power, are patent to any one who is not the slave to some mere formula. Nor is it possible for any thoughtful person to believe, as did thinkers of great power during the eighteenth century, that these differences are due wholly to circumstances which can be got rid of by wiser laws or by better institutions. But, though no modern democrat who has thought seriously on social and political questions can, at the present day, believe in the "equality of mankind" in the strict sense of that term, every supporter of democratic institutions does believe and feel that, from a political point of view, the characteristics which men have in common are of far more importance than the features, marked though they may be, in which they differ from one another. Democracy depends upon the importance attached to the similarities, as surely as aristocracy depends upon the importance attached to the differences, of human nature; and wherever democratic institutions flourish, the dogma of equality, rationally understood, roughly corresponds with the actual state of society. But the strict separation in any community of whites from blacks emphasizes in the strongest manner the vital importance of the difference of color. It goes in reality further than this, and declares that, in the eye of the State, one class of citizens does not stand on an equality with another class of citizens. A system of caste, whatever its merits, is inconsistent with the democratic spirit, and it passes belief that caste and democracy can in reality coexist.

Nor can this assertion be disposed of by pointing to the success of the Anglo-Indian administrative system, under which different races, while standing apart from one another, have enjoyed equal civil rights. The success of English administration is in no way due to democracy. British India is not governed on democratic principles; government *for* the people is a very different thing from government *by* the people. The government of England, it is true, has become more or less democratic, but the popular government of England is Imperial government as regards India; and the credit fairly due to English democracy is that, while popular opinion has vaguely desired that India should be governed with justice, popular wisdom or diffidence or indifference has confided the administration of British India to experts. The whole relation, moreover, of Englishmen to the natives of India is modified by the physical inability of Europeans to settle there. The country is governed by Englishmen, but it is inhabited by native races.

To summarize the objections which Mr. Bryce's proposals excite in the mind of a friendly critic is a very different thing from asserting that these objections are decisive. The general drift of the policy he recommends strikes me, in so far as I can venture to have an opinion on the subject, as preëminently wise, if it be looked upon as a scheme for meeting fairly the immediate difficulties of the moment. What criticism suggests is that, if one may assume the soundness of the principles on which his suggestions are based, they sketch out a prudent policy of transition, but do not afford anything like a final solution of the negro problem. A. V. Dicey.

## THE LATE LORD ACTON.

London, June 23, 1902.

In Lord Acton, who has just died (June 19), at Tegern See in Bavaria, Europe has lost one of its most learned men, and England one of its most unique literary figures. He belonged to an old Roman Catholic family of Shropshire, a branch of which had gone to southern Italy, where his grandfather, Gen. Acton, had been chief minister of the King of Naples in the great war, during the period when the Bourbon dynasty maintained itself in Sicily, by the help of the British fleet, while all Italy lay under the heel of Napoleon. His father, Sir Ferdinand Acton, married a German lady, heiress of the ancient and famous house of Dalberg, one of the great families of the middle Rhineland; so John Emmerich Dalberg Acton was born half a German, and connected by blood with the highest aristocracy of Germany. He was educated at Oscott, one of the two chief Roman Catholic colleges of England, under Dr. Wiseman, afterwards Archbishop of Westminster and Cardinal; but the most powerful influence in the development of his mind and his principles was that of Dr. von Döllinger, with whom he lived and studied for some years at Munich. He sat for a short time in the House of Commons, as member first for Carlow (1859), and was afterwards elected for Bridgnorth (1865), but lost his seat (which he had gained by one vote only) on a scrutiny. In those days it was no easy matter for a Roman Catholic to secure an English seat; so in 1869 Mr. Gladstone had him created a peer. Though he took no prominent part in Parliamentary life, in either house, he continued to be all his life keenly interested in politics, and was for many years one of Mr. Gladstone's most trusted confidential advisers. It was, indeed, believed that on at least one occasion Mr. Gladstone wished to place him in an important office; but political exigencies made this impossible, and the only public post he ever held was that of Lord in Waiting in the Ministry of 1892. In this capacity he was brought into frequent contact with Queen Victoria, who felt the warmest respect and admiration for him. He was one of the very few persons round her who knew the courts of Continental Europe, and could discuss with her from direct

knowledge the men who figured in those courts.

Unlike most English Roman Catholics, he was a strong Liberal—a Liberal of that orthodox type which prevailed from 1852 till 1885. He was also a convinced Home-Ruler, and had, indeed, adopted the principle of Home Rule for Ireland before Mr. Gladstone himself adopted it. His liberalism was based on the love of freedom for its own sake, and on the belief that freedom is the best foundation for the stability of a constitution and the happiness of a people. This was, he used to say, one of the great lessons which he had learnt from history. He applied it in ecclesiastical as well as in political affairs. At the time of the Vatican Council of 1870, he was, though a layman, prominent among those who constituted the opposition maintained by the Liberal section of the Roman Catholic Church to the affirmation of the dogma of papal infallibility. His wonderfully full and accurate knowledge of ecclesiastical history was placed at the disposal of the prelates, such as Archbishop Dupanloup, Bishop Strossmayer, and Archbishop Conolly (of Halifax, N. S.), who combated the Ultramontane party in the animated and protracted debates which illumined that Oecumenical Council. One, at least, of the treatises and many of the letters in the press which the Council called forth, were from his pen, and he was recognized by the Ultramontanes, and in particular by Archbishop Manning, as being, along with Döllinger, their most formidable opponent. As every one knows, the Infallibilists triumphed, and the schism which led to the formation of the Old Catholic Church in Germany and Switzerland, was the result. Döllinger was excommunicated; but against Lord Acton, since he was a layman, no action was taken, and he remained all his life a member of the Roman communion, while adhering to the views he had advocated in 1870.

With this close hold upon practical life and this constant interest in the politics of the world, especially of England and the United States, no one could be less like that cloistered student who is commonly taken as the typical man of learning. But Lord Acton was a miracle of learning. Of the sciences of Nature and their practical applications in the arts he had indeed no more knowledge than any cultivated man of the world is expected to possess. But of all the so-called "human subjects" his mastery was unequalled. Learning was the business of his life. He was gifted with a singularly tenacious memory. His industry was untiring. Wherever he was—in London, at Cannes in winter, at Tegern See in summer, at Windsor or Osborne with the Queen; latterly, till his health failed, at Cambridge during the University terms—he never worked less than eight hours a day. Yet, even after making every allowance for his memory and his industry, his friends stood amazed at the range and exactness of his knowledge. It was as various as it was profound. It covered the whole field of history, both civil and ecclesiastical, and was especially full and minute as respects the Renaissance and Reformation periods and the centuries thence down to our own. It included not only the older theology, but modern Biblical criticism. It included metaphysics; and not only metaphysics in the more special sense, but the abstract side of economics and that philosophy of Law on which the Germans set so much store. Most of the prominent figures who have led the march of inquiry in these subjects, men like Ranke and Fustel de Coulanges in history, Wilhelm Roscher in economic science, Adolf Harnack in theology, were his personal friends, and he could meet them as an equal on their own ground. On one occasion he was a guest at a small party in London where the late Bishop Creighton, who was then writing his History of the Popes, and the late Prof. Robertson Smith, the first Hebrew and Arabic scholar in Britain, had been invited to meet him. The conversation turned first upon the times of Pope Leo the Tenth, and then upon recent controversies regarding the dates of the books of the Old Testament, and it soon appeared that Lord Acton knew as much about the former as Dr. Creighton, and as much about the latter as Robertson Smith. The Constitutional history of the United States is a topic far removed from those philosophical and ecclesiastical or theological lines of inquiry to which most of his time had been given; yet he knew it perhaps more thoroughly than any other living European, and he continued to read all the books of importance dealing with it which from time to time were published. So, indeed, he kept abreast of nearly all the literature of possible utility bearing on history and political theory that appeared in Europe or America, reading much which his less diligent or less eager friends thought scarcely worthy of his perusal. And it need hardly be said that his friends found him an invaluable guide to the literature of any subject. In the sphere of history more especially, one might safely assume that a book which he did not know was not worth knowing, while he was often able to indicate, as being the right book to consult, some work of which the friend who consulted him, albeit not unversed in the subject, had never heard. He had at one time four libraries—the largest at his family seat, Aldenham in Shropshire, others at Tegern See, at Cannes, and in London; and he could usually tell in which of these the particular book he named was to be found. Unlike most men who value their libraries, he was fond of lending books, and would sometimes put a friend to shame by asking some weeks afterwards what the latter thought of the volumes he had almost forced on the borrower, and which the borrower had not found time to read.

Vast as his stores of knowledge were, they were known only to the few who were intimate with him. It was not merely that he, as Tennyson said of Edmund Lushington, "bore all that weight of learning lightly, like a flower." No one could have known in general society that he had any weight of learning to bear. He seemed to be merely a highly cultivated and agreeable man of the world, interested in letters and in politics, but quite as willing (perhaps more willing) to listen as to talk. In a large company he seldom put forth the fulness of his powers; it was in familiar talk with persons whose tastes resembled his own that the extraordinary finesse and polish of his mind revealed themselves. His critical taste was not only delicate, but exacting; his appreciations leaned to the side of severity. No one applied a more stringent moral standard to the conduct of men in public affairs. He insisted upon this, in his inaugural lecture at Cambridge, as the historian's first duty. But in estimating the value of literary work he was also hard to satisfy. His ideal, both as respected thoroughness in substance and finish in form, was unusually high, and he noted every failure to reach it. No one appreciated merit more cordially. No one spoke with warmer admiration of such distinguished historians and theologians as those just named. But the extreme precision of his thinking and the fastidiousness of his taste gave a tinge of austerity to his judgment. His opinions were peculiarly instructive and illuminative to Englishmen, because he was only half an Englishman, as well in blood as in his training and mental habits. He viewed our insular literature and politics with the detachment not only of a Roman Catholic among Protestants, of a pupil of Döllinger and Roscher among Oxford and Cambridge men, but also of a citizen of the world, whose mastery of history and philosophy had given him an unusually wide outlook over mankind at large.

The passion for acquiring knowledge which his German education had fostered ended by becoming a snare to him, because it checked his productive powers. It absorbed so much of his time that little was left for literary composition. It made him think that he could not write on a subject till he had read everything, or nearly everything, that others had written about it. It developed the habit of making extracts from the books he read—a habit which took the form of accumulating small slips of paper on which these quotations were written in his exquisitely neat and regular hand, the slips being arranged in cardboard boxes according to their subjects. He had many hundreds of these boxes; and though much of their contents must no doubt be valuable, the time spent in copying and arranging the essence of the books whence they came, would have been better spent in giving to the world the ideas which they had helped to evoke in his own mind. When one read some article he had written, garnished and perhaps overloaded with citations, one often felt that his own part was better, both in substance and in form, than the passages which he had culled from his predecessors. One of the secrets of historical composition is to know what to neglect, since in our time it has become impossible to exhaust the literature of most subjects, and, as respects modern times, to exhaust even the original authorities. Lord Acton was unwilling to neglect anything; and his passion for completeness drew him into a policy fit only for one who could expect to live three lives of mortal men.

It was this somewhat overstrained conscientiousness, coupled with the almost impossibly high ideal of finish and form which he set before himself, that made him less and less disposed to literary production. No man of first-rate powers has in our time left so little by which posterity may judge those powers. In his early life, when for a time he edited the *Home and Foreign Review*, he wrote pretty frequently; and even between 1868 and 1890 he contributed to the press some few historical essays and a number of anonymous letters. But the aversion to creation seemed to grow on him. About 1890 he so far yielded to the urgency of a few friends as to promise to reissue a number of his essays in a volume, but, after he had spent several years in

rewriting and polishing these essays, he abandoned the scheme altogether. In 1882 he had already drawn out a plan for a comprehensive history of Liberty; and those who were privileged to hear him talk of the way in which he meant to treat that splendid theme, know what it might have become in his hands. But this plan also he dropped, because the more he read with a view to undertaking it the more he wished to read, and the larger did the enterprise seem to loom up before him. With him, as with so many men who cherish high ideals, the Better proved to be the enemy of the Good.

His literary style suffered in his later days from the copiousness of the interspersed citations and from the overfulness and subtlety of the thought, which occasionally led to obscurity. But when he handled a topic in which learning was not required, his style was singularly clear, pointed, and incisive. Some years ago he wrote in one of our monthly magazines a short article upon the late Lord Houghton (Mr. Monckton Milnes), which showed how admirable a master he was of polished diction and penetrating analysis, and made one wish that he had more frequently consented to dash off work in a quick way.

To the work of a university professor he came too late to acquire the art of fluent and forcible oral discourse, nor was the character of his mind, with its striving after a flawless exactitude of statement, altogether suited for the function of presenting broad summaries of facts to a youthful audience. His predecessor in the Cambridge chair of history, Sir John Seeley, with far less knowledge, far less subtlety, and far less originality, had in larger measure the gift of oral exposition. But the influence of Lord Acton's character and method, the impression produced by the amplitude of his views, by the range of his learning, by the liberality of his spirit and his unfailing devotion to truth and to truth alone, was very great and very fruitful in the university. His lectures (read from MS.) were models, in their way, of narrative informed by fulness of thought.

To most men he seemed reserved as well as detached. He avoided publicity and popularity with the tranquil dignity of one for whom the world of knowledge and speculation was more than sufficient. But he was a most loyal friend, affectionate to his intimates, gracious in his manners, blameless in all the relations of life. Comparatively few of his countrymen knew his name, and those who did probably knew him best as the confidant of Mr. Gladstone and as the most remarkable instance of a sincere and pious Roman Catholic who was equally a Liberal in politics and in theology. But those who had been admitted to his friendship recognized him as one of the finest intelligences of his generation—an unsurpassed, and indeed a scarcely rivalled, master of every subject which he touched.

# Correspondence.

## THE EXCUSE FOR DEWEY.

To the Editor of The Nation:

Sir: May I suggest that the statement in your issue of the 3d inst., in regard to "the spurious character of the so-called battle of Manila," is hardly fair to Admiral Dewey and the commanders of the American land forces? In a certain sense the battle was a sham, but this was not their fault. By the Spanish military law, as I understand, a commander who surrenders a post without a fight, no matter how hopeless it may be, is punished with death. To show that this rule is not a dead letter, I may state that I was informed by Capt. C. H. Davis, U. S. N., who was in command of the naval force which took Ponce, that, although the Spanish troops there were very few, and utterly powerless to protect the town against bombardment, their commander was with great difficulty induced by the civil authorities to withdraw, in consequence of Capt. Davis's threat to bombard unless the town were immediately surrendered. Although a refusal to withdraw the troops would only have led to needless slaughter and destruction of property, the Spanish commander was condemned to death, and it was only in consequence of a very strong influence in his behalf, backed by Capt. Davis's positive statement that he had intended to fulfil his threat, that the sentence was commuted to imprisonment—for life, I think.

Of course, from a humanitarian standpoint, the Spanish Governor-General should have surrendered without insisting on the formality of an attack, and should have taken his death punishment like a Christian, instead of sacrificing other men's lives to save his own; but then, Spaniards are rarely humanitarians. The American officers were not, however, responsible for the Spaniard's lack of humanity. He would not surrender the town without an attack, although he would agree to do so after the attack had reached a certain point. The time had come to take Manila, and, if it was to be taken, an attack in force was inevitable. Had the cable been working, the American officers could have been informed of the protocol, in which case there would have been no attack; but it was their duty to go ahead until they received orders to the contrary, and the Spanish Governor-General left them no choice.

Yours truly, Charles C. Binney.

Philadelphia, July 5, 1902.

## OXFORD AND THE RHODES SCHOLARSHIPS.

To the Editor of The Nation:

Sir: As your excellent article in No. 1928 has done me the honor to allude to my anticipations (in the May *Fortnightly*) of the effects of the Rhodes foundation in America, a few words of comment may perhaps be permitted me. In the first place, I hardly "advocated" the giving of Rhodes scholarships to graduates. I merely said that *if* Americans were consulted, they probably would be so given; if they are not consulted, any scheme that is adopted will probably prove a failure. Again, admitting that their age would differentiate the Rhodes scholars from the ordinary undergraduates, it hardly seems to follow that they would have to form "a separate colony" in any invidious sense. The social life of Oxford is varied enough to afford congenial society to every taste.

On the other hand, your article seems entirely right as to the relations of the colleges towards the Rhodes scholars. They will be judged on their individual merits as men, and those colleges which are most attractive will have the first choice and will admit those whom they want. No college will want too many of them, and all colleges will want some. Thus the problem of distribution will solve itself, without any official regulation or vain attempt to dictate to the perfectly independent authorities of the colleges.

F. C. S. Schiller.

Corpus Christi College, Oxford, June 27, 1902.

## THE HARVARD COMMENCEMENT.

To the Editor of The Nation:

Sir: This year's commencement at Harvard was a day to cause grief to all her sons who have dear at heart her fair fame and her honorable record as a seat of learning. Snobbery, commonplace, and mutual and self-admiration reigned supreme. The ticket which every graduate was rightly required to carry and show was dishonored by policemen at various points where there could be no question of the safety of the President of the United States; but he was somewhere near, as if he were the Sultan or great Cæsar. Can anything surpass the bad taste of President Eliot's words describing Charles Proteus Steinmetz as "the foremost expert in applied electricity of this country, and therefore of the world"? After dinner (and such a dinner!), and after President Eliot had compared 1892 (why not 1872?) with 1902, to the tune of "Alone I done it," the crowded tables resolved themselves into a political meeting. President Roosevelt chose that time and place to make an *apologiam pro vitâ suâ*. He can hardly be so simple as to suppose that his assertion that Wood and Root are good men and have done right, convinced a single person who considers Wood to have made wrongful use of money, and Root to have kept back facts which the whole country ought to have known. Fortunately, there were redeeming features — Governor Crane's few simple words, and the reception of Roosevelt's tribute to the junior Senator from Massachusetts. And most delightful was it that, at the singing of "Fair Harvard" in front of Holworthy, nearly every man in range took off his hat. This went far, but could not wholly atone for the mistakes of the day, in the view of a middle-aged alumnus.

A. L. T.

Boston, July 4, 1902.

# Notes.

Henry Holt & Co. announce the second volume of Prof. J. P. Gordy's 'Political Parties in the United States'; a translation, by Dr. William Fairley, of Seignobos's 'History of the Roman People'; and a 'Syuopsis of Animal Classification,' by Prof. Wilder of Smith College.

'The Unspeakable Scot,' by T. W. H. Crosland, is in the press of G. P. Putnam's Sons.

It is with a pleasant surprise that we receive from Aiken, S. C., a very tasteful prospectus of the Palmetto Press (W. L. Washburn), announcing a reproduction, in two limited editions, of Urian Oakes's 'An Elegie upon the Death of the Reverend Mr. Thomas Shepard,' following the form and spelling of the copy of the first edition

in the Library of Brown University. Mr. Shepard was "Late Teacher of the Church at Charlstown in New England," and his death occurred in 1649. Oakes died fourth president of Harvard College in 1681.

'Why My Photographs Are Bad,' by Charles M. Taylor, jr., a practical guide to the amateur, is to be published by George W. Jacobs & Co., Philadelphia.

Among forthcoming publications of the Oxford University Press we select for mention 'The Part of Rheims in the Making of the English Bible,' by the Rev. J. G. Carleton; and 'Une Lignée de Poëtes,' by Charles Bonnier.

Kingsley's 'Westward Ho!' in two volumes, Carlyle's 'Sartor Resartus,' and a special translation of Boethius, 'The Consolation of Philosophy'—the first into English having been King Alfred's about 890—are among the fresher outputs of the Dent-Macmillan Temple Classics. Mr. W. V. Cooper, B.A., King's College, Cambridge, is the author of this latest version. Portraits, a view of the rectory and church at Eversley, and an Elzevir frontispiece representing the wheel of fortune, adorn these captivating little books.

'Jane Eyre' begins the complete edition of Charlotte Brontë's works bearing the imprint of Dodd, Mead & Co. In Dr. Robertson Nicoll's candid and excellent introduction, some scraps of evidence are offered in support of the suggestion "that in Charlotte Brontë's conception of love there are distinct traces of Harriet Martineau's forgotten novel of 'Deerbrook.'" Appended to this volume is a hitherto unpublished fragment, 'The Moores,' written during her married life, and there will be more such to come, we are told. The print is as large as this bulky work permits.

The same publisher's Thackeray proceeds with 'The Newcomes' in three volumes, with Walter Brock's editing and cleverly designed illustrations by Charles E. Brock.

Mr. William Wale's dictionary of quotations, 'What Great Men Have Said about Great Men' (London: Sonnenschein; New York: E. P. Dutton & Co.), has an obvious utility, but we must as little expect proportion as completeness in such a collection. There is, for example, but one "saying" for Lincoln—Walt Whitman's, in prose; yet Lowell had just been drawn upon for Lessing, and heads nine sayings about Longfellow, besides contributing one of three on himself. Under Emerson we might wish to find Matthew Arnold. Arnold himself has apparently not been talked about by his peers. An index of the critics and panegyrists quoted would, we think, have been worth while.

We have met with no better guide-book to the Lake District than that entitled 'The Lake Counties,' by W. G. Collingwood (E. P. Dutton & Co.). It is one of Dent's "County Guides" series, under the general editorship of Mr. G. A. B. Dewar, and meets the most fastidious requirements of type, paper, weight, etc. It is light in the hand, though nearly 400 pages in length, and has eight separate maps, besides a general map of the region in a pocket. The idea of having a set of articles by experts attached to the eight "Itineraries" is a very happy one; there are ten of these, dealing with the natural history and sport of the Lake Counties, three of them written by members of the Severn family, whose close relation to Ruskin and the life of the dalesmen is well known. The illustrations, by Cuthbert Rigby, though not as good as those of Mr. Pennell in a similar work, are pleasing enough. Mr. Collingwood is a resident of the Coniston district, and was an intimate friend of Ruskin. He writes with complete knowledge of the legends and antiquities of the dales and lakes and in an entertaining style. No tourist to the Lakes should neglect this convenient little volume.

'Nature Portraits' (Doubleday, Page & Co.) is a folio collection of pictures of birds, mammals, insects, and fish by various nature photographers, with a short accompanying text by the editor of *Country Life in America*. The illustrations, many of which have been published before, are excellent. They are largely the work of Mr. Dugmore and Mr. Carlin. One photograph, by the way, labelled "Pocket Gopher," does not appear to represent that animal. The text, which has no direct connection with the pictures, will be of some interest to teachers and parents who are considering pedagogical problems of "nature study." It challenges certain points of view which, if early impressed upon a child, affect his future relations with the world of nature. In a series of sections, it discusses the old attitude towards wild animals versus the new, as expressed in the new method of hunting with the camera and the new movement for protection; condemns the attempt to explain as distinctly useful each structure or character in an organism; defends the teacher who tries to make nature interesting to children in ways discredited by the advocates of "science for the sake of science"; urges emphasis on the large and significant values of a subject; and favors the use of the poetic and figurative in interpreting nature to children.

'Wags of the Stage,' by Joseph Whitton (Philadelphia: George H. Rigby), a model of book-making, so far as type, printing, and illustration are concerned, must have been written for personal gratification, as there is no other reasonable excuse for its production. It is mainly a collection of humorous anecdotes concerning stage-folk of greater or less eminence, but the selected stories are either too stale or too silly to be worth repeating. Moreover, the author has no special gift of comic relation, or, apparently, any general acquaintance with his subject. His book, indeed, is chiefly remarkable for the good things which are not to be found in it, although they have been common property for the last hundred years. The most interesting part of it is his account of his adventures in Nicaragua with William Wheatley; but these have nothing whatever to do with waggery, and afford no fresh information.

We have, perhaps, not devoted to Delta's 'Charades' (Cambridge, Mass.: Charles W. Sever & Co.) as assiduous a study as so profound a tome requires. The impression it has left is, that Delta deals with his charade-words as popularizers do with the secrets of natural science, and aims "to make them patent to the meanest capacity." But this may be a mere effect of superficial reviewing; for not half the book has been worked through. So, for aught we know, there may be tests here fit to measure every grade of charade sagacity. A certain neatness is observable in these problems, hardly rising to elegance. No mortal could for one moment mistake them for poetry. Yet experiment has shown that they will beguile an idle hour very well.

The important monograph of Mr. J. E. G. de Montmorency on 'State Intervention in English Education' (Cambridge [Eng.]: University Press; New York: Macmillan Co.), traces the history of that question from the earliest times down to 1833, when Parliament for the first time voted money for the promotion of elementary education. The subject is dealt with mainly from the political and legal point of view, and abounds in valuable references to documentary authorities. The writer expresses his surprise that no satisfactory collection of such material had previously been made, and contends that many of the present educational troubles in England are directly due to the neglect of the historical aspect of the subject. Two notable points are particularly emphasized by the record here presented—the decadence of education under the Stuarts, from which it resulted that it was less flourishing in the beginning of the nineteenth century than at a certain period before the Reformation; and the example of progress set by the colonies to the mother country. Incidentally, Mr. de Montmorency calls attention to the curious fact that the general use of the English tongue dates from the Black Death. The terror of the plague drove out of the country the French and Norman parish priests, who were also the masters in the grammar schools. The clergy who remained were natives, and their influence introduced English into schools as the vehicle of lessons. We have noticed an erratum on p. 153, where Sir Henry "Parke," the Australian politician, should be Sir Henry Parkes. It is to be inferred from his preface that Mr. de Montmorency intends to follow up the present volume by a similar treatment of the period from 1833 to the passing of the Elementary Education Act of 1870. If the second book is of the same quality as the first, it will be heartily welcome.

Mr. A. R. Whiteway, an English barrister, deals in a light and even flippant style with a subject of too much gravity for such handling. His 'Recent Object-Lessons in Penal Science' (E. P. Dutton & Co.) is made up largely of magazine articles, and contains little that is new to penologists, or even to those who have but a cursory acquaintance with the subject. His bibliography is very incomplete, and many of his comments are inept. The book may serve to draw attention to a subject which deeply concerns the public but interests it little. If it can do this, it will justify its existence.

Very different points of view are taken by "Veritas" in his 'German Empire of To-day' (Longmans, Green & Co.) and by Maurice Lair, in 'L'Impérialisme Allemand' (Paris: Armand Colin). The composition of the former book is somewhat peculiar. It begins with a sketch of German history up to 1871, which is necessarily too brief to be of much value, and proceeds to explain the present condition of the Empire largely by means of consular reports. A considerable body of facts and a large number of figures are thus marshalled under various titles; the impression given being that remarkable progress has been made in every direction. "Veritas," however, does not look below the surface, and his book is little more readable than most public documents. M. Lair presents the same facts, but he interprets

them, and gives others which supplement them. He is as keen in depreciation as "Veritas" is dull in laudation, and shows us the seamy side of imperialism very effectively. On the whole, we must say that those who wish to know the truth would better consult M. Lair; making some allowance for national prejudice. Nor will those who read for amusement be disappointed in his pages, for his sarcasm is clever. But he does not fail to recognize much that deserves admiration, and his tribute to German industry, enterprise, and intelligence is unstinted.

It would be strange indeed if a French author should win the distinction of writing the best life of the late Queen of England. At present, however, M. Abel Chevalley seems to hold the field. His 'La Reine Victoria: Sa Vie, son Rôle, son Regne' (Paris: Ch. Delagrave) is certainly superior in every respect to such compilations as that to which the Duke of Argyll put his name. Its literary merit and its freedom from bias mark it off at once from the numerous biographies which have attempted a new interpretation of the political maxim that the king can do no wrong. M. Chevalley's memoir is especially valuable for its estimate of the nature and extent of Queen Victoria's influence upon state affairs, and for the light it throws upon the relation between the growth of the imperialistic spirit and the increase of the authority of the crown. Another admirable feature is its excellent character-drawing of Gladstone, Disraeli, Chamberlain, Salisbury, and the Queen herself. The criticisms of English weaknesses are at times severe, but they are nearly always well-informed, and are evidently consistent with a warm appreciation of what is admirable in English character and what is great in English statesmanship.

Charming views in plenty accompany Prof. Dr. Ludwig Neumann's 'Der Schwarzwald' in the "Land und Leute" monographs published in Leipzig by Velhagen & Klasing (New York: Lemcke & Buechner). Inhabitants as well as scenery are pictured, and history, topography, boundaries, orography, plain and elevation, are duly regarded. The frontispiece is a fine general view of Baden-Baden, which we commend to readers of Turgeneff's 'Smoke.' The index is not forgotten. An Andree map of the region concludes the liberal equipment.

The latest addition to the popular reproductions of pictorial masterpieces in the series called "Meisterbilder" of George D. W. Callwey, Munich, is a portfolio containing Moritz von Schwind's "Morgensonne," Luca Signorelli's "The Damned," Rubens's cheerful companion piece of "The Descent of the Damned," Rembrandt's "Supper at Emmaus," Dürer's "Virgin Mary with the Child" in three prints brought together on one sheet; and Holbein's "Wife and Children." Two of the above, we opine, could be well spared from the "Deutsches Haus" for which the series is designed.

Even the libraries of a great city may be difficult to ferret out. Such was the experience of a committee of the New York Library Club compiling a list of libraries in this metropolis ('Libraries of Greater New York'). When found, they did not always heed the request for simple information as to history, regulations, and resources, and the derelict have thus earned a star in the catalogue, even when the particulars have been otherwise ascertained or conjectured. The volume, handsomely printed, includes a valuable index to special collections, and a manual and historical sketch of the club, with lists of members.

Internal dissensions in the Camera Club of this city have resulted in the withdrawal of the management of its organ, *Camera Notes*, with Alfred Stieglitz at their head, upon the appearance of the first (July) number of volume six. The high quality of the illustrations of this issue emphasizes the loss of such editorial direction as the periodical has heretofore had, and also the task imposed upon the future editors. The number is further distinguished by an author and subject catalogue of the club's extensive photographic library, by Juan C. Abel.

The April number of *Photo-Miniature*, the tiny publication of Tennant & Ward, No. 287 Fourth Avenue (London: Dawbarn & Ward), is given up to a Treatise on Film Photography by the editor, John A. Tennant, who has found no English predecessor in this service.

Mrs. Agnes Smith Lewis of Cambridge reports in the *Expository Times* an especially scandalous instance of vandalism. In a visit a few months ago to the Convent of St. Catherine on Mount Sinai she discovered that a leaf was missing from the Syriac codex of the Gospels, which she discovered there in 1892, and which has since been known as the Sinaitic Palimpsest. The manuscript has been kept carefully in a box in custody of the monks, but has been shown occasionally to travellers. Her belief is that some visitor, wishing to make an addition to a collection of Oriental curios belonging to himself or to his university, slipped the leaf between the pages of a book in the hope that it would never be missed. Mrs. Lewis gives reasons for the opinion that the theft was not the work of a scholar. She publishes in the *Expository Times* a photographic facsimile of the stolen leaf, which contains part of the story of Mary, slave of Tertullus, and, in the under-script, the text of Mark ii., 21—iii., 21. The existence of this photograph fortunately prevents any loss to scholarship, but makes the offence none the less heinous.

In American comments on Sir Walter Besant's Autobiography considerable notice has been taken of his protest against the ultra-ecclesiastical atmosphere of King's College, London. A significant mitigation of this conservatism is now reported. The College Council has decided by twenty-two votes to two "that, so soon as may be, every religious test as a qualification for office, position, or membership, in or under the Council or College, other than professorships or lectureships in the faculty of theology, shall cease to exist." This liberalizing process has been stimulated by the action of a Welsh M. P. in moving the omission, from the grant to universities and colleges, of the sum of £1,700 hitherto annually appropriated to King's College. It was recognized that, in view of the provisions of the act of 1898 which reconstituted the University of London, the college could no longer share the financial and other advantages of affiliation to that university without abandoning its tests. King's College, it will be remembered, is the institution which dropped from its professorial list, on account of heterodoxy, Frederick Denison Maurice and, later, A. W. Momerie.

The close of the academic year at Oxford has been signalized by two graceful acts of generosity on the part of alumni of two leading American universities. The welcome given to these gifts is officially recorded in the University *Gazette* of June 17, where we read that the Hebdomadal Council "gladly accepted two busts in bronze, reproductions of the busts of George Washington and Benjamin Franklin by Houdon, presented by Jonathan Ackerman Coles, D.M., an alumnus of Columbia University," and in the next paragraph we read of an offer made to the University through the same Council by a visitor, Dr. Lee of Cornell University, "of one hundred and two New England elms to form an avenue in the Park." This proposal received the approval of the Curators of the Parks and has been gladly accepted. The bronze busts are to be placed in the Bodleian Galleries, which already contain a fine charcoal drawing of the late Captain Edward Silsbee placed beside his gift of Shelley mementoes. The other busts in the same galleries are of Mr. Gladstone, Dr. Jowett, and Sir Thomas Bodley, and among the numerous portraits is one of the Mr. Prynne who (along with Mr. Burton and Dr. Bostwick) suffered the indignity of having his ears cropped for the publication of heretical doctrines. This is the Mr. Prin whom William Dyer (see his letter in the *Nation* No. 1926) visited in the Tower of London. When, in the fulness of time and on the completion of all legal preliminaries, the American Rhodes scholars finally appear in Oxford, they will find in these recent gifts welcomed by the University an earnest of the welcome which will be extended to them.

With a too liberal anticipation of the future, our reporter of the American Library Association's meeting spoke last week of the Library of Congress adding "half a million cards" to its catalogue yearly; a slip for "fifty thousand titles."

—The predominant tone of the July *Atlantic* is seriously political. The editor opens the volume with suggestions on keeping the Fourth of July, and invites very careful attention to the foundation principles of our Government and the problems involved in our attempt to force "American institutions" upon others regardless of their own desires. And those who imagine that it is really our own kind of institutions that we are so far planting in the Philippines, may well take to themselves the remarks of H. D. Sedgwick, jr., on the facility with which Americans of the present day can cling to the patriotic phrases of the past, long after they have ceased to have any real meaning as applied to the facts of to-day. This habit of passing off spurious articles under a fair name, and the excessive commercialism of the time, are the two aspects of current American life to which Mr. Sedgwick calls special attention. James A. LeRoy, who has had two years of service with the Philippine Commission, tells at some length of the damage done among the natives by the unrestrained exhibition of race prejudice on the part of American officers and men, adding materially, by the way, to the already ample evidence of positive cruelty to the natives. Mr. LeRoy misses the point, however, when he asserts that to doubt

our doing eventual justice to the Filipinos is to call into question government by the people. Our government of them is not and never can be even government by the American people. From the nature of the place it must be largely monarchical or oligarchic in its application, and its failure to work smoothly is no test of the power of either Americans or Filipinos to govern themselves. Mr. LeRoy shows overwhelmingly that we are not doing justice there so far, and he attributes the trouble to an evil of which there is no immediate prospect that we shall free ourselves, the same race prejudice which has made it hitherto impossible to secure a working solution of the negro problem in our own land. This problem is discussed with vigor in another article, by Andrew Sledd. Mr. Sledd presents a severe indictment of the cruelty of lynching, tearing into tatters the argument that it has its origin in the outraged feelings of the better classes who too often come to its defence. The article is a good corrective to false opinions likely to be instilled into the reader by portions of Thomas Dixon's novel, 'The Leopard's Spots.'

—When the Fates crossed the early ambition of Professor Gildersleeve to be a man of letters, a possible source of almost boundless literary delight was, we will not say *quenched*, but so hedged about as to be practically inaccessible, except to the favored few. Readers of the *American Journal of Philology* will readily say of its genial editor, as Cicero said of Bruttius, *Non est enim seiunctus iocus a philologia.* The steady vein of kindly humor, the flashes of wit, pervading his critical remarks published regularly under the heading of "Brief Mention," have brought more delight into the life of many a weary scholar than could be gained from the strained efforts of a whole library of professional "humorists." Even when he considers it necessary to administer severe critical punishment, the victim must often be forced to smile at the form of the blow which fells him, as when Herr Drerup's ungracious depreciation of Professor Goodwin calls forth the crushing rejoinder that Goodwin's name "had been familiar to German scholars long before Herr Engelbert Drerup was dry behind the ears." Even the narrow limits of a Latin Grammar could not squeeze all the humor out of the veteran philologian's statements. To readers of the *American Journal of Philology*, therefore, it will be a real pleasure to learn that Professor Gildersleeve begins with the present issue the publication of a series of papers entitled "Problems in Greek Syntax." His competence to deal scientifically with such problems has been so long and so often demonstrated that he can safely brave, as a younger man might not, any danger of the serious application of his own humorous maxim that "no true grammarian has any right to be readable." An unreadable essay from his pen, or a dull lecture from his lips, is unthinkable to any one who has had any opportunity to know of his work. No man who reads him will ever worry over the loss of time spent upon the study of Greek.

—'Upland Game Birds,' by Edwyn Sandys (Macmillan), the second volume of the American Sportsman's Library, is a full account of its subject as well as of some foreign species that have been introduced into this country. It includes, besides gallinaceous game birds, the upland plover, the golden plover, the woodcock, cranes, and the mourning dove; and it describes their feeding and breeding habits, their range, and the best methods of hunting them. Few writers have hunted so great a variety of game birds in so many parts of the country as Mr. Sandys has, and the information and advice that he gives are exhaustive and trustworthy. The chapter on the quail is excellent work, full of invaluable directions for the man who would bag this "king of game birds." It even tells him how to get the better of a shooting companion in various situations afield; and though the author hastens to condemn sharp practice and to explain that he is only warning the novice against it, yet the tone of this part of the chapter seems out of harmony with the spirit of good fellowship that pervades much of the book. There is an elaborate chapter on the prairie hen, which Eastern men about to try "chickens" for the first time will do well to study. Mr. Sandys relates many entertaining incidents of his hunting experience. His keenness of observation and quickness in seizing an opportunity make him a clever hunter, and, as his stories show, he is an excellent shot. He has considerable fluency in description, and writes in a free, somewhat unconventional style; indeed, he now and then uses expressions which, suited perhaps to the exigencies of the hunting field, are yet hardly picturesque enough to call for publication. A chapter by Mr. T. S. Van Dyke describes the quail and grouse of the Pacific Coast, and shows how difficult it is to hunt them successfully.

—In writing a history of Scotland for the Cambridge Historical Series (Macmillan), Prof. P. H. Brown makes his second volume embrace the period between the accession of Mary Stuart and the Revolution of 1689. From the preface to the first volume we inferred that the work would eventually be brought down to the date of the legislative union, if indeed it did not, like Sir Henry Craik's 'Century of Scottish History,' extend to recent times. There is no preface to the second volume, nor are we able to gather from the public announcement that the narrative will be carried forward to either the eighteenth or the nineteenth century. We hope, however, to see the conclusion of a work which, if left at the overthrow of James II. and VII., will omit many of the most striking episodes in Scottish annals. It is not that Professor Brown writes or strives to write picturesquely. His pages, even when he is dealing with Mary, Darnley, and Bothwell, are colorless; but because he is learned, dispassionate, and direct, his version of those events which have given rise to so much romance is the more sure to be worth having. Viewed by itself, the second volume of Professor Brown's history is, as every sketch of Scottish history from 1542 to 1689 must be, an account of religious feud and mutual persecution. Of its two main topics the first is "The Religious Revolution," the second "The Crown and the Kirk." To steer an even course between Romanists and Protestants, between Episcopalians and Covenanters, can be no easy matter for one who has been born and bred in Scotland. Professor Brown is enabled to avoid many a dilemma by reducing his own comment to a minimum, but he can also lay claim to the merit of disinterestedness. Nor is he unduly swayed by feelings of patriotism, although he is willing to defend his countrymen from the unjust charge of having sold their king. His comment upon the action of the Scots towards Charles I. in 1646 runs thus: "That the coincidence of the payment of arrears should be malevolently construed by party feeling was in the nature of things: calmly viewed in the light of actual facts, the conduct of the Scots bears no such construction." These two volumes of Professor Brown form a most useful compendium of Scottish history to the accession of William and Mary.

—A notable discussion of the Flinders Petrie Papyri, in relation to Platonic text criticism, came before the Oxford Philological Society recently in a paper by Professor Burnet of St. Andrews. He adverted to the bitter and fruitless controversy, in the course of which some scholars had made a determined onslaught on the authority of one of the oldest of extant MSS., the Clark MS., while others, feeling that philology risked losing all scientific precision if such views were to prevail, were betrayed into equal acrimony against the Papyri. Without specifying the details of the controversy, Professor Burnet urged that "no such thing existed as a critical apparatus to the 'Phædo' " which could form the basis of a reasonable comparison between the Petrie Papyrus fragments and what should be called our MS. traditions. To fix this latter we required not the reading of one MS., however good; but, "so far as is possible," our standard should be "the common archetype of all our MSS." Nor should we neglect the "indirect tradition," chiefly accessible through casual quotations made by writers such as Iamblichus and Stobæus. Those who used the edition of Schanz for the text of the 'Phædo' too often forgot, he feared, that all Platonic students, Schanz included, had "completely altered their views" as to the history of the Platonic text of that dialogue. The Clark MS. was taken by Schanz as primarily infallible: where it erred, he corrected it from any MS., however derived, that helped him out. This very frequently chanced to be a MS. written for Cardinal Bessarion, which Schanz freely used to patch the rents of the Clark MS. At least two neglected MSS., one in Venice and one in Vienna, must be brought into line, Professor Burnet maintained, before we can have the data necessary for establishing our MS. tradition. This he had done for the Venice MS. in his edition of the 'Phædo,' and was now in a position to do for the Vienna MS., thanks to the great courtesy of Professor Král. With the coöperation of his pupils he had now a full critical apparatus for all the fragments of the 'Phædo' contained in the Petrie Papyrus.

—This he laid before the Society in print, thus enabling his hearers to note the variations of the Clark (B), the Venice (T), and the Vienna (W) MSS. along with the full text of the Papyrus fragments. His apparatus contained also the "indirect tradition," wherever it was available and of use. Inferences drawn against the Clark MS. because of its manifest errors, often corrected by Schanz from Bessarion's MS., were quickly shown not to hold good of its

archetype, *i. e.*, the common original of (B), (T), and (W). Else, why were all the readings which the papyrus shared with Bessarion's MS. to be found in (T), the Venetian MS., while most of them were also in (W), the Vienna MS.? Plainly their absence from the Clark MS. was a mere accident. Thus the divergence between the Papyrus and our MS. tradition was, he maintained, very much diminished, and Cobet's theory of the sole authority of the Clark MS. was proved to be fundamentally unsound without in the least detracting from the authority of its archetype. The freshness and fulness of Professor Burnet's treatment of Platonic textual criticism evidenced by these few extracts from his paper shows how fortunate American scholars must account it that he has now in his hands, for ultimate publication, the notes on the scholia of the Clark MS. so laboriously made by the late Prof. F. D. Allen, during the year which he spent at Oxford. These our lamented compatriot left unpublished only because he did not live to do the similar work which he had definitely in mind on the Venetian MS. (T). This work Professor Burnet, so far as he has not done it already, is about to do in connection with his edition of the Platonic text partially issued by the Clarendon Press.

## THE AMERICAN FUR TRADE IN THE FAR WEST.

*The American Fur Trade in the Far West:* A History of the Pioneer Trading-Posts and Early Fur Companies of the Missouri Valley and the Rocky Mountains, and of the Overland Commerce with Santa Fé. By Hiram Martin Chittenden, Captain Corps of Engineers, U. S. A. New York: Francis P. Harper. 1902. Three volumes, pp. xxiv + 1,029. Maps and illustrations.

The first commercial foundations of New England were codfish, and St. Louis was still more decidedly founded on fur. The fur trade, however, though a leading industry from the start, was largely local till 1806. In that year the return of Capt. Lewis from the Pacific, without losing a man from a party of more than thirty, during three years, among tribes which had been considered hostile, and with tidings of the most coveted furs throughout the transcontinental routes, was the beginning of a boom in fur trading which, though chronicled as moribund in 1843, is still very much alive (p. 109).

Self-centred individual traders at once ventured very far and came back rich in beaver. The American Fur Company, the first one organized, within two years of its birth had established a post 2,824 miles up the great river, at the three forks where it first gets its name Missouri. The ample proposition which hope makes in all designs, here as elsewhere failed in the promised largeness, yet the association lasted twenty-five years and was the grandest corporation for the quarter of a century. The organization, including every trader of distinction in St. Louis, excluded outside partners and, unfortunately, John Jacob Astor, who would have given the financial backing-up which, when troubles came in battalions, was a vital necessity for winning profitable results. They were too sure of success to succeed.

Though the Missouri front door was thus shut, the New York capitalist, besides doubling his fur business in the sphere of the Great Lakes, resolved to penetrate the central fur-bearing fastnesses single-handed, and that from both the East and the West. Accordingly, he enrolled a band of overlanders larger than that which Jefferson had sent under Lewis. These partisans, following in the track of Lewis, made a forced march to the Pacific more swiftly than that Columbus of the Columbia could. At the mouth of the great river of the West, these adventurers combined with as large a party of Astor's men in a ship which he had dispatched round Cape Horn. Astor's purpose was that an annual ship from New York should supply the wants of Astoria, take on board the furs from Columbia valley posts, add to them others from Russians in Alaska, with whom the Tsar had allowed him to trade, pass on to China, the best of all fur markets, and come home full-freighted with the most salable Celestial spoils, *spolia vere opima.*

The end would have crowned this world-wide work but for the war of 1812. Notwithstanding this catastrophe, ultimate triumph must have been sure had not Astor's wisdom proved, in one particular, egregious folly. On both land and sea expeditions his officers and men had been selected from those most capable and experienced in Canadian companies, and hence proved to be very largely British subjects. Consequently, when the war came, none served Astor but constrained things whose hearts were absent. His interests were sacrificed, and Astoria was unconditionally surrendered, both financially and politically, when Americans could and would have held that fort, and thus all Oregon, against all comers. "The great purpose of the enterprise, the skill with which it was planned, the far-reaching relation which it bore to the future of the United States, and the loss of life and property in the attempt to carry it out, were worthy of a better fate" (p. 238).

Astor's faith in fur never failed nor flagged. He enlarged his operations, bought out the Mackinaw Company, soon had a thousand salaried officials, and became lord paramount on the upper Mississippi. In 1819 he legally established his legal right to bring his Canadians up the Missouri—that is, labor better and withal cheaper than he could hire in the States. In 1821 he induced Congress to abolish national factories among the Indians, which had been ruinous to private enterprises, and the next year he fixed his headquarters in St. Louis. Several corporations and a host of persons adventuring from that base had accumulated more or less of wealth, yet their prosperity was seldom lasting. A brief run of ill luck had been a killing frost to many a consummate flower of hope. Astor, after all, entered this arena among many competitors. One of them, Ashley, drew a greater prize than Astor ever grasped at a single swoop, and then relinquished the field of fur for matrimony and politics. But the more others accumulated, the more sanguine grew the invader from the North. His compulsive course knew no retiring ebb. He purchased both a St. Louis company of long standing and a new firm which Boston men had set up, disarmed others by mergers and consolidations; and, as in other oppositions, the longest purse was sure to win. The company to which Ashley, after a checkered four years with a lucrative close, gave place, ended four years of similar alternations by selling out to mountaineers—the so-called experts in reaping fur harvests in the Rocky Mountains. These men, within another Presidential term, had set successful traps in every highland fastness of fur-bearers, but had been so overreached by the lowland city merchants, from whom came inevitably the tools of their trade, that they were then swallowed by Astor's anaconda. What an imperial autocrat he became is shadowed forth by his bust on a grand medal that was stamped and circulated for buncombe among the Indians. This token or totem—officially styled an "ornament," to dodge accusations of lese-majesty—easily supplemented the effigies of kings and presidents which previously had been current fetishes as signs of sovereignty. The obverse legend was "President of the American Fur Company." The reverse, beneath significant emblems, bore the mysterious capitals U. M. O., which were interpreted "Upper Missouri Outfit."

But this monarch, sagacious from afar of furs failing to his hunters, as whales failed to Nantucket sailors—and of silk hats which roused ominous conjectures about future markets—in 1834, when his years were more than three-score and ten, resigned his Western empire for a consideration to Chouteau & Co. His American Fur Company, under these heirs, lasted thirty years longer. The new firm, who undertook to keep liquor out of the Indian country, were so reinforced by national functionaries that they successfully outlived all competing lines. Bridger, easily the preëminent mountaineer, remained in charge of one of their extensive outfits till he built the fort which still bears his name, on a water which flows into the Pacific, as a way-station for emigrants. The year was 1843, a date which marks the termination of the fur trade as described in these volumes.

The trade in furs, as thus concentrated within four decades, will seem to many too small a matter to be spread over a thousand pages. Such, however, cannot be the sober second thought of thorough readers, who must lay down the book asking for more words regarding a necessary and critical stage in our history, both pathfinding and epoch-making—preparative for domestic expansion and trans-Pacific relations—and not without influences on both. The subject has never before been treated in its entirety, and it is here dealt with by Capt. Chittenden so well that, as to all prominent features, his volumes must be a finality. His whole career has accomplished him for the work. One of the first three cadets who were graduated from West Point in 1884, his stations ever since in Government service have been in the West, except that, in the Spanish war, he was chief engineer of the Fourth Army Corps. During the last decade he has been much in the Yellowstone Park, of which he is now in charge, and concerning which the best octavo ever published is his writing. His main function, however, has been superintending reservoirs and other expedients for improving the navigation of that Missouri which was from first to last the "head-centre" of the industry which fills his book. This river, in all its length of 2,945 miles, and in many of its ramifica-

tions, has come under his inspection, both in his tour of duty and in his labor of love. His headquarters, whether in the National Park, in St. Louis, or in Sioux City, are coigns of vantage. While posted in the last place, he designed and had in charge the erection of the Floyd obelisk, the most exact reproduction of the Karnak model. He has had in hand all known printed books on his theme, including "that very unusual treasure," the adventures of the Prince of Wied, the only reliable authority concerning the earliest period. This rare and admirable production has yielded many quotations, and some engravings earlier than Catlin's and drawn by the Prince's artist. Many details he has gleaned from trans-Mississippi newspapers, which exist each only in a single file and have never before been scrutinized. Manuscripts, also, which have come down from fur-trade principals and subordinates, have now for the first time been detected and examined. Critical judgments, whether of authors or of facts and possible fables, are numerous, and disclose research, judicial fairness, and love of truth.

To explain the bearings and characteristic peculiarities of the fur trade is the author's first endeavor. Then follows the narrative of events in chronological order. This section, which forms the bulk of the work, and this only, will be read by those who care nothing for side-lights. But others will not neglect the division where contemporary events of influence on fur business are passed in review. The Captain's Dedication is, in part, "In honor of the forgotten heroes who first explored our great unknown, bearing the standard of peaceful commerce," etc. Therefore, the romantic biographical series could not be spared. While every monograph is easy reading, pathetic or sympathetic, none is so thrilling as that of a sort of Stonewall Jackson, who appears more than thirty times in the body of the book. This hero was one O. Smith, whose Christian name, Jedidiah, befitted his nature better than can be felt without referring to II. Samuel, xii:25. The final division is a survey of the world "out West," its orography, fauna, flora, and native tribes, such as no scientist could write without long and loving personal observation. The appendix presents eight documents of illustrative value, never before gathered together and in part hitherto unprinted.

We cannot emphasize enough the national importance of this elaborate work. No one can pass it by on the other side who seeks to understand the rise and progress of Americanism in the larger half of our territory.

## MORE LISZT LETTERS.

*Franz Liszt's Briefe an die Fürstin Carolyne Sayn-Wittgenstein.* Vols. III. and IV. Leipzig: Breitkopf & Härtel.

Franz Liszt died on July 31, 1886. His last letter to the Princess Wittgenstein is dated July 6 of the same year. The first he addressed to her bears the date of February, 1847. Thus his correspondence with the Princess covers nearly forty years, and the sum total of it makes 1,566 printed pages, without her answers. One sometimes longs to see those answers; not so much because Liszt refers to them as "superb and sublime," for that may be merely the hyperbolic language of a friend; but because she knew more about Liszt and his compositions than any one else, and often referred to them in her letters in a way to call for his modest protests. "What a remarkable woman!" Baron von Liebig once said to Liszt. "I have never met her like! In one hour she can squeeze out of the wisest and wittiest savant all there is in him." She certainly must have done much, by her enthusiastic encouragement, to stimulate Liszt's creative powers during all the years when the professional world was so bitterly hostile to his compositions. But if she had done nothing but cause him to write these letters, she would have earned the lasting gratitude of the musical world. She constantly urged him to write more about his work and his inmost thoughts, and it is no doubt largely owing to this that his letters become more and more interesting, the last volume being the most absorbing of the four.

If the letters of the Princess are ever printed, they will probably fill more volumes than Liszt's, for she was a most voluminous writer. Her great work was a treatise 'Des Causes Intérieures de la Faiblesse Extérieure de l'Église,' in twenty volumes. This she finished shortly before her death, not quite seven months after Liszt's. There are frequent references to it in these letters. Once he hints that she would have done better to divide one of the volumes into two; they contained nearly 1,000 pages each! On another occasion he refers to the work as her *stupendo libro*, and compares its glowing descriptions to the paintings of Makart and Breughel. Still, he was probably not much in sympathy with it, and promises, "since you ask it," not to "speak about it any more." In a letter he tries to calm her suspicion that he is not interested in her book, but adds: "In truth, I know nothing about politics or religion; hence three-fourths of your work is beyond my comprehension." Some of the chapters, it appears, were printed anonymously and incurred the warning censure of the Index; whereupon Liszt wrote that he would have gladly spent the rest of his life in prison or in a hospital to save her this painful experience; and he exhorts her to submit patiently to the Church. He was all his life a devout Catholic, yet several of his letters indicate that he was as liberal in religious as in musical matters, reading the works of Renan and David Strauss with as much relish as those of the orthodox writers.

Of his liberality in matters musical these letters afford many new illustrations. He knew that several prominent musicians, notably Joachim, Rubinstein, and Berlioz, all of whom he had befriended, expressed their disapproval of his compositions with quite unnecessary insistence and bitterness; yet this did not in the least change his feelings towards them personally, or prevent him from expressing his admiration of their works. When Joachim was to give a concert in Venice, Liszt wrote: "I prefer not to come across Joachim, who has behaved in a more than singular manner towards me." A few days later he wrote from Buda-Pesth: "Joachim, whom I ever regard as the greatest master of the violin, will play here next week. I shall applaud him with pleasure." Some weeks later he had the satisfaction of writing that he had dined with Joachim, and that friendly relations had been reëstablished after a break of twenty years. Géza Zichy, he adds, afterwards told him that Joachim had confided to him that he felt himself at fault in his attitude towards Liszt. "Cela m'est une satisfaction tacite."

While fully cognizant of Rubinstein's shortcomings, Liszt sincerely admired him both as pianist and as composer, and remained on the friendliest terms with him. "Son talent," he declares, "est complet et d'une étonnante vigeur et opulence." He refers to Rubinstein's plan of going to America to earn $50,000 in order that he might have leisure to devote a few years to uninterrupted composition. Rubinstein's plan to "composer la Bible" interested him at first; but subsequently he came to the conclusion that Handel and Mendelssohn had exhausted the possibilities in this line, and left little for the *épigones* to say. The fact that Rubinstein had bitterly reproached certain women for their Liszt and Wagner enthusiasm Liszt treats almost as a joke rather than as an offence; and he cordially wishes Rubinstein "an operatic success as great as that which he enjoys as a pianist." As regards Berlioz, Liszt points out that, outside of the "new German" party (of which Liszt was the leader), Berlioz had, in 1868, few adherents. Liszt did everything he could for him in Germany, whereas Berlioz belonged to a clique of Parisian critics who held that Liszt subverted all the laws of harmony, rhythm, and melody. The so-called "Wagner-Liszt-Berlioz" school can hardly be called a happy family. Liszt alone liked both of his colleagues; Wagner liked Liszt as a composer, but he had no use for Berlioz, and Berlioz detested both Liszt and Wagner. It is doubtless to the spiteful remarks on Wagner in Berlioz's private correspondence that Liszt alludes when he writes: "Our illustrious and too embittered [*enaméré*] friend does not profit by the posthumous appearance of his letters. His name, Hector, did not bring him good luck —Achilles Wagner having come out as winner in the field of contemporary music-drama."

The principal opponent of Liszt, in the days of his youth, was the pianist Thalberg; but even him he bore no grudge, and actually subscribed a hundred francs towards his statue in Naples! "My heart is absolutely ignorant of all hatred," he writes in one letter; and in another he emphasizes the fact that he feels himself becoming more and more *selbstlos*—more interested in others than in himself. He is constantly vowing that he will never again play the piano in public or in private. In Vienna he once said to a hostess: "Put me out of doors, madam, but don't put me at the piano!" and he repeatedly commends Rossini and others for their tact in not asking him to play. Yet, while he did not earn one franc with his piano during the last thirty-eight years of his life, we constantly find him volunteering to play in public for some charitable or artistic purpose; and to the end of his life he continued to play for his pupils and to spend hours at the piano perusing MSS. sent him by young composers in quest of his advice and encouragement.

In the summer of 1880, Hans von Bülow exercised, as Liszt puts it, "une sorte de terrorisme" over about twenty of Liszt's pupils, whom he informed bluntly that only three or four of them were either prepared

or worthy to take lessons of him. Bülow, though sometimes generous, had none of Liszt's amiability. Liszt recalls the notice Bülow had pasted over his door: "In the morning not to be disturbed; in the afternoon not in"; also, his quarrel with the manager of the Berlin Opera, which he referred to as the "Circus Hülsen," with subsequent apology to the proprietor of a circus in Berlin; also his pun about the "Spontinische Sümpfe" (Marshes), and, apropos of a certain tenor, the "Schweineritter" (Schwanenritter) Lohengrin. Bülow did know how to hate, the Jews above all. Liszt also was accused of having expressed decided opinions on this subject, but he denies it in his letters. He fully realized that "the Jews constitute at present the decisive majority in music, here and everywhere. Nothing surprising in this—they rule the two greatest Powers in the world, the Bourse and the Press."

There is, of course, a good deal about Wagner in these letters, and about the Bayreuth festivals of 1876 and 1882. Again and again Liszt calls attention triumphantly to Wagner's growing popularity and success, and again and again he repeats his conviction that the "Ring of the Nibelung" is the crowning art work of the century. During the preliminary rehearsals of 1875 for the first Bayreuth festival, Wagner gathered 150 of his friends about him in his house and made a speech, "the leading idea of which was that music had the mission of regenerating and vivifying all the arts of the century." Another interesting incident, heretofore overlooked by the biographers, is noted by Liszt—a reading given by Wagner at Minister Schleinitz's, in Berlin, at which Moltke and nearly the whole of the diplomatic corps were present. Bismarck, it seems, visited Wagner, who, however, received no invitation from the imperial family. Subsequently the Emperor atoned for this by attending the Bayreuth festival. With all his adoration of Wagner, Liszt was not blind to his foibles and eccentricities. "What singular folly," he wrote to the Princess in 1868, with reference to Wagner, "to wish to fill the whole world with himself—with the result that he only makes himself more and more discontented and melancholy." One of his retorts in defence of Wagner may also be cited. He was never afraid to speak his mind in face of royalty, and when Queen Olga of Würtemberg said to him that, in the opinion of the most learned professors of æsthetics, the "Ring des Nibelungen" was absurd and impossible of performance, he replied that infallibility was not an attribute of professors.

In the last volume there are many references to the biography which Lina Ramann had undertaken to write. Liszt did all he could to facilitate her task; but he constantly urged her to reduce the story of his life to a minimum, and to give most of her space to his works. In these his interest was maintained to the end, though he speaks with excessive modesty of their worth. He grew tired of life years before the end came. He suffered the penalty of fame in the large sacrifices of time called for—"je m'irrite souvent de pâtir des misères qu'inflige la célébrité," as he puts it—and he had not Wagner's courage or indifference to the world to bury himself, as his friend did, in Switzerland. To the last year his home was tripartite—Rome, Weimar, and Budapest—and the frequent journeys became more and more fatiguing. He always disliked to be questioned regarding his health; but he does not hesitate to inform the Princess of his growing *tædium vitæ*. This chord is first struck in 1877, nearly a decade before the end. "Without wishing to complain, I often suffer from existence—my body has retained its health, my mind has not." Four years later: "Without being blasé, I am extremely tired of life." Instead of congratulating his son-in-law, Ollivier, on the advent of a child, he wrote: "You know what sad thoughts infants give me—their future is exposed to so many unpleasant chances." After Wagner's death: "You know my gloomy views on life—to die seems simpler than to live." And once more, in 1885, "Ma fatigue de vivre est extrême." He had written to the Princess, as early as 1869, that he wanted a simple funeral—not like Rossini's—no music, no parade, no discourse; and he asked that his epitaph should be: "Et habitabunt recti cum vultu tuo." These words were inscribed on his tomb at Bayreuth.

---

*A Study of the Ethics of Spinoza.* By Harold H. Joachim. Oxford: Clarendon Press; New York: H. Frowde. 1901. 8vo, pp. 316.

For the Cartesians and the intellect of Continental Europe at the time Spinoza wrote, geometry, as presented in the first book of Euclid's Elements, was the very exemplar of what science should aim at being. From our modern point of view, geometry is a triumph of instinctive good sense; but it is not entitled to be called a positive science, since it makes no critical examination of the truth of its assumptions. Its abridged style of exposition will answer for a subject where an almost unerring instinct guides us; but in itself that style is utterly vicious as not half setting forth the thought. In all this, Spinoza felt himself obliged to imitate Euclid in order to maintain his pretensions to science. His philosophy was deep, out of the common ways of thinking, and intelligible only from peculiar points of view; so that it would have been difficult enough to understand had it been ever so lucidly presented. Clothed, as it is, in the garb of Euclid, the 'Ethic' is one of the most enigmatical books that ever were written. The most curious circumstance about it is that a logical writing which Spinoza left unfinished at his death, shows that the Euclidean form of the 'Ethic' was utterly untrue to the author's own way of thinking. Those assumptions which, when stated as definitions and axioms, seem to come from nowhere, bursting upon us like bolts out of the blue, had really been subjected by Spinoza to the critical examination of a sort of inductive logic.

The 'Ethic Demonstrated in Geometrical Order' appeared posthumously in 1677. It had been ready for the press since 1675, and had been seen by some of Spinoza's inmost friends in earlier forms at least ten years before. Attacks upon it began promptly upon its publication, if not earlier. For half a generation they were plentiful. This was the period of its ill-fame, during which good Thomas Moore could exclaim, "So, then, wood, mire, lead, and dung are God!" and when Toland invented the inappropriate word *pantheist* on purpose to describe its author. Long before the middle of the eighteenth century it had come to be regarded as settled that Spinoza had merely developed a few ideas that had been thrown out by Descartes, and that his notions had been definitively exploded. This opinion received something of a shock when, in 1780, Lessing declared himself a Spinozist, although mistakenly; and an interesting discussion of Lessing's supposed Spinozism followed between F. H. Jacobi and Moses Mendelssohn. Then, Herder confessed to a sort of Spinozism, as later did Goethe. The system could not, after such events, well sink back into obscurity. About 1816 H. C. W. Sigwart began that more careful and critical study of what Spinoza really did mean to which many writers have contributed in a fuller and fuller stream of literature to this day, until the study may now almost take rank as a special branch of science, Spinozology. Certainly, the last word about it has not yet been said. Perhaps the problem is insoluble. At any rate, beyond a certain point, any opinion that can at present be put forth must rank as a merely personal one. In 1852, an important book by Spinoza was brought to light, together with many significant letters. Since then, the data of the problem remain unaugmented.

The present work consists of a commentary upon the 'Ethic' based upon a very careful and well-considered study of the whole of the writings of Spinoza, together with those of the cream of his commentators, some two dozen in number, not, however, including several that were well worthy of attention, such as the book of Berendt and Friedländer, that of Höffding, and one or two extremely important papers in the journals. In the reviewer's opinion, some of the interpretations of Mr. Joachim are entirely inadmissible; yet the book will be esteemed by all students of Spinoza. For beginners in the study, it has one particular merit, that of recognizing the accidental character of the geometrical form of the 'Ethic,' and, in the main, ignoring that form in the exposition. To go into further particulars about the truth of the rendering of Spinoza's thought would only be setting one unproved opinion against another.

We will venture, however, upon one remark, which is overlooked by Mr. Joachim and most of the other commentators. It is that, educated in Holland when he was, the notions of philosophy which Spinoza first received, and which, in the main, form the bed-rock upon which he built, naturally would come, and it is easy to see that they did come, from the Dutch reformed peripatetics of that time, Burgersdyk, Heereboord, and the others. There is no trace in Spinoza of any direct acquaintance with mediæval scholasticism. The Dutch Aristotelians were influenced to a considerable, but limited, extent by scholastics. This bed-rock of conceptions was overlaid in Spinoza's mind by pretty wide philosophical reading. The influence of Bruno, Descartes, Hobbes, for example, is plainly discernible. But the main features of his philosophy are consistent with Aristotelianism slightly modified, and not at all so with the other doctrines which subsequently influenced him.

There is no philosopher of whom there is more quite unprofitable study than Spinoza. In order to study any philosophy with due profit, it is necessary to understand it;

and, in order to understand it, it is necessary to begin by placing one's self in the state of mind of the author at the beginning of his speculations and follow out the course of his thoughts. We ought not to say that there is no good at all in pursuing philosophical reflections with a book open before us which we do not understand; but in order to study the works of a given philosopher with the profit that they may afford, there is no other way than that we describe. First of all, then, in order to study Spinoza with profit, it is requisite to soak one's mind in the general way of thinking of the Dutch Aristotelians, and this will be far from being in itself the valueless study which our Cartesian prepossessions (for such still prevail) lead us to imagine it to be. But all those philosophers wrote in Latin, and their works are untranslated. Next, it will be indispensable, in order to understand Spinoza, to take minute account of all his writings, the rest of which are not composed in the enigmatical style of the 'Ethic.' One of these writings is in Dutch, the rest in Latin. Under these circumstances, the fact that some half-dozen English translations, partial translations, and paraphrases of the 'Ethic' are in circulation (one, at least, in a second edition), while none of the other necessary aids are extant in English, is sufficient proof that the 'Ethic' is chiefly read by numbers of persons who never penetrate the Euclidean husk to reach the real meat of the book beneath. The truth is, it is the style that attracts readers to the book, the style of Euclid. To an unprepared student who cannot control his curiosity about the book and is determined to dip into it, we would say, At least, take Mr. Joachim's book along with Spinoza's text; and remember that even then, in the opinion of the majority of Spinozologists, you are only making a moderate approach to the true philosophy of Spinoza.

---

*Gabriele Rossetti:* A Versified Autobiography. Translated and Supplemented by William Michael Rossetti. London: Sands; New York: E. P. Dutton & Co. 1902.

The bulk of literature about the Rossettis bids fair to equal that about Stevenson; and possibly posterity may be puzzled to understand the taste of a generation which required so much of either. In his book on his father Mr. W. M. Rossetti seems to have exhausted the family revelations, until the time shall come for his own letters and diaries to be printed.

Gabriele Rossetti, the father of Maria, Christina, Dante Gabriel, and William, deserved and has received some biographical memorial in Italian; we doubt whether any one, unless he be a blind worshipper of the Rossetti cult, will urge that a similar memorial was needed in English. In Italy the elder Rossetti first made a name as an improvisatore. When the Carbonari revolution broke out in Naples in 1820, he became its "Tyrtæus," and when it was suppressed he escaped death by flight, and spent the last thirty years of his life in honorable exile in England, dying in London in 1854 at the age of seventy-one. For many years, until his health failed, he was Professor of Italian in London University. Dante students remember him as the author of some astonishing theories of the hidden meaning of the 'Divine Comedy,' theories compared with which the late Ignatius Donnelly's aberrations in Shakspere criticism seem tame. As his semi-public life, his poetry, and his prose works were all Italian, the only excuse for presenting an English biography of him is that his remarkable children belong among the makers of Victorian literature or painting.

The versified autobiography which forms the core of the present volume was written in rhymed sextets a few years before their author died. Mr. Rossetti has translated them into a rhymeless doggerel which he calls blank verse. In the original they may have charm; the translation is a weary task for even a long-suffering reader—how weary, a few specimens will show. Here is how Rossetti records his appointment as professor:

"Stately an University had risen
In this enormous capital of the realm:
And now the Council, from whose midst emerged
Such ample learning sacred and profane,
Offered me of its own accord the chair
Allotted to Italian literature."

Again, he tells us of his wife,

"That she both speaks and writes three high-prized tongues,
Which rank 'mong Europe's choicest and most rich;
And, when their authors she was studying,
She culled the flower of the three literatures."

He spares no details of his bodily infirmities, *e. g.:*

"Worn down and down by bronchial sufferings,
From January until September increased,
I yet, exhaling in my verse my woes,
Nurtured my mind with patriotic thoughts."

The filial piety which could translate several thousand lines of this sort certainly deserves the palm; but is there not such a thing as filial discretion? The portrait which Gabriele Rossetti draws of himself shows us a kindly, virtuous, domestic man, who mistakes his fluency and versatility for genius, regards his literary performances with great complacency, and bears his exile patiently, but not without the self-consciousness common to most banished patriots. Fortunately, the son spares us some parts of the autobiography, filling the gaps thus left by pages of interesting prose which, with the many footnotes, relieve the dreary text. The poet's references to Italian, and especially to Neapolitan, political events, and to his contemporaries who took part in them, afford an excuse for much elucidation of semi-historical value. We cannot but feel that had Mr. Rossetti given a prose abstract of the autobiography, he could have preserved whatever is of interest in it and spared us its banalities, which, in his blank verse, become intolerable.

The rest of the book contains several letters from Gabriele Rossetti to his wife and to Charles Lyell; letters from Seymour Kirkup and Mazzini; and six of his own poems. The domestic letters have a few references to the since famous children, and disclose the straits in which the family lived. Those to Lyell, the translator of Dante's 'Canzoniere,' deal chiefly with Dante. Lyell gave sympathetic attention to Rossetti's theory of the hidden purpose of Dante's works; perhaps he accepted it. What that theory was, Rossetti himself states in a nutshell as follows:

"It is impossible to continue without exhibiting the most intimate mysteries of the sect, seeing that the entire poem of Dante, all the lyrics of Petrarca, almost all the works of Boccaccio, and, in fine, all the old writings of that class, are nothing else than *downright doctrine and practice of the Freemasons*, in the strictest acceptation of the word. Such was the Gay Science, such the Platonic love, such the sect of the Templars, and that of the Paulicians. . . . But it is dangerous to consign the work to the public, and the chief danger is this: The demonstration cannot be *rightly* founded, so as to defy confutation, without citing in confirmation the writings of St. Paul and those of St. John."

For prudence' sake, Rossetti refrains from doing this, and so "is compelled to stop short at the effects, and leave the cause unexplained, which makes less visible and tangible the reality of the assumption."

This was in 1832; by 1836 he had discovered that "Origen and Tertullian, as well as Synesius, Bishop of Cyrene," and "especially Swedenborg," had used his patent mystic key. By 1840 he got confirmation from Raphael's sonnets, from Pico della Mirandola, Molza, St. Bernard, Cecco d'Ascoli, etc. "Oh, how much can be gathered from the Latin writings of Poliziano!" he exclaims; far more than even from those of Tasso." The present writer, not being a Freemason, can merely add; "What could be simpler?"

The letters from Seymour Kirkup have permanent value, because they describe the discovery, due principally to Kirkup, of Giotto's portrait of Dante in the Bargello. Kirkup sent Rossetti a tracing of the fresco made immediately after it was uncovered, before the inevitable restorer—against whose whole tribe he inveighs bitterly—had time to injure it. The eleven letters from Mazzini to Rossetti have slight significance, but the twelfth, addressed to a fellow-conspirator, "Corso," and signed "Strozzi," has much interest as an example of the mingled zeal and reasoning with which Mazzini infused his ideas into his followers. The six poems at the end show Rossetti at his best. He was not a great poet, but no one can deny that he was, in spite of effusiveness which now seems somewhat out of taste, a worthy patriot. As such, he did real service to the Italian cause by living an honorable life in England.

---

*Horæ Latinæ:* Studies in Synonyms and Syntax, by the late Robert Ogilvie, M.A., LL.D., edited by Alexander Souter, M.A. With a memoir by Joseph Ogilvie, M.A., LL.D. Longmans, Green & Co. 1901. Pp. xviii, 339.

In the last twenty years Latin lexicography has been a subject of growing interest, but relatively little attention has been paid to the synonyms in the Latin language. To treat the subject well requires wide reading, careful observation, and, above all, delicate discrimination, for it is not given to every one to detect the finer shades of meaning in words; and the difficulty of the task is increased by the fact that writers, even good writers, are sometimes negligent or inconsistent, and disagree in usage one with another. Often one word is used instead of another merely for the sake of variety, and so the sharp lines of demarcation are blurred. Undoubtedly, the word *mortalis* connotes something different from *homo*, and its sphere of usage is restricted, but Sallust used *multi mortales* for *multi homines* mainly for alliterative effect. One must constantly be on one's guard against too broad generalizations, and the subjective element must be held in check. The late

Dr. Ogilvie, with a long educational experience, seems to have pursued the subject of synonyms *con amore* and with great independence, and the results seem to justify the opinion of his brother, that he had exceptional qualifications for the undertaking. Unhappily, he was not permitted to see his work through the press, or give to it the finishing touch. The editing, however, has been skilfully done by Mr. Alexander Souter, a pupil of the great Ciceronian scholar, Professor J. S. Reid, and the only British authority engaged upon the 'Thesaurus Linguæ Latinæ.'

"The principal object of the work," as stated in the editor's Explanatory Note, "is to aid the composer of Latin prose in selecting the proper equivalents of about 500 English expressions." The arrangement of these English expressions is alphabetical from *An* to *Younger*, but there follows an index of the Latin words treated. Cicero, as was to be expected, is the writer most drawn upon for illustration, but there are abundant quotations from Plautus, Terence, Cæsar, Nepos, Sallust, Livy, Virgil, Horace, and some from other writers, often with apt translations which admirably set forth the point at issue. Incidentally syntax comes up for consideration, as, for example, under *If*, where the various forms of conditions are passed in review, and under *Do not*, where reference is made to the American contributions to the subject of prohibitions by Hale, Elmer, Bennett, and Clement. This latter article was rewritten by the editor and is not altogether satisfactory. Etymologies are only rarely introduced, and were perhaps better omitted entirely. The connection of *causa* (earlier *caussa*) with *caveo* is doubtful; still more so that of *vesci* with *vivere*. No attempt is made to give all the possible expressions that may be used. Thus, under *Die*, only the verbs *mori*, *demori*, and *emori* are differentiated; under *Entreat*, only *orare* and *exorare*. *Fluvius* is distinguished from *flumen* and *amnis*, but it is not noticed that Cæsar and some other writers avoid *fluvius* entirely, while Livy is the first prose writer to make frequent use of *amnis*. It is true that *flumen* is used if the sense is metaphorical, as, *flumen orationis*, *flumen verborum*. Cicero, as Ogilvie states, uses *vis* (not *flumen*) *lacrimarum* for 'a flood of tears,' but, on the other hand, Virgil (Aen. i., 465) has *largoque umectat flumine voltum*. Space forbids our giving examples to show the author's keen discrimination and fit phrasing of distinctions.

We may note a few omissions or errors. Under *About* no mention is made of *circa* with numerals, although it is so used by Livy. The statement that "*ad, about, up to the number of* (=*fere*) is often used adverbially (not in Cicero)," is wrong; see *pro Cluentio* 110, "cum annos ad quinquaginta natus esset." The distinction between *ultra* and *sua sponte* is clearly made, but it should be stated that the order *sponte sua*, at first poetical, is used by Livy, by Augustus in the Monumentum Ancyranum, and by later prose writers. Whether Cicero used it *pro Sestio* 47 (cited by Ogilvie) is, perhaps, doubtful. Under *Build*, the phrase *viam munire* should be cited; under *Face*, some idiomatic uses of *os;* under *Grief*, the phrase *minuere luctum*. On p. 281, where *quondam*, *olim* and *aliquando* are discussed, the use of *olim* (='once upon a time') in story-telling should be mentioned, as *e. g.*, in Horace Sat. II. 6, 79 "Olim rusticus urbanum murem mus paupere fertur accepisse cavo." On p. 161 the plural *libertates* is said to occur only in Plautus and Tacitus (A. 15 55), but it occurs also in the Digest.

Much pains has been taken by the editor in verifying citations, and the Latin orthography is excellent; so, too, the typography in general, but it is irritating to find now and then an editor's name apparently forming part of a Latin sentence, as on page 152, where we read, as an example of *nescire:* "L.2.2.3 M. Müller nescire Tarquinios privatos vivere."

---

*Highways and Byways in Hertfordshire.* By H. W. Tompkins, F.R.Hist.S. The Macmillan Co. 1902.

The latest volume of the "Highways and Byways" series deals with a county little known to tourists. But though it is not a "show" county, no other in England is more fertile; probably no other has so large an acreage of wheat in proportion to its size; and if the British farmer can be said to flourish anywhere, he should flourish in Hertfordshire. It is not a county rich in literary associations, but its lovers, though few, have been select, and it is thickly strewn with memories of one whom Mr. Swinburne called the "best beloved of English authors." Canon Ainger says: "All through his life Hertfordshire was seldom far from Charles Lamb's thoughts, and never from his heart." He lived to see the old hall of Blakesware—the "Blakesmoor" of the essay—pulled down and "reduced to an antiquity." But he had himself immortalized it in 'Dream Children':

"When I told how good she was to all her grandchildren, having us to the great house in the holidays, where I in particular used to spend many hours by myself, in gazing upon the old busts of the Twelve Cæsars, that had been Emperors of Rome, till the old marble heads would seem to live again, or I be turned into marble with them; how I never could be tired with roaming about that huge mansion, with its vast empty rooms, with their worn-out hangings, fluttering tapestry, and carved oaken panels, with the gilding almost rubbed out, . . . strolling about among the old melancholy-looking yew trees, or the firs, and picking up the red berries, and the fir apples. . . . I had more pleasure in these busy-idle diversions than in all the sweet flavors of peaches, nectarines, oranges, and such like common baits of children."

In yet another part of "that fine corn country" lay the farmhouse of which Lamb said: "The oldest thing I remember is Mackery End." The farm itself still stands almost as in Elia's day, and Mr. Tompkins believes that it is a place of pilgrimage for pious literary Americans. The quaint houses and old churches of the county abound in antiquities concerning which Mr. Tompkins gives much curious information. All who read his pages will note, and some will highly appreciate, his knowledge and love of birds and their habits; they receive fully as much attention as the other inhabitants of those quiet villages. The villagers themselves, in spite of their nearness to London, have been little affected by modern civilization, as may be seen from the following anecdote of John Gilpin's Ware:

"Some years ago there stood upon this spot an old thatched wayside inn, kept by a man named Clibbons. Now Clibbons was wont to increase his income by nefarious practices. He went regularly to Hertford market to sell cakes, which was well enough; but I am sorry to say that he added to his cake-selling a worse occupation. He used to frequent the busiest inns in the town, and listen furtively to the farmers and other country folk as they chatted over their ale. When he heard that George Turmut or Jack Shorthorn had taken a good round sum for their beasts, he would waylay them as they were returning home and ease them of their money. Folks at Ware Side tell me that in the garden of the 'Fox' there was formerly a small cave in which Clibbons carefully hid his ill-gotten cash, and when danger threatened would hide there himself.

"One day, as he was returning from market in a very ill humor, he met a farmer between Widford and Ware Side. He was about to rob the farmer when a third party came up; the farmer shouted that he was likely to be murdered, and the stranger shot the cakeman on the spot. Acting on the good old adage that it is useless to cry over spilt milk, the farmer placed the body of Clibbons in his own cart, and drove it to the 'Fox,' where he was met upon the threshold by the cakeman's wife, who said she knew her man was dead an hour ago, for she had received a token from another world. I doubt whether anybody, man or woman, who has not had much personal talk with the older folk in our more quiet villages, is aware how superstitious such persons often are even in the present day. If the candle burns down in a peculiar manner, and the tallow assumes the form of a winding sheet, there is death at the door. If you have warts, you had better steal a piece of beef and bury it, and as the beef decays the warts will disappear. There are still old women who believe that their infirmities would be healed by the royal touch, and bemoan their inability to receive it; there are still old men who believe that if the horseshoe fell from their doorway in the night, sorrow would come in the morning" (p. 335).

Mr. Tompkins made his tour on foot, and, to judge from his experience, Hertfordshire is an ideal country for a walking tour; the roads are good, and comfortable, old-fashioned coaching inns abound. Knebworth, the home of Bulwer Lytton, inspires the writer with reminiscences of Dickens, Douglass Jerrold, Mark Lemon, and others of the coterie that used to assemble there in the days of the novelist.

The illustrations, by Mr. Griggs, are up to the standard set by Mr. Pennell and Mr. Hugh Thomson in the earlier volumes of the series. The studies of trees are especially good, and give an excellent idea of the leafy lanes of Hertfordshire. The volume is furnished with a map of the author's route, and an index. As a literary supplement to Baedeker, the tourist would find the book a useful and entertaining item in his luggage. One fault, or rather two, we have to find with the whole series. The books are printed on heavy sized paper, presumably for the sake of the illustrations—a serious drawback for a traveller's guide. Moreover, the binding is too weak for the weight of the volumes; that which we have just considered is already unstitched after a single reading, and we have encountered others of the series in the same plight. Strong binding and light weight would seem to be essentials for books of this class.

---

*Garden-Craft, Old and New.* By John D. Sedding. John Lane. Pp. xxvi, 213.

The present revival of the old-fashioned formal garden is due in large measure to John Sedding. His 'Garden-Craft,' printed in 1892, was the first book of which the dominant note was praise of the old way of gardening. It was a gentle book, full of love for the half-forgotten beauty of an

earlier time. It was the voice of a poet telling of the joy that he had found in going back to a manner long despised and often bitterly rejected. The book was promptly attacked by W. Robinson, author of 'The English Flower Garden,' upon whom formality in a garden has the maddening effect of red upon a bull. Rushing into print, he proceeded to characterize poor Sedding's exquisite imaginings as "drivel." Perhaps his ire was not entirely without cause, for, before his 'Garden Design and Architects' Gardens' came from the press, Blomfield's 'The Formal Garden in England' had appeared, and some of the things in it were enough to anger the mildest of landscapists. Blomfield slashed back at Robinson in the caustic preface to his second edition, and so the battles of the styles went on merrily enough.

But Sedding was not the man to enjoy polemics. He was, before all else, an artist, and his untimely death, just before the appearance of his book, deprived England of one who, by both promise and performance, held a unique position among her architects. Of the man himself, his indomitable gayety, his deep kindliness, his all-pervading love of art, of his work and those high qualities that so easily distinguished it from the work of others, we may read in a memoir written by one of his dearest friends and included in this book. Whether it is the character of Sedding as revealed by the memoir, or whether it is Sedding's thoughts on gardening, that most deeply interest us, it would be hard to say. Suffice it that he approaches his subject in no narrow frame of mind. He is as ready to see and acknowledge the good in the landscape style as in the formal, and indeed he ends his book with a chapter "In Praise of Both." Yet he accomplished the thing he started out to do. He showed us how much of beauty we are losing by closing our eyes to the merits of the garden of our forefathers, and how small was our angle of vision when we refused to see good in any method but that of the attempted imitation of nature.

'Garden-Craft' has to-day a far wider circle of sympathetic readers than it had when it first appeared. Since it has for some time been out of print, and since it is a book that improves the oftener it is read, the new edition is very welcome.

---

*The Ancient Ruins of Rhodesia* (Monomotapæ Imperium). By R. N. Hall and W. G. Neal. With more than seventy illustrations, maps, and plans. E. P. Dutton & Co. 1902. 8vo, pp. xxvii, 396.

The existence of ancient ruins in South Africa was made known in our time by an American finding in 1868 a cyclopean wall in the forest near his hut. Though several other similar structures were found by travellers drawn to the place by his discovery, yet until recently there had been no systematic search for these remains of a bygone age. In 1895 two mining experts, W. G. Neal and G. Johnson, under a grant from the British South Africa Company, began the work of methodic exploration. The results of their investigations at the end of 1900 were, that, in a region one hundred thousand square miles in extent, south of the Zambesi, there are more than five hundred groups of ancient ruins. They are of towns, covering one to two square miles, villages and forts; the best preserved buildings being massive walls and conical towers of granite blocks laid without mortar, and displaying five different styles of ornamentation, including the chevron and dentelle. Along the banks of the streams are innumerable holes for crushing quartz with stone hammers, and small piles of quartz lying beside them; and in the cemented floors of the walled buildings are smelting-furnaces, the linings covered with specks of gold. In one district the hillsides are elaborately terraced for cultivation, irrigation being provided by artificial canals in use at the present day. There are also indications of roads lined with forts converging on the port of Sofala, where in 1505 the Portuguese found two Arab dhows laden with gold for export. A slight examination of the vast mass of débris which covers the country has brought to light, among many other things, gold ornaments, tools, fragments of crucibles and blow-pipes, soapstone beams surmounted by carved birds and phallic emblems. Thus far, however, no burial-places have been found, only some fifty human skeletons—and no inscriptions! Though these vanished peoples have left no written records to tell us of their history, the Sabæan remains of southern Arabia show such a marked similarity to the most ancient ruins as to leave no doubt as to the Asiatic origin of the earliest comers. In the second period there are distinct traces of the Phœnicians.

It is evident, reasoning from human analogy, that this land has passed through the same experience which we are now witnessing in the Transvaal. Within the last twenty years the Rand has been occupied by a multitude of goldseekers who have digged mines, built towns, and constructed roads to the sea for the transport of their gold and supplies. So, possibly, in 3000 B. C., an Asiatic Livingstone thrilled his countrymen with the story of his adventures in a far southern land, and showed specimens of the abundant gold he had found in it. The success of the men who, inspired by his tale, sought this prehistoric El Dorado, led many more to follow their example. At length some monarch sent out a host of soldiers and slaves, it may be, and took possession of the land, built towns, forts, and highways, and made the mining industry a state enterprise.

The account of a mining engineer of a single district recently surveyed by him will give some idea of what these enterprising Asiatics accomplished: "I saw at least one hundred and fifty square miles of country composed of kopjes ranging in height from one hundred to four hundred feet, literally covered on their slopes with these stone terraces, and the valleys literally strewn with the ruins of the ancient dwellings of a former teeming population." In that district alone he estimates the amount of "manipulated ground" —that is, ground of which the "loose stones, earth, débris, etc., have been shifted and placed into position, and carried up steep hills often hundreds of feet high" —at "something like 261,733,750 tons!" These facts, as well as the depths at which the earliest ruins are in some instances buried, show that the occupation of the land by the miners must have lasted for centuries. What brought it to a close we can only conjecture, though it was evidently not the exhaustion of the gold. Possibly the decay of the distant parent state loosened the bond connecting it with its colony and made communication difficult and dangerous, and so occasioned the withdrawal of garrisons and the gradual homecoming of the alien population. The actual end may have followed upon an uprising of the slaves or the raid of a savage tribe.

The authors of this volume modestly disclaim possession of the learning essential to presenting a theory of their own as to the origin and history of the people who have left such substantial testimony to their presence in South Africa. Their task is simply to exhibit the known facts, and they leave scholars to interpret them, though they incline to the view advocated by Prof. A. H. Keane that Rhodesia, the Monomotapa of the Middle Ages, was the land from whence came the gold which, in the days of Solomon, was "at Jerusalem as plenteous as stones." According to this theory, Tarshish, from which the ships in those days came once in three years, was Sofala, and Ophir was the distributing emporium on the south coast of Arabia. A brief statement is given by Mr. R. N. Hall of the speculations of the different archæologists who have studied the subject, together with such historical references as throw light upon it. He has also collated and arranged the results of Mr. Neal's five years' researches and those of all other explorers, including the "investigations by many leading Rhodesians, who have long devoted considerable time to the study of this fascinating subject."

A particular description of the nearly two hundred groups of ruins which have been examined is prefaced by an account of the Great Zimbabwe, the most ancient as well as the first discovered. From a careful scrutiny of the numerous "finds," they have been able to show with almost startling distinctness the methods of the miners and goldsmiths. The ore-bearing quartz was taken from the mines to the nearest water, where it was crushed and washed. The dust was then carried to the capital town of the district, for it is in these places only that furnaces, crucibles and blowpipes are to be found; and from there the gold was transported by the fortified roads to the sea. The most important contribution to our knowledge, however, is the demonstration, by the different architectural styles and building methods, of the four periods into which this ancient occupation of the land must be divided. The vivid realization of the facts of which this work is a complete treasury is greatly helped by numerous maps, plans, and pictures of the principal ruins and the most interesting objects discovered in them. Altogether a profound impression is made of the enterprise, intelligence, and courage of these gold-seekers, the earliest of whom may have been contemporaries of the builders of the pyramids. Their civilization must have been of a high standard even when compared with our own, while their buildings, the walls of which go down to rock formation and are sometimes fifteen feet thick, are far more substantial than ours. Their mysterious fate, too, provokes the wonder whether their history "will repeat itself" in the Transvaal. These ruins certainly make it conceivable

that, in some far-distant age, men may search in the mounds that will mark the site of Johannesburg for evidence of the origin and history of the miners and builders of the nineteenth century.

---

*The Life of John William Walshe, F.S.A.* Edited, with an introduction, by Montgomery Carmichael. E. P. Dutton & Co. 1902.

The uninitiated reader will find reason for doubts as to the nature of the literary product which confronts him here. The opening chapters are so full of realistic detail that the elaborate apparatus of the Introduction seems not needed to support the pretence, or confirm the impression, of biographic veracity. Those which follow introduce a liberal element of romance; but, before the middle of the book is reached, edification and instruction abound in measure suited only to a tract. The sensitive child of a stupid and brutal father, after woful experience at home, in a Dotheboys Hall, and in a counting-house, flees at eighteen to Italy, where he falls at once into the arms of a phenomenal English scholar. Thenceforth all is roseate, except for the hero's self-macerations, mental and physical. The blessing of Heaven and of the Church rests upon a land of grateful peasants, beneficent landlords, pure and tender-hearted priests, and confessors so wise and disinterested that they find no vocation to holy orders in the most gifted and wealthy laymen.

In this idyllic scene carnalities are merely the background, and external events have little place; we are invited to contemplate the growth of the hero's character and his exemplary habits as a student. "His own intimate life was that of a holy person of the Middle Ages in word, thought, and deed"; in later years he "was subject to ecstasies or rapts." Yet his superior intellect was singularly well furnished and systematically exercised. Heraldry, which seems here to be a peculiarly Catholic science, had done a good deal for him in youth; and Latin, which was his delight as a boy, is, of course, the only adequate tongue alike for study and for devotion. "Logic and scholastic philosophy kept him sane in his views." The Church, be it remembered, has the only accurate logic and all the methodized knowledge that is of any value; as for the world without, it lies in folly no less than in wickedness. The "literary and scientific men" of England are a surprisingly ignorant set: "the wisest of them did not know the difference between a monk and a friar, or a martyr and a confessor, or an amice and an amess," etc. (see pp. 221-2).

As all this falls naturally under the heading, "Important if True," it is as well to know that John William Walshe, F.S.A., who "was well known to scholars as perhaps the greatest living authority on matters Franciscan," and who "died on the 2d July, 1900, aged sixty-three, at Assisi, in Umbria," is but the product of Mr. Carmichael's busy brain. To what extent his author shared the views of this alleged memoir, supposed to be written by the subject's son, since also deceased—views for which he twice humorously in notes evades responsibility—or whether he is throughout smiling over the mystification, it were considering too curiously to inquire. In either case he, as literary executor of his mythical friend, has yet to publish the thirty-four volumes of Notes on Franciscan and other topics, with numerous other MSS., and (after twenty years), the "Recollections" and Diary on which the present sketch is based.

---

*Antarctica.* By Edwin Swift Balch. Philadelphia: Press of Allen, Lane & Scott. 1902. Charts. Pp. 230.

The object of the author of this important monograph is twofold—to give a complete guide to the literature and cartography of the South Polar region, and to show that chief among its explorers is an American. Mr. Balch divides his work into three periods, the first beginning with the voyage of Amerigo Vespucci in 1502, though he refers to the conjectures of the ancients, especially of the Chaldæan Seleukos, B. C. 170-125, as to the existence of a southern continent. It closes with the voyage in 1775 which gave to Capt. James Cook "the second place among antarctic explorers." The next and most important period includes the remarkable achievement of Capt. Nathaniel B. Palmer, a Connecticut sealer, who, in the sloop *Hero*, "but little rising forty tons," in 1821 discovered a group of islands which a Russian navigator, Bellingshausen, in gratitude for services rendered him by the Yankee skipper, as well as in admiration for his exploits, has called Palmer Archipelago. The U. S. Exploring Expedition in 1838-42, under the command of Lieut. Charles Wilkes, appropriately closes the review. "No finer achievement" than this voyage, says our author, "has been accomplished in the annals of the Arctic or of the Antarctic. With unsuitable, improperly equipped ships, amid icebergs, gales, snowstorms, and fogs, Wilkes followed an unknown coast line for over fifteen hundred miles." Emphasis is laid upon this because indications are not wanting of a disposition to ignore the claim of Wilkes to the honor of being the first to discover the Antarctic Continent. For instance, the name Wilkes Land given to this coast, though to be found in the *Times* Atlas, has no place on the chart in the Encyclopædia Britannica or in the latest edition of Chambers's Encyclopædia.

Mr. Balch briefly records what has been accomplished in the last fifty years, and closes with a reference to the English, German, and Swedish expeditions now engaged in the exploration of the Antarctic region. He adds to each of his statements a note giving his authority, and some idea of his painstaking labor may be formed from the fact that these are more than three hundred in number, and that the index includes some five hundred proper names. To his accuracy we can bear this testimony, that, after a somewhat careful examination, only one typographical error has been detected, the misspelling of Stieler on p. 164. Among the curious bits of information scattered here and there through the work is the statement "that there is no apparent record of any woman having passed beyond 60° south latitude." There are reproductions of portions of two old charts, and one by the author showing the latest discoveries.

**SEIGNOBOS' ROME**

*A History of the Roman People.* By Prof. CHARLES SEIGNOBOS, author of "A Political History of Europe Since 1814." Translation edited by WILLIAM FAIRLEY, Ph.D. With illustrations and maps. 528 pp., 12mo. $1.25 *net.*

This school history has all the clearness characteristic of French historical writing, and is graphic in its style. It is an interesting book. Large use has been made of legendary and anecdotal material. The editor has carried the narrative down to Charlemagne and appended to each chapter a list of sources available in English and a very full set of parallel readings.

# The Nation

VOL. LXXV—NO. 1933. THURSDAY, JULY 17, 1902. PRICE TEN CENTS.

*The* title *of* the late Dr. Benjamin Howard's posthumous book, "PRISONERS OF RUSSIA," naturally brings before the mind's eye the gruesome pictures *of* devilish cruelty as drawn by Prince Kropotkin, Mr. Kennan, and others. But from Dr. Howard we feel that we have the truth, for he was the first, and until the day *of* his death remained the only foreigner who ever visited Sakhalin, the island on the extreme east coast *of* Siberia, whither are sent the worst offenders under the Russian law. He was the guest of the Governor *of* the island and his companion on his tours of inspection. He had unconditional liberty to observe and investigate, and his conclusions therefore have the weight *of* first-hand knowledge. Dr. Howard actually saw a flogging with the knout, and his conclusions being those not only *of* an eminent penologist, but of a physician also, are noteworthy. The reception accorded to this wonderful book stamps it as the most authoritative on the subject. (12mo, Cloth, $1.40 net. Postage 14 cents additional.)

*The* success of Graham Travers' (Dr. Margaret Todd's) new novel, "THE WAY OF ESCAPE," is due to the humanity, the living interest, and the terrible truthfulness of the story, which touches a responsive chord in every heart, either from sympathy for the struggling heroine or from a fellow feeling induced by some inward battle fought and won—or lost. This book has two distinct claims upon popular favor: it is, first, a complete, well-rounded story, thus reaching the level *of* the best novel *of* the day; and, second, underlying and interwoven with it, is a tremendous moral lesson—a lesson that recalls the Biblical truth that he that ruleth his spirit is greater than he that taketh a city. (12mo, Cloth, $1.50.)

Undoubtedly the most important book *of* its kind is "THE CARE OF THE TEETH," by S. A. Hopkins, M.D., D.D.S., Professor of Theory and Practice of Dentistry in Tufts College Dental School. Mothers will find that it contains many ounces of prevention. Dentists will find just the suggestions to make to their patients, and Physicians will experience an awakening sense of the bearing diseased teeth have upon the general health. (12mo, Cloth, 75 cents net. Postage 7 cents additional.)

*The* latest and one *of* the most interesting in that valuable series *of* small volumes, "The Library *of* Useful Stories," is "THE STORY OF THE ART OF MUSIC," by Frederick J. Crowest, Author *of* "The Great Tone Poets," etc., which traces in an interesting manner a general history *of* the art, closing with a fascinating chapter on Wagner. (Illustrated. 16mo, Cloth, 35 cents net. Postage 4 cents additional.)

## The Week.

Senator Burton of Kansas explicitly confirmed, in his speech last week at Topeka, the suspicion that the Republican leaders in the Senate did not really wish to pass the Cuban Reciprocity Bill. "They came to us," he asserts, "and encouraged us to keep up the fight." We do not see how Senator Aldrich can pass this challenge by in silence. Was he playing a double game? Did he deceive the President? Was it dread that the Sugar Trust's differential might be stricken off which led the Senatorial managers secretly to encourage the "insurgents" to persist? It is a woful tale of Republican insincerity and trickery upon which Senator Burton puts the seal of authenticity. If his assertions remain uncontradicted, we have an unparalleled case of party betrayal, and of deliberate and calculated cheating and humiliation of the President. If there is to be no punishment for such duplicity, then the blackest political crimes may hope to go unwhipped. Already, we observe, those Republican newspapers which were saying two weeks ago that the people would rebuke the Republican recreants at the polls, are changing their tone, as of course they were bound to, and remarking that the issue will be, after all, whether the policies for which the Republican party stands shall be "wrecked." But how if your chief wreckers are in that party? How can a party be trusted to keep any pledge if it would not redeem its pledge to Cuba? The real issue, we should say, is whether a party shall or shall not be made to smart for acting in what its own President has affirmed to be a dishonorable manner. Will the people renew a vote of confidence in confessed double-dealers?

---

Since Senator Burton took issue with the President on the question of Cuban reciprocity, it has been alleged by Mr. Burton's rivals in Kansas that the President has "turned him down" more than once in the matter of offices. It was specifically stated that the President refused to appoint Foley, Wiggam, and Richter, who had been recommended by the Senator, because of the latter's attitude towards him. Here is Mr. Burton's full and complete refutation of the charge:

> "President Roosevelt told me months ago that he would not appoint Mr. Foley, and I said I would give him another name for appointment before Congress adjourned, which I did, and the President appointed him. *Mr. Wiggam was not my appointee. That was solely the patronage of Congressman Miller, and the Indian Territory marshalship* [which was given to Mr. Richter] *was solely the patronage of the President himself.*"

The sentences which we have italicized present a graphic picture of the way in which appointments are made by Representatives, Senators, and occasionally the President—for Mr. Burton admits that once in a while the President "solely" exercises the power intrusted to him by the Constitution.

---

Reports that the propertied classes in Cuba are at once to organize for annexation may be ill founded, but there can be no doubt that business and industry in the island are in a bad way. The *Diario de la Marina* of July 8 declares that the news which it gets from the country, and the events recorded in the regional press, "could not be more alarming or disheartening." Thousands of laborers, it asserts, are out of work, and with no prospect of getting any. Many are even suffering from hunger. Two thousand workmen recently left Manzanillo to go to Mexico in search of employment. Sugar mills are being abandoned and preparations for the next crop abandoned, on many plantations, in despair. This is the testimony, be it remembered, of an impartial newspaper, which knows nothing of party politics in Cuba, and has no interest except that of stating the facts. It is a mournful account of American stewardship in the island. We shall not soon see another American President inviting his fellow-countrymen to glory over their unexampled generosity to Cuba. Let us charitably hope that it is to hide its own shame that the Jingo press has lately taken to abusing the Cubans, telling them that their request that we remove our coal from Havana is a mere "bluff," and asserting that we need a naval station there and will have it, whether they like it or not.

---

The *Evening Post's* Washington correspondent presents the apology of the Roosevelt Administration for the postponement of the President's campaign against Trusts until after the adjournment of Congress. It simply comes to this, that Mr. Roosevelt all along had wanted such legislation as he earnestly advocated in his speech at Pittsburgh three days after the Senators and Representatives who might have enacted it had left Washington, but that he followed the advice of Attorney-General Knox to see what could be done with the present so-called Sherman Anti-Trust Law before asking for anything more. Accordingly, the apology proceeds, the prosecutions of the Northern Securities Company and the Beef Trust were started largely with the idea of giving Mr Knox points for the supplementary legislation which it was thought, some weeks ago, might be needed, and which both the President and the Attorney-General became convinced was demanded. This conclusion having been reached, the measure required will be carefully framed during the recess, and then "an anti-Trust bill will go through Congress at its next session by a practically unanimous Republican party vote, if by no other. This is the Administration programme," announces the well-informed correspondent.

---

One serious defect in this apology is the fact that the next session of Congress will be the short one, with much less than ninety days of working time, and with more to do in the line of ordinary legislation than can be well done. Another difficulty about the Administration's defence of its silence on the Trust issue until after Congress had adjourned, is found in the character of the promise now given that the action which was concededly needed before the last session ended will be taken at the next session. "An anti-Trust bill," we are now assured, "will go through Congress at its next session with a practically unanimous vote." How does the country know this will be done? Why, because "this is the Administration programme." If the Roosevelt Administration had not yet encountered Congress, the nation might be ready to accept such a guarantee. But people remember that the Administration had a "programme" on a most vital issue when Congress met last December. It was set forth by the President in these pungent words:

> "I most earnestly ask your attention to the wisdom—indeed, to the vital need—of providing for a substantial reduction in the tariff duties on Cuban imports into the United States. . . . We are bound by every consideration of honor and expediency to pass commercial measures in the interest of her material well-being."

People also remember that Congress adjourned without having carried out this "Administration programme." What assurance can the President give that the same Congress will be any more tractable when another "Administration programme" is sent from the White House to the Capitol next winter?

---

Representative Griggs, Chairman of the Democratic Congressional Committee, loses no time in reminding the Republicans and President Roosevelt how open to ridicule they will be for suddenly discovering that there is need of Federal legislation against Trusts. Do they want to make the campaign one huge joke? Or is their anti-Trust demonstration merely a passing feint? Mr. Griggs puts the case pungently. While actually in session, with Congress in their complete control, the Republicans did not lift a

finger, did not even peep or mutter, against the Trusts. On the contrary, they applied their fine brute majority to voting down every proposal of the Democrats really to do something to restrain and punish monopolies. How, then, can it be taken as other than pure farce, or the coolest impudence, for the Republicans to go about the country declaring that it is necessary to keep them in power in order to curb the Trusts? The question will be thrown in President Roosevelt's face with every speech he makes. He will be asked to state whether the whole thing is a sham, whether he has flung himself into the movement with the rash enthusiasm of youthful ignorance, or whether he has maturely considered it and is in the fight to stay. Now we beg to assure him again that the only way in which he can make his sincerity and determination entirely clear in this business is frankly to say that he stands ready to see the tariff breastworks of the Trusts levelled to the ground. If he does not mean to fight as one that beateth the air, that is the blow he must be prepared to deliver.

---

Missouri halts the movement for Democratic reorganization upon the basis of ignoring the Kansas City platform of 1900 and taking a fresh start, which was begun in Indiana and continued its advance in Illinois. The regular State convention of the party does not meet until July 22, but a special convention was held at Springfield last week to nominate three candidates for the Supreme Court. The reorganizers wanted to remit all matters pertaining to State and National affairs to the later convention, and have no more platform now than an endorsement of the Democratic Governor and other State officials; and the majority of the Committee on Resolutions so reported. But a Bryanite promptly moved to amend by adding a resolution that "we, the Democrats of Missouri, in convention assembled, do hereby endorse the principles of the Democratic party as enunciated in the National Democratic platform of 1900 in Kansas City"; and, after a lively discussion, this was carried by the overwhelming vote of 501 to 199. It is significant that all but four of the 122 delegates from the city of St. Louis were against clinging to the silver folly any longer, but most of the farmers remained faithful to Bryanism. There is reason to fear that this tendency prevails among many Democrats in rural districts at the South and in the further West, and the existence of such a sentiment is a serious obstacle to harmony in the party.

---

It was all very well for Congress to get rid of the currency difficulty in the Philippines by shelving it, but that does not help matters in Manila. Not only merchants, but army officers and teachers and other civilian employees, are left at the mercy of a fluctuating exchange which makes them unable to tell in advance what the net product of their salaries will be. Secretary Root is said to be overwhelmed with remonstrances from business men in the Philippines, and protests from school-teachers, all dwelling on the mischief of the present financial chaos in the archipelago. The two houses of Congress could not agree on a remedy, and so, with a sigh of relief, decided to apply none. But how imperatively one is needed, every Manila mail which reaches the War Department testifies afresh. Many of the teachers write that they will be forced to resign and return home unless they can be assured of getting full value for their wages. They at least will be ready, in the far-off Philippines, to believe that "the wisdom of Congress" diminishes directly as the square of the distance. That is a principle which the whole history of colonization has established almost mathematically.

---

Gen. Chaffee's relief, after two years of service as commanding general in the Philippines, comes as a surprise. It is at his own request, however, and, as the latest Manila reports have represented him as being worn out by his heavy responsibilities, he has evidently had all the tropical service good for him. He will probably be able to report by September 30 the total pacification of the islands. Both Gens. Otis and MacArthur have asserted their claims to the exclusive use of the title of conqueror, but it goes almost without saying that Gen. Chaffee's régime has been the most successful from the military point of view. Essentially a soldier, and not a diplomat, Gen. Chaffee has stuck to his work with great grit, and—marvellous as it seems—we cannot recall that he has made a foolish speech or given out a "sensational" interview during the entire period. He has trusted his subordinates and given them a free hand. When the Waller case was brought to his attention, he was quick to take it up, and his comment upon it reveals a man of humane instincts. While slow to begin social relations with the Filipinos, he did finally follow the lead of the Civil Commission in trying to get at the leading natives of Manila. Like all his predecessors, he has frequently erred for lack of personal information as to what was going on among his troops. His ignorance of the water cure, if it was ignorance, is a case in point, for he could have stopped it at any time had he so desired.

---

Lieut. A. J. Dougherty, Twenty-eighth Infantry, has written a valuable letter from the Philippines to the *Army and Navy Journal* in defence of the present "dry" or temperance canteen. "Of the many who loudly condemn the canteen without beer, I do not know one who has given it an honest trial," he declares. He then proceeds to give his experiences with a "dry canteen" which he organized for his company last March, in a town which contains half-a-dozen native rum-shops and a saloon run by an American "civilizer." From January 15 to March 15 forty-five soldiers were tried for drunkenness. In the two months following the establishment of the "dry" post exchange by Lieut. Dougherty, only two men similarly offended. In view of these facts, he thinks that the present system should be given a fair trial, and not be generally condemned because of individual prejudices. It is interesting to note that Lieut. Dougherty disposes of still another argument of those who would give the soldier Government beer. The profits of his exchange were $367.10, while there was $169 worth of stock on hand at the end of the period mentioned, although the canteen was started without any capital. Henceforth it will be difficult to appeal for the beer canteen on the ground of the extra luxuries and comforts it earns for the soldier, as compared with the temperance exchange.

---

President Schurman spoke a fit word on "Education in the Philippines" in his address before the National Education Association at Minneapolis on Thursday last. Confident of the capacity of the Filipinos to receive and profit by the best that the Occident can teach them, he went on to say that we could not pretend to be carrying to them education unless it included instruction in American political philosophy. This, as Mr. Schurman pointed out, is something all our own. It has asserted the value of liberty in and of itself. It has glorified a self-governing democracy as the broadest-based, and so the safest and most stable, form of government. It has preached national independence as the right and blessing of every people. Now, is it to be supposed that we Americans can educate the Filipinos without imparting to them these fundamental political doctrines? Can we teach them applied mechanics and withhold from them applied freedom? The questions answer themselves. If we are sincere in our professed desire to educate the Filipinos, we must hold up before ourselves, and before them, the goal of an independent Philippine republic. It is because President Schurman believes in Filipino education that he believes also in Filipino independence as its sure consummation. Aspiration for independence will certainly not be diminished by education.

---

The Agricultural Department's estimate of crop conditions, published on Thursday afternoon, shows that the dangers to the various harvests are by no

means past, and will not be for two months yet. But the first and most serious of them—the blighting of the crop in the early stages of its growth—has been passed successfully. This is precisely the week when, a year ago, it became known that the growing corn was seriously damaged. It is true that the hot wave continued for weeks after this period; it was not, in fact, until the 20th of August that the devastating drought in the Missouri valley was finally broken. But, with corn, the point of interest is that conditions are such already as to preclude entirely any general harm from drought. Meantime, the average condition of the crop, with a largely increased acreage, appears to indicate a corn yield not only running a billion bushels beyond 1901, but exceeding all other corn crops in our history. Probably there will be some impairment later on, but hardly such as to upset expectations badly. Wheat, on the other hand, does not make as good a showing as last year. Early drought in the winter-wheat belt cut down prospects at the start, and some decrease in the Northwestern acreage added its effect; so that the probable yield is a full 100,000,000 bushels less than in 1901. It should be added, however, that last year's wheat crop was abnormally large—a fact which did very much to offset the bad results of the corn-crop failure. Except for the huge production of last year, and one or two others equally exceptional, the indicated wheat yield for 1902 is greater than any actually harvested in the past.

---

Why should a change in the English premiership seem so much more important than one in the French? Why does Mr. Balfour succeeding Lord Salisbury win from us an attention which we never thought of giving to M. Combes when he replaced Waldeck-Rousseau? Something, of course, must be allowed for the interest which we take in the politics of a nation of our own blood and speech, and which, in the nature of the case, must be more vivid than that we feel in the public life of any other European country. But, beyond all this, we see in England a party system of government, still in full vigor, under which the party leadership stands for a solid and continuing representation of the people in a way quite impossible in France. There we have factions and "groups," instead of parties—or, if there are parties, they present themselves as if resolved into their ultimate and discordant atoms. The result is that the customary French premiership has too much the air of an ephemeral success in temporarily harmonizing conflicting interests. In this there is no promise of stability, and little of real power even for the day. Premiers come and go. But the English Government strikes its roots deeper. Its chief is such through representing and controlling stronger and more enduring political forces than a French Prime Minister ever feels at his back. Mr. Balfour may not be in his own person a more attractive or puissant figure than M. Combes; but he cannot but appear so, because of the body of English liberty, slowly broadening down from precedent to precedent, of which he is the product.

---

Now that the war in South Africa is over, the English are beginning to take a different attitude about the achievements of their army, and to maintain that no other troops could have done so well. Comparisons unfavorable to the German army appear here and there. At Tientsin and Pekin, it is declared, the Anglo-Indian contingent proved far more mobile than the Germans, and showed "a more soldierly grasp of the exigencies of the case." A German general is cited, too, as stating his belief that no other nation could have done as well, so that there is a general feeling of jubilation in English military circles, despite the fact that Gen. Buller has at last publicly revealed himself as the totally incompetent officer he proved to be at Colenso in 1899. A similar feeling was noticeable in this country in 1898 at the close of the war with Spain. Of course, we blundered and wasted human lives in our death-camps, but, after all, we licked the Spaniards, was the cry. In England this change of feeling is ominous for the reform of the army. Possibly the Cabinet change may give Lord Roberts the occasion for retirement, and Lord Kitchener the opportunity, as commander-in-chief, to put through some of the reforms he has at heart. So far there have been few signs, indeed, of any serious movement towards a reorganization, and there has never been much confidence in Mr. Broderick's ability to overcome the enormous social influence which makes for a continuance of the present order of things military.

---

The Emperor William is a realist among statesmen. He frankly recognizes power, whether it present itself to him in the form of a pedigree or a check-book. With Cecil Rhodes he met as with a fellow-monarch; he scandalized his own nobility by taking the rich ship-owner, Herr Ballin, off with him on his private yacht; so why should he not receive Mr. Morgan at Berlin with the honors usually reserved for royalty? That gentleman's countrymen have watched his European progress with mixed emotions. The kowtowing, or else the panic, which has marked his descent on various foreign shores, stirs their sense of the ridiculous, if it also flatters their national pride. If they could only forget their own frightened shrieks about him in 1893, they could laugh quite heartily at the agitated foreigners who are in such a state of dread lest he buy up all of their property, at three or four times what it is worth. This American invader must certainly seem a new type of Western democracy to the royalties who entertain him. Instead of clapping Cæsar's self upon the back and calling him "Old Hoss," the new style of "strong-limbed Goth" from over the seas takes his imperial attentions as the most natural thing in the world, and returns from Sans-Souci to eat, with the utmost *sang froid*, his "Salade, Steel Trust." But we observe that the German press is agog with wonder what *coup* Mr. Morgan will spring next.

---

The retirement from office of the Prussian Minister, Herr von Thielen, who for eleven years has been head of the Bureau of Public Works, has called forth praise for his achievements even from political opponents. Having had twenty-seven years' experience on the Prussian railroads before becoming a member of the Council of Ministers, it was expected that the railway system particularly would benefit by his incumbency, and public opinion was not disappointed. Since 1891, the mileage has been increased 28 per cent., eighty millions of dollars have been spent on new and old stations, new and more powerful locomotives and more comfortable cars have been introduced, as well as additional safeguards in the way of air-brakes and electric block signals. Some few changes were effected in passenger and freight rates, and experiments made with a view to the use of electricity as motive power for long-distance traffic. Although himself slow to move in matters affecting wages and personnel, Herr von Thielen's incumbency has been distinguished by an increase in pay of some of the employees and a shortening of the hours of others. It is noteworthy, however, that the latter changes were in part due to a series of bad accidents attributed in many instances to overworked employees. None the less, this record of improvements is noteworthy in a state which is naturally extremely conservative and apt to be far behind private companies in the development of its lines. It has even been claimed for it that its trains are, on the whole, faster than our American ones; a contention which has been completely demolished by Mr. G. G. Tunell in the last *Journal of Political Economy*. Gen. Budde, the new Minister of Public Works, is a distinguished retired officer, who gained much knowledge of railroading while attached to the General Staff. He is also considered a canal expert, is a man of great energy, and, although only a little more than fifty, has had experience in the Prussian Chamber, and, since his retirement, has been head of a private ordnance and ammunition factory. Much is expected from his appointment, which has, in some circles, however, given rise to a fear that the Emperor means to still further "militarize" the Government.

*JINGOISM AND THE RIGHTS OF NATIONS.*

The cause of Right in its contest with Might has evidently been weakened for the time by the inroads which science and criticism have made on religious belief. Not that Jingoism is without a religion. It seems that religion of some kind is necessary to all. Flag-worship is the religion of the Jingo, and the presence of the flag constitutes right, and is the warrant for all that is done under it. The other day at Boston a ragman was fined twenty dollars for desecrating the flag by wrapping up rags in it, and the patriotic policeman who arrested him was presented with an honorary medal. What could a Catholic have done more in a case of desecration of the Host?

Of the influence of the growing belief that Might makes Right in international questions we have an incidental illustration in Mr. Norman's 'All the Russias,' a very interesting book and one of high literary merit. Mr. Norman vividly depicts the state of the Russian Empire—the unfettered, limitless, absolute rule of one man over his fellows; a Holy Synod whose God-given task it is to coerce or cajole into orthodoxy; a metropolitan society lapped in every luxury, esteeming manners more highly than morals; a vast and roadless country where settlements are to distances like fly-specks to window-panes, where the conveniences, the comforts, and often the decencies of civilization may be sought in vain outside the towns, where entire villages are the prey of hideous disease; a peasantry lodged in dilapidated hovels, living in dirt and inexpressibly verminous, generally given to drunkenness, seven-tenths of them illiterate, and sometimes the victims of most revolting superstitions. Add to this a conscription which tears the youths from their homes to be made food for the cannon in the service of an insatiable ambition; add also the inevitable consequences—the wild heavings of discontent repressed by the Cossack's cruel whip, student rebellions, nihilism with its dynamite bombs, and huge state prisons with their mysteries of horrors.

"I only desire here," says Mr. Norman, summing up, "to make clear the two great characteristics of the Russian social fabric, without an appreciation of which no Russian question or prospect can be intelligently judged—autocracy, the semi-divine, unquestioned, unbounded authority, at the top; its counterpart, illiterate, superstitious, brute-like dependence and automatonism, at the bottom."

On the other hand, Mr. Norman describes Finland, annexed by the fortunes of war and territorial rapine to Russia, but still preserving by treaty a partial autonomy, a Constitution with a Diet, and political rights of its own. Finland is a country, naturally barren, which intelligent and strenuous industry has made fertile. The character of the Finn is attractive. "Within his hard shell there is a tender kernel of romance and playfulness and song." He is temperate, the sale of alcohol in any shape or form being absolutely prohibited outside the towns. Finland is a land of schools. Except upon the eastern frontier, which is still backward, everybody can read and write. Out of every hundred of the entire population, something like twenty-three are at school. Out of a population of 2,380,000, there are 2,600 university students. Learned societies flourish. The country is prosperous, the public debt is small, and every penny has been incurred for construction of railroads.

But Russia now seeks to swallow Finland and deprive the Finns of their local nationality and their Constitutional privileges. Mr. Norman's judgment as to the rights of the question seems clear. "There is no doubt whatever," he says, "the contention of the Finns is right and that of the Russians wrong." "When Finland," he adds, "was taken from Sweden and annexed to Russia in 1809, the Czar Alexander I. conferred upon it, and conferred willingly and from conviction of the expediency of the act, a distinct autonomy, and that autonomy has been confirmed by the coronation declaration of each succeeding Czar." We might suppose, then, that Mr. Norman would give judgment emphatically in favor of the Finn, and would speak with indignation and sorrow of the attempt to merge a free, noble, and progressive nationality in the dead expanse of Russian slavery. Not so:

"To be quite frank," he says, "the charge of violation of the Finnish Constitution is met by one simple consideration. As a matter of plain fact, there is in human affairs of this kind no such thing as finality. Or, rather, the only final thing is *force majeure*—imperative national self-interest. Before that, all promises are air, and all treaties are black marks on white paper. I put this brutally (foreseeing the consequences), but there is no use in mincing words. Every student of history, politics, or diplomacy knows it to be the simple truth; and every country, not Russia alone, affords examples in proof. Germany broke her promises to Denmark. France broke her promises about Madagascar. To come nearer home, England has repeatedly pledged herself to evacuate Egypt, and the United States was solemnly pledged to grant complete independence to Cuba. None of these pledges seems likely to be kept. Therefore, if it is, in the judgment of Russia, an imperative condition of her national prosperity or security that her relations with Finland should be fundamentally altered, she will only be following the ordinary line of historical and modern precedents by breaking her promises and tearing up her pledges. I do not defend the principle—I state the fact. 'Pity 'tis, 'tis true.' "

If Mr. Norman, a man of honor, does not defend the principle, he practically ratifies it as one of general application. It would apply to the relations of other great Powers with small nationalities, as well as to those of Russia with Finland; to the relations of Germany with Denmark and Holland, and to those of France with Belgium and Switzerland. It has just been applied to the relations of the British Empire with the two little South African Republics. Against its application in the case last mentioned, the Boer has fought heroically, so as to make predatory Powers beware, rendering thereby a lasting service to the cause of national independence.

"In conclusion," says Mr. Norman, "there is one more consideration which those who raise the loudest cries of illegality would do well to ponder. Russia, as one of her leading statesmen remarked to me, might, with perfect ease and safety and in all the odor of perfect legality, absorb the whole of Finland next month, and wipe it off the map as a separate entity. This would be the simple process: First, she announces that she withdraws from all protection over Finland, and grants to the former grand duchy absolute and complete national independence. Then, as the presence of an independent and possibly hostile state upon her exposed frontier would be obviously incompatible with her national security, she marches an army corps into Finland and annexes the country—lock, stock, and barrel. White to play—mate in two moves. There would be a huge outcry, but anybody who knows anything of contemporary Europe, knows that not a finger would be raised to stop her. And I do not see an American fleet steaming up the Baltic. Thus Russia could get all she wants, and infinitely more than she is asking, without transgressing for an instant or by a hair's breadth that sacred formal legality in which laws and lawyers often perpetrate injustice everywhere."

Had such a scheme of territorial spoliation under pretence of political necessity been devised by an Italian politician in the fifteenth century and recorded with approbation by Machiavelli, it would seem characteristic of that age. But here we have it endorsed by an English Liberal M.P. in the twentieth century as a perfectly natural method of circumventing the plain dictates of international morality, styled by him "that sacred formal legality in which laws and lawyers often perpetrate injustice everywhere." That the technicalities of law do sometimes, perhaps inevitably, work injustice, may be true; but the lawyers do not mean to do injustice, nor do honest men speak of it with levity as a clever application of the principle of *force majeure*.

In another part of the book Mr. Norman speaks of Skobeleff's massacre of the Turkomans, who, by his own account of them, must have been decidedly superior to the muzhiks and more full of promise for humanity:

"For two years Skobeleff made his preparations, and on January 1, 1881, he delivered his first attack upon this Turkoman stronghold [Geok Tepe] with 8,000 troops and more than fifty guns. Inside was the flower of the Turkoman race, with 7,000 women and children. Their felt tents were set on fire by petroleum bombs, artillery rained shell and shrapnel on them, gradually the trenches drew nearer; but they fought with a desperation which kept the Russians at bay for three weeks, and on more than one occasion they routed the invaders in a hand-to-hand struggle, and slashed them to death in their own trenches, leaving Russian heads and limbs scattered about. But the inevitable end came, and the slaughter of every male left in the fortress, and, after it, that terrible Cossack pursuit of flying men and women for ten miles."

"Opinions differ," says Mr. Norman,

"as to this part of the struggle." But he leaves his readers in no doubt as to the side to which his opinion leans. "If you would strike only once and thus be more merciful in the end, you must strike hard—was Skobeleff's motto in dealing with Orientals, as it has been that of all who have understood the Eastern character." There follows a playful allusion to the scarcity of bridegrooms for Turkoman brides consequent on the massacre.

Timur is, in Mr. Norman's estimation, "the mighty conqueror, one of the world's greatest dead." The epithets are well bestowed if devastation and massacre, both on the most hideous scale, are to be taken as proofs of greatness. The erection of triumphal pyramids of heads was Timur's particular fancy. On the ruins of Bagdad he erected a pyramid of ninety thousand. Covering a plain with children and seeing them trampled to death by his cavalry was another of his diversions. The great Jingo founded nothing permanent except the buildings of Samarcand—colossal, but, if we may judge from Mr. Norman's photographs, devoid of art.

How far will Jingoism go and how long will it last? Will it prevail, as some Jingoes seem to hope, till all the small nationalities have been absorbed by great predatory Powers? The answer to this and some other critical questions must greatly depend on the elaboration of a more settled basis for morality.

## *FINLAND'S LATEST TROUBLES.*

For some months past the news from Finland has been of a disquieting character. The accounts of the riots in Helsingfors in April last were undoubtedly much exaggerated, particularly in the European press, but the cause—the calling out of the first army recruits conscripted under the law of July 12, 1901—continues to arouse universal ill feeling. According to the latest reports, between 70 and 80 per cent. of those designated for military service have failed to present themselves. Naturally there has been and is much anxiety throughout Finland as to the course the Russian authorities will take to punish the recalcitrants for what is undoubtedly a national protest against legislation plainly contrary to the Constitution of Finland. Fortunately, the only action on the part of the St. Petersburg authorities thus far announced, the appointment of an assistant to the Governor-General, bears on its face some evidence that a milder policy towards the unfortunate Finns is under consideration.

The law of July 12, 1901, which has caused the existing crisis, is but another step in the Russianizing of Finland which has gone on so rapidly under the present Czar. Prior to the so-called reforms of last year, the organization of the Finnish troops was, on the whole, a pretty satisfactory one from the military point of view. Moreover, the policy by which Finns served next to and under their countrymen appealed particularly to a people whose Constitutional privileges are disappearing one by one. This has all been done away with, and the conscripts are now to be forced into Russian regiments, while the old organizations have been mustered out for all time. Since the Finns differ from the Russians in religion, habits, and customs of life, and speak a language of their own, it is much as if Hindus were forced to serve in Anglo-Saxon regiments. It is not surprising that, under these circumstances, the few Finns who have responded to the call have been hooted and jeered and regarded as cowards or traitors in more places than one.

But, more important than this and than the doubling of the quota required from Finland, is the fact that the law itself has been forced upon the country regardless of its Constitutional prerogatives. The first proposals for the Russianizing of the army in Finland were laid before the lower house of Parliament in 1899, and were rejected. At the same time some changes were made in the directions desired, which would, it was thought, appease the War Office. This did not, however, prove to be the case, and the Governor-General, Bobrikoff, succeeded, with the aid of the Czar, in forcing the present decree upon the people without the consent of Parliament. The first result was an immediate protest by half a million citizens in the shape of an address to the Czar, in which it was maintained that the decree could not be regarded as a legal enactment. There was also a petition for a return to the Constitutional method of enacting such laws. No attention whatsoever was paid to this appeal, and Bobrikoff set himself in hot haste to the disbandment of the troops, regardless of the consequences, personal and financial, to officers and men. The local recruiting boards having declined to act further, the general conscription commissions were empowered to select the new men needed—another unconstitutional action which fanned the growing flames of resentment.

So bitter was the feeling in Helsingfors that on the 17th of April only 56 of the city's 860 conscripts presented themselves in the presence of a large and ugly crowd, which protested, by word and deed, against their appearance. It was not difficult for the Governor of the province to find an excuse to let loose without warning a squadron of Cossacks upon the indignant people. These hated foreigners did not hesitate to ride down and beat men, women, and children wherever they could overtake them. For these valiant services they were publicly highly praised by Governor-General Bobrikoff. An indignant protest to the Czar from the city fathers has met the same fate as the petition mentioned above.

Nobody can foretell what the outcome will be. There are still those who expect better days for Finland, despite the evident desire of Bobrikoff and his followers to destroy every vestige of popular government and wipe out every evidence of a separate nationality. The optimists base their hopes upon the resolute moral opposition of the entire people to the present Russian policy, and upon the hope that some day the Czar will see through the tissue of misstatements and falsehoods which now prevents his hearing and seeing the truth about Finland. Those who feel thus have taken fresh courage at the appointment, as assistant to the Governor-General, of Privy Councillor von Dietrich, hitherto president of a St. Petersburg court, and noted for his unusual knowledge of the law. When he assumes office this month, it is thought that he will represent a milder policy than that lately pursued, or at least a determination to Russianize Finland by Constitutional methods.

As Finland's case now stands, it is still another impressive object-lesson as to the folly of attempting to destroy nationalities by force. Poland was finally wiped off the map in 1868, yet the hope of a national existence has never died out among Poles. So strong is it in Polish Russia that the Government has had to appropriate large sums of money for a campaign to keep its own influence from waning, and has begun a clever policy with a view to dividing the Poles among themselves. In Austria-Hungary, the strife of the various nationalities is the story of each day. In South Africa, by permitting the use of the Dutch language in schools and courts, by declining to suspend the Cape Colony Constitution, by praise of their quondam enemies, and by liberal financial assistance, the English seem to have begun upon a far-sighted policy. For the United States in the Philippines there is but one proper action—the building up and welding together of the Philippine nation, that it may go its own way at an early day.

## *SALISBURY AND BALFOUR.*

The personal interest which attaches to the Marquis of Salisbury, whose long-expected retirement is now an accomplished fact, is almost greater than the political. His public prominence for so many years served to exhibit in a strong light those qualities of private character which make the man a more fascinating study than the statesman. The real problem of his official career is, how such a personality as his—so proud, so aloof, so disdainful of the tendencies of his age, especially of its democratic

tendencies; no orator, no organizer; consistently a retired student by choice, and ever a reserved *grand seigneur* in a day of chattering familiarity—how such a man could have been leader of a great party in a great democracy for nearly a quarter of a century.

Lord Salisbury's natural tastes would have held him in the still air of delightful studies where his youth, as a younger son, was passed. Rosebery has given us one of his own boyhood's memories in recounting a glimpse he had at Hatfield House of "a tall bookish figure" stealing out of the library with a volume in his hand. It was Lord Robert Cecil. He was in his element as student, writer, *Saturday Reviewer;* and it was apparently only his unexpected accession to the headship of the family that made him turn his thoughts to public affairs. The Cecils had been a ruling house in England for three hundred years, and he took up that tradition with the title. It was, indeed, as a kind of hereditary ruler that he ever bore himself. No aristocrat could have hated and despised "popular movements" more than he did. One of his earliest speeches in the Commons breathed a sort of Coriolanus feeling as respects "the people." He was opposing a bill to remove the tax on newspapers, and "could it be maintained," asked Lord Robert, "that the people would learn anything from newspapers?" It was this lordly air of a Cecil that he carried into official life throughout. He had unquestionably great powers. It is probably not true that Bismarck said of him that he was a lath painted to look like iron; but if he did, it was a most mistaken characterization. The real metal was there. How he impressed so cool a head as Jowett may be seen in a letter of the latter's to Sir R. B. D. Morier:

> "Salisbury," he wrote, "is a man of great ability and perhaps even genius, but impulsive, forgetting one day what he did the day before, and imprudent to the last degree without being aware of his imprudence. He will settle off his own bat things of which he knows nothing, and is very reckless of consequences."

Salisbury's cynicism, his air of entire detachment from all that interested his fellow-men, his scorn for "people's tribunes"—if he disliked Gladstone, he loathed Chamberlain—would have made his leadership of the Conservative party for two decades a hopeless puzzle, unless those unprepossessing qualities had been overbalanced, as they were, by commanding parts. Proud as he was with a kind of mediæval pride, he was yet a thorough Englishman in submitting to the inevitable in politics, and in playing the game through without going off in a fit of the sulks. When Disraeli "dished the Whigs" in 1867, by outbidding them in an enlargement of the franchise, Salisbury (Lord Cranborne, as he then was) rated his leader openly, and accused him of being a traitor to Conservative principles; but he himself lived to pass, as Premier, an Irish land bill more radical than any that Mr. Gladstone ever fathered, and to be denounced in turn as a swallower of his own words and a renegade. Even, however, with this ability reluctantly to compromise, he carried into domestic legislation, as a rule, a spirit of "haughty unwisdom"—to borrow a felicitous phrase used of him by John Bright in 1878. He made himself a necessary man to his party, but it never followed him with enthusiasm, and always lived in fear lest one of his "blazing indiscretions" should bring political disaster upon it.

It was in foreign affairs that Lord Salisbury left his deepest mark. "I feel," wrote Lord Lytton to him in 1878, when he first went to the Foreign Office, "that you are destined to be one of England's greatest Foreign Ministers." There was, of course, a dash of "Lucile" exuberance in this, but Salisbury's great achievements in foreign affairs have been admitted even by his enemies. Bright said of him that he "left his unwisdom for home consumption"; and the series of international agreements on vexed questions which he concluded in his last term of office—with Germany, with France, with the United States, with Japan—would alone be enough to establish his fame. It was perhaps as much his misfortune as his fault that the burden of years and of personal sorrow should have induced him to leave the negotiations with the Transvaal in 1899 in the hands of an astute and too little scrupulous Colonial Secretary. It is impossible, at any rate, to believe that if Lord Salisbury had kept his grasp upon that affair, he would have allowed a causeless war to mar a premiership which otherwise would have associated his name in history with many notable victories of peace.

His predestined successor in the Conservative leadership was Mr. Balfour. As long ago as 1891, Mr. Bryce predicted in these columns that Balfour would become Prime Minister if he lived. It was not simply that he belonged to one of the great families—he is Lord Salisbury's nephew—but that his intellectual and moral qualities had marked him out for the succession. He has, or assumes, a languid manner; and his uncle's cynicism, often unfeeling, has descended to him in the form of witty and good-humored sarcasm. He is no orator, though a very able speaker; his mind being analytic, and his most powerful speeches being a merciless dissection of the arguments of others. In exposition he is less happy; and, as leader of the House of Commons, he has often shown great vacillation, and even something that looked like ignorance of the matter in hand—the pending Education Bill, for example—in piloting bills through the troubled waters of debate. He is reputed to be averse to hard work, though this may be only a result of a studied intellectual superciliousness, which Tories like, and an unwillingness to sit out tedious discussions in the House. As an administrator, his talent is all to be proved, if we except his Irish Secretaryship, where his rôle was mainly the simple one of repression, not administration. Yet he impressed Mr. Bryce eleven years ago as having "a fund of self-reliance and composure equal to any emergency."

He will have to draw upon it at once. His succession to the premiership is natural and easy; but to maintain himself there will require powers greater than any he has yet displayed. Already we see, in the resignation of the Chancellor of the Exchequer, that there are serious differences and embittered factions in the Conservative party. Sir Michael Hicks-Beach's prompt throwing up of his office will be interpreted as a result of Prime Minister Balfour's having to choose between him and Chamberlain, and having thrown himself into the arms of the latter. Chamberlain is undoubtedly the more influential political leader, but is a dangerous man for Balfour to tie to. In any case, extensive party readjustments are inevitable, and a dissolution of Parliament cannot be long delayed. An exciting political period in England will be too soon upon us to make prophecy about it at this time seem anything but an unusually gratuitous blunder. Enough to-day to note the passing of one great figure in English public life, and the accession of a Premier of fine gifts and high character, who is a good friend of the United States, and a statesman whose rise by sheer ability makes one hope that he will be level with the great opportunities now before him.

## *PRICES AND THE INCREASING GOLD SUPPLY.*

The active resumption of gold-mining in the Transvaal, with the probability that before many months South Africa will again be enlarging the annual gold supply at the rate of three years ago, has revived in many quarters discussion of the effect which this increase in the world's output may have on commercial prices. So far as regards the gold supply itself, the position is rather curious. By the estimates of our mint, the world's gold production reached its maximum in 1899. Before the Boer war broke out in October of that year, the Transvaal was producing gold at the rate of some $80,000,000 annually. During 1900 and 1901, its yearly production was cut down by the war blockade to less than eight millions annually. Had production in other quarters of the globe remained stationary, the world's yearly supply would have decreased correspondingly. In the United States, however, the annual gold production increased $8,000,000 in 1900, and a million more in 1901. Canada produced $6,500,000 more in 1900

than in the year preceding, and while Australia's output decreased slightly, India's increased; the net result being a world's production in 1900 only $51,500,000 below 1899, with the difference even less marked in 1901.

In other words, resumption of its maximum output by the Transvaal—expected by the close of the present year—should immediately raise the world's annual supply to a figure beyond any recorded. Furthermore, it is believed by many experts that the Transvaal's annual production will be increased, in the next few years, as rapidly as it was in the three years before the war began—within which time its yearly output expanded from 2,280,000 ounces to 4,295,000. It is natural, in the face of such expectations, that the question should again be asked, what influence such additions to the world's supplies may have on the outside markets.

M. Leroy-Beaulieu discusses the question in a recent number of the *Économiste Français*. Briefly to sum up his article, he holds that in twenty-five years the stock of gold which he estimates to exist in the world to-day will be doubled. But as against the conceivable results of such expansion, he points out the rapid increase in population of the various states and the still more rapid increase in trade activity. The new nations, such as Japan, which are adapting their trade to modern business methods, are suggested as a moderating influence, and the countries which now use paper money, but which may convert their currencies, are finally brought into the problem. In short, M. Leroy-Beaulieu does not look for anything like a serious disturbance of the world's markets as a consequence of the coming increase in gold production.

The assumption on which the argument is based, that so great a ratio of increase is at hand, will probably be disputed in many quarters. We shall not undertake now to argue the highly technical question as to the existing stock of gold. For the present, it is enough to know that the ratio of annual increase is likely to pass beyond all precedent. That of itself is a phenomenon worthy of study as to its possible results. M. Leroy-Beaulieu undertakes to trace the course of action of the new gold supply on trade. It falls first into the hands of people employed about the mines and of capitalists interested in them. Through them it influences, first, the demand for luxuries; second, the volume of bank reserves; and, third, the inquiry for investment securities. Then, but more slowly, its influence, in his judgment, passes into other and remoter quarters. In general, this analysis conforms to that employed by Professor Cairnes in examining the movement and effects of the new gold produced in Australia and California, half a century ago. Professor Cairnes laid more stress on the displacement of labor in other industries, through the larger inducements of mining, and less on the question of bank reserves. This is natural, because he wrote in the day of the individual worker at a "claim," before the time of the cyanide process and the Kaffir "boy," and because the later economies in bank credits, based wholly or partly on cash reserves, have raised the banking phase of the question to more conspicuous importance.

The argument from increased reserves in banking institutions is inviting at first sight, because the money market is in the habit of drawing its own quick inferences from an increase or decrease in the reserve of a given institution. The situation of the present day, however, presents a rather striking offset to this influence, in the shape of expanded capitalizations. Nowhere is this phenomenon more notable than in the gold-mining industry itself, which is nowadays commonly capitalized, recapitalized, and at last overcapitalized. A dozen Transvaal companies mentioned in the London mining manuals, most of whose properties did not exist a few years ago, have to-day a total market valuation not far from $500,000,000, and they by no means measure the full capitalization of the Rand. Even if we suppose all the new gold to flow directly into the market where these securities are floated, and to stay there, this huge expansion of fixed capital still remains for the enlarged reserves to support. But, as M. Leroy-Beaulieu points out, and as the trade statistics show, the gold is not all retained.

In so far as the paper wealth derived from the sale of such overcapitalized enterprises adds to the purchasing power of the original owner or promoter, a new demand for luxuries and necessaries is no doubt created. But in this regard precisely the same is true of an owner or promoter—for instance, in the steel trade—who has sold at an excessive valuation to a Trust. This sort of demand, which is as plainly visible in America to-day as it was in England during the régime of the "Kaffir" magnates, does beyond question stimulate trade demand and emphasize the appearance of prosperity. Whether its contribution to prosperity is permanent, however, is quite another question. The fact that every such period of exaltation, even when accompanied by an unprecedented increase in the gold supply, results, as in 1857, in excessive bubble-blowing and eventually in severe reaction, provides one answer to the question.

## *A STORY OF ACHIEVEMENT.*

Charles Eliot, landscape architect, was "a lover of nature and of his kind, who trained himself for a new profession, practised it happily, and through it wrought much good." Such is the characterization in the recent volume devoted to his life, edited by his father, President Eliot of Harvard University. The book is an interesting story of achievement.

Born in 1859, Charles Eliot as a boy enjoyed every advantage of home, school, and travel, but was handicapped by a frail body and occasional illness. When a college senior, he suffered so much from indigestion, palpitation of the heart, headache, and low spirits that his father suggested postponing graduation; nevertheless, by husbanding his strength he pulled through. So reserved was he that to most of his classmates he was known only by sight. He left college, still in the dark as to a profession; and in groping his way to light he was helped less by his formal education than by his play. In boyhood he had been kept as much as possible in the open air, had explored on foot and on horseback every rod of country about Cambridge, had cruised along the New England coast and camped at Mount Desert. Thus he early developed an indelible memory for details of woodland, meadow, and watercourse. As might have been expected, he had a keen enthusiasm for outdoor life and a delicate appreciation of the beauty of scenery. Moreover, through keeping the log-books of his cruises and writing journals and letters, he had acquired a style that was concise, exact, and vivid; in the management of camping and sailing parties he had shown considerable executive ability. Relying on such tastes and faculties, he decided, in the September following graduation, to enter a profession then hardly recognized in the United States—that of landscape architect.

Preparation was difficult, for no school could offer him instruction. He spent eight months in the Harvard Department of Agriculture and Horticulture, two years and a half as apprentice to Frederick Law Olmsted in Brookline, and a year in Europe. From this training he gained knowledge, but not confidence: from Nice he wrote, "In dealing with men I am nowhere. . . . I know myself to be ill-made, . . . an unbaked loaf in the human bread-batch." His father tried to encourage him by replying, "Such dealings as you have thus far had with boys and men you have conducted suitably. . . . Where other men work eight hours a day, you must be content with five. . . . Take comfort in the thought that you can have a life of moderate labor." Despite misgivings and the discouragement of facing an ignorant and indifferent public, Mr. Eliot began independent practice in Boston in 1886; succeeded so well that in 1893 he became a partner of the Olmsteds, the principal landscape firm in the country; and advanced steadily till his death in 1897.

Here the record would end had he been nothing but a highly capable land-

scape architect. He was, however, penetrated by a conviction that recreation grounds are essential to the physical and moral health of cities. Having discovered his power, he plucked up heart, threw off ill health, and started to persuade first Boston, then Massachusetts, and the whole United States to procure sites for parks while land was cheap. He wrote for the press; he addressed meetings and testified at hearings; he organized latent opinion; and he inspired many minds and wills with the faith that moves Legislatures. His was the animating spirit of the Trustees of Public Reservations and of the Metropolitan Park Commission, whose labors between 1892 and 1902 opened in and near Boston 9,248 acres of land and water and 23.6 miles of parkway. Through this splendid enterprise he has taught America its most striking lesson in the importance of breathing-places. The work has been a model for similar undertakings elsewhere—notably, in this vicinity, the Essex County Park system of New Jersey; and his personal services were required by a number of cities, including New York. All this is the accomplishment of a man who was cut off at thirty-seven.

This signal success is no mystery. He had amassed knowledge; he was gifted with the artistic sense of fitness and proportion; he was a clear and vigorous writer, a persuasive speaker; but, above all, he was bred in the tradition of public service. His ancestors on both sides had been useful in their day. He had seen his father happy as President of Harvard and moulder of the educational system of the country, earning a fraction of the salary that equal skill and energy would have commanded in law, in railroading, in manufacturing, or in business. In a college theme Charles Eliot had defined success as "the attainment of a sufficient competency, combined with the largest amount of usefulness to one's fellow-men." At the close of his first year of practice he said in a letter, "I enjoy the work and it suits me—and this is more to me than money-making." His talents, he felt, were for the profit of the community as well as for himself. The open secret is that he was able to win confidence, rally adherents, and achieve large results, because he was expert, unbiassed, and unselfish.

His reward was exceeding great; he beheld his influence extending through an ever widening circle, his beneficent visions becoming realities. His imagination, that foresaw in scattered swamp and stream, fen and fell, a possible unity, order, and beauty, must also have foreseen that for generations to come every one whose eye rests upon a new Eden, every convalescent breathing strength in our parks, every man and woman provided with healthful recreation, every child lured from the misery and vice of the streets, will owe gratitude to him for wisely directing a great popular impulse.

## A FRENCHMAN'S DIARY IN OUR CIVIL-WAR TIME.—I.*

September 13, 1864.—Wendell Phillips came to spend the day with us at Weymouth, Mass. He is, after Garrison, the most important representative of the abolitionists. I am told he is the foremost orator in the United States. His voice is pleasant and possesses much charm. His face, which is very noble, has fineness and distinction. Though his hair is already gray and his forehead bald, his general appearance is still youthful. Phillips is an agreeable talker, unpretending, with none of the affectations of a famous man.

At the present moment a serious dissension separates him from Garrison in respect to the reëlection of Mr. Lincoln. Phillips, in opposition to the Administration, is advocating Frémont, who has not the slightest chance of being elected President. This mistake shuts him out from a political career from which his abolition sentiments have hitherto debarred him, but upon which he might now have embarked, with the prestige of his immense talent, could he have been satisfied with the concessions made by Mr. Lincoln to the principles of the abolition school. When Garrison declared himself satisfied, and proclaimed his confidence in Lincoln, it is a pity that Wendell Phillips wasted himself in bitter and fruitless attacks on an Administration which, with all its momentary errors and shortcomings, has forwarded the emancipation idea beyond all precedent. The foresight, moderation, and elevation of view of the statesman have been wanting in the eloquent orator and apostle; and in the present crisis his marvellous qualities have turned against him and made his unreasonable opposition more illogical.

"I believe," said I to him, "that Mr. Lincoln will be reëlected. It is seldom that executive power is changed during a war."

"Yes," he answered, "but Lincoln's reelection will make our task dreadfully heavy. We have got nothing from him except by pressure. We have constantly to be pushing him from behind."

September 15.—Visited Charles Sumner in Boston.† A tiny house in Hancock Street, over the hill which is crowned by the State House. Sumner received me in a small room whose walls were covered with engravings, mostly by Nanteuil. A resident of the Sandwich Islands was engaged in explaining to him the condition of the archipelago. In comes Mr. Wilson, like Sumner, a Senator from Massachusetts; homely in manner, of practical good sense, ardent patriotism, and great integrity. He has been to Maine. Mr. Lincoln has the full sympathy of the masses. It would be useless to try to oppose him; he has found a place in the heart of the nation. Wilson asks Sumner if, at the Republican Convention about to assemble at Worcester, he approves of proposing Edward Everett for Presidential elector. In the election of 1860, Everett was a Democratic Vice-Presidential candidate. When the war broke out, his patriotism rose superior to the strife of parties; or, rather, he no longer knew more than two parties, the friends and the foes of the Union. He will vote for Mr. Lincoln and support his Government, as he has been doing for three years. Sumner declares that Everett must be put on the Republican ticket, and is glad to see his name among Lincoln's partisans.

I walked with Sumner to the State House, where we viewed the archives; to the Public Library, and to Faneuil Hall. We dined at the Union Club, and afterwards drove to Cambridge. Old college buildings of red brick. Washington's headquarters during the siege of Boston.

September 16.—To Worcester, to attend the Massachusetts Republican Convention, by a special train carrying 1,625 delegates. The meeting was in Mechanics' Hall, and Alexander H. Bullock of Boston was chosen presiding officer. Everett was appointed Presidential elector by acclamation; Andrew likewise was nominated for Governor. The resolutions were for the continuance of the war, the abolition of slavery, and the reëlection of Lincoln. A fine speech from Mr. Bullock of Worcester. The assembly was orderly though numerous—plain folks deliberating sagely and maturely; serious; helping on the triumph of a cause which has nothing to offer to most of them, and which they serve voluntarily and disinterestedly. The parties are well organized; without organization the electorate in a democratic country is but dust, and the politician is as necessary to parties as the officer to armies.

September 17.—Visited Josiah Quincy at Quincy. His father, lately deceased at 92, witnessed the War of Independence.

September 21.—Called on Ticknor, who has a fine house overlooking the Common. I found him, much aged, in his library. He has no doubt that the North will prevail over the South, and thinks Lincoln will be reëlected. His uneasiness is for the future. The Union will be reëstablished, but will the love of it be renewed in the conquered States? He gives me some interesting details concerning the credit of the country, the States, and the municipalities. In the evening, dining at Edward Everett's, I was presented to Longfellow, who speaks French with great ease. A fine head, long, white, flowing hair, gray beard somewhat bushy, very mild and sparkling eye, extremely sympathetic countenance. It was, as he remarked with a sigh to Charles Sumner, the first time in three years that he had put on white gloves. (He lost his wife three years ago in very harrowing circumstances.) Mr. Everett also introduced me to Charles G. Loring, a Boston lawyer, who has written on international law; to John G. Palfrey, author of a history of New England, an agreeable and vivacious man; to Mr. Hooper, a member of Congress and a skilled financier; to Mr. Haven, a bank president; to Mr. Harper, a clever young lawyer. Lyulph Stanley, a tour-

*M. Auguste Laugel, the dean of the *Nation's* foreign correspondents—his connection with this journal having extended to the present time from the first volume and almost from the first number—has kindly permitted us to publish these extracts from his American diary. M. and Mme. Laugel left Liverpool in the *Scotia* on August 27, 1864, arriving in New York on September 7. Mme. Laugel was revisiting her mother, Mrs. Maria Weston Chapman, one of the pillars of the anti-slavery movement and the future biographer of Harriet Martineau. Hence the diary opens at Weymouth, Mass. The English version is our own.—[Ed. Nation.

†Sumner had met the Laugels in Paris in the spring of 1857. He records in his diary dining with them on May 14, in company with Tocqueville.

ist like myself, was also of the party. Mr. Everett spoke to me of General Lafayette, whose salon he had frequented in 1818. He is familiar with French affairs.

I had to leave rather early, to attend a wedding at Mr. John Forbes's at Milton Hill. The bride and groom were to set off the next day for Burlington, Iowa. I saw a number of young and gracious faces.

September 24.—With Sumner I called on Garrison at the office of the Anti-Slavery Society. His spectacled face was known to me from photographs: a head quite bald, with a fringe of hair behind; features spare and without pronounced character. He received me like an old acquaintance, with much affection and good will. There is nothing timid in his manner. He expresses himself quietly, simply, like a man who knows exactly what he would say, with none of the affectations common to those who belong to a sect or coterie. "Our sole, our most cherished desire," he remarked to me, "is to disappear, to become of no use, to dissolve our Society. We think we cannot yet do this because the slaves are not all freed; but we are approaching the goal." What noble language! And I felt it to be absolutely sincere. "Nunc dimittis, Domine, servum tuum."

We talked of a recent speech of Seward's at Auburn, in which the orator intimated that all the so-called war measures would cease to have effect on the termination of the war. "Seward," said Garrison, "has always been fond of ambiguity; but this declaration has no importance—it is a truism. Plainly, the war ended, everything returns to the usual order; but what is done is done, and nothing can undo it. I have entire confidence in Mr. Lincoln's honesty; his honor is involved in his fidelity to his Emancipation Proclamation. No doubt he has always affirmed that beside his power there is another, that of the Supreme Court. Should this court some day succeed in depriving the Proclamation of all efficacy, Mr. Lincoln would not be to blame for it; but I have no such apprehension. Be assured that slavery has been stabbed to the heart, and nothing can restore it to life."

September 25.—Dined in the evening at the Boston Literary Club. Longfellow, Emerson, and Agassiz, who are members of it, were absent. The diners were Oliver Wendell Holmes, James Russell Lowell, E. P. Whipple, Judge Hoar of the Supreme Court of Massachusetts, Charles Eliot Norton, Dr. Hedge (a Unitarian clergyman), Dr. Estes Howe of Cambridge. Holmes, author of 'The Autocrat of the Breakfast-table,' 'The Professor at the Breakfast-table,' etc., possesses an abundance of wit of the finest quality. Lowell opened a discussion on points of grammar, with an eye to literary purism—an odd pretension on the part of the author of the 'Biglow Papers.'

September 26.—Left for Newport, where we enjoyed the hospitality of Mr. Sam Ward. Calls from Mr. and Mrs. George Bancroft and Mrs. Julia Ward Howe. Bancroft has written the history of the foundation of the United States. His face is spare and grimacing. When he talks, you forget its little peculiarity. His conversation was upon State rights and was very patriotic. Mrs. Howe is the muse of Boston—a muse already mother of several charming young girls and still charming herself, although somewhat thin and pale; delicate, intellectual, refined; inclined, like all true poets, to lofty philosophic views; with some affectation, not without its charm; much distinction of manner and of carriage.

October 1.—Called on Edmund Quincy at Dedham; on Mr. Charles G. Loring at Beverly, whose fine trees skirt the seashore, and include magnificent pines and maples. Mr. Loring is seventy years old. A son of his is a colonel in the army.

October 12. — Niagara. . . . Chicago. Called on Gen. Hooker, for whom I had a letter from the Comte de Paris. The talk was upon the war, the Confederates' advantages from the military point of view, the condition of parties. On leaving the regular army, Hooker was for ten years a farmer in California. Walker tempted him with the offer of command of an expedition to Nicaragua, a fine opportunity for carving out an empire. He was frightened by the word "filibuster" and declined. A good deal of the farmer is still visible in the General: he has neither beard nor moustache; a keen eye; a frank sort of character.

October 18.—La Crosse, Wisconsin. The difficulty of navigating the Mississippi at the present moment prevents my going to St. Paul. Here for the first time I have a sight of Indians, four men in red blankets, a woman, and a child, about a great wood fire on the bank of the river. The woman was wholly concealed in a wretched gray cloak; the men were bareheaded, and their thick, stringy black hair, blown about by the wind, almost covered their sombre countenances. At a distance four steamboats showed the white lines of their upper works. La Crosse, despite its shops along the bluff, its warehouses, its elevator, has a poverty-stricken and forlorn aspect. We begin to feel ourselves beyond the pale of civilization. In the evening, in the lower hall of the tavern, about the red-hot stove, I observe silent groups of wild-looking men, and now first the faces of those adventurers common in the Mississippi and Missouri valleys, with unkempt beards, dirty garments, shawls in which the men wrap themselves, poncho-fashion; broad-brimmed hats jammed over their eyes.

Quincy, Illinois.—The town gas suddenly goes out; everybody aroused. Missouri invaded by General Price, causing great uneasiness in southern Illinois, Missouri, and Kansas.

I descend the Mississippi on the *Sucker State*. A Methodist farmer in discussion with a Universalist lady, who thinks herself too perfect to be damned, insists on damnation. Some talk about Kansas with a young man from that State who is reading Tocqueville in an English translation borrowed from the Leavenworth public library. As we approached Alton, I made a sketch of the bluff surmounted by a large building, the State prison. An innocent-faced young man watched my drawing. With some diffidence and very politely, he said: "You do that so quickly, sir, that I want to ask the favor of a copy." "Very gladly," I answered, and proceeded to duplicate the sketch for his benefit. "Now," said I, "may I ask what interest you had in it?" He blushed to his ears as he replied: "I was once in jail up there." I forebore to ask for what cause. At the present time, Confederate prisoners are kept at Alton.

St. Louis, Lindall House.—Call from Mr. William G. Eliot, Unitarian minister, a native of Massachusetts, but for many years settled in St. Louis. He relates the history of Missouri from the beginning of the war.

## SIR LESLIE STEPHEN, K.C.B.

LONDON, July 1, 1902.

Among all the coronation honors, none has been greeted with such universal and unfeigned satisfaction as the knighthood conferred upon Leslie Stephen. The grounds of this general approval are well worth notice, for they throw great light on the characteristics of an author of acknowledged distinction.

Sir Leslie Stephen's most obvious claim to honor is that he is a most eminent "man of letters," and that men of letters, in the sense in which that term used to be used, are rare in modern England. Of literary men—that is to say, of able writers who can express their thoughts with clearness and often with point in reviews, in magazines, or in newspapers—we have enough and to spare. There never was an age in which so many more or less educated persons could express themselves in print with ease, fluency, and correctness. These ready writers are not to be despised; to their labors we owe the existence of high-class newspapers and of interesting magazines; but though here and there a true man of letters makes it his profession to write in the newspapers, such a man is apt to show, even in his best work, how hard it is for him to maintain a high standard, either of thought or of expression, while he is occupied as a matter of business in supplying lively articles to ephemeral periodicals. As a matter of fact, the most solid contributions even to our magazines proceed from men who may have done literary work of a high character, but to whom letters are an incidental occupation of a life devoted to public or to professional aims.

The contrast between writers such as (to take eminent examples) Mr. Bryce or Mr. Morley, and the pure men of letters, of whom Sir Leslie Stephen is the representative, is marked and noticeable. No one, either in England or in America, will doubt that both the authors I have named have produced work of high worth and of great importance, but it is extremely difficult to think of either Mr. Bryce or Mr. Morley as primarily devoted to literature. We all know that either of them might have achieved, and have, indeed, actually gained, a high place in the world of letters, and some critics may regret that both these distinguished writers have not devoted themselves wholly to literature, but, in fact, they have not taken this course. They have become immersed in the public life of England. Their literary work has probably both gained and lost thereby; but what is certain is, that whenever the day comes, which one hopes is far distant, for summing up their career in some new edition of the 'Dictionary of National Biography,' as much will be said about their political conduct and principles as about their contribution to the world of books. The reason why this is worth noticing is that the men whose names I have recalled are, in this matter, but types of a very large class. The literature of modern England is to a great extent created by men to whom writing is an incidental occupation. With such

writers Leslie Stephen stands in marked contrast. The difference is illustrated by a comparison with his eminent brother. Whether, indeed, the literary output of Sir J. F. Stephen's or of Sir Leslie Stephen's labors is the larger in amount, it would be difficult to ascertain and rash to pronounce. What is certain is, that Sir J. F. Stephen's great powers were devoted in the main to the study and elucidation of the law, and to the attainment of hardly won but well-deserved professional success, while Sir Leslie Stephen has devoted his equally marked and rarer powers to literature. The one was an admirable specimen of a philosophic lawyer and vigorous controversialist; the other is the very type of a man of letters.

There is, however, a little danger that this expression, which has an Old-World flavor, may mislead my readers. Our author is devoted to literature, but this assuredly does not mean that the object of his writing is, or ever has been, the production of literary works which shall be monuments of their composer's skill in the use of language. It is one thing to be devoted to letters, it is quite another thing and a far less noble thing to be the worshipper of style. Consider for a moment all that a true devotion to literature really means, and what the qualities are which you have a right to demand from your man of letters. Of these the most salient though not the most important is a keen interest in all that concerns literature and writers. The exquisite 'Hours in a Library'; the biographies of Johnson, of Swift, and of George Eliot, as well as the scores of lives which our author has contributed to the 'Dictionary of National Biography'; that Dictionary itself, of which he planned the design and laid the foundation—all show the possession of that enthusiasm for letters which you find in men so different as Johnson, as Gibbon, as Macaulay, and is the note of the man to whom literature is the appropriate sphere of his intellectual activity.

Then, again, in the perfect man of letters, one looks for that complete independence or detachment of mind which makes him shun the bias due to the competition for professional success or the vehement participation in the conflicts of public life. From this kind of bias, which constantly takes from the apparently abstract theories of English thinkers a good deal of the perfect sincerity with which such speculations ought to be marked, our author is absolutely free. Every word he has written has the ring of absolute truthfulness. This, however, is in great part due, not to the mere absence of bias, but to that zeal for the propagation of truth without which the labors of the mere man of letters will appear to most of us to be of very little value. In this matter Sir Leslie Stephen stands preëminent among the men of his day. During the thirty years and more which have passed since he began publication, the 'Essays on Free Thinking and Plain Speaking,' the 'History of English Thought in the XVIIIth Century,' the 'Science of Ethics,' 'An Agnostic's Apology,' 'Social Rights and Duties,' and the 'English Utilitarians' each afford evidence of Leslie Stephen's devoted ardor in the promotion of truthfulness both in speech and in thought.

But our author is much more than a typical man of letters; he is distinguished among men of letters by combining two characters which in England have always gained the interest and the respect of the great public: he is at once a charming biographer and an impressive moralist. Of his charm as a biographer there is no need to say much—it is known to every man throughout England and the United States who has read the 'Hours in a Library,' or who reads month by month the exquisite sketches which will sooner or later allow us to enjoy another hour in the best-chosen of libraries. Of his weight as a moralist there is more reason to speak, because, though every one who has the least real interest in ethical speculation must be acquainted with Stephen's 'English Thought in the Eighteenth Century' and his 'Science of Ethics,' there are, it must be admitted, many so-called intelligent readers who may have been deterred from studying these two treatises by the idea (which is true) that they deal, and deal conscientiously, with moral questions of difficulty; and also by the notion (which is unfounded) that Stephen's moral theories are abstract, over-refined, or incomprehensible. The plain truth is, that the biographer and the moralist play into one another's hands. No one finds it difficult to follow our author's biographical studies, yet they are filled with acute criticisms and philosophic speculation. His more abstract works, on the other hand, are to a great extent biographies. 'English Thought in the Eighteenth Century' is a most admirable monograph on a most difficult subject, but it does not deal with abstractions. With extraordinary skill it mingles the history of thinkers with an analysis or criticism of their thoughts. The same remark holds good of the 'English Utilitarians.' Nowhere can you obtain better lives of Bentham, of James Mill, and of John Mill, but nowhere can you also obtain a more searching and subtle criticism or a more valuable appreciation of Benthamite Utilitarianism. The 'Science of Ethics' is, indeed, in form more abstract, but in its substance it in reality exhibits the remarkable and happy connection between biography and ethics which is the peculiar and most valuable characteristic of Stephen's moral teaching.

His intense and thoroughgoing desire to arrive at true conclusions on the fundamental principles of morality gives a speculative interest to the pictures and analysis of character which belong to biography of the best kind. His immense knowledge of the actual lives of men guards him against that abstract, and therefore unreal, way of looking at things which is the special weakness of systematic thinkers; it supplies, indeed, a good deal of that sort of knowledge which some writers have gained from large acquaintance with affairs or from mixing with the world, and is often lacking in teachers who have studied books more than men. John Mill, for one, would assuredly have gained a good deal from that wide knowledge of the lives and feelings of men who had lived and played their part in the world, which gives a tone of reality to even the most abstract of Stephen's speculative works. It is this quality, at any rate, combined with his subtle and playful humor, that makes Sir Leslie Stephen a moralist in the sense in which our grandfathers applied the word to Dr. Johnson. The Lexicographer and the creator of the 'Dictionary of National Biography' had this at least in common: they were conscious of the humor of life even when they took a somewhat depressed view of human nature; they each knew and felt that morality was not an abstract science, but a body of rules which ought to conform to the nature of man; they each corrected moral speculation by interest in biography. If it were not for Boswell's 'Life of Johnson,' it may be doubted whether the sage would be known to modern readers by any of his prose works except the 'Lives of the Poets.' Of Sir Leslie Stephen's moral speculations, one may be allowed to think more highly, as far as their abstract value goes, than of Dr. Johnson's moral dogmas; but it is at least conceivable that Stephen's ethical doctrines, which have already produced a very considerable effect, may be best remembered a century hence because of their close connection with biographies which can hardly lose their charm.

However this may be, his latest work, 'George Eliot,' which itself deserves a special notice, illustrates to the full the fact on which it is my object to insist, that biography, criticism, and moral doctrine are so blended together in all our author's pages that he is, to many English readers, as was Johnson to the men of the eighteenth century, the best of biographers as well as the weightiest of moralists. To such readers and pupils, who are numbered by thousands, it gives profound satisfaction that the honors bestowed by the King make it clear that England appreciates living merit, and that, as regards Sir Leslie Stephen, we need not wait to

> "See nations, slowly wise and meanly just,
> To buried merit raise the tardy bust."

AN OBSERVER.

## THE NATIONAL POET OF GREECE.

ZAKYNTHOS, June 18, 1902.

On Saturday, the 15th of June, was ended in the pretty island of Zakynthos a proud and glorious triduum of feasts commemorating Dionysios Solomós, the national poet of Greece. Solomós was twenty-three years of age when, in 1821, the war for freedom began in Greece. The Zakynthians were at that time British subjects, for since 1809 Zakynthos had been under English protection and rule. They nevertheless fraternally sympathized with the Greek patriots, and many of them crossed over to the mainland and personally participated in the long struggle against the Turks. In word and sympathy Solomós was of all Zakynthians the most fervid champion of the Hellenic cause. It seems inexplicably strange that, during the seven exciting years of the war, he never once determined to take his gun and join in the hot combat.

Zakynthos was a Venetian possession for more than three hundred years, up to 1797. Under the influence of this protracted foreign control, the nobles, who constituted the highest class of Zakynthians, became out-and-out Italian in many of their habits and in language. All Ionian culture was Italian. Young Solomós at the age of ten years was sent off to Italy to be educated. Ten years later he came back to Zakynthos with a good knowledge of Italian language and literature and a lawyer's diploma from the University of Pavia. While yet a student in Italy he had begun to compose in

Italian verse, and these first short poems of his were so sweet and artistic that one of his friends and teachers, the learned priest Santo Rossi, who, like many other Italians of that time, regarded Monti as the favorite poet of Italy, used, in his enthusiastic admiration for the young poet from Zakynthos, frequently to exclaim: "Greco, tu farai dimenticare il nostro Monti." If, following the example of his townman Ugo Foscolo, our poet had permanently established himself in Italy, the enthusiastic hopes of Rossi and his other friends might possibly have come true.

After his return home he continued to compose successfully in Italian. These poems, just like many of those which he wrote in his later years, were not primarily intended for publication, and a good number of them have been lost. But, in spite of the beauty of his Italian compositions, his fame rests entirely on what he wrote in Greek. In the year 1822 Spiridion Trikoupes, the noted historian and patriot, on the occasion of a visit to Zakynthos, heard Solomós read one of his Italian poems, "La Prima Messa." Trikoupes warmly exhorted him to cultivate his native language and to write in Greek, and thereby to assist in encouraging and inspiring the men who were engaged in the desperate fight for freedom. The poet accepted the patriot's advice, and began to study the Greek language. But he never thoroughly mastered it, and one of the peculiarities of his Greek poems, if not also one of their attractions, is a certain precipitous inaccuracy of expression. He had no correct knowledge of ancient Greek, for he had studied the classical writers not in their original tongue but in Italian translations. He fell in love with the popular ballads and klephtic songs of the people, and became persuaded that the language in which these unpretentious compositions were clothed was the best linguistic medium for the Greeks of his day.

In Greek, his first poem of note was his pæan to Liberty. Whatever virtues his other poems may possess, it is this hymn which created his fame and sustains it. It was written in May, 1823. Before it was printed and published, Trikoupes read it in manuscript, and, elated by its sublime patriotism, carried it to Byron, who then lay dying in Missolonghi, intending to read it to the great Philhellene; but he did not arrive in time. The "Hymn to Lberty," as soon as published, became widely known. Attempts have been made to translate it into most of the languages of Europe, but always with ill success. Many of the strophes are absolutely untranslatable on account of their strange language and strange thought. At least two versions, inaccurate and insipid, have appeared in English; the earlier of these was the work of Charles Brinsley Sheridan. It appeared among his 'Songs of Greece,' which he published in London in 1825. The first two stanzas are rendered thus:

Yes! I know thee by the lightning
Of thy tyrant-slaying glaive,
By thine awful glances bright'ning
As thou gazest on the brave.

Kindle from our country's ashes,
Liberty! thy sacred fire—
Many a Spartan sabre clashes,
Breathe on one Tyrtæan lyre!

The second version was made and published in 1858 by a Zakynthian, Georgios Kanáles, who lived long in America, and was known to many of our literary men of the first half of the nineteenth century. It begins as follows:

By thy falchion's edge tremendous,
By thy glance that measures earth,
By thy thoughts and works stupendous,
Freedom! well I know thy worth!

Welcome to thy new existence,
Ancient spirit of the free,
While thy modern sons' resistance
Breaks the yoke of tyranny.

In 1828 Solomós left Zakynthos and went to live in Kerkyra, the capital city of the Ionian State. Here he died in 1857. Among his friends and admirers at Kerkyra the warmest and truest was Mánzaros the musician and composer. Four years after the poet's death Mánzaros received from Bozzaris, a member of King Otho's Cabinet, a request to compose a march which should awake new earnestness in Greece, and especially in the army. Mánzaros complied by setting Solomós's Hymn to music. Three years after this, when a Danish prince whom the Powers had chosen to be the successor of Otho, as King of Greece, landed at Kerkyra (which, with the rest of the Ionian State of the Seven Isles, had just been added to his dominions), he heard the march and was so much pleased with it as to declare that the music of the first two strophes ought to be adopted as the "national air" of Greece. His wish became law, and this "Hymn to Liberty," with the first two strophes of Mánzaros's music, is now the official National Song of Greece. Mánzaros's music to the following strophes has been lost.

Besides other poems of a patriotic nature, such as the "Death of Byron," fragments of a hymn to Marco Bozzaris, "Missolonghi, or the Freemen Besieged," the "Destruction of Psara," he wrote a number of short poems, most of them beautiful and touching—some of them, like his "Lampros," too weird for art; many of them merely disjointed members of some unfinished masterpiece. During his lifetime his poems were never collected. After his death his admirers were disappointed at not finding among his papers the manuscripts of different poems which they had reason to believe he had written but had never published. Suspicion was aroused that these manuscripts had been stolen. It is quite probable, however, that the poems in question were never finished, but merely planned. There was a slight hope that, on the occasion of these Zakynthian feasts, some hidden manuscripts would be brought to light. But as yet no such revelation has taken place.

In 1865 his relations and townsmen of Zakynthos disinterred his remains, which had been buried in Kerkyra, brought them back to his native island, and reinterred them in front of the Venetian Cathedral of Saint Mark. The spot is marked by a pedestal surmounted by a bust of the poet. But, to demonstrate their love for him, the Zakynthians determined to erect a new monument to his memory, and to unveil it on the hundredth anniversary of his birth. The anniversary, however, fell in the year 1898, while Greece was still pale and exhausted from the shame which the war of 1897 had brought upon her. Under such circumstances, even the light-hearted Zakynthians could not inaugurate days of rejoicing, and the celebration of the anniversary was postponed to the present year.

The statue was unveiled on the evening of June 13, the first of the festive days. It is made of fine Pentelic marble, by Broutos, an Athenian sculptor. The poet is represented as standing. In his left hand he holds the manuscript of his poems. His right is uplifted, indicating that he is about to speak. This attitude recalls the fact that he used to take delight in reciting his poems to his friends. On his head he wears a crown of laurel leaves. The statue has been placed close to the harbor, and faces towards the sea, looking over to the mountains of the Peloponnesus and towards heroic Missolonghi. The second day was one of pleasure and amusement. At noon the guests of the city were entertained at a dinner given in the open air near the house where Solomós wrote the "Hymn to Liberty." In the afternoon thousands of people, natives and visitors, gathered to this same place and enjoyed themselves in one of those peculiar picnics known here as a "panegyris." In the evening a gala representation was given in the theatre by an Italian troupe which was called from Smyrna for the occasion.

The third and last day was the most soul-stirring of all. In the forenoon the invited guests assembled in the theatre, and Lampros, the most noted of all Athenian orators of to-day, spoke the praises of the poet, comparing him with Simonides of old. Professor Mistriótes, an enthusiastic Hellenist, read a critical and interpretative analysis of the hymn. Tabouláres, one of the best tragic actors on the Greek stage, recited portions of the Hymn and of other works of the poet. And Márgares relieved the monotony of unbroken solemnity by reading the poet's comic and satyric composition called "The Physicians' Consultation." In the afternoon the scene of celebration was transferred to the piazza in front of the Church of Saint Mark, where stands the monument over the poet's remains. Representatives of the University at Athens, of different patriotic and learned societies, of various communities, and of several noted personages gathered round the monument, and, with appropriate addresses, placed magnificent wreaths on the tomb. The most affecting moment was when Nikoláras, a Greek from the island of Psara, came forward with a wreath from his native island. Psara produced tremendous naval heroes in the war for independence, but her villages were burned to ashes, and most of her surviving inhabitants sought homes elsewhere after the war was over, for Psara was not included within the territory which the Powers decided to admit to freedom. The wreath from Psara was made from wild thyme and other mountain plants, so as to recall the unapproachably sublime lines of Solomós which he wrote when Psara was destroyed. He represents Fame as "wandering over the lone hills of the island and thinking about the deeds of the glorious pallikárs. She wears on her head a wreath made from a few herbs, the only vestige of life in that desolated land."

Throughout all Greece a lively interest was manifested in the celebration in Zakynthos. The journals everywhere devoted most of their space to topics relating to the poet and to the island. The *Panathenæa* devoted an entire number exclusively to the life of the poet and to his poetry. Telegrams and letters of congratulatory participation came to the managing com-

mittee from all quarters of the Hellenic world. The inhabitants of Kerkyra, where the poet spent the latter half of his life, placed a commemorative inscription on the wall of the house which he used to occupy. Only one man was notably absent who should have been present, the King.

Literary men in Greece are divided into two antagonistic schools as regards the phase of language which ought to be employed by writers. Some prefer the archaistic "katharevousa," which bears a remarkable outward resemblance to the language of ancient Greek prose of the later period, while others, known as the demoticists, prefer the types of language which are common among the uneducated classes. But both schools unite in admiration of the poems of Solomós. The demoticists have full reason for doing so, because Solomós always composed his Greek poems in a language similar to the demotic, and often uttered bitter words against those who preferred the older forms. On the other hand, the purists make a very proper distinction between literature and language, and love Solomós for his thoughts and patriotism and poetry, in spite of his language. On the occasion of this anniversary, individuals from each school have seized the opportunity of fulminating anathemas against the other. DANIEL QUINN.

## AMERICAN SCHOLARSHIPS AT OXFORD.

TO THE EDITOR OF THE NATION:

SIR: Allow me to offer a few observations on the article, "American Scholarships at Oxford," which appeared in the *Nation* of June 12.

(1.) The carrying out the provisions of Mr. Rhodes's will depends almost wholly on the wisdom and the discretion of the trustees. There is, it is submitted, little doubt that (probably under the sanction of the Chancery Division of the High Court) they can frame any scheme which broadly gives effect to the spirit of his will.

(2.) To any one who knows Oxford, and especially to any one who has watched with interest the careers—often the very successful careers—of American students at the University, it is certain that Mr. Schiller's view is substantially correct, and that the students from America who will derive most advantage from the Rhodes scholarships are men who have taken degrees at American universities, and are prepared to pursue courses of "post-graduate," or, as Mr. Schiller prefers to call it, "graduate" study.

(3.) It is much to be desired that every holder of a Rhodes scholarship should, if possible, receive it on the terms of pursuing a definite branch of study, *e. g.*, law, theology, or the like. The reasons for this are twofold. The first is, that the scholars will be thereby saved from waste of time and of effort. The second is, that if the professors and teachers in a particular faculty know for certain that as many as even ten students will arrive yearly seeking for advanced instruction in the subjects of that faculty, *e. g.*, law, they will be able to arrange and provide additional courses of instruction meeting the special wants of such students.

(4.) I most cordially join in the hopes formed by Mr. Schiller that the arrival of students from America, the colonies, and from Germany may give a new and additional stimulus to learning and teaching in Oxford. Of one thing I am quite certain, that American students of capacity and character may count upon the warmest welcome in the University and (what under our system is even of more consequence) in the Colleges of Oxford. A. V. DICEY.

OXFORD, July 1, 1902.

## LOUISIANA SAVED.

TO THE EDITOR OF THE NATION:

SIR: I am a citizen of Louisiana, and am also a Democrat; therefore, your criticism of the Louisiana Legislature and Schley interested me greatly. I wish to commend every word you said, but should like to add that, had you waited a week, you would have had no need to make the criticism, for our Governor, Mr. Heard, has had the good sense to veto the bill. Furthermore, to show you how easily our legislatures are influenced, both the Senate and the House sustained Heard's veto without a dissenting voice!

Sincerely, WILLIAM KERNAN DART.

BAY ST. LOUIS, MISS., July 12, 1902.

## A LONGFELLOW COINCIDENCE.

TO THE EDITOR OF THE NATION:

SIR: In the Table-Talk of America's best-beloved poet is printed the following sentence:

"When we reflect that all the aspects of nature, all the emotions of the soul, and all the events of life, have been the subjects of poetry for hundreds and thousands of years, we can hardly wonder that there should be so many resemblances and coincidences of expression among poets, but rather that they are not more numerous and more striking."

These words of Longfellow were recalled to my mind recently, as I chanced upon two lines in an old English homily which form an almost exact parallel to a portion of the "Psalm of Life." The lines occur in the sermon "In Caput Jejunii" ("for Ash-Wednesday"), which stands twelfth in the series of Aelfric's "Lives of Saints," edited for the Early English Text Society by Rev. W. W. Skeat; they are numbered 26 and 27 (vol. i., p. 262), and run as follows:

"Forthan the thu eart dust, and to duste gewendst.
Nis this na gesæd be manna sawlum."

A literal translation of these words into Modern English gives: "For that thou art dust and to dust turnest; this is not said of men's souls"; which inevitably suggests the familiar

"Dust thou art, to dust returnest,
Was not spoken of the soul."

In this age, when the pursuit of literary sources has achieved the dignity of a science—I often wonder that the poets do not rise and beg to be slain outright with that good old bludgeon, the now-disused cry of "Plagiarism"—the first impulse is to say "Post hoc, ergo propter hoc"; but, remembering the dictum quoted at the head of this letter, it is much safer to say "coincidence." It is, in fact, almost demonstrable that the poet's lips had had no draught from the old monk's well. It is true that, in the spring of 1838, Longfellow was studying Anglo-Saxon literature, and that an essay from his pen upon that subject was written in April and published in the *North American Review* for July of that year; and that the "Psalm," which appeared in the *Knickerbocker Magazine* for October, 1838, was written on the morning of July 26 of the same year. But this homily was at that time resting safe in the obscurity of the British Museum and of the libraries at Cambridge University; it was never printed until 1885; and we have not the least reason for thinking that Longfellow's somewhat superficial study of Old English ever led him to much browsing among Anglo-Saxon manuscripts.

It may not be out of place, in closing, to recall the first draft of this stanza of the "Psalm," as given in the Rev. Samuel Longfellow's Life of his brother; from this it will be seen that it was only by a second impulse that the poet's words came into line with those of Aelfric:

"Life is glorious. Life is earnest,
Cannot pass in smoke away.
Dust alone to dust returneth,
But thy soul cannot decay."

FRANK H. CHASE.

HAVERHILL, MASS.

## ANTON TCHEKHOFF.

TO THE EDITOR OF THE NATION:

SIR: The *Fortnightly Review* for July contains an article on Anton Tchekhoff, "a writer still living and still young, whose achievements are to-day creating a greater clamor of mingled rapture and repulsion than even [Gorky's] *Tchelkash* and *Konovaloff*."

It is gratifying to note that English criticism has at last discovered Tchekhoff, Russia's greatest short-story writer, whose literary career began in 1879, and whose works have long been translated into German and French. Mr. Long's criticism of Tchekhoff's works, however, can hardly be considered a fair estimate of the great Russian's many-sided literary physiognomy, for, strange to say, the greatest of Tchekhoff's masterpieces, such as 'The Peasants,' 'The Incased Man,' 'In the Ravine,' are not even mentioned in the article. Nor does Mr. Long do justice to Tchekhoff's plays, which have for several years occupied the most conspicuous place on the Russian stage.

Mr. Long is wrong when he says that "Ivanoff" and "Tchaika" are the only two plays of Tchekhoff's put upon the stage. "The Bear" and "The Proposal" have been produced repeatedly for the past ten or twelve years with the greatest success, while Tchekhoff's latest, and perhaps best, drama, "The Three Sisters," published last year in the *Russkaya Misl*, has attracted more attention than any other play produced of late in the leading theatres of Russia. HERMAN BERNSTEIN.

NEW YORK, July 13, 1902.

# Notes.

Among the fall publications of D. Appleton & Co., few will be welcomed more warmly or widely than a volume of additional letters from Charles Darwin. This firm further announces 'The Work of Wall Street,' by Sereno S. Pratt; and 'The Autobiography of a Convict.'

Professor McMaster's Life of Daniel Webster will shortly be issued by the Century

Company, who will, in the autumn, add to their "Thumb-Nail Series" Pascal's 'Thoughts,' Sheridan's 'The Rivals,' with an introduction by Joseph Jefferson; and Tennyson's 'In Memoriam,' with an introduction by E. C. Stedman.

Little, Brown & Co. have undertaken the first collective edition of Samuel Lover's works in six volumes, with an introduction by James Jeffrey Roche; and a series of volumes from the elder Dumas's travel sketches, beginning with 'The Speronare,' descriptive of a Mediterranean trip, embracing Sicily. The translator is Miss Wormeley.

It is a noteworthy coincidence that the completion of Gregory's 'Text Kritik des Neuen Testaments' is to be followed immediately by an entirely new and independent attempt on a grand scale to restore the oldest forms of the New Testament books. This is the work of Professor von Soden of the University of Berlin. 'Die Schriften des Neuen Testaments' will make two volumes, one of "Untersuchungen," containing all the preliminary researches on manuscripts, history of text, etc.; and the second, "Text mit vollständigem Apparat," containing the actual results. Von Soden's investigations are anything but the continuation of the Tischendorf, Weiss, Tregelles and Westcott-Hort methods, which were substantially the same in principle. He returns rather to old methods, but with new material; and on the basis of the 2,328 codices—454 more than Gregory examined—which he himself in repeated journeys to the Orient has studied, he has, among other things, come to the conclusion that the Vaticanus and the Sinaiticus, together with allied manuscripts, which hitherto have generally been accorded a decisive voice in settling a variant, represent only one type of text recension. Von Soden has traced the connection of all these manuscripts with the two text types current in the Middle Ages, in addition to which he has discovered also other individual text forms. The whole promises to be the most independent work done in this line for decades. Alexander Duncker (H. von Carnop) is the New York publisher.

R. Swain Gifford, N.A., contributes a brief introduction to 'Color Problems,' by Emily Noyes Vanderpoel (Longmans), in which he confesses that "the study of color from the scientific side has very little attraction for the layman, and it is even difficult for a painter to get out of such study much that will help him in his work." He might have gone further, and indicated the fact that the painter of pictures, dealing as he does with much-broken and constantly varied tints, indescribable and unclassifiable, finds it necessary to rely absolutely on instinct and such empirical knowledge as practice gives him, and that the theory of color is not, at present, able to give him any real help whatever. The decorator, who deals more in flat and uniform tones, may, however, learn some things from the scientist. Even to him the reason of things, most interesting to science, is of no value; but the facts may be usefully formulated. To such workmen the many well-executed plates of this volume may afford more assistance than would the relatively brief and bald text. The numerous pieces of quantitative analysis of color schemes from historic examples of ornament are especially interesting.

Mr. Cecil Headlam's 'Peter Vischer,' in the Bell-Macmillan "Great Craftsmen" series, should properly have been entitled 'The Vischers,' for it deals with three generations of that family—Hermann Vischer, the father of Peter; Peter Vischer; and Peter Vischer's five sons, most of whom died before their father. The work of the sons is almost inextricably confused with Peter's, but, so far as it can be disentangled, it would seem that Peter the younger was the greatest artist of the family. If he did the Nuremberg "Praying Madonna," which Mr. Headlam is inclined, though cautiously, to attribute to him, he was so great an artist as to deserve a place in the "Great Masters" series rather than in its companion; indeed, some of his undoubted works, such as the plaquette of "Orpheus and Eurydice" in the Berlin Museum, would almost entitle him to that honor. It is, however, such great pieces of craftsmanship as the shrine of St. Sebald that will more surely immortalize this family of bronze-workers than any single work of sculpture, even the much-admired "King Arthur." Their career covered the transition from Gothic to Renaissance art, and the only point in which we are inclined to differ from Mr. Headlam is his assumption that the later development of their style was in all respects an improvement. It seems to us that the Italianate forms of the Rathaus Railing, in so far as that work can be judged from the drawings of it which survive, are, though beautiful, less idiomatic of the material and less marked by the racial characteristics of the workmen than are those of their earlier manner; and we own to a certain sympathy with the Fugger heirs in their disappointment and in their repudiation of the work. The change was inevitable; and the Vischers showed their artistic quality in their eagerness to make it; but it marked the beginning of the end of German art.

There is nothing new to say of the useful little "Riverside Art Series" (Houghton, Mifflin & Co.), save to note the addition of Van Dyck to the artists treated of.

The Bohemia Guild of the Industrial Art League (Chicago) publishes a book, by Oscar Lovell Triggs, Ph.D., most misleadingly entitled 'Chapters in the Arts and Crafts Movement.' There is really nothing in it about arts and crafts, but a great deal about Socialism. Those who are interested in the modern revival of craftsmanship as an artistic phenomenon will find nothing in this handsomely printed volume to their purpose; but those who may be interested to know how men like William Morris and Walter Crane came to believe that a social revolution is necessary before art shall again become a living force, may find there what they want.

The third edition of Prof. William P. Mason's 'Water Supply' (John Wiley & Sons) is brought down to date by a recompilation, including some recent data. The chapters on chemical and bacteriological examination of water have been omitted. As the subject is "considered principally from a sanitary standpoint," this omission seems an important one. A curious error reappears on page 253. The paragraph attributed to Mr. Tweeddale is from Mr. C. C. Vermeule's report on water supply, published by the Geological Survey of New Jersey.

Prof. A. A. Atkinson's 'Electrical and Magnetical Calculations' (D. Van Nostrand Co.) is clear, concise, and thoroughly well thought out. Any young man who is interested in the application of electricity and is fortunate enough to procure this little volume at an early period of his studies, will find he gets more service out of it per page than from almost any other on his shelves.

The John Brown papers deposited by Gov. Wise in the State Library of Virginia in 1860 were long lost sight of, and only accidentally came to light in a search made for another purpose by the present State Librarian in December, 1901. Mr. Scott began publication of them, or rather of his introduction, in the April number of the *Virginia Magazine of History and Biography*, and now in the July issue finishes his preliminary matter (including dismissal of the myth of Frederick the Great's presenting a sword to Washington), and opens with Col. Lee's report of his attack on the engine-house at Harper's Ferry. There is no letter from John Brown in the collection; many written to him, to Gov. Wise, to the Sheriff of Jefferson County, Va., to the clerk of court at Charlestown, to Andrew Hunter, etc., etc. It is doubtless too soon to judge, but we apprehend that Mr. Scott's "conservative estimate" of a market value for the papers of $5,000 to $10,000 "in a community where John Brown is held in higher esteem than he is in Virginia," will not be justified in the sequel.

Labrador, judging from the report of the Brown-Harvard expedition in 1900 by its leader, Prof. E. B. Delabarre, published in the Bulletin of the Geographical Society of Philadelphia, is an inviting field for the explorer, the student of nature, and the lover of wild scenery. In the extreme northeast the highest mountains on the Atlantic Coast rise sheer from land-locked bays, which rival, if they do not surpass, the beauty of the Norwegian fiords. The greater part of the peninsula is practically unknown, while the geologist, Dr. R. A. Daly, asserts that, from the lack of forest and soil-cap, the interpretation of the structure and history of the earth's crust is there possible with a remarkable degree of rapidity and amount of assured detail. The expedition, six in number, sailed northward some seven hundred miles, stopping at twenty-eight places for geological research and the collection of specimens of the flora of the region. Two of the members accomplished the almost unprecedented feat for white men of making the last hundred miles by land. A favorable account is given of the Eskimos, notwithstanding the fact of their increasing demoralization, due to their practical slavery to the traders, "who charge outrageous prices for supplies, and give small returns for fish and furs." Efforts are being made to counteract this evil by the establishment of coöperative stores by the branch of the Mission to Deep Sea Fishermen, which maintains two hospitals on shore and a hospital steamer. Lists of plants and birds collected and observed are appended to the report, whose attractiveness is increased by some fine photographs.

The salient feature of the Consular Reports for June is the illustrated description of the new electric railway at Berlin by our Consul-General, F. H. Mason. In one important respect it is far superior to

our street railways, "in the artistic beauty, the architectural charm and sense of fitness, which the German constructors have imparted to the stations, the bridges, and even the ordinary overhead viaduct sections." When it passes through a public square, "it is on solid and artistically designed masonry," and the stations are not as with us mere sheds; no two are alike, and each is "specially designed to fit not only the requirements of traffic at that point, but the adjacent buildings as well—the architectural framework in which it is set." Though this implies increased cost of construction, yet the way fares are but two and one-half cents, the through fares three and three-quarter cents. In reviewing the outlook for our export trade with Germany, Mr. Mason writes that the Americanization of certain industries has nearly destroyed the demand for American machinery and manufactured products. The cheap shoe is almost the only important article in which the German manufacturer cannot compete with us. The hope for the future lies in novelties and food products, especially cheese, for which there is a "fine field, hitherto almost uncultivated." Our interest in forestry should be quickened by the fact that, according to the latest statistics, the state forests of Saxony, besides their indirect benefit to the country, yield a direct annual profit to the Government of $2,240,000.

The Proceedings of the Anglo-Russian Literary Society (Imperial Institute Road, London, S. W.) for the first quarter of 1902 show that this worthy organization, intended to promote the study of the Russian language and literature, and also friendly relations between Great Britain and Russia, is still in active operation and doing most excellent work. A long paper on the Russian poet Miakoff, born in 1821, and made President of the Board of Foreign Censorship in 1881, shows that he was one of the few Russian authors whose life was not clouded by storms and trials. The full edition of his works was published in St. Petersburg in 1888, with a German translation at Leipzig in 1901. Several of Miakoff's poems are here presented in English. Another paper treats of "Two Anglo-Russian Philanthropists" who greatly aided in the reform of Russian prisons. "To visit Christ in the dungeon" meant, in old Russian custom, to send a member of the imperial family to the prison, who arranged the release of a debtor. A half-dozen other papers on fresh themes, with reviews of books, seem to show that this journal is a necessity to all who wish to keep informed as to the inner life of the Russians.

There are few countries, perhaps, in which slavery is a matter of sex. Korea, however, is a kingdom in which only women are still kept in involuntary servitude. For certain services done without a regular compact, certain kinds of servant boys are called "common slaves," though they are not really such; but women slaves are still bought and sold. In the *Korean Review* for April, besides papers on "The Status of Woman," there is a very valuable one on "Slavery in Korea." A woman may become a slave in four ways—through poverty, or debt; because of attainder of treason in the head of the house of which, as wife, daughter, sister, or servant, she is a member; or by the death of a slave woman (her daughter or "seed slave" being compelled to take her place); or through voluntary entrance into servitude. The writer asserts there is "not a single male slave in all the realm of his Majesty, the Emperor of Ta-Han." Since 1895 the punishment of wives or daughters for their hubsands' or fathers' sake has been done away with—a great step in judicial ethics. There is a good Rip Van Winkle story, a variant, which, besides being of submarine location, explains also the name of the "Monastery of the Ocean Seal." With other valuable lore and information, there are chapters on Korean history, and a merciless exposure of the slovenly inaccuracies of Mr. Alfred Stead, who spent a few days in Seoul, and was there probably "stuffed" by some old resident, who enjoyed taking in the rapid-transit traveller.

In *Petermann's Mitteilungen*, number five, Prof. Th. Fischer directs attention to the condition, unparalleled in Europe, of the people of Apulia in southeastern Italy. Though mainly agriculturists, and increasing in number, they live, not on their farms or in villages, but in large towns separated from each other by extensive uninhabited tracts. In the daytime the towns are absolutely deserted by the men, who are at work in fields, orchards, or vineyards sometimes two or three hours distant. This occasions, among other evils, great poverty; the most an able-bodied peasant can earn, even with the aid of his wife, is from $80 to $100 a year. The cause, so far as it is due to natural and not inherited conditions, is the scarcity of water. To some districts all the drinking-water is brought by rail. The problem for the Government to solve is whether, by the construction of large reservoirs, the people can be induced to live on the land they cultivate.

The women contingent in French higher educational institutions does not yet attain the proportions that prevail in Germany. While in the latter country, out of some thirty-two thousand students, a little over two thousand are women, in France, out of a total of 30,370 found in the institutions of this grade, exclusive of technical colleges, the total number of women is 1,084. Of these, 673 are natives, and 311 foreigners; 412 women are students of medicine, 21 of law, 360 of philosophy and pedagogy, 43 of mathematics and the natural sciences, and 73 of pharmacy.

The ministerial decree ordering that foreign terms be eliminated from German textbooks for schools as rapidly as possible, is being systematically carried out. Lately it has been decided that Geometry shall in the future be called *Raumlehre; Physik* is to be supplanted by *Naturkunde*, etc. As yet no German equivalent for Chemistry has been found.

The Royal Society's Catalogue of Scientific Papers, volume 12 (supplementary volume), has been issued. In it are catalogued the most important articles which appeared from 1880 to 1883 in upwards of 350 periodicals and Transactions of societies not previously indexed. A few modifications of the method used in compiling the previous volumes have been introduced, notably the omission, in most cases, of references to mere abstracts of papers. It is announced that the Catalogue for 1883-1900, and the classified index to the first twelve volumes, are in preparation. With the publication of these volumes, the undertaking for which the Royal Society assumed the sole responsibility comes to an end. The work of cataloguing scientific papers for 1901 and onward is in the hands of an international organization, through which scientific institutions of various countries will coöperate in the preparation of an International Catalogue of Scientific Literature, arranged under authors and subjects; the subject catalogues appearing as separate volumes.

Dr. Florentino Ameghino has been appointed director of the National Museum of Buenos Aires as successor to the late Prof. Charles Berg. The Museum has been reorganized, and six sections—geology and mineralogy, palæontology, botany, zoölogy, anthropology, and biology—have been established. This new organization and the approaching removal to more suitable quarters will, it is hoped, enable the Museum to extend its field of research, and to publish the results of investigations more frequently. The seventh volume of *Anales* will soon be issued.

The Rijks Ethnographical Museum at Leyden (situated within a stone's throw of the Pilgrim Fathers' former residence, and across the Rapenburg Canal, where was the Commandery, which Miles Standish probably visited) has one of the best collections in the world of articles of every sort illustrating humanity in Asia, primitive America, and Insulinde or Island India. The report of the director, Dr. Schmeltz, for 1901 shows unusual richness in the Japanese and Korean departments, though the Dutch dominions also are well represented. The plates illustrating the important additions revealing the art of Japan and of Upper Laos in Siam, are reproduced with spirit and elegance. In the purely anthropological department we notice the finding of some teeth and a bone (tibia) of the famous Pithecanthropus, who, or which, may turn out to be the "missing link," and whose statue at Paris (chiefly gypsum) attracted so much attention, as being an instance of the scientific use of the imagination.

In the forty-first annual convention of the Swiss Gymnasium (or College) Teachers the special discussion was on the pronunciation of the letters *c* and *t* in Latin. It was demonstrated to general satisfaction that in the classical period of the Latin, *i. e.*, in the first Christian century, these letters were always pronounced like *k* and *t*, and not like *z* before *e*, *i*, and *y*, and the demand was made that the original pronunciation of such words as *natio* and *Cicero* be restored. This has actually been already done in Bern, Basel, and elsewhere. It was, however, also shown that, as early as the time of Charlemagne, the softer *z* pronunciation had been introduced from Italy.

The International Congress of Historical Sciences, which was to have met at Rome, Italy, last spring, has been definitely postponed until April, 1903. An archæological congress, which was to have been held at the same time, was the cause of the postponement. The Italian archæologists (*genus irritabilissimum*) started a controversy which raged for some time and embroiled the members of both congresses. The matter was finally left to the Minister of Public Instruction, who has decided upon April of next year as the best date for the meeting. The Congress already numbers nearly a thousand adherents, but others may now

join by sending the fee of 12 francs to the Secretary, 18 Via dei Greci, Rome, Italy. The American Committee formed last year for the purpose of assisting the work of the Congress in this country will continue its existence, and further information may be obtained from the Secretary of the American Committee, No. 118 East Fifty-eighth Street, New York.

—The guide to Italy of the Macmillan series is a handy volume for the whole peninsula (excluding Sicily and Sardinia), calculated for those who have little time at their disposal, or for those whose appetite for "sights" is easily satisfied. It may be conceded that this class will need more than an entire page about Bordighere, and will be content with a line about the frescoes at Saronno, as well as that many things interesting to the thoroughgoing traveller should be omitted altogether. Still, frequent as are the omissions, the book, like a pocket dictionary, surprises rather by what it includes than by what it leaves out. It is incomprehensible that the hasty traveller should care for the elaborate dissertations on painting and architecture furnished in the prefatory matter. Any one capable of reading these will surely demand a more complete list of examples in the body of the book. The accounts of education, social condition, the tenure of land, etc., on the other hand, may be welcome to any reader. The hotels, as a rule well chosen, are by themselves in a separate list; there is a sort of mere mention of towns along the hundred routes given, while a more detailed description of the most important follows in alphabetical order. There are about fifty maps and plans, including one of ancient Italy and one of Italy before 1858.

—'Die Riviera,' by W. Hörstel, No. xi. of the series entitled "Land und Leute," published in Leipzig by Velhagen & Klasing (New York: Lemcke & Buechner), is a thin octavo abundantly illustrated from photographs known to all frequenters of this coast, and addressed to the ordinary reader. The historical survey is scarcely more than would be deemed necessary for a guide-book; and of art and archæology there is still less; but scenery, climate, geology, vegetation, and industries are more fully dealt with. As to all these, what is given is drawn from good sources and is trustworthy and accurate. The chief value of the book is in its account of the inhabitants. It is well known that the Ligurians do not enjoy an enviable reputation among their neighbors, and the winter visitor is apt in his first years to be seduced by their winning manners into an unreasoning enthusiasm over them, which, with more diversified experience, he is equally apt to exchange for unreasoning contempt. Herr Hörstel refers to the popular judgment as to the faithlessness of the men, without, however, quoting what is said of the women, as well as to Dante's terrible

> "Ahi Genovesi, uomini diversi
> D'ogni costume, e pien d'ogni magagna."

And yet he does not surrender his own opinion, which is founded upon the people as he has known them, and is singularly unprejudiced and just. Indeed, we do not know where to look for a fairer appreciation of these much misunderstood Ligurians, although our author neither says the best that might be said of the higher development of which they are capable, nor the worst that is true of the baser sort. And, whether from reticence or other cause, he does not allude to the numerous affiliations of the entire region with Tarascon; but he is unexceptionable in his representation of the every-day qualities and peculiarities of its people. He gives, too, a great deal of information as to manners and customs, industries, cultivation, and condition in general. For good or for evil, the book is somewhat exclusively German in outlook. At Lerici the author does not recall Shelley, but a group of palm trees near Bordighera (one remarked by most passers by rail) suggests the fact that Victor von Scheffel once felt uncomfortably ill beneath them, and wrote some indifferent verses about his sensations, which are cited in full. *Ex pede Herculem.* We only signalize what may be taken as a quality or a defect in a work that as a whole is very praiseworthy.

—Prof. Henry E. Bourne's 'Teaching of History and Civics in the Elementary and the Secondary School' (Longmans) is not only the most elaborate, but also easily the most important, of the numerous recent works on historical "method," and will doubtless take its place among the few books of the sort which the teacher will think needful to own. The first part, somewhat less than half the volume, begins with a discussion of the meaning of history and an outline of the equipment which historical scholarship demands; reviews briefly the teaching methods in French and German schools, and, more in detail, the recent discussions and reports of educational bodies in this country; and then passes to a consideration of the historical programme for schools, particularly as formulated by the Committee of Seven of the American Historical Association. Throughout this, the most difficult part of his subject, Professor Bourne shows himself to be not only amply informed, but clear, concise, and eminently sensible. The second part presents a number of carefully worked-out studies of different historical periods—Greece, Rome, mediæval Europe, European history since 1560, the United States, etc.—illustrative of the principles enunciated in the earlier chapter, and showing in tangible form the kind of teaching which the author would have. In quantity of matter, history greatly overshadows civics, only two of the twenty chapters being given to the latter subject. The disproportion is significant, but the time seems not yet to have come when civil government can be much treated in schools save in connection with history. We cordially commend Professor Bourne's substantial volume to the attention of teachers and students.

—The English Palestine Exploration Fund, through Mr. McAllister, has just commenced excavations at a new site, Abu Shusheh, identified by M. Clermont-Ganneau in 1872 as the site of the Biblical Gezer, near Ramleh, on the edge of the Sharon plain. For some six weeks the Austrians, under Professor Sellin, have been excavating, with a fair degree of success, Ta'anuk, the Biblical Taanach, on the southwestern edge of the plain of Esdraelon. The Germans have secured a firman to excavate the ancient Megiddo, in the same neighborhood, and expect to commence work there shortly. As is well known, another German expedition has been excavating and restoring in an admirable manner the great temple of Jupiter Heliopolitanus at Baalbek, and the neighboring smaller temples. This work, which has already occupied about two years, will require more than another year for its completion. In addition to this the same expedition has excavated some smaller but interesting ruins in the Lebanon, on the edge of the Beka, in the same general region. This summer the same expedition is exploring the ruins of Palmyra, Gerash, Amman, and similar less-known sites east of the Jordan for the purpose of a more thorough study and comparison of Syrian-Roman architecture and antiquities. The Germans are peculiarly active in exploration in Turkey at the present time. In addition to the two expeditions mentioned above, they are excavating also at Miletus, at Pergamos, and at Babylon, and are about commencing excavation of a little-known Babylonian ruin mound, apparently of great antiquity, south of Nippur, between the Tigris and the Euphrates.

—In 'Le Miroir de la Vie' (Paris: Hachette & Cie.) M. de la Sizeranne, the French critic of English painting, gives us four essays upon art as the reflection of life—art studied not for what it is in itself, but for what it can tell us of the changing conditions and ideals of men. In "L'Esthétique des Batailles" he shows how war was first sculpturesque, then picturesque, and is now no longer either, since it fails to occupy artists as a subject for art; he concludes that war will finally cease, not because philosophers shall teach that it is useless and wicked, but because artists shall no longer persuade that it is beautiful and glorious. In "La Caricature" he reviews the course of that art from the pyramid builders to the draughtsmen for *Life*, including many things as caricature that some of us would be likely to exclude from that category, and drawing conclusions that are at least debatable. Perhaps the most interesting of these are that caricature is, of its nature, conservative; that, by its personifying tendencies, it is an ally of Cæsarism; and that, by its tendency to put the concrete in place of the abstract, the image in place of the idea, it tends to undo the work of the press. In "La Modernité de l'Évangile" he shows how and why art has always tended to represent the events and personages of the Gospel in the surroundings and costume of the artist's own time, and maintains that the reason such representations shock us in the art of today while they do not in the art of the fifteenth century, is not that our artists are more learned or less sincere than were the elder artists, but simply that modern costume is ugly—or, as he prefers it, "inesthétique." This distinction between what is ugly and what is unæsthetic is one of the least tenable he makes, for an artist would deny that the old felt hat is ugly or the *bel habit* anything but ugly. It is true that an ugly old man may be a magnificent subject for Rembrandt; but is this not because, though ugly as a man, he is really beautiful as a surface for the display of light and shade? Finally, M. de Sizeranne discusses "Les Portraits d'Enfant," and the

light they throw upon the different way in which children have been regarded at different epochs. As a whole, his book will be found stimulating and suggestive reading by those who care for art as a part of general culture, even if it contains little for the student of art for its own sake.

## CRAWLEY'S STUDY OF PRIMITIVE MARRIAGE.

*The Mystic Rose:* A Study of Primitive Marriage. By Ernest Crawley, M.A. The Macmillan Co. 1902. Pp. xviii, 492.

At first blush the title of this book might seem to mark it as one of the many fantastic contributions of the "new thought" school of "psychology." No one, however, who had read the author's discussion of "Sexual Taboo," published in the Journal of the Anthropological Institute (London) for 1895, of which the present volume is more than a mere expansion or elaboration, could entertain such a suspicion. 'The Mystic Rose' is dedicated to Mr. J. G. Frazer, author of 'The Golden Bough,' and Mr. Crawley has evidently imitated his master in choosing a title that means both less and more than it should. The book is named from "the most prominent ideal personality for modern Europe in this connection, the Maiden-Mother, the Mystical Rose, whose figure enshrines many elemental conceptions of Man and Woman and their Relations." The author's general thesis is that "marriage, both in ceremony and system, is grounded in primitive sexual relations"—a truism lost sight of by many writers upon the subject, who have interpreted primitive custom by non-primitive ideas, attributed legal conceptions to folk-thought, and created pseudo-syntheses in which the sexual relations are almost completely obscured. The cardinal idea about marriage in primitive psychology is that "the union of man and woman amounts to identification and combination of the two sexes." Hence taboos, ceremonies, devices, magic black and white, etc. (born of or demanded by sexual solidarity or sexual weakness, the active and the passive natures of man and woman), the intent of which is to guard against or to render harmless sexual relations that are, physically or spiritually, unnatural, imperfect, too complete, or dangerous in other perceived or imagined ways. Mutual contact may be tabooed, on the one hand, because the persons contemplating marriage, or for whom marriage may be desired, are so different or so distant that their union would be perilous for one or for both; or, on the other hand, the taboo may express the danger likely to arise when persons too like and too near come together. Ideas of contact are at the root of all conceptions of human relations at any stage of culture, and the physiological and psychological implications of this fact for primitive peoples are the basis from which, by help of the "primitive religious mental habit," marriage systems and marriage ceremonies have been evolved. But Mr. Crawley is careful not to assume, as Frazer seems to do, that "the origin of the marriage system was to be found in some primitive conception of danger attaching to the sexual act." So narrow a view is unnecessary when we consider the primitive identification of the real and the imaginary; the confusion or combination of the human and the "spiritual"; the association of disease and illness with evil spirits (also heat and the like); the observation of functional and organic crises (puberty, menstruation, child-birth, etc.); primitive ideas of childhood and old age, of property, of contagion, and transmission of qualities from sex to sex and from parents and ancestors to children and descendants; belief in the virtues of imitation, disguise, and deceit.

Moreover, there is good reason to believe, with Mr. Crawley, that "marriage rites of union are essentially identical with love-charms, and other marriage rites coincide with precautions taken to lessen the dangers of contact between the sexes, not only in ordinary life, but at the critical age of puberty" (p. 318). The taboo between engaged couples exists because "their state is a re-presentation of life in the family, where sister and brother are kept apart, and the sanctity of the home, in the primitive sense, is preserved by the mother on the principles of sexual taboo" (p. 316). The "couvade" and the treatment of the mother-in-law are "savage" customs, which, as the author remarks, have added much to the gayety of nations. The former, according to Mr. Crawley, falls under the head of attempts at contact-sympathy "always tending to pass into substitution and exchange of identity" (p. 425); it is intended to protect both wife and child, for "the savage is a better man than he is generally painted, and has a real altruism and marital responsibility." The avoidance of the mother-in-law (common enough in civilization) is with primitive peoples often a real part of the marriage system, and is a taboo of contact between relatives for the purpose of avoiding danger, which reaches its maximum in the *uku-hlonipa* system of the Zulus. The godparents of the present day, who have so little to say to their protégés, are not so far removed from the "bridesmen" of the Beni-Amer, who "may not speak to [the bride] for the rest of her life, but are sworn to defend and protect her, and actually do so when her husband's conduct requires it" (p. 263). Many modern customs and practices in connection with betrothals and marriages (and remarriages) mask primitive ceremonies which "show both the taboo character of bride and bridegroom and also an attempt at disguising them by fictitious change of identity."

Mr. Crawley's criticisms of other theories and subsidiary explanations, even when not convincing, are keen and sometimes witty. "Group-marriage," the last position of the theory of primitive promiscuity, is held to be individual marriage modified in polygamous and polyandrous directions. Certain theories about promiscuity, incest, etc., are "cases of mental actualization of apparently potential states which were really impossible except as abnormal occurrences" (p. 482), and we may reasonably believe that "individual marriage has been, as far as we can trace back, the regular type of union of man and woman." Actual "capture," Mr. Crawley thinks, is only "a method of obtaining a wife," not a mode of marriage, and he regards as exploded the theory of "marriage by capture" as an explanation of exogamy, or of an alleged change from the paternal to the maternal household. The essence of exogamy is "the prohibition of marriage within the house" (p. 443)—in early times it is "a family and not a tribal matter." The object of marriage ceremonies "is not and never was to join together the man or the woman, as the case may be, with the life, or blood, or flesh of the *tribe*." Of this "sentimental socialism," as the author terms it, "there is no trace in primitive society, though there are facts which look like it. . . . Marriage is between individuals and is an individualistic act" (p. 320). What is miscalled "marriage by purchase" is in reality a development from the "bride gift," and not vice versa. The "bride-price" was originally "a pledge, a part of one's self, given to another and received from him" (p. 387), and the principle involved "is more personal, more religious; there is less of price and more of value, more of the pledge than of profit and loss." Besides, with primitive peoples, buying and selling "have not the same sordid connotation as they now have."

The "tree marriage" (in India and elsewhere) is "a good instance of the primitive fashion of make-believe by which an effigy does duty for a person, all risks being thus obviated" (p. 340). In these mock ceremonies the intention is thereby to secure the harmlessness or success of the real ceremony. Perhaps something of this idea still attaches to modern wedding rehearsals. The institution of bridesmaids, groomsmen, etc., is the crystallization of "the very natural practice of being accompanied on these, as on other important occasions, by a friend of one's own sex." The attendants are really *duplicates*, the idea in question being "'safety in numbers,' combined with similarity of costume," for they are often dressed to resemble the bride or the bridegroom. The "best man" is not, as has been suggested, "the strongest of the bridegroom's friends who assisted him in capturing the bride from the foreign tribe." As Mr. Crawley remarks, in this matter "it is sex, not the tribe, that is concerned," and the origin of marriage ceremonies is hinted at by the way in which, for a longer or a shorter period after the wedding, "the women stand by the bride and the men by the groom."

Very important among primitive peoples is "what may be called *physiological thought*, subconsciously arising from and concentrating upon physiological functions (especially the two chief functions of nutrition and sex)." Nor is modern man without a large share of this "physiological thought," for the juxtaposition in our laws of *mensa* and *thorus* reminds us of what was once a chief object of man's regard. Another generalization which the author feels justified in making concerns "the high morality of primitive man," something the Imperialists who swear by McLennan and Letourneau should take to heart. Indeed, besides being a new and interesting book on marriage, this volume deserves to be read by all who desire to know something about the moral and social characteristics of the so-called "lower" and "higher" races of man. From it they may learn how closely akin are all human beings when it comes to the expression of the fundamental relations between man and woman. Selden, the famous lawyer of the seventeenth century, said, "Marriage is a desperate thing," and the nurse of the

late Cecil Rhodes, chiding him for remaining a bachelor, declared, "Marriage is nothing; you says *snip* and she says *snap*." Primitive man's idea was certainly nearer that of the lawyer than that of the nurse, but not too near, if we read aright.

Altogether, Mr. Crawley, while pushing the taboo idea too far here and there, has given us a worthy companion for Westermarck, and, we might say, the most human book about marriage we yet possess. To the excellent topical index an alphabetical list of authorities should have been added, and the author ought to have been more careful in normalizing his English equivalents for the names of foreign peoples and savage tribes.

## ADMIRAL JOHN WINSLOW.

*The Life of John Ancrum Winslow*, Rear-Admiral, United States Navy. By John M. Ellicott, Lieutenant U. S. Navy. G. P. Putnam's Sons. 1902.

In spite of the generally unfounded notion to the contrary, the nation can safely repose confidence in the conservatism of naval officers when men like Winslow write, as he did in 1846, apropos of the forerunner of the Venezuela war-cloud: "By newspapers we have seen the passage of the Oregon question through the House. Our own people seem mad with their braggart course in this question, while England, with a power that could crush us, mildly invokes pacific measures. I think it ungenerous in the United States." And again, from Vera Cruz during the Mexican war: "One has only to see the misery which war creates to become sick of its horrors." We are confirmed in the belief that the professional warrior is often the least bloodthirsty of men.

To tell the story of Winslow's life in a manner to arouse and maintain the reader's interest was no light undertaking, for the quiet and conscientious performance of one routine duty after another, at times and in places rarely marked by thrilling events, appeals but slightly to a public which craves the excitement of the marvellous and joyfully swallows the incredible without question. Lieut. Ellicott has discharged his duty as biographer with great tact. He has had the wisdom to let Winslow speak for himself, and has supplemented the extracts from Winslow's official and private correspondence by such comment and explanation as were necessary to make the matter clear.

It was in the Mexican war that Winslow received his baptism of fire, behaving with great gallantry in command of a detachment of sailors in the attack on Tobasco. His expressed opinion that the war was unjustifiable did not prevent his doing his whole duty in action. He had the good fortune, in the civil war, to share in the operations which secured the control of the Mississippi River by the Federals. This part of the narrative is very readable in itself, and it is also instructive as showing the difficulties which attended the building up of the river force that did such important work towards the suppression of the rebellion.

For ability, Winslow was never rated very high by his contemporaries; but the esteem of such a leader as Foote, "who immediately applied for Commander Winslow as his chief assistant in fitting out and organizing the flotilla," must be allowed much weight as a corrective to a vague general impression, even if the latter suggests at the same time a temperamental disadvantage. Certain passages in his home letters convey the idea that he was self-centred in a small way not in the least resembling Nelson's unbounded and glorified egotism. If this inference be correct, it may furnish the key to the manner of his detachment from the *Baron de Kalb*, of which the true causes are still obscure. Between the lines of the story as told we read a certain lack of harmony. Had his relations with the commander of the Mississippi squadron, Acting Rear Admiral Charles H. Davis, been altogether cordial, it is hardly conceivable that his application for change of duty should have been forwarded by the latter with an unfavorable comment. The prospect of having Porter promoted over his head and assigned to the command of the squadron was, naturally, distasteful; moreover, Winslow, having been commissioned a captain, was eligible to a much larger vessel than the gun-boat *Baron de Kalb*. In themselves, these circumstances justified his asking service in other waters.

This is the letter which had such an unforeseen effect upon Winslow's fate and fame:

"The Department, prior to ordering me to Western Flotilla, was pleased to forward for my consideration a letter of Rear-Admiral Foote.

"The conditions under which I accepted having been materially modified in the recent change of the Commander of the Flotilla fleet, I would respectfully request that the Department would assign me to other duty."

Endorsed by Davis:

"The application contained in this letter, which, if unqualified, would be regarded as an act of insubordination, is forwarded with the following remark:

"The language of Captain Winslow implies that there is a special understanding with the Department; otherwise I should recommend that the request be not complied with."

Mr. Welles acknowledged the receipt of this communication, and added: "You are hereby detached from the Mississippi squadron and placed on furlough." We wonder whether many persons outside the naval service are aware that, by law, the Secretary of the Navy has the arbitrary power to place any officer "on furlough"; that "furlough" in the navy is a terrible punishment—not, as in the army, a privilege; and that through Mr. Welles's action Winslow was practically fined at the rate of more than $200 a month, his pay being reduced *ipso facto* from $3,500 to $1,050 per annum. Under the same statute, a Winslow of today can be mulcted in $2,250 a year on the irresponsible whim of a Secretary. Such an authority, which savors of the despotism of an empire rather than of the freedom of a republic, does not exist in the army, is a menace to the self-respect of every naval officer and a disgrace to our legislation. It cannot possibly be Constitutional; but unhappy Winslows, smarting under its cruel injustice, without appeal, are too poor in purse to test the question in the courts.

We have noticed the affair at some length because it shows what may happen to any naval officer who does not bask in the light of Departmental favor; because it was the most painful experience in all his career to Winslow's sensitive nature; and because, oddly enough, it was the means of bringing to him the laurels of victory. Shortly after reaching his home in the East, he was relieved from furlough, through satisfactory explanation of his hapless letter just quoted, and, later, he was ordered to command the *Kearsarge*, the ship with which his name is for ever connected.

Lieut. Ellicott's instructive analysis of Winslow's new task brings into clear relief a fact, too often overlooked, that war, like other trades, is learned by experience and —through mistakes. Winslow took station about the Azores in the hope of catching the Confederate cruisers which occasionally appeared in that neighborhood, but the logic of events drove him to the English Channel, where, sooner or later, these piratical craft had to resort for repairs and supplies. Here he watched and blockaded and ate his heart out until Semmes arrived at Cherbourg, off which harbor the *Kearsarge* promptly appeared. For reasons best known to himself, possibly stung by the reproach that he was a mere pirate and dared not fight, Semmes sent word to Winslow to wait for him and do him battle.

How the *Alabama* came gayly out past the breakwater on that hazy, beautiful Sunday morning, June 19, 1864, her officers under the promise to return to their friends on shore with scalps at their belts; how she steamed straight for the *Kearsarge;* how the latter headed away until the thousands of spectators on the French hills thought the American vessel in flight; how the latter, when well beyond the marine league which limits neutral waters, turned and flew at her foe; how the two began circling about a common centre like opposite riders on a merry-go-round; how the rapid but ill-directed broadsides of the *Alabama's* British guns, pointed by British gunners, were no match for the slow, steady, accurate fire from the *Kearsarge's* smooth-bores —especially that from an eleven-inch pivot aimed by a cool Yankee who ought to have sprung from the loins of Long Tom Coffin himself; how one brief hour put an end to the *Alabama* and her unholy cruise as she slid stern-foremost under the water; how Semmes dramatically threw his sword overboard, after surrendering his ship, and sought safety in flight on the British yacht *Deerhound;* how Winslow received the thanks of Congress and promotion to the grade of Commodore—all these things have been told a hundred times, but never more soberly, with appeal to authority for each statement, than in this volume, which well deserves a place among the few really satisfactory lives of sailors who have brought honor to our flag. Few who open this book will be content to leave it unfinished, while all its readers will recognize the tact and skill with which the subject is treated, and the simple and pleasing style in which it is presented.

A second edition, it is hoped, will contain a map of the theatre of the Mexican war, a better one of the operations on the Mississippi, a less obscure diagram of the great *Kearsarge* and *Alabama* duel, and the correct spelling of the name of Admiral Foote's biographer.

*Salmon and Trout.* By Dean Sage, C. H. Townsend, H. M. Smith, and William C.

Harris. Illustrated by A. B. Frost, Tappan Adney, Martin Justice, and Others. Macmillan. 1902.

The fraternity of anglers lost one of its finest representatives when Mr. Dean Sage, the leading author of the work named above, suddenly died, as our readers have been made aware. Mr. Sage had for many years been known as one of the very best authorities on salmon angling, and his portion of the present volume treats of the Atlantic salmon, its history, habits, and resorts, the tackle by which it should be taken, the handling of the fly, and many other points of interest to the practical or literary angler.

Mr. Sage was not one of the dogmatic class of anglers to whom there is but one way, definitely and minutely laid down, for handling the rod under any given conditions of time, water, or weather. Experience had taught him that the precise way in which a game fish will act is one of the hardest things in the world to predict. If it were not so, angling would be reduced to something like the regularity of a Chicago pork-packing establishment, and would possess no attraction whatever for the class of men who now follow it as one of the most successful modes of mental and physical recreation. Because of this fascination of uncertainty in it, the ill-disposed sometimes try to discredit it by calling it mere gambling, forgetting that the evil of gambling lies in other qualities than its uncertainty. It is often called a cruel sport, too, by persons who know too little of it to be aware that no class of citizens does more to minimize the waste and suffering of fish life than genuine anglers. Mr. Sage was preeminently of this humane type, angling not for "fun," as the adversary puts it, but for physical health and strength, mental rest and repair, with a reasonable amount of choice salmon for food by the way.

The unqualified assertion of some writers that salmon do not eat at all while in fresh water, is not borne out by the careful observations of Mr. Sage. That they take the fly in the mouth merely from a spirit of pugnacity or curiosity does not comport, he thinks, with the fact that he has occasionally taken them with the fly far down towards the stomach. He also cites several cases of salmon taking bait in fresh water; and in one case a salmon taken with the fly, on the Upsalquitch, was found to contain a small mass of angle-worms in its stomach. In another case he was assured that a salmon had been taken with a partly digested frog in its stomach; but for this he does not personally vouch. As an explanation of the well-known rarity of food being found in their stomachs when taken, even in salt water, he suggests their power of emptying the stomach through the mouth when danger calls their activity into sudden play, as the black-bass will often do when hooked. It is acknowledged, however, that salmon feed but little after entering fresh water, the appetite disappearing as the season of spawning approaches. May it not be that, under the influence of this declining appetite, their habit is to seize their prey in the mouth, squeeze the juice out of it, and eject the solid portion, just as the human stomach, under abnormal conditions, may welcome the juices of fruits and meats, while revolting at the solid parts?

The treatment of the Pacific salmons, by C. H. Townsend and H. M. Smith, is more formally scientific than Mr. Sage's part of the volume, and, as a natural consequence, less readable for the angler than for the ichthyologist. Nevertheless, it contains much information which the angler will be glad to possess, and which will aid him materially in the work of classification. It is stated that the Pacific salmon *loses its ability to eat*, after entering fresh water, owing to the atrophy of the digestive organs. The influence of the spawning function thus appears to be greater in its initial stages than with the Atlantic species, and the function has a tragic ending, as the spent fish dies almost immediately, without returning to the salt water.

Mr. Harris, in his treatment of the various species of trout, devotes his attention chiefly to semi-scientific description, and by so doing sacrifices all opportunity of appeal to the "literary angler," a personage quite often to be found in these days, and no less deserving of consideration by the writers of angling literature because circumstances have not put him in the way of handling the rod. As a kind of cushion between the practical angler who comes home by force of untoward conditions with an empty creel, and the unpitying non-angler who sees no sense in fishing when the fish do not bite, he is worth developing.

---

*Nestlings of Forest and Marsh.* By Irene Grosvenor Wheelock. Chicago: A. C. McClurg & Co.

This work, with Professor Herrick's recent 'Home Life of Wild Birds,' practically creates the study of nestling birds. So far as the present reviewer knows, these are the only books devoted to the subject by writers of popular science. Mrs. Wheelock's book is a contribution to ornithology that no student of birds should overlook. Her study of a bird family often begins with the building of the nest and the laying and brooding of the eggs, including also the length of the period of incubation; then she watches the growth of the nestlings, notes their food and the age at which they leave the nest, photographs them as they develop, observes how they learn to perch and to fly, and listens to their early attempts at singing. Her photography is not always successful, but her observations are painstaking and persistent, and her style is simple and readable. The sketches of marsh birds are perhaps more interesting than the others. Few observers have recorded so full notes of marsh work. She writes here and there of the conditions that attended these studies.

"A tramp through the marshes at four A. M., waist-deep in the lush wild grass, the mists veiling the wonderful unseen beyond, and, in the near distance, the pink of the mallows, the purple of the iris, and the yellow of the marigolds still heavy with the dew, reflecting the glories of the sunrise sky; to hear the bird chorus as you never hear it at any other hour of the day; to see the birds waken, stretch their little wings, and enjoy a morning bath, splashing and dashing as if they could never have enough of the cool fresh water; to watch them shake and preen their little wet feathers as they sit swinging on the cattails; to follow their flight over the glistening green, dipping, rising, circling in matchless curves—is not all this well worth the sacrifice of a morning nap?

"But the marsh is a faithful keeper and guards its secrets well. Much hard work, many discomforts, some danger, and small success will often be the sum total of a day spent there. The little marsh people are shy and very, very wily."

Mrs. Wheelock's marsh birds are two blackbirds (the red-wing and the yellow-head), the long-billed marsh wren, and the rail. The following extracts from the account of the wren show her manner of work:

"The nest we had chosen to watch was in the centre of a little island of rushes separated from the main marsh by a passage just wide enough to punt a duckboat through. Here we lay, partly concealed, while the anxious little father scolded and sang by turns, and then, with deliberate intention to deceive, commenced to build a dummy nest in full view of us. Evidently his heart was not in his work, or our presence made him nervous, for it was not well done and he left it one-third completed to commence another a few feet farther away. This was repeated day after day, until four had been started and two finished in a radius of ten feet by the same industrious builder. All the material brought was wet, having just been picked from the water. . . .

"Not once did he go near his real treasure. The four beautiful tiny brown eggs were housed in the oldest, most tumble-down house of them all. One would never suspect it of being selected for a home among so many fresh green new ones. The doorway also was on the inland side, so that it looked to be only a ball of dried water-grass among the rushes. The doors of the dummy nests, on the contrary, were usually in plain view from the lake and invited inspection. . . .

"It took fifteen days for the eggs to hatch, and afterwards such a long, long time before the first downy head peeped through the doorway. The mother was not a close sitter, whether because of our presence or because she knew the warm sun would help in her task. It was certainly steaming inside that round ball, and the tiny eggs felt like hot pebbles to my prying fingers. She left for two hours at a time, and this, with an open nest in a tree, would certainly prove fatal to the eggs after incubation had begun. . . .

"On the morning the first egg hatched, . . . we cautiously pushed up to the doorway, and, on finding there were young, cut a slit in the top of the nest to look at them. Four naked pinky nestlings, with wee heads, mere knobs for eyes, and buds for wings, lay cuddled down within. After satisfying our curiosity, we tied the slit up with rushes and left them. Before we could push the boat away, the little mother had entered the nest, not two feet away from us. . . .

"As in the case of most young birds, we had to teach them to perch; and a comical task it was. The tiny claws had never learned to clasp, and yet by instinct they fastened to the rushes, and the little ball of down tried to balance itself on its uncertain little legs. . . . They liked to cuddle down on our fingers or hop up my arm to the shoulder, and took especial delight in hiding inside my shirt-waist sleeve, entering at the wrist, which the heat had compelled me to unfasten. . . .

"During the hour or two we were playing with the babies, the father and mother remained within a few feet, calling somewhat anxiously, but not greatly alarmed. I held a little one out on my hand and went almost up to the mother before she took wing. Had not the great heat (106 degrees) driven us out of the marsh, I am sure more patience in waiting would have conquered her fear of me, and she would have fed him on my hand. Before we were four feet away, she had returned to them with a fat June bug in her beak, and all was serene again in the little home."

---

*Facts and Comments.* By Herbert Spencer. D. Appleton & Co.

Mr. Spencer's life has been prolonged beyond his own hope, and beyond what men may reasonably expect. Nevertheless, his mind is so clear, his feeling so strong, his determination so great, as to make the an-

nouncement that this is positively his last book seem inappropriate. It is true that the material of it consists largely of chips from the author's workshop. While he was writing systematic treatises, ideas suggested themselves which, although not fitted for the occasion, were worth recording, and this collection of essays is the result. But the subjects are frequently broad and of present interest, while Mr. Spencer is as sententious as Bacon, and arouses in his readers the wish, nowadays rather unusual, that he would expand and continue his argument. Few men can write more forcibly or reason more clearly; his years have brought him weakness of body, but they have not impaired his mind.

Mr. Spencer informs us that for the last dozen years he has been tethered by ill health to the south of England, where he has usually spent the summer in the house of some gentleman farmer whose family and surroundings fulfilled the needful conditions; "one being the presence of young people." He continues, with grim humor: "Taking, in my daily drives, two ladies as companions, and being generally unable to bear continuous conversation, I put a check on this by asking one or other question not to be answered without thought." This method of securing companionship, while substituting silent reflection for conversation, Mr. Spencer hardly needs tell us, became a habit with him. He enjoys exercising the reasoning powers of his readers, and he especially enjoys exposing the fallacies of which they are presumptively guilty. He is undeniably censorious; probably he would admit that he was given to fault-finding, but he would say that it was because there was so much to find fault with. His standards are high and his virtue austere; we may properly call him

"Justum et tenacem propositi virum,"

for when he has taken a position he is immovable. He would be startled if he found himself popular; to be in a small minority, even a minority of one, does not disturb him. It is no reason for modifying his views or even for considering whether they need modification. "Athanasius contra mundum" is his exemplar; the question whether others agree with him in a conclusion which he has reached by due logical process, is quite irrelevant. Logic, indeed, is caviare to the general; most social problems are as far beyond the grasp of ordinary people as the calculus, and it is absurd to pretend to defer to their judgment.

The number of subjects touched upon is so great as to make it impossible even to enumerate them. In a few cases, the opinions expressed will command no respect; but they are generally stimulating, even when exasperating in their perversity. The propositions laid down concerning music illustrate our meaning. Historians will be interested in the assertion that when the Southern States seceded, the sentiment of England, judging from the tone of the journals, was altogether favorable to the North. Mr. Spencer had the files of the London press examined in order to determine this point, and found the evidence conclusive. Antagonism to the North was aroused in England by "undeserved vilification." Mr. Bagehot, it may be remembered, pointed out how our "suspension of specie payments," as we used to call it when we defaulted in our promises, alienated the financial world.

Whatever savors of socialism, of course, meets with Mr. Spencer's condemnation, and much of the book is filled with such matter; true, perhaps, but vain as the prophecies of Cassandra. Under the circumstances, it is not surprising that Mr. Spencer should be embittered and acrimonious. He gives us light, but not sweetness. Hence it is touching to find him at the end, in answering the question, "What should the skeptic say to believers?" tenderly considerate of those to whom this life is made tolerable only by the belief in a future life. "Nothing but evil can follow a change in the creed of such; and, unless cruelly thoughtless, the Agnostic will carefully shun discussion of religious subjects with them." Severe as he is, Mr. Spencer cannot help saying that it seems a strange and repugnant conclusion that, with the cessation of consciousness at death, there ceases to be any knowledge of having existed. His final word is: "Of late years the consciousness that, without origin or cause, infinite space has ever existed and must ever exist, produces in me a feeling from which I shrink."

*The White World:* Life and Adventures within the Arctic Circle, Portrayed by Famous Living Explorers. Edited by Rudolph Kersting for the Arctic Club. New York: Lewis, Scribner & Co. 1902. 8vo, pp. 386. Illustrated.

This is a collection of yarns, sketches, and stories, by various members of the Arctic Club, informally told, as if to the tinkle of ice in tall glasses, while memory peered through clouds of fragrant Havana. Hence it is obvious that the narrators are not to be held to the stricter limitations laid down for purveyors of scientific, historical, or literary essays, but treated rather as the good fellows of a club evening, each contributing, according to his gifts, something for the common entertainment.

Viewed in this light, the result is a success, and the reader will find in one or another of the brief contributions amusement, excitement, pathos, or tragedy, as he may choose. The average Arctic book depends for its interest upon literary skill or exceptional adventure, so thoroughly has the field been covered by the contributions of a long line of explorers. Even under the best conditions, a large part of each book is given up to details of minor interest. But in the present publication we have, as it were, the plums without the duff, and a majority of the chapters are very pleasant reading. We may, without being invidious, mention especially Brainerd's "Farthest North with Greely"; Middleton Smith's "Superstitions of the Eskimos"; "An Arctic Honeymoon," by Mrs. Florence Leonard Lee; and "Eskimo Music," by Robert Stein. Albert White Vorse gives, under the somewhat inapplicable title of "America's First Polar Expedition," an account of some of the squabbles and perplexities in which the organizers of the Wilkes Exploring Expedition were involved; but as no reference is made to Capt. Symmes and his "Hole," the reader may be warned that Mr. Vorse is far from having exhausted the subject. Other contributors are Amos Bonsall, the sole survivor of the second Grinnell expedition; Biederbick, Long, Dr. Cook, Walter Wellman, Albert Operti; and nearly a dozen more whose names are associated with exploration or adventure in the North. Appropriately enough, the illustrations include portraits of the contributors, as well as many Arctic views and pictures of Eskimo. Readers in search of cooling literature for the heated term, and all those who enjoy tales of Arctic adventure, will profit by and appreciate this undertaking of the Arctic Club, and feel under obligations to the editor and publishers who have carried it out so well.

---

*Die Deutschen Universitäten und das Universitätstudium.* Von Friedrich Paulsen. Berlin: A. Asher & Co. 1902.

This the latest work by the author of 'Die Geschichte des Gelehrten Unterrichts,' will no doubt find many readers among the members of university and college faculties in this country. No one is better qualified to write on the subject than Professor Paulsen, and the value of the present volume is enhanced by the fact that only one-seventh of its space (eighty pages) is devoted to historical retrospect, while the remaining 482 large octavo pages contain a frank up-to-date discussion of the contemporary university in all its important phases. Statistics are sparingly introduced; as a rule, only to demonstrate certain conditions or tendencies discussed in the text. The historical sketch, though brief, is not dry; facts form links in the chain of historical development—a development often quite as striking in its retardations as in its progress. Thus, the atmosphere of the territorial confessional university of the 17th and 18th centuries was as close and as stifling to real intellectual freedom in the newly founded Protestant as in the older Catholic universities. The sudden overthrow of the scholastic philosophy was in reality not as complete as it appeared through the spectacles of the humanist; it revived in the 16th and 17th centuries, and lives in the Catholic seminaries of to-day. The defeat of Latin eloquence and verse, in their turn, at the hands of the "moderns" under the leadership of Thomasius, was followed by the extension of the prevailing French influence to the universities; and the Latin language as the medium of lecture-room instruction —than which nothing is more convenient to the mediocre teacher who has only traditional knowledge to communicate (to quote Döllinger)—did not go out of use till many generations later. Instruction in the sciences had been growing in importance as the age of the Renaissance receded, yet the medical faculty remained long the weakest of all; as late as 1805 all the Prussian universities had but 144 students of medicine, as compared with 1,036 in jurisprudence and 555 in theology.

In general the development of university instruction is designated by Paulsen as tending from the practical-dogmatic to the theoretical-academic. The old university acted on the supposition that the truth had been given, and it was for the instructor to transmit it; the new university acts on the supposition that the truth is to be found, and it is for the teacher to fit the student for this task. Of the part taken by individual universities and scholars in the general development little could be said within the narrow limits which Paulsen set him-

self. The influence of Halle and Göttingen, however, which amounted to a complete transformation, during the eighteenth century, of academic conditions in Germany, is duly set forth. But, as has been hinted, the most interesting and valuable part of Prof. Paulsen's book consists in his treatment of the existing conditions of university life and work. The manifold problems, intellectual, moral, and practical, are here discussed throughout in the author's hab'tual liberal-conservative spirit. In speaking of the procedure of filling professorial chairs, the writer incidentally expresses his inability to share the indignation felt by many of his colleagues at the establishment of a chair of history for a Catholic in the University of Strassburg; he sees in this action "merely the recognition of the fact that the historical world, seen from different standpoints, assumes different aspects." In the growth of the already disproportionately large contingent of Jews among academic teachers, on the other hand, Prof. Paulsen sees a real and threatening problem. The modes of remuneration of professors, by means of fixed salaries, lecture fees, etc., the momentous questions of the professor's twofold duty as investigator and teacher, and of the methods of university instruction, by lectures, seminary exercises, etc., form the subjects of exhaustive discussion. Due reference is made to the well-known views on the latter subject of Prof. Bernheim, E. von Hartmann, and others, and this portion of Prof. Paulsen's book really constitutes a useful treatise on the theory and practice of lecturing, replete with suggestions which instructors in our higher institutions will do well to ponder.

A partial bibliography of about ninety titles—all but three or four of nineteenth-century publications—and a good index conclude the volume.

---

*Lamarck, the Founder of Evolution:* His Life and Work. With Translations of his Writings on Organic Evolution. By Alpheus S. Packard, M.D., LL.D. Longmans, Green & Co. 8vo, pp. 451, illustrated.

Lamarck was the founder of evolution, the discoverer of the theory of descent, the first to outline the genealogical tree, and the author of many works of great scientific importance. He was the greatest and most philosophical of French naturalists, yet personally very little is known of him. He left almost nothing autobiographical; his contemporaries gave few details relating to him or his life. The present volume contains more about him than any previous attempt, but it has nothing of childhood and youth except the date of birth, the birthplace and its present condition, and the fact that, while being schooled for the Church, he quit to become a soldier. Concerning his later years there is somewhat more. Promoted an officer on the field, he then, being disabled, after a year in the hospital, was a bank clerk for awhile, and studied medicine for several years before he turned to science and became a botanist. At about thirty-four years of age he published his 'Flora of France,' a work which brought him recognition, popularity, and opportunity. As court botanist he travelled and collected in different parts of Europe. His first publication in zoology, on Molluscs, appeared when he was forty-eight; still later, he dropped the plants to occupy himself with invertebrate animals, doing his greatest work on them, until age and blindness prevented.

The first to teach evolution and descent —heretical doctrines in the eyes of the Church—he met with ridicule and persecution, in part probably from jealousy of his early successes. His popularity waned, and, though lecturing and publishing well toward the end, at his death his body was placed in a trench of the unknown and uncared for, whence his bones were thrown on the heaps in the Catacombs and lost. It is from his numerous publications and his lectures, and from notes relating to his duties in the Garden of Plants and the Museum of Natural History, that most concerning him is drawn. In the lack of other material, his writings and teachings are specially dwelt upon. Half or more of the volume under examination is in quotations and translations, to render the matter more exactly. The greatest import lies in the discussion of Lamarck's philosophy and its bearings on the science of his time or of the present, and in a fair presentation of his views in comparison with those of contemporaries or of men of earlier or later times. The author has a full appreciation of the breadth of mind, originality, industry, and persistence of his subject, and of the permanent value of the philosophy, as also of the systematic work in botany and zoölogy. In the comparative discussions, the treatment of the views of Buffon, Erasmus Darwin, Geoffroy St. Hilaire, Cuvier, Charles Darwin, and others is particularly interesting, and clearly shows the great extent to which some of the most modern conclusions in science have been anticipated. The volume is a good addition to the literature on great naturalists; no other gives so just and full an idea of Lamarck and what he did. Of the four portraits, the frontispiece, a side face, is the weakest, hardly as good as the relief from which it appears to have been taken. A better one, perhaps, to have given with the other three is a front face of later date, representing Lamarck in blindness and poverty, and giving a much more effective idea of the helpless giant as he sat in the darkness waiting for death.

Besides some defects chargeable to the proofreader, several minor items may be noted. The Discourse of 1803, translated in chapter xvi., is omitted from the bibliography. The date of death is said to have been accurately ascertained, but, if so, it has been lost in the telling: "The 'acte' states that December 28, 1829, Lamarck, then a widower, died in the Jardin du Roi, at the age of eighty-five years"; this is followed by—"The obsequies, as stated in the *Moniteur Universel* of Paris for December 23, 1829, were celebrated on the Sunday previous in the Church of Saint-Médard, his parish," and the second sentence from this, again, is, "At the interment, which took place December 30, M. Latreille, in the name of the Academy of Sciences, and M. Geoffroy St. Hilaire, in the name and on behalf of his colleagues, the professors of the Museum of Natural History, pronounced eulogies at the grave"; on the next page, "De Monnet de Lamarck buried this 20 December, 1829," etc., is copied from the register, and several pages farther along it is said that "At a session of the Professors held December 22, 1829, the first meeting after his death," etc. The last chapter, that on Neolamarckism, is so much in the nature of a lot of testimonials as to raise a question whether it adds either to strength or to completeness in a history of 'Lamarck, his Life and Work.'

RENSEIGNEMENTS GÉNÉRAUX.

L'Enseignement de l'Ecole des Sciences Politiques est le couronnement naturel de toute éducation libérale. Chacune de ses grandes divisions constitue en outre une préparation complète aux carrières d'Etat et aux examens ou concours qui en ouvrent l'entrée: (Diplomatie, Conseil d'Etat, Cour des Comptes, Inspection des Finances, Inspection des Colonies), et à des postes d'initiative ou de contrôle dans les grandes entreprises privées.

Les élèves sont admis sans examens, avec l'agrément du Directeur et du Conseil de l'Ecole; il n'ont à justifier d'aucun grade universitaire.

L'enseignement comprend un ensemble de cours répartis en deux années, mais la durée des études peut être étendue à trois ans. Un diplôme est délivré, en fin d'études, aux élèves qui ont subi avec succès les examens.

**ANNEE SCOLAIRE 1902-1903.**—L'année scolaire commencera le 10 novembre 1902 et finira le 6 juin 1903. On s'inscrira au Secrétariat à partir du 3 novembre 1902. **Inscription d'ensemble** donnant entrée à tous les cours et conférences réguliers et complémentaires et à la Bibliothèque (environ 25,000 volumes et 160 revues et journaux français et étrangers) ..... PAR ANNÉE: **300 fr.**

*Une* **Brochure spéciale** *donne des renseignements détaillés sur l'organisation de l'Ecole et sur les carrières auxquelles elle prepare.*

*S'adresser à l'***ECOLE, 27, Rue Saint-Guillaume, PARIS.**

MARYLAND, Baltimore, 122 and 124 W. Franklin St.

*EDGEWORTH BOARDING and Day* School for Girls—39th year will begin September 26, 1901. Mrs. H. P. LEFEBVRE, Miss E. D. HUNTLEY, } Principals.

MASSACHUSETTS, Boston.

*BOSTON UNIVERSITY Law School.*
Address the Dean,
SAMUEL C. BENNETT.

MASSACHUSETTS, Concord.

*CONCORD SCHOOL,*
Special attention given to boys preparing for college. Location exceptionally attractive, near the historic village of Concord. Ball field, tennis-courts, and boathouse. A family school with individual attention.
THOS. H. ECKFELDT, Head Master.

MICHIGAN, Detroit, 73 Stinson Place.

*DETROIT HOME and DAY SCHOOL,*
25th Year. Prepares for all colleges open to women. 20 received in the school family.
The Misses LIGGETT, Principals.

NEW YORK, Tarrytown-on-Hudson.

*HOME INSTITUTE.*
A Boarding and Day School for Girls. College preparation. Reopens Sept. 18. Miss M. W. METCALF, Prin.

PENNSYLVANIA, Philadelphia, Germantown, 59 High St.

*IVY HOUSE.*
Preparatory to Bryn Mawr and other colleges.
Address Miss MARY E. STEVENS.

PENNSYLVANIA, Rosemont, 1 mile from Bryn Mawr College.

*THE MISSES KIRK, formerly connected* with Bryn Mawr College, will begin the 4th year of their College Preparatory School for Girls in a new and larger house, on October 2, 1903. Number of boarders limited to twelve. Careful individual instruction.

SWITZERLAND, Geneva.

*A SELECT HOME SCHOOL for 6* American boys in cultured French-Swiss home. Unique advantages. For pamphlet, etc., address J. C. DUFOUR, M.A., 20 Ave. de Lancy, Geneva.

*MISS ANABLE'S Boarding and Day* School for Girls. Established in 1848. Circular on application. 1350 Pine St., Philadelphia.

**Abbot Academy** ANDOVER, MASS.

A high-grade school for girls. Fine situation. Complete modern equipment. Fine buildings. Ample provision for outdoor exercise. Personal attention of teachers. Address The Principal.

**St. Agnes School:** *ALBANY, N. Y.*
Estab. 30 yrs. in the interest of the best education. For girls of all ages it combines the best **Physical, Moral, Intellectual, Domestic, and Religious Training,** with ideal **Home Living.** Built on high ground above the historic Hudson, equipped with every progressive feature of **Study** and **Recreation,** including a laboratory for scientific work, gymnasium, art studios, lecture hall, and library. High standards in art and music. Prospectus on request.
**Miss Catherine R. Seabury,** Head of School.

**Mrs. Delafield and Mrs. Colvin's**
**SCHOOL FOR GIRLS**
Successors to Miss Heloise E. Hersey.
**An institution of the highest scholarship**
Offering exceptional surroundings and relationships to those who value them at an increased cost. Only thirty pupils with eleven teachers secures the most careful personal supervision. No pupil rec'd without a personal interview. *Terms,* $1,250 *a year.*
**25 and 46 Chestnut Street, Boston.**

PENNSYLVANIA, Bryn Mawr.

**Miss Baldwin's School for Girls**
**Preparatory to Bryn Mawr College**

Miss FLORENCE BALDWIN, Principal. Within 11 years more than 145 pupils have entered Bryn Mawr College from this school. Diploma given in both general and College Preparatory Courses. Fine fire-proof stone building, 25 acres of beautiful grounds. For circular, address the Secretary.

**Ontario Ladies' College**

***Reading Case for the Nation,***
To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

# An Educational Directory

I.—The NATION stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in the NATION has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 206 to 210 Broadway, N. Y.

**L. MENDENHALL, Duluth, Minn.**

# The Nation

The New York *Nation*, founded in 1865, and conducted with rare editorial continuity to the present time, enlisted from the beginning the willing service of the best morality and enlightenment of the country. The leading colleges and universities have freely contributed to its staff of writers, have used it constantly for purposes of instruction, have made it the vehicle of interchange of sentiment, of literary inquiry, of advertisement for all good causes. It is kept on file at such institutions, and in every public library of importance, and is incessantly consulted. As a forum of general discussion it has never had a peer, and its total body of casual correspondence surpasses any of a like character ever brought together in this country. Its special correspondence has been not less remarkable, averaging more than a hundred letters yearly gathered from all quarters of the globe.

In politics it has made the same mark, and even more profound; but here the recognition has been less ungrudging because the spirit of party condemns independent and disinterested criticism, such as is welcomed in all branches of the scientific pursuit of truth.

*The Nation's* literary criticism has, for carefulness, evenness, justice and style, earned it the first place on this side of the water, and, by the consensus of foreign opinion, put it on a par with the best authorities in any country.

The list of writers for *The Nation* speaks for itself as to the intellectual and moral company to which its readers are habituated; and these readers are themselves a class apart.

The subscription price of *The Nation* is Three Dollars per annum. Published by New York Evening Post Co., Broadway and Fulton St., New York.

# The Nation.

*NEW YORK, THURSDAY, JULY 24, 1902.*

## The Week.

Who would suppose, from the tone of the American press, or even from the tenor of the communications of the Administration to the Vatican, that the Philippine friars had a shadow of legal right behind them? "The Friars Must Go," is the current cry; yet it is in direct disregard of the most solemn treaty obligations assumed by this Government. The second paragraph of Article VIII. of the Treaty of Paris reads:

"And it is hereby declared that the relinquishment or cession, as the case may be, to which the preceding paragraph refers, cannot in any respect impair the property or rights which by law belong to the peaceful possession of property of all kinds, of provinces, municipalities, public or private establishments, *ecclesiastical* or civic bodies, or any other associations having legal capacity to acquire and possess property in the aforesaid territories renounced or ceded, or of private individuals, of whatsoever nationality such individuals may be."

Now it is to that clause that the Philippine friars, and their protectors in Rome, are entitled to point and say, "We stand upon the law." The holdings of the friars come distinctly under the provisions of the treaty. They are plainly property of the sort which we have pledged ourselves to allow no man to "impair." Yet when its owners come to the American authorities in Manila and in Washington and demand that they be reinstated in "the peaceful possession of their property," the answer they get is, "Not at all. You must go." Indeed, Secretary Root declares that the United States "cannot permit" the reinstatement of the friars in their property. We vowed we would do it; now we say that we shall not allow it. The negotiations are broken off for the present, as it was inevitable they should be, considering the temper in which they were undertaken. The *Tribune*, however, assures us that it "is not for a moment to be conceded" that Secretary Root's diplomacy has been "defeated." To prove the case up to the hilt, it prints the pictures of two of the three Cardinals who "are held responsible for the failure of negotiations over the friars' lands."

---

President Roosevelt is in luck to have received Senator McLaurin's declination of a proffered United States judgeship. The Court of Claims is one requiring a high grade of judges, adequate to the important questions brought before them, and to the serious responsibilities which they have to sustain; and the retiring Senator from South Carolina has impressed no one, unless it be the President, with his qualifications for that bench. His refusal to accept a seat on it, in view of the charge made against him that he was selling his party allegiance for that reward, betrays more delicacy on his part than we can think the President displayed in offering him the appointment. Mr. Roosevelt is reported to have said that he desired to give McLaurin "some place," not as a reward for his support of the Administration, but as a recognition of his "proving that a Southern man may fight in the Northern ranks of a reunited people." That elegant phrase is only another way of saying that McLaurin became to all intents and purposes a Republican. For that he may have deserved gratitude and a reward, but some other than a judicial appointment should have been found for him. The President cannot use judgeships to pay party debts without injuring both his own prestige and that of the judges. He will probably have many important judicial vacancies to fill; and it is fortunate that he has been saved from the blunder of naming so unfit a man as McLaurin for the first one.

---

Representative Chester T. Long of Kansas was never much known outside his State until he came into prominence as an earnest advocate of Cuban reciprocity in the Ways and Means Committee, and as the zealous supporter of Mr. Roosevelt's policy on this question when the Kansas Republicans, a few weeks ago, had to decide between the President and Senator Burton, one of the "insurgents." Since this episode Mr. Long has come to be a considerable figure in national politics, and he proves to have an interesting personality. He recognizes that reciprocity with Cuba is the great issue in his State, and he delivered a speech on the subject before the Chautauqua Assembly at Ottawa, Kan., last week, which was a fine specimen of vigorous and courageous argument. He first showed that such reciprocity as Mr. Roosevelt has urged is consistent with Republican doctrine, and then demonstrated that nobody in this country could be harmed by it—not even the farmers who raise beets to be converted into sugar—since the price of sugar, and consequently of beets, would not be affected by the proposed reduction of the duty on Cuban sugar. But the strongest part of the speech was Mr. Long's insistence upon the moral aspects of the question, growing out of our special duty to Cuba and our special pledges to her.

---

Wisconsin Republicans have for two years been involved in a factional controversy of the utmost bitterness. Robert M. La Follette, an ambitious and forceful politician, who appears to be a man of much the same type as the late Hazen S. Pingree in Michigan, and, like him, is considered by many a thorough-going demagogue, succeeded in securing the nomination for Governor in 1900. He was elected by a majority which attested his personal popularity, for his vote fell only 1,447 short of that polled for McKinley, who was supported, on the issue of opposition to Bryanism, by many thousand Democrats in a State long distinguished for its earnest adherence to sound money. La Follette had made his campaign chiefly on the promise of reform, both in the method of making nominations and in the matter of taxing corporations. His Republican opponents had sufficient influence in the Legislature to thwart the full accomplishment of his purposes, and the Governor therefore sought a second term upon the same issues. The "Stalwarts," as his opponents have often been styled, fought him with the utmost vigor in the caucuses, but they were overwhelmingly defeated, La Follette securing fully two-thirds of the delegates to the convention which met last week.

---

Chance gives a national bearing to one feature of this year's State election in Wisconsin. The Legislature which is to be chosen in November must elect a United States Senator, as Mr. Spooner's term will expire next March. The Senator has been busily engaged in his duties at Washington through nearly the whole of the contest in the primaries, and he had held aloof, so far as the public was informed, from the previous dispute between the factions. But he is hated bitterly by La Follette, and his closest friends have been among the older party leaders whom the Governor has pushed aside. The mass of Republicans admire the Senator's ability, and desire his continuance in the public service, but the La Follette managers in the convention insisted upon conditioning their support on his endorsement of the La Follette platform which had been adopted. So far as its chief planks are concerned—"the equal and uniform taxation of all taxable property," and the nomination of all candidates at a primary election on a certain day by direct vote under the Australian system—it is hard to see why Mr. Spooner should not accept them, as the "Stalwarts" generally must do, unless they are prepared to bolt on seemingly insufficient grounds. The resolution adopted truthfully declares that Mr. Spooner "has become recognized as the leader of the United States Senate," and in ordinary circumstances it would be a national misfortune if a public man of such standing should be forced out of Congress by a factional controversy in his State. Posterity, however, reviewing Senator Spooner's

rôle in our Imperial rake's progress—that of apologist, against his own better judgment, salver of the public conscience, and adroit legislative draughtsman—may see in his retirement only the poetic justice which is sure to relegate many of his Jingo associates to obscurity.

---

We can but admire the strategy which Chairman Babcock announces for the conduct of the Republican campaign. He is going to have no "literature" this year. The ordinary "campaign handbook" would, indeed, tax the skill of the compiler, for an election in which different sections of the party are at swords' points over the true policy to be advocated. As Mr. Babcock astutely observes, "The people are tired of literature, and want a change." He is going to give it to them in the shape of an unprecedented outflow of oratory. A perfect "firing line" of Republican stump-speakers is to traverse the country. They may fire at each other, very likely, but anyhow they will keep up a tremendous volleying. That is the main thing. Agreement on the real objective is only a bookish way of making political war. Mr. Babcock himself will denounce the high tariff which shelters Trusts, and Congressman Payne will propose to shoot on the spot any man who lays a sacrilegious hand upon one of its schedules; Representative Long will make Kansas ring with his clamorous demands for Cuban reciprocity, and Mr. Tawney of Minnesota will declare that policy no better than treachery. This is a somewhat obvious inconsistency, but, bless your simple heart, the object of a political party is not to be consistent, but to win the elections. As the *Sun* solemnly puts it, the duty of the hour is to "rebuke" the faithless Republican party, "provided the spirit of vengeance goes no further." That is to say, we must be very angry with our betrayers, but must be sure to send back to Congress enough quarrelling Republicans to betray us again. To this end, Chairman Babcock's plan of go-as-you-please bushwhacking, without concert and without responsibility, seems beautifully adapted.

---

The action of the bituminous miners' convention at Indianapolis last week is one of the most gratifying developments of the time. It was possible for the miners to have simply said, We will force a sympathetic strike, or, We will not; and let the matter go at that. Such action would have left the decision merely a matter of expediency; and, in fact, it is the question of expediency which has been most actively discussed in the preliminaries of the convention. The favorite argument of miners who opposed in advance a strike by the soft-coal men, has been that such a strike, with the resultant loss of wages, would deprive the hard-coal miners of the financial assistance which they might otherwise expect. Fortunately, the miners at Indianapolis do not rest their decision on any such narrow grounds. Their decision not to strike is clearly based on the fact that a strike would violate contracts with their employers. The bituminous union has agreed on the wage schedule for the year; it has signed, in behalf of its constituents, an agreement to recognize that schedule during the next twelve months. There have not been lacking hot-headed labor leaders to plead for disregard of contracts, and to raise again the cry of "My Union, right or wrong." But the convention is a deliberative body. It has heard some plain truths, and acted on them intelligently.

---

Mr. Mitchell put the case of the conservative party, in his reference to the dangerous effects of contract violation. It must be said that the view of contracts presented in his speech was a little naïve. To say that, "though a temporary advantage may be gained by violating contracts, it will certainly lead in the end to disaster," is, to say the least, a somewhat unconventional way of discussing the contract question. But Mr. Mitchell doubtless knew his men, and acted accordingly. Unions have not been noted for accepting the view of contracts which will be found in treatises on law or in a merchant's code of ethics, and it was perhaps diplomatic to waive the question of the organization's honor and to argue solely from the laborer's personal interest. And, from that point of view, there can be no doubt of the soundness of Mr. Mitchell's argument. If the members of a union will not keep the contracts signed by its officers in the laborers' behalf, then it is clearly foolish for the employers to sign such contracts. But if employers were to refuse to sign, then the laborer is at once back where he stood a generation ago. It has never been alleged that the companies repudiate their side of the contract. But they could hardly afford to continue making pledges of wages for the year if the *quid pro quo* were to depend merely on the whim of the other signatory. Mr. Mitchell's address went considerably beyond even this appeal for contract observance. He took up the whole question of sympathetic strikes, and had some very forcible comments to make upon them. He plainly said that "sympathy strikes" result invariably in failure for the men who participate in them, and that the proposition for such a strike to-day is a mistake.

---

It is now several weeks since it was declared, in behalf of the anthracite operators, that they could man their mines on a day's notice if they were to give work to strikers who were anxious to return. This statement was either correct or incorrect. If it was incorrect, the public view ought to be promptly set right by a trustworthy explanation. If it was correct, then we are wholly at loss to understand what the operators mean by their present attitude. It is true enough that the public has suffered less from the deadlock at the mines than had been expected—apparently because a mysterious reserved stock of anthracite has been fed out by somebody to the market after prices had been forced to the maximum. But the *Engineering and Mining Journal* of last Saturday, after remarking that the regular July price for coal at New York is $4.05 to $4.30, adds that "what coal is picked up outside of that still supplied to certain old customers, changes hands at $7 to $8 per ton." Whether the coal which is being quietly put out, at these extortionate prices, comes at first hand from the operators, or from speculating intermediaries, we do not know, and it does not greatly affect the merits of the question. In either case, a wrong is being done to whatever people have to buy the coal, and is done without excuse, unless—and this the operators themselves do not assert—it is impossible to start up mining.

---

In a recent article in the Chicago *Record-Herald*, President J. G. Merrill of Fisk University calls attention to the growing need of trained negro physicians and ministers. In many parts of the South the colored man has quite outgrown the old type of negro preacher, and there are no places where he does not need in his pastor a social guide and educator ready to direct the forward movement of the race. It is not generally known in the North that Southern white ministers, at least in many sections, decline to even marry negroes. In one case of which we know, a negro couple desirous of marrying in an Episcopal church were able to do so only by passing themselves off for white persons after a long journey to a city in which they were not known. The negro doctor, as President Merrill points out, has "an amazing opportunity" among the eight millions of his race, inasmuch as the black man turns to a physician of his own color as readily as the white physician in the South turns away from colored patients whenever he can honorably do so. President Merrill was able to tell of the success of twelve negro doctors in Nashville, all doing well financially, and half of them amassing property. He reports also that it is easier for a colored physician to build up a self-supporting practice than for the white doctor. The necessity of good medical schools for negroes should be plain to all, even to those who doubt the wisdom of higher education in the classics and natural sciences. New York city would be benefited if there were several hundred competent and professionally high-minded colored doctors within its limits to do missionary

work in its terribly degraded "colored quarters."

---

The formation of a large real-estate and building corporation, with a capital of $60,000,000, is, of course, in accordance with the economic tendencies of the time. It is merely an extension of the modern idea of combination to the industry of building and the management of real estate. The organization of the new "Realty Trust," too, so far as its details are known, presents many points of contact with other recent large flotations. The new corporation will acquire the holdings of several large corporations already in existence, giving in return its own shares; and it may be taken for granted that the properties thus purchased will be put in at a generous advance over their present valuation. This, it will hardly be denied, is pretty high, for the large realty corporations, in their recent purchases, have bid up prices so far that many of the stiffest property-holders have taken advantage of the opportunity to sell. It may be assumed, therefore, that not more than one-half of the $60,000,000 capitalization, at the most, will represent actual assets. Neither is it to be feared that the new combination is likely to monopolize the field. The choicest parcels of Manhattan realty are already owned by powerful families and estates, and are practically out of the market. It is little less than a religion with these families—the Astors, for example—never to sell. It is inconceivable, therefore, that the new Trust will unfavorably affect the public in the way of advancing rents. Competition, especially in the provision of office and high-class apartment accommodations, will practically be as keen as before.

---

The public is interested in the combination, however, from a very different standpoint. It means, in a word, the opening up of an entirely new field of investment. Hitherto the investor who cared to put his surplus cash into real estate has been limited to the actual ownership of property, or, secondarily, to investments in bonds and mortgage. But the value of centrally located Manhattan realty has so advanced in the course of the last fifteen or twenty years that its actual ownership is limited to a very small percentage of the public. A down-town office building, for example, one of the properties which the Trust will absorb, represents invested capital of $7,500,000; a new hotel, planned for the Plaza site, will cost in the neighborhood of $10,000,000. It is evident that for financial undertakings of this kind a different form of organization is required from that which prevailed in the days when Wall Street lots sold for $1,000 or less. To meet this want the new realty combination is formed. That it supplies a genuine need, therefore, is plain at a glance. That Manhattan real estate, ably and conservatively managed, is as good an asset for a dividend-paying corporation as steel or gas or railroads, must also be admitted. Whether the new corporation fails or succeeds, therefore, will depend entirely upon the way it is conducted. The idea, though novel, is economically sound.

---

Russia's reported suggestion of an international congress to deal with Trusts has that strange air of a union of self-seeking and of universal if somewhat dreamy benevolence which has marked other Russian proposals, of late years. Cynics will at once say that Russia wants in some way to avoid having her sugar exports penalized, as they now are in this country, for being aided by an indirect bounty. Others will see in the Russian Government's invitation to the nations to meet for discussion of great combinations of capital only one more sign of the European dread of "the American peril." In particular, it will be said, Russia fears American competition in China, even in Mantchuria, which she has marked for her own, and is plotting in this way to retain her markets for herself while winning a better chance to compete under the system of the open door in the Orient. All these things may be alleged, and may be true; yet our exporters will do well to note the alternative which M. Witte holds up. Failing an international agreement, says the St. Petersburg *Financial Messenger*, "there is but one remedy, namely, increased customs duties." In other words, that staff of protection on which American exporting Trusts lean at home, may be as a sword levelled at them abroad.

---

In the idea itself of an international congress on Trusts there is something alluring. Nor does the movement for calling one come badly from the Czar Disarmer. A reason frequently given for the maintenance of swollen armaments is the trade rivalry of the leading nations. Cobden saw and declared, even in his time, that "the cry for new markets might become as mischievous as the old cry for extended dominion," and that jealousies about trade might lead to war as directly as disputes about territory. There is no doubt, therefore, that if the nations could make an amicable agreement covering international trade, the chances of general disarming would be greatly brightened. As for the necessity of common action, that is not at present clear; nor is it easy to see what effective plan of repressing the international ill effects of Trusts could be devised. Yet even if the project is only a dream, as yet, we must not forget that the dreams of one generation are often the realities of the next. The Common Law has long aimed its weapons at regrating and monopoly; who knows that some sort of international statute against internationally operative Trusts may not hereafter find a place in the *jus gentium*?

---

In view of the German Emperor's recent speech against excessive drinking, made at Bonn before his old college corps, the Borussia, it is interesting to note that the Prussian Landtag recently adopted a measure which is also aimed at wholesale drinking. Incidentally it attempts to limit the sale of liquor during church hours on Sunday. Thus, while many New Yorkers favor opening the saloons on the day of rest, the Prussians are working towards a limitation of Sunday selling. There is, of course, no thought of stopping the whole liquor business on the Sabbath, but the action of the Landtag is one of a number of signs that thoughtful Germans have taken alarm at the constant drinking, by which thousands of people, if not drunk, are always more or less under the influence of alcohol. Naturally, the movement to restrict Sunday liquor-selling is meeting with much opposition. Even so high-minded a newspaper as the Berlin *Tageblatt* raises the familiar cry that to close the saloons on Sunday morning would infringe upon the citizen's liberty. There will be much more agreement on the necessity of putting an end to the bestial drinking at the German universities. For his outspoken language about this unmitigated evil the Emperor deserves all praise. So does the Crown Prince's refusal, since his imperial father's speech, to conform to the Borussia's drinking requirements —an action hitherto involving social ostracism for one not born to the purple.

---

A single administrative order of Premier Combes's is to close 2,500 Roman Catholic schools in France, throwing out of employment 6,000 masters, and leaving 150,000 children to be otherwise provided for. M. Waldeck-Rousseau would have been content to leave the Associations Law as an official expression of opinion, useful chiefly as a general reprimand to the contumacious orders, but available, on occasion, for the exemplary repression of any particularly obnoxious body. Premier Combes apparently means to enforce it as literally as if it were the tax on doors and windows. Without going into the casuistry of these two attitudes towards the Associations Law, it is plain enough that M. Waldeck-Rousseau's mild *in terrorem* policy tended to keep the Catholics loyal, while Premier Combes is apparently studying the methods of making the Catholics his enemies. One must recall that these Roman Catholic schools are among the best in France—that they are preferred to the Government schools by the wealthy and aristocratic classes generally—to appreciate the odium that the new Ministry is deliberately incurring.

*AN APPEAL TO THE PEOPLE.*

From Lincoln, Neb., comes the interesting news that the Republican State Committee, at its meeting on Thursday, "turned down" Senator Dietrich, one of the beet-sugar insurgents. Mr. Dietrich and his colleague, Mr. Millard, who stood with him on the issue of Cuban reciprocity, had already tried to persuade the party managers in their State that they could help in the campaign as much as though they had supported the President and the majority of Republican Congressmen on this question, but they had been given to understand that their services were not desired. Mr. Dietrich was unwilling to accept the rebuff, and made a personal appeal to the State Committee, only to find that body unanimous in sustaining the President, and in feeling that a Senator who had tried to thwart him could not render any assistance on the stump.

The Republicans of Kansas have been quite as frank and united in their rebuke of Senator Burton, another of the "insurgents," and in their endorsement of Representative Long, the member of the Ways and Means Committee who from the very first earnestly supported the policy of Cuban reciprocity. Mr. Burton recently made a long and labored attempt to justify his course, but even before he delivered this speech he had found party sentiment so generally against him that he did not dare to maintain an uncompromising attitude. He therefore followed his attempt at justification of his past conduct with the announcement that he would cheerfully turn around and support reciprocity if his constituents should say that he ought. He soon found out what they thought. His home is in the Fifth Congressional District, and the Republicans of Riley County, in that district, held their convention a few days ago. They adopted a resolution which heartily approved President Roosevelt's course in general; particularly endorsed "his unflinching demand for an honorable discharge of the pledges made to the Cuban republic, and for such generous treatment of that country through reciprocal trade arrangements as shall provide relief during its period of recuperation and at the same time bring great commercial advantages to the United States"; and then added:

> "And whereas Senator Burton has requested the people to advise him as to their wishes, now, therefore, be it resolved: That we demand of Senator Burton, whose home is in this district, to vote for and stand by the reciprocity policy of President Roosevelt."

Meanwhile Representative Long wins everywhere in his district the warmest praise for the struggle he made while Congress was in session, and for his determination to keep up the fight until it shall be won. A meeting of the Republican Congressional Committee in his district was held, the other day, at which he outlined his plan of campaign. Mr. Long referred to the unequivocal declaration in favor of reciprocity made by the State convention of the party, said that his canvass would be made squarely on that platform, and added that "there will be no faltering, no equivocation, no hesitation." Mr. Long quoted the President's speech at Pittsburgh on the Fourth of July, in which he declared that "reciprocity is as sure as fate," announced his own agreement with this view, and expressed this sound philosophy as to party action: "If the Republican party confesses that reciprocity is too big a question for it to settle, it will matter little who is the candidate in 1904. The Republican party is a party of action, and it will remain in power only as long as it is able to perform."

The Minnesota Senators and Representatives who opposed reciprocity find their constituents as unresponsive to their apologies as the people of Kansas to Mr. Burton and those of Nebraska to Messrs. Dietrich and Millard. Senator Nelson, Representative Tawney, and the other Minnesota "insurgents" in Congress persuaded the party managers to "let them down easy" by putting a facing-both-ways resolution in the platform adopted by the State Convention, but this device has not helped their case at all. The present situation is accurately summed up by the Minneapolis *Journal*, one of the chief Republican newspapers, which declares that the recalcitrants "find themselves without any real support at home." Senator Nelson, Representative Tawney, and the rest supposed that they would be endorsed because they professed to be standing up for the local interest of beet-sugar making, but the *Journal* says that "the people of the State have risen above the narrow sectional view of this question, and viewed it in the light of National policy and duty."

In these developments there is great ground for encouragement to all who believe that the American people will always rise to a moral issue when it is clearly presented. President Roosevelt should learn from the quick and general response of the Republican masses to his appeal for support against perfidious Senators and Representatives that the next time he may "strike when the iron is hot," as it was in this matter by the end of last February, with entire assurance that the people will sustain him and force their unfaithful servants in the Capitol to recant and to discharge national obligations without delay.

---

*REDEEMING THE AMERICAN NAME.*

Whatever criticisms the future historian may find himself compelled to pass upon the Administration of Theodore Roosevelt, he will be able to cite the President's decision in the case of Gen. Jacob H. Smith as an example of a just and high-minded action, and as a manly blow for the honor of the army and the nation. He will be able to show that the President's decision was not only unexpected by his party associates, but unwelcome to many of them, and that it was rendered at the risk of making himself unpopular with the managers of his party as well as with the army. Editors, generals, and Senators had been apologizing for a method of campaigning in our island possessions which would have received universal condemnation had it been used by Filipinos or Chinese Boxers. It was charged that the Opposition was seeking to dishonor the army and the country; that instead of upholding the men facing the bullets, the critics at home were firing upon them from the rear. There was the excuse apologetic, the excuse denunciatory, and the defence absolute. In behalf of a few uniformed offenders, war was given even a blacker name than heretofore, by the side of which Gen. Gordon's definition of it as "organized cruelty, pillage, and murder" paled. Our military heroes of bygone conflicts were dragged out—Grant, Sherman, Sheridan, even Washington—and their worst deeds retold to defend a "Hell-Roaring Jake," a murderous Waller, and a torturing Glenn. There were plenty of signs of a fetish worship of the army.

Fortunately, the President of the United States, himself a soldier, remained unaffected by the clamor and confusion of the demagogues about him. He forced an apparently unwilling Secretary of War into rigid investigation. He issued an order declaring that "the President desires to know in the fullest and most circumstantial manner all the facts, nothing being concealed, and no man being for any reason favored or shielded." "Nothing can justify," he affirmed, "or will be held to justify, the use of torture or inhuman conduct of any kind on the part of the American army." He insisted, moreover, upon the trial of every officer accused. Now, when the results of two courts-martial have been laid before him, he has been quick to bear out by deed the written promise of last April, and to show unmistakably his abhorrence of the kind of warfare practised by Major Waller and Gen. Smith. By this action he has upheld those who contend that the best way to make an army pure and honorable is to expose its scandals relentlessly and to punish its wrongdoers, just as the surgeon extirpates a poisonous growth which threatens to contaminate the entire system.

In both of the cases at issue the court which tried the officers so erred on the side of leniency as to give special point to "Mr. Dooley's" characterization of it as an "austere but hail-fellow inquiry." But the President has practically censured the court, and has reminded the delinquent officers composing it that the honor of the army is in his hands as well

as theirs to defend. Where it acquitted Major Waller, but the other day the recipient of a "sword of honor," the President declares that he has "sullied the American name"—a phrase borrowed, it might seem, from political opponents. Where the court merely admonished Gen. Smith, the President adds to this totally inadequate punishment by abruptly ordering the officer's retirement. Although the retired list of the army is an honorable one, and does not include the names of more than one or two Eagans, the manner of his going upon it will for ever mark Gen. Smith as a soldier disgraced at the very close of his career. The excuse of his friends that no men, or women, or children were killed as a result of his infamous order, rightly availed him as little as the assertion that Major Waller should have recognized in his "hell-roarings" the weakness of an eccentric and ill-balanced mind. When urged to promote a veteran of four wars by reason of his long service, Frederick the Great once retorted: "So is my mule a veteran of four campaigns, but that does not qualify him to be a general." Similarly President Roosevelt did not allow a long career of some merit to blind him to the atrocious character of Gen. Smith's conduct.

In his treatment of these officers Mr. Roosevelt has gone to the limit of his powers, since no retrial of the accused men, with a view to obtaining proper sentences for them, was possible. The rectitude of the President's action should not blind the public to the difficulty of his position, or lead it to withhold from him the praise he deserves. In going counter to the army-worshippers President Roosevelt has honored himself, and at the same time has made a very shrewd political move. If it should exasperate so unrestrained a defender of "kill and burn" methods as Senator Foraker to have the leader of the Republican party show up his doctrine of righteous brutality and slaughter in its true colors, it will, on the other hand, deprive the Democrats of such an opportunity for criticism of the Administration as was afforded by the conduct of the Secretary of War, who declared, on February 18, that the war in the Philippines had been conducted with "unequalled self-restraint and humanity," at the very moment that he was quietly ordering inquiry into the conduct of Major Glenn, of Capts. Ryan and Lyons, and others.

In its broader aspect the President is entitled to thanks for destroying the whole breastwork of misconception and distortion with which our budding Imperialists were fortifying their doctrine of the infallibility and freedom from criticism of the army. The Dreyfus trial showed the futility of such an undertaking in a nation eaten up and ruled by militarism. It can never succeed in this country, for there will always be Roosevelts to treat men on their merits, without regard to the waving of the flag and the cry of the demagogue, and an Opposition to make it clear that men in uniform differ from others only in the demoralizing character of their profession, and the singular temptations to which their license to kill and maim exposes them.

## *THE BIBLE AS LITERATURE.*

One of the resolutions adopted by the National Educational Association at Minneapolis week before last was the following:

> "It is apparent that familiarity with the English Bible as a masterpiece of literature is rapidly decreasing among the pupils in our schools. This is the direct result of a conception which regards the Bible as a theological book merely, and thereby leads to its exclusion from the schools of some States as a subject of reading and study. We hope and ask for such a change of public sentiment in this regard as will permit and encourage the English Bible, now honored by name in many school laws and State Constitutions, to be read and studied as a literary work of the highest and purest type, side by side with the poetry and prose which it has inspired and in large part formed."

The complaint is an old one, and is well founded. Ignorance of the Bible, even among the educated classes, has reached a depth which would have left our pious ancestors aghast. President Thwing published, some years ago, the results of an investigation into the acquaintance of a typical freshman class with the phraseology of the Bible. An examination was set on the Biblical allusions in Tennyson. The results would have been laughable if they had not been so disheartening. The freshmen could not have gone farther astray if they had been asked to point out Tennyson's Virgilian refrains or echoes of Catullus. As to the fact of the declining and disappearing familiarity with the Bible, there can be little disagreement. Things have reached such a pass that a story recently told by an English man of letters might easily be found applicable to any part of the Bible. He went into a bookstore and inquired, "Have you the Apocrypha?" The young person behind the counter reflected for a moment, and then asked, "Is it a weekly or a monthly?"

That the loss of the old saturation of the popular mind with the language of the English Bible is deplorable, few would deny. It is like letting slip a precious part of our race heritage. The sinewy style, the piquant idiom, the haunting phrase—what shall our literature, our oratory, do without them? But they are going, or gone, from the general memory. The educators at Minneapolis did not overstate the extent of this literary loss of the Bible. We only wish, for our part, that there were any way of making it good: but we fear that the Educational Association was wrong both in its account of the cause of the mischief and its prescription of the remedy. We do not believe, that is to say, that the vanishing knowledge of Biblical incident and diction is due to the banishment of the Bible from the public schools, as a theological book, or that it could be restored by the reading of the Bible in the schoolroom as a pure example of the highest literature.

Where did our grandfathers get their intimate familiarity with the splendid English of King James's version? How did it become second nature to them to make their daily conversation, their family letters, vivid with racy expressions or solemn utterance taken instinctively from the Bible? They became mighty in the Scriptures, not in school, but in the church, and, above all, in the home, by means of repeated reading and compulsory memorizing under a father's eye or at a mother's knee. Ruskin has told us of the process in his own case, and it was typical. Nor did the child dream that it was literature he was getting. Devout awe and godly fear were the atmosphere about the sacred volume. Just because it was "a theological book"—because lightnings and earthquakes and the voice of a trumpet were associated with it, and in it were supposed to be wrapped up the issues of life and death, the destinies of the soul, heaven and hell—it was read and committed to memory with that wrapt attention and excitement which fastened its words for ever upon the mind. An old graduate of Phillips Academy once asked another, "Why could we never forget the principal parts of a Greek verb that we learned under Principal Taylor?" "It was because we were afraid of him," promptly replied the other. "Fear made our minds like highly sensitized plates, and we could not forget." Something like that is the true explanation of the way in which a former generation stored up the language of a book which was thought to be big with the eternal fate of every reader.

Now is it going to be possible to reproduce those old conditions by a restoration of the Bible to the schools as a piece of literature merely? If you set a boy to studying the Apocalypse as a fine specimen of post-Elizabethan English, will he carry from it anything like the imaginative associations, or the indelible memory of epithet and description, which were borne away formerly by children who read in a trembling and holy reverence, not knowing when the beasts and the dragon and the mighty angel might not appear visibly to their dilated eyes? We think the question answers itself. The old familiarity with the Bible was not gained by literary study, and it cannot now be made good by literary study. The Bible, simply grouped among the English books to be read in literature Class A, Course IV., would have to take its chances with Marlowe and Shakspere and Bacon, and would thus be at once degraded from the unique position which it formerly held, and which alone gave it

its unrivalled place in the thought and speech of the English race.

Moreover, if the Bible is to be regarded purely in a literary light, and only as a source of reference and allusion useful to an educated man, we are bound to say that the motive for its study is lessening every year. The reason is that to employ Biblical phraseology is to employ a tongue which is becoming more and more unknown. Nobody who writes or speaks can fail to have perceived this. If you venture to borrow a phrase like "their chariots drave heavily," you are sure to get a query from the proofreader—"drove?" If some Biblical expression leaps to the lips of a public speaker—"abomination of desolation," let us say, or "the mystery of iniquity"—the blank look he observes on every face shows him that he might as well have talked Greek. Thus the purely literary motive for studying the Bible breaks down in another way. If the old Biblical associations in men's minds have disappeared, why should writer or speaker equip himself with even a noble English phraseology which will surely be caviare to the general? We conclude, therefore, that the only way in which the old familiarity with the Bible can be revived is by bringing back the social and religious conditions under which it was "the one book" to a whole people and the man of their counsel. But we hear of nobody who thinks that in fact those conditions can really be restored.

### *MUSIC AND MANLINESS.*

One of the most puzzling of all æsthetic problems lies in the fact that the English, who have achieved such splendid results in some of the fine arts—notably poetry and painting—have so long remained an unmusical nation. A thousand years ago, every Englishman was expected to be able to sing and accompany himself on the harp; and in Shakspere's time the English appear to have been as fond of music as any Continental nation. These good beginnings, however, never led to great results. For a long time it was taken for granted that the hostility of the Puritans to the art of music had checked its growth; but several recent writers have argued plausibly that this hostility has been exaggerated, and that it could have hardly had such far-reaching consequences. British commercialism, and the great national devotion to politics and to outdoor sports, then suggested themselves as explanations; but these, too, did not seem to cover the whole ground.

New light is thrown on the problem by the musical critic of the London *Times*, Mr. J. A. Fuller Maitland, in his recent volume, 'English Music in the Nineteenth Century.' One need not go so far as to agree with him that there have been born in England since 1847 five composers—Mackenzie, Parry, Goring Thomas, Cowen, and Stanford—who constitute a school or group that can be compared with any that the world of music has seen, and some of whom will ultimately be generally accepted as among the greatest composers of all time; but he certainly proves that there has been a musical renaissance in England since the middle of the last century, and that music is held in much higher esteem than formerly. The ideal of a National Opera is still unfulfilled, but the mere fact that the plan has been discussed as practicable argues progress in the right direction. That the London County Council should spend a large sum every summer in giving frequenters of the parks the opportunity of hearing good music would, writes Mr. Maitland, "have seemed incredible not long since." The number of concert-halls and concerts has increased enormously, and at a much higher rate than the general growth of the city. Students no longer have to go to foreign capitals for their musical education; and when they appear on the stage, they may safely dispense with the customary "Herr," "Signor," or "Mme.," and boldly use "Mr." or "Mrs." In short, "in a thousand ways the musical atmosphere is more favorable than it was to native talent."

Of special interest is what Mr. Maitland says about the attitude of the people generally toward music. He finds that in every class of society the standpoint of the average person in regard to it is completely different from what it used to be. The ordinary man no longer sees anything to be proud of in the confession that he does not know one tune from another; and the typical lady no longer thinks it a matter of course to indulge in loud conversation during a musical performance. The frequency with which ladies and gentlemen, in the truest sense of the words, have become professional musicians attests the honor in which the art is now held, and has also helped to raise the tone of the profession itself. But most important of all is the change in the attitude of men toward music:

> "Formerly, the average English parent considered it an almost unmentionable disgrace that a taste for music should manifest itself in the case of the male children; the daughter who had a shapely arm was obliged to play the harp as a matter of course, and any two sisters nearly of an age were bound to display their charms in pianoforte duets; but a son who should take to singing or to 'wasting his time' at the piano was held to be a sort of disgrace to any respectable family, and to require some grave treatment, medical or other, for his cure."

To-day, if we may believe our informant, the normal English parent sees no more objection to cultivating the talent for music than a taste for another art, or for a science. Be that as it may, does not the passage just cited suggest a solution of the mystery regarding the failure of the English to have great names in music? So long as music was regarded as an unmanly art, it was natural that the manliest and most ambitious men should devote themselves to other arts or occupations. It may be said that real musical genius is an irresistible impulse, and unchangeable, but that is not always the case; indeed, great genius is apt to be versatile. Richard Wagner had the poetic and the pictorial faculties almost as highly developed as the musical. Had he lived in England, he probably would have been simply a poet or a painter, allowing his musical faculty to lie dormant.

It must be clearly understood that what we mean when we deny the England of the past a place among the musical nations is not so much that it has not produced good singers and players, as that it has not given birth to a single composer of the first rank. In the matter of performance, music is both manly and womanly; violinists and pianists of the fair sex are nearly as great as their male rivals, while sopranos and contraltos are quite the equals of tenors and bassos. But, on the creative side, music is distinctly a manly art. The very fact that it has always been held to be more or less of a feminine art, and that, nevertheless, we have not a single immortal melody written by a woman, argues that virility is essential to musical creativeness. If the English, therefore, have given up the absurd idea that music is not an art for men, this change in itself will raise bright hopes for the future; and it is not impossible that, a hundred years hence, an historian of England may be able to write what a German historian can truthfully say to-day—that the two most prominent and most manly figures of the past century in his country were a politician and a musician—Bismarck and Wagner.

### A FRENCHMAN'S DIARY IN OUR CIVIL-WAR TIME.—II.

November 12, 1864.—New York. Breakfast at the Union League Club, where I had to make a speech and acquitted myself as best I could, feeling that mistakes would be overlooked in a foreigner. Goldwin Smith, an invited guest like myself, made a genuine discourse. If he carries back to his own country all the messages given him to-day, he will have his hands full:

"Tell England that we are her best friends, and can never dispense with her esteem and friendship." "Tell her," said another, more of an *Alceste* than a *Philinte*, "that we have become indifferent to her praise and censure alike." "We are but one and the same nation," said a third; "John Milton was an American, and George Washington was an Englishman." "All America," shouted a fourth, "is a new England." "What distinguishes us from England," says a fifth, "is that there is nothing insular about us; we are an idealistic people like the French." "You are a Liberal," said the Episcopal Bishop Coxe to Mr. Goldwin Smith; "you speak ill of England's aristocratic classes, her prelates, the high

dignitaries of her Church. As for me, I like your Tories and your High Church." There were no fewer than twenty speeches. Among the guests I will name Bancroft, Evarts, George William Curtis, John Jay, Henry Ward Beecher, the aged poet Bryant.

November 13.—Dined with Richard M. Hunt, the architect, who studied at the Paris Beaux-Arts; together with John Jay, Bancroft, Goldwin Smith—the last very severe on Palmerston for his quarrelsome policy and on the recent expedition to China. "We are interfering in a host of countries in contempt of all international law, and, once there, we are indignant if these laws are violated in the most insignificant particulars by people who have never heard of them."

November 15.—Boston once more. Dined at the Revere House with the officers of the *Kearsarge*, the ship which sunk the *Alabama* off Cherbourg. Very beautiful speech by Everett in favor of Lincoln, and good remarks by R. H. Dana, jr. Captain Winslow tells in a very simple manner of his cruiser's pursuit of the *Alabama*.

November 23. — Accompanied Wendell Phillips to a lecture by Oliver Wendell Holmes, both original and agreeable. I made the acquaintance of Agassiz, who is very cordial and charming, possesses a great deal of warmth and vigor, is powerfully built, with an enormous head, strong jaws, a very speaking eye always in motion. He discusses with me Darwin's evolutionary theory, to which he is greatly opposed. He speaks enthusiastically of the American people, their generosity and love of science. They give him all he wants for the Museum he has founded.

Heard a lecture by Emerson on "American Life." He reads very badly, turning his leaves backwards and forwards. This is disturbing, but at the same time fixes the attention; every moment we catch a piquant expression, an unexpected metaphor, a paradox, a profound thought. You could have heard a fly. Emerson has his disciples—I can imagine it. There emanates from him a sort of happy serenity, a peace. He makes no pretence of eloquence; he is content to be a thinker.

November 28.—With Wendell Phillips visited courts and schools. Dined with J. B. Smith, a colored caterer, Boston's Chevet. He sent my wife, on our arrival, a magnificent bouquet. I went with Mr. Phillips to thank him. I found him at his home in Cambridgeport, with his wife (very white and well bred). In his parlor I saw portraits of Sumner, Phillips, and Garrison, a fine photograph of young Colonel Shaw, killed at the head of a black regiment in an assault on a Charleston fort. I did not decline Smith's invitation to dine with him. My wife and Mrs. M. W. Chapman were with me; the other guests were Sumner and Longfellow. The dinner was excellent. Longfellow was extremely gracious, and conversed with much warmth. Smith was evidently very happy, but nothing that he said was put on or exaggerated.

Called on Longfellow at Cambridge, in the old mansion once Washington's headquarters. Dined with Longfellow and his three daughters. He inquired about our writers, particularly Musset, and showed a lively admiration for Lamartine—"a bird that soars very high." He prefers Schiller to Goethe, and finds "Faust" unwholesome.

December 1.—Agassiz conducted me through his Museum of Natural History, immensely stocked with material. He explained to me his theory of embryonic development parallel with the historic and chronological. Dined at the club with Mr. R. H. Dana, jr., who gave me details about the Supreme Court and the character of its judgments. Soirée at Mrs. Julia Ward Howe's, she reciting verses composed by her in honor of Bryant.

December 2.—Another æsthetic soirée at the house of James T. Fields, the publisher: a lecture by Henry James on Carlyle before a very select audience. Mrs. Fields, with downcast eyes and delicate crossed hands, in a velvet gown cut in the manner of some of Raphael's portraits, had a pose full of grace. Without being a regular beauty, she possesses very great charm.

December 5.—With Edmund Quincy and my wife I go to Concord to visit Emerson. His house is old, and simple in the extreme; the parlor is furnished with a few old pieces, with faded red curtains, and branches of evergreen over doors and picture frames. A small room adjoining serves for a library; the books, ranged on wooden shelves, almost all in paper covers and showing marks of use. I notice good engravings of Michelangelo's "Sibyls" and great frescoes, a head of Dante, aged and angular, a crayon of Dante in his youth, a head of Pindar crowned with laurels.

Emerson talks at some length of Hawthorne and his morbid shyness. Mrs. Emerson (a second wife) is a tall woman with a spare face, in which a trace of beauty still lingers; large and somewhat wandering eyes. After the very simple but abundant dinner, Emerson took us out in a small carriage which he drove himself. He showed us the small obelisk erected on the bank of the Concord River, at the point where the first shots were exchanged between the British soldiers and the American militia. He also pointed out Hawthorne's home, of painted wood, like all the houses of the neighborhood, with a sort of square wooden tower where Hawthorne betook himself to work undisturbed. Near the obelisk Emerson called our attention to an old house minutely described by Hawthorne in his 'Mosses from an Old Manse.'

The Concord landscape viewed on this winter's day, the leaves already on the ground, has a certain analogy with Emerson's talent: beneath the stratum of fertile soil is hard gneiss, is granite. A beautiful light lends something aerial to a severe nature. Great benevolence, slightly skeptical, is the basis of the man's character. His spirit is broad: *humani nil a se alienum putat*. He is fond of Agassiz, but also of Darwin. He likes Sainte-Beuve, because Sainte-Beuve talks to him of everything. We encounter in Emerson's writings Montaigne, Carlyle, Indian philosophy, Plato, Swedenborg; but under his pen everything takes an original turn, a racy flavor. The Concord grape is the American wild grape improved by cultivation. Though for ever borrowing, Emerson's genius is the most original in America.

December 6.—Lecture by Wendell Phillips on the situation. He is a well-nigh perfect orator: diction, choice of words, elegance, fluency, richness of imagery, voice, figure, nobility of attitude and of countenance—nothing is wanting.

December 20.—Called on Mr. Perkins, a Hartford (Conn.) lawyer, and on Mrs. Harriet Beecher Stowe, a relative of the Perkinses. I found her in a house of her own designing, crowded with articles brought back from Europe. She is greatly aged, as abstracted as formerly, less sprightly. Her husband is seventy-two years of age, and has a patriarchal air; he has much wit and humor.

December 23.—With Bancroft, visited the New York Historical Society, and saw Audubon's original drawings representing all the birds of America life size.

December 28.—With John Jay, visited the Astor Library.

December 29.—Dined at Bancroft's with Admiral Farragut, an excellent, perfectly simple and unaffected man. He is from the South, and his wife from Virginia. He has been faithful to the Union and the flag. He spoke to me with admiration of Grant as a man full of resources, very bold in conception, very resolute in action. At this moment Grant directs Sherman, Thomas, and Sheridan, three men of action rather than strategists. "I made Grant's acquaintance," said Farragut to me, "at Grand Gulf on the Mississippi, and told him *that* was the direction for threatening Vicksburg. He reflected, studied the map carefully, and instantly changed his whole plan of campaign. He had caught my idea." The other guests were Baron Osten Sacken, the Russian Secretary, an intelligent man and distinguished naturalist; Miss Helen Russell, Mrs. Bell, Mr. and Mrs. Langdon; Miss Cary, a relative of Agassiz's; Mrs. Barton, daughter of Livingston, former United States Minister to France.

## IRISH AFFAIRS.

DUBLIN, July 6, 1902.

About 100 members of Parliament, town mayors, councillors, and other representative men are now in prison for terms of from two months to a year, practically for denouncing the system of government in Ireland, the over-taxation of the country, and for advocating legislative reform. Some few of these men are treated as first-class misdemeanants, but the greater number are committed, under an act passed 600 years ago in the reign of Edward the Third, as rogues and vagabonds, who refuse or are unable to give sureties to be of good behavior when so required by the magistrates. This act of Parliament has long been obsolete in England, but has been of late years reapplied to Ireland, not by the magistrates generally, but by those known as "removables," *i. e.*, magistrates paid by and dependent on the Crown. The evidence given in these cases is usually that of the police; and when even that evidence would not warrant a conviction for the alleged offence, the magistrates can and do call on the accused to give bail under the statute of Edward III., "to be of good behavior" for a stated period. This is almost invariably refused, and the accused is then sent to jail as a "rogue" within the meaning of the musty act of Parliament.

Needless to say, the land question is at the bottom of the trouble, and the advocates of radical reform are held to be "rogues." Meantime, the country is almost crimeless; whether it will continue so when the right of public meeting and the free expression of opinion are persistently suppressed, remains to be seen. That legis-

lation on the land question is still needed is recognized by the Government. Chief Secretary Wyndham introduced another land bill, supplemental to the twenty or thirty acts passed since 1870. He twice refused to see a deputation of representative Ulster farmers, but now, finding that he cannot pass his bill without Unionist as well as National opposition, he is imploring those interested in the land question to meet and confer with him. This bill is admittedly drawn in the interest of the landlord class; it is to give them greater inducements to sell to their tenants—that is, it is to put up the price of agricultural estates above their natural and normal value.

The result of buying his farm at too high a price by means of a loan repayable by instalments for fifty years, is just as disastrous to the Irish peasant as paying too high a rent to his landlord. If the annual instalments are more than can be made out of the farm, and prevent the reasonably industrious farmer from keeping and increasing his farm capital, he must become poorer year by year. I notice this to be the case with those tenants who were induced to buy at unreasonable prices merely to get rid of a load of arrears due to the landlord. Many were compelled by threats of eviction for arrears to agree to buy at whatever price the landlord chose to impose. Although there has been very little loss as yet to the State from unpaid instalments, a very considerable number of instalments have to be recovered by law; the payers are still "dragging the devil by the tail," hardly able to make ends meet.

Paying a £4 instalment instead of a £6 rent will not in itself make a farmer rich, but the security of ownership leads to better cultivation and to improvement. New buildings are the most evident improvement, and in parts of the west, where hitherto cattle have been kept in the dwelling-houses, I notice that purchasers have begun to put up houses for their cattle. Small "lean-to" sheds covered with sheet-iron are common; insignificant to look at, but enabling the cattle to be better kept, and human beings to live in a more cleanly fashion. Reclamation of waste, moor, rocks, and swamp has always gone on. Such work promised an immediate return, and was done in the hope, often disappointed, that the tenant would be allowed to reap the fruits of his labor and escape an increase of rent.

To those who have not seen such work in the doing, it is incredible what labor has been spent on reclamation by the small farmers in Ireland. The present appearance of a cultivated field will not tell the onlooker what thickets of brushwood have been rooted out, what rocks have been quarried, what marshes have been dried up. The more complete the reclamation, the fewer traces remain of what has been done. But in some cases the traces cannot be removed. I recently examined a farm bought eighteen years ago. It contained nineteen acres, a narrow strip on a hillside. The upper half was almost solid rock, with heath and furze growing in the interstices and hollows. Five acres at the bottom were cultivated moor, once a bog where turf had been cut, but now growing corn, potatoes, and grass. The centre, containing about four acres, was a mass of stone walls surrounding little enclosures each of which was well and cleanly cultivated. Some of these walls were eight feet high, and varied in width from two to twenty feet. They consisted of massive boulders rooted, blasted, and quarried out of the ground, the smaller stones being piled on top. The owner said the foundations were two feet below ground. Above ground I measured these walls, quarried out of not more than four acres, to contain 50,500 cubic feet of closely packed stones, not less than 2,500 tons. "It took three generations of us to do that," said the owner. An elderly lame brother, whose foot had been crushed when a boy in moving these boulders, represented part of the cost. He had been a cripple for fifty years. The rent of this farm, created out of the waste, had been £6 before 1881. The tenant, aged seventy-six, having repaid part of the purchase money, was now paying about £2 10s., and local taxes amounting to £1 10s. "I'm no richer," he said, "but I'm contented." His small, thatched house was scrupulously clean, and an iron-roofed shed for cattle had been built since my last visit about eighteen years ago. Then there was little contentment; decrees for arrears of rent that couldn't be produced from the rocks and bogs had been followed by evictions and tumults, and close to my friend's house one of his neighbors was shot dead by the police.

Police swarm in the district. Every stranger is kept under observation. Soon after I had gone into lodgings in a village near, my hostess drew my attention to two constables watching the house. Next morning they were again on the watch, and when I rode into the country a policeman on a cycle was on my track; not till I had been seen to visit a Government official was the "observation" discontinued. This locality is now the centre of what is called disturbance. It is thickly inhabited; most of the able-bodied men work in England for several months in the year; the young women emigrate. Rents are mainly paid out of earnings in England, or remittances from the emigrants, for they could not be made, in the economic sense, out of the farms.

In 1899, the Government, through the agency of the Congested Districts Board, bought the estate of Lord Dillon, an absentee, extending to over 90,000 acres, occupied by over 4,000 tenants. Purchase and some expenditure on arterial drainage and roads came to £331,300. The rental had been £20,000. The Board, without incurring any loss, can sell and is in process of selling to the tenants for annuities running for about fifty years, which amount to £13,000. For an annual and terminable payment of 35 per cent. less than their former rents, the tenants become owners in fee. There is an end of law-suits between landlord and tenant; agents, bailiffs, and gamekeepers, causes of continual annoyance, have disappeared.

The tenants on the adjoining estates, worse agricultural slums, and more highly rented than the Dillon estate, ask that the Government shall treat them in the same way and emancipate them. The low price of cattle last year made rents more difficult than usual to be earned. Appeals to the landlords to remit part of the rent are spurned. The tenants combine, hold meetings; speakers are prosecuted and imprisoned; compulsory expropriation of the landlords is demanded by the United Irish League, by the National members of Parliament, supported by T. W. Russell, and a large section of the northern farmers. Ninety per cent. of the Irish members are pledged to demand a permanent settlement of the land question by the compulsory expropriation of the landlords. It is no greater hardship to compel them to sell at a fair price than to compel them to take a fair rent. The costs of rent litigation and the unrest it produces are ruinous to both parties. To all this Chief Secretary Wyndham replies: "Never. Be good for a while, and maybe I'll do something, but as long as there is agitation there can be no legislation, and certainly not at the instance of the United Irish League."

The Chief Secretary is supposed to be in the hands of a clique of agents, landlords, and officials. Many of these men are as much interested in the continuance of the land troubles and of the existing land system as South African contractors in the continuance of the war. Agents, bailiffs, paid magistrates, and other such officials, crown prosecutors, and police are more interested in preserving the elements of unrest in the country than the landlords, many of whom would be very glad to be compulsorily expropriated, and so saved much expense and trouble in trying to sell by agreement, making title, and the like. But these landlords would like their nominal rental to be taken as the basis of purchase—not what they have actually received. Bad debts, expenses of collection, cost of agents, bailiffs, and continual litigation make their net very much less than their nominal rental.

In the case of the De Freyne estate the landlords have taken a new departure and have served the United Irish League, the *Freeman's Journal*, and some twenty or thirty individuals with writs asking for an injunction and damages for conspiracy to prevent the tenants paying their rents. It is possible that the case may be tried without a jury; and in the hands of an Irish judge the defendants are likely to fare badly. The litigation will be prolonged and costly. Most of those sued are poor, and would be ruined not only by a judgment for damages but by the costs. Lord de Freyne is supported by a syndicate of landlords who have undertaken the payment of the interest on his estate mortgages as well as the conduct and costs of the litigation. It is expected that wholesale evictions will be commenced at once, and the housing of the evicted people is one of the problems that the United Irish League have to deal with. If the evicted families are housed on adjoining farms, injunctions can be obtained against those who shelter them; if relief is given out of the poor rates, the Local Government Board may disallow the expense and charge the individual guardians with the cost.

The case of McHugh, member of Parliament, Mayor of Sligo, and newspaper proprietor, is an example of the difficulties and dangers in the way of reformers. He was prosecuted by the Crown for the "criminal libel" of saying that a jury was "packed" in the County Sligo, as it undoubtedly was. His trial was removed to Dublin, where a "carefully selected" jury convicted him and he served six months in prison. He is now under sentence by Judge Ross for contempt of court in remarks made on the conduct

of that judge, but meantime is in confinement for another contempt of court, having called two removable magistrates, before whom he was summoned for conspiracy, liars. The contempt in this case was deliberate, the magistrates having contradicted McHugh, and the tribunal being one which has no existence under the British Constitution except in Ireland. Magistrates cannot imprison for more than a week for contempt of court, but, on being insulted by McHugh, who appears to have stated the truth somewhat offensively, they fell back on the statute of Edward the Third, and asked for bail that he should be of good behavior, and on refusal sentenced him to six months' imprisonment as a rogue and vagabond.

McHugh is also the subject of a civil action for £5,000 damages for "conspiracy" to deprive a Crown solicitor of his position as solicitor to a Sligo local council. The "conspiracy" consisted in openly advocating the dismissal of the solicitor, on the ground that, as he was prosecuting local councillors on behalf of the Crown, he was not a proper person to act as legal adviser to the council. If tried in his own county, McHugh would have nothing to fear, but the High Court judges have transferred the trial to Belfast, where a carefully selected jury may give large and ruinous damages. At present McHugh is technically in custody, but actually at large in London, attending a House of Commons Committee, the appointment of which to investigate the magisterial sentence the Irish party were able, owing to slack attendance of Government supporters, to compel. AN IRISHMAN.

## THE JUBILEE OF THE GERMANIC MUSEUM AT NUREMBERG.

ISLAND OF FÖHR, July 6, 1902.

The inspiring festivities which, in the old city of Nuremberg, from the 14th to the 16th of June, assembled the most notable of the crowned heads of Germany, together with chosen representatives of German scholarship, burgherdom, and statecraft, to celebrate the day when, fifty years ago, the Congress of German Historians and Antiquarians decided upon the establishment of a Germanic Museum, had a threefold significance. In the first place, these festivities were a tribute to the memory of Baron von Aufsess, the virtual founder of the Museum, which now has assumed so large proportions that it cannot any longer be associated with the name of a single individual. Seldom has an idea been fought for and maintained with so much perseverance, energy, and devotion as the plan of what now forms one of the most flourishing and best-endowed museums in the world was fought for during a whole lifetime by this Franconian nobleman. Reared in the atmosphere of early romanticism, inspired by the outburst of popular enthusiasm that marked the German Wars of Liberation, initiated into the endeavors of Baron vom Stein for the promotion of mediæval studies, he conceived in the twenties of the nineteenth century the project of a museum which should be a huge repository of whatever the German people had accomplished during bygone ages in the arts and crafts, in industry and science; which, in other words, should be a colossal illustration and supplement to Stein's 'Monumenta Germaniæ Historica.' For more than twenty years he wrote, labored, begged, and spent his own means for this project without obtaining any help or recognition from any quarter, without meeting with anything but ridicule or indifference, or at best half-hearted and lukewarm interest. And even when at last, in 1852, through the vote of the Historical Congress referred to, the establishment of this Museum, with Aufsess as its director, was decided upon and made a matter of common scholarly concern, the means at the disposal of the young institution were so slender that for years to come it was continually on the brink of disaster, and required constant financial sacrifices on the part of the director to be barely maintained.

Until 1857, most of its collections were housed in a single tower of the Nuremberg city wall, the Thiergärtner Thor, and the accommodations for accretions were so ridiculously insufficient that, for instance, when in 1853 the official records of the Frankfort Parliament were presented to the Museum, the twenty-three boxes containing this valuable gift had to be stored in the kitchen of a private house. It is to Aufsess's lasting credit that, in all these straits, difficulties, and disappointments, he never lost heart, always stood by the great ideal of his life, and thus weathered one crisis after another, until at last, through the acquisition of the old Carthusian monastery from the Bavarian Government, a proper housing for the growing collection was obtained, and popular and official interest in the national undertaking permanently secured. That this noble, patriotic man should have met with his death at the hands of a drunken student when, in 1873, he had gone to take part in the festivities attending the foundation of the University of Strassburg, gives to his life a touch of the irony of Fate.

It was, however, not only the memory of the founder of the Germanic Museum which actuated the festivities of last month. They were also meant as a tribute to what the German people has done for this museum since it was once publicly recognized. It is not an empty phrase when, over the main entrance of the Museum quadrangle, there stands the inscription: "Eigentum des deutschen Volkes." Here we tread, indeed, in more than one sense, upon national soil. Ever since 1857, when the institution was first housed in a manner suited to its intrinsic importance, it has stood before the public eye as a symbol of German greatness, as an embodiment of the most precious traditions of the German past, and as an appeal for maintaining these traditions in the present. Princes, states, cities, and private individuals have vied with each other in showering gifts of objects as well as of money upon it, the latter ranging from five florins collected by the pupils of a Bavarian seminary—the very first contribution made to the Museum—to the million marks which were given by two Nuremberg citizens a few weeks ago as an anniversary donation. And it would be hard to conceive of a more widely diffused popular interest in a scientific institution than that maintained in this Museum by the network of so-called *Pflegschaften*, or chapters of the Museum Association, covering all Germany, each of which is constantly disseminating, within its local boundaries, information regarding the needs as well as the most recent acquisitions of the Museum, and is thus stimulating ever new endeavors in its behalf. It is largely owing to this finely systematized popular propaganda that, apart from the running expenses of the Museum administration, which are covered by yearly appropriations from the German Empire, the Bavarian Government, and the city of Nuremberg, all other financial costs, for purchases, building alterations, special investigations, and so forth, are defrayed by voluntary contributions coming from every class of people and from every part of Germany.

The third, and to the great mass of Nuremberg citizens the most conspicuous, element of the anniversary celebration was a political one. For, while the Museum authorities had invited representatives of the official and scholastic world, there had also been invited, by the Prince Regent of Bavaria, as Chief Patron of the Museum, the Emperors of Germany and Austria and the most notable of other German princes; and although the Austrian Emperor, out of regard for the anti-German sensibilities of his Slavic subjects, had declined this invitation, Emperor William had willingly seized this opportunity of meeting once more with his South German brethren of royal blood, and of greeting the old imperial town where his ancestors had first exercised dynastic rights as hereditary Burggrafen. His presence, then, together with that of the rulers of Bavaria, Würtemberg, and Baden, imparted to these days the character of a commemoration and reassertion of German unity and of the final bridging of the gap between the North and the South, which was accomplished a generation ago. All these elements combined to give to the grand old city of Nuremberg, always so impressively picturesque and stately, additional charm and glory, and to infuse the thousands of visitors from far and near that crowded its streets and halls during these days, with a festive mood such as I have rarely observed anywhere.

I shall not describe the festivities in detail. In part, of course, they consisted of the more or less spectacular exercises common to all such occasions—processions, reviews of troops, banquets, and the like. What was refreshing even in this part of the programme was the complete absence of stiff formality, and the hearty, unfettered enthusiasm of the masses. Truly inspiring was the mighty wave of cheering that accompanied the passage of the Emperor and the other royal guests throughout the whole city, from the Museum to the ancient turreted castle towering above the town; and unforgettable was the reverent hush that lay over the vast audience which had assembled in the venerable Church of St. Lawrence to listen to a wonderful rendering, by the Munich Vocal Choir, of classic German hymn-music. While, from the artistic point of view, this concert marked the climax of the festivities, the professional interest, so to speak, centred in two meetings held in the new armor hall of the Museum itself. Of these, one consisted chiefly of addresses by delegates from universities, museums, and other learned institutions in Germany, Austria, Switzerland, and America (among them our own Germanic Museum Association); the

other was signalized by the reception of the Emperor, the presentation by him of an oaken cabinet, containing copies of the seals of all the German emperors from the Karolingians downward, and the performance by Nuremberg citizens of two Shrovetide plays of Hans Sachs. It was a curious contrast to see the homely, awkward figures of the old shoemaker-poet appear before this glittering modern audience. But here again there was the same absence of restraint and oppressive etiquette; and if one observed the genuine jollity with which the Emperor gave himself up to the enjoyment of these naïve representations of plain burgher life, all the royal splendor and officialdom seemed far away.

All in all, this was a memorable celebration, worthy of the great Museum, the modest beginnings of which it commemorated; worthy of the imperial city in which it was held. KUNO FRANCKE.

THE CHOISEULS.—I.

PARIS, July 2, 1902.

M. Gaston Maugras cannot be said to have risen to the dignity of a true historian, but he can write agreeably on matters belonging to history. The list of his works is already very long. We find among the personages who have been the subjects of them the Duke de Lauzun, Voltaire, Jean Jacques Rousseau, the Abbé Galiani, Madame d'Épinay. His last volume has for its title 'The Duke and the Duchess de Choiseul: Their Intimate Life, their Friends, and their Time.' M. Gaston Maugras had already been captivated by the Duchess de Choiseul and had written an essay on this charming person, so remarkable, in a corrupt and frivolous time, for the dignity of her life and her virtue.

"Madame de Choiseul," he says, "is perhaps the most delicious figure of the eighteenth century. . . . We shall see her, in extreme prosperity as well as in extreme misfortune, always the same, always equal to herself, bearing with the same serenity wealth, homage, the highest rank, and also ruin, misery, forgetfulness. Never did fate contend with so lofty a soul, and she always showed herself superior to fortune."

She was the granddaughter of Crozat, who had been a petty clerk and became a great financier. Crozat made a great fortune in colonial enterprises, and was the founder of the Louisiana Company. He bought the estate of Châtel and took the name of Crozat du Châtel. He died in 1738 at the age of eighty-three, leaving a very great fortune, which was divided between his three sons and a daughter, married to the Count of Évreux, the third son of the Duke de Bouillon. His eldest son, the Marquis du Châtel, was father to the Duchess de Choiseul. The celebration of the marriage of Louise Honorine Crozat du Châtel and of the Count de Choiseul-Stainville (who became afterwards Duke de Choiseul) took place on the 22d of December, 1750, in Paris, in the private chapel of the Hôtel du Châtel. The young bride was barely fifteen years old, Choiseul was thirty-one years old. He belonged to an old and poor family of Lorraine; he had served in the army, shared in the campaign in Bohemia in 1741, and witnessed the siege of Prague.

"Choiseul," says M. Maugras, "is one of the most sympathetic figures of the eighteenth century. More, perhaps, than any other, he personified his time and his epoch; but if he possessed in the highest degree its amiable qualities, he also had all its defects. 'Good, noble, frank, generous, gallant, magnificent, liberal, proud, audacious, the Duke de Choiseul,' says Baron von Gleichen, 'recalled to mind the ancient French Knights.' Of mediocre size, with reddish hair and an almost ugly face, he still had a most amiable appearance, and his countenance spoke for him. His little eyes sparkled with wit; his upturned nose gave him a pleasant air; and his thick, laughing lips announced the gayety of his conversation. His wit, his fire, made him irresistible."

Madame du Deffand, the intimate friend of the Duchess, said of him: "He is more charming than ever; in him alone do we find grace, gayety, and charm; outside of him, all seems foolish, extravagant, or pedantic."

Choiseul did not go much to court at first; he was not on good terms with Madame de Pompadour, the favorite, though his brother-in-law, M. de Gontaut, was intimate with her, and had often tried to bring about an understanding between him and Madame de Pompadour. The favorite was always afraid of losing her influence with the King, who had become very attentive to Madame de Romanet, a cousin of Choiseul's. This lady was so bold as to make it a condition that Madame de Pompadour should be dismissed. She showed to Choiseul some of the King's letters. Choiseul was very indignant with her, and told her that if she did not leave Fontainebleau at once, he would expose her intrigue to her husband. "It is my duty," he said to her, "to put an end to an intrigue which is dishonorable to my family. Not that I am very pedantic or scrupulous on the chapter of love; I can tolerate all the tastes, whatever they may be, which you may have, even that you should satisfy the King's tastes, provided it be in secret, and without any appearance of favor." This gives exactly the tone of Choiseul's scruples; they were not inspired by virtuous sentiment, but merely by family pride. Madame de Romanet submitted, and promised to withdraw. This became the occasion of a visit on Choiseul's part to Madame de Pompadour. She thanked him for the part he had played and for the indirect service he had rendered her. From that moment their relations became cordial. "These two personages, who detested each other before becoming acquainted, felt the liveliest sympathy for each other as soon as they were in relations." Choiseul wrote afterwards: "Far be it from me to disavow that this circumstance of my life made me know Madame de Pompadour, which attached me to her by the most tender friendship, and which interested her in everything that has happened to me. I shall remember all my lifetime my attachment to her, and the gratitude which I owe her for myself, for my family and my friends."

In 1753 Choiseul was sent as Ambassador to Rome; he remained there several years, and the salon of Madame de Choiseul became a charming centre where the Romans mingled with French people and with other foreigners. Among the habitués of her circle, we find the Abbé Barthélemy, La Condamine, Baron Gleichen, a young German; Greuze, the painter; Guiard, a sculptor, a pupil of Bouchardon. Choiseul was afterwards appointed Ambassador to Vienna; it is in these terms that he gives an account of his presentation: "The Empress [Maria Theresa], after having spoken of your Majesty in terms of the greatest interest, inquired after the persons whom you honor, Sire, with your confidence, and she named Madame de Pompadour, for whom she feels much friendship and esteem." During his sojourn in Vienna, Choiseul had to confirm the alliance between the French and the Austrian courts, and was occupied chiefly with the relations between the armies which were in the field. Since 1756, the two countries had been bound by an alliance which brought them to the bloody Seven Years' War. Frederick of Prussia had to fight Russian, French, Austrian, and Swedish troops; he had no ally but England, who had engaged to furnish him with subsidies.

Choiseul was recalled to Paris, and was appointed prime minister. From the moment when he took the place of the weak Cardinal de Bernis, he became the real King of France, under the apparent authority of Louis XV.; and for twelve years he was the inspirer of French policy and the arbiter of the destinies of his country. As such, he was one of the most extraordinary men of his age. Under the appearance of levity and almost of indifference, he developed superior talents, and he repaired as much as was in his power the disasters of the Seven Years' War. It was said of him at first that he was "a petit-maître without talent, with little phosphorus in the brain." He soon proved the contrary: the great Catherine called him "the coachman of Europe." When Choiseul became minister, Madame de Pompadour had been the King's favorite for fifteen years. Nobody could foresee the end of this extraordinary favor, which was due not only to her beauty, but to a rare intelligence which could embrace all subjects. The King's passion had become a mere friendship; she had become a necessary friend, a necessary adviser. She shut her eyes on his infidelities. She imposed herself on all the ladies of the Court, on the ambassadors, on foreign princes. She knew how to practise the great art of amusing the man in the kingdom whom it was most difficult to amuse. She led the most fatiguing life and never complained. She once made this audacious comparison: "My life is like that of the Christian: it is a perpetual struggle." It was impossible for Choiseul not to treat her as an ally; he soon became something more, a friend. He introduced her to his wife and, afterwards, to his sister, Madame de Gramont. His alliance with the favorite made him omnipotent; he took the ministry of war in 1761, and afterwards the navy in 1762. He compared himself to the coachman in Molière's "Avare," who sometimes dresses as a cook. In 1760 he was made Governor-General of Touraine, grand master and superintendent of the Post-Office. In 1762 he received the Golden Fleece and the office of Colonel-General of the Swiss. His various offices yielded him 800,000 livres a year.

Madame de Gramont, his sister, lived with him and had the real authority in his household. Madame de Choiseul was mild and modest, and accepted this situation, which was the subject of much criticism, as Madame de Gramont made many enemies by her pride and her overbearing manners. Madame de Choiseul found much consolation and pleasure in the friendship

of two persons, the Abbé Barthélemy, whose acquaintance she had made in Rome, and Madame du Deffand, whom she had known first in the salon of Madame du Châtel. Madame du Deffand is familiar to all who are acquainted with the history of French society in the eighteenth century; she is well known, also, to all who have read the Letters of Horace Walpole.

In 1761 Choiseul bought, near Amboise, the magnificent château of Chanteloup; in 1764 Louis XV. united Chanteloup to Amboise, and created out of them a ducal peerage, under the title of Choiseul-Amboise. Choiseul entered into correspondence with Voltaire at the time when, after his quarrel with the great Frederick, the philosopher took refuge in the *pays de Gex*, a little territory situated between the Jura mountains and Switzerland. Voltaire obtained from Choiseul the renewal of some immunities which made the *pays de Gex* neutral ground. The letters of that period, some of which are very amusing, were published by M. Pierre Calmettes in his 'Choiseul et Voltaire' (1900). In 1762 peace was signed at last; and if the results of the Seven Years' War were not very brilliant, it was not the fault of Choiseul, who had found everything going wrong when he entered the Cabinet, and who had succeeded in procuring men and money in abundance for the continuation of hostilities. In the midst of all his troubles Choiseul never ceased to extend his protection to Voltaire; he did so during the famous Calas affair, after the publication of the 'Dictionnaire Philosophique.' But the time was approaching when he was going to lose his ally, Madame de Pompadour, who was, like himself, imbued with philosophical ideas and an enemy of the Jesuits. The Marquise died on the 15th of April, 1764, at the age of only forty-two years, worn out by the fatigues of her life. She left in her will to Madame de Choiseul a box of silver adorned with brilliants, and to Choiseul a remarkable diamond. Choiseul's difficulties were now to begin in earnest.

## Correspondence.

### A BRUGES EXHIBIT.

To the Editor of The Nation:

Sir: At Bruges, Belgium, an exhibition is now open, until September 15, of works of old Flemish painters. In the Hôtel du Gouvernement Provincial have been brought together the Memlings from the Hôpital de Saint Jean, many Memlings and Van Eycks from private collections in England and France, and a number of other early Flemish pictures. One of these latter, of the beginning of the sixteenth century, shows that the artist was striving for the effects of lighting attained by Rembrandt a hundred years later.

In the Gruuthuus is a collection of missals and illuminated manuscripts which date from about the tenth to the fifteenth centuries. Examined in connection with the oil paintings, these missals are an object-lesson in the evolution of painting in northern Europe. Beginning about the tenth century, the earliest drawings show an art knowledge on a par with that of a child about eight years old; if they were not representations of saints, they might be ascribed to a Sioux Indian or a South Sea Islander. As the centuries roll on, the illuminations improve: drawing creeps in, so does color, glimpses of landscape begin to appear behind the figures, until at the end of the fifteenth century some really fine water colors are produced. Some of these show a close kinship with the oils of the Van Eycks and Memling. Indeed, so closely do some men-at-arms represented in one of the manuscripts resemble the men-at-arms in the legend of Saint Ursula of Memling, that it seems quite possible that the water-color was painted by Memling himself.

The conclusion to be drawn from the Bruges exhibit is, that the earliest oil paintings were only enlarged prayer-book illustrations carried out more thoroughly in a different medium. The aims and the methods of the painters (and possibly the painters themselves) were the same in both, and the only notable difference is that the oils are larger and more elaborate than the water-colors. To any one interested in art, the Bruges exhibition is well worth a visit, for it may be doubted whether such an opportunity for studying *de visu* the evolution of early European painting has ever before been offered to the public.

Edwin S. Balch.

Homburg v. d. Höhe, July 8, 1902.

## Notes.

The late John G. Nicolay had completed a condensation of the ten-volume Life of Lincoln produced by him in conjunction with the present Secretary of State. It will soon be issued by the publishers of that work, the Century Co.

In keeping with the revival of interest in Northwestern exploration and fur-trade is the promised reprint of Alexander Mackenzie's century-old and classic 'Voyages' across this continent, by the New Amsterdam Book Company. They announce further a translation of the 'Mabinogion' by Lady Charlotte Guest.

T. Y. Crowell & Co. have in press 'Thoreau: His Home, Friends, and Books,' by Mrs. Annie Russell Marble; 'Economics of Forestry,' by B. E. Fernow; 'Word Coinage,' a study of slang and provincialisms, by Leon Mead; 'Mind Power and Privileges,' by Albert B. Olston; Poe's Works in seventeen volumes, edited by Prof. James A. Harrison; Hawthorne's Romances in fourteen, edited by Prof. Katharine Lee Bates; and Tennyson's Poems in ten, edited by Prof. Eugene Parsons.

'Ghetto Silhouettes,' to be published by James Pott & Co., shadow forth the Russian-Jewish element in this country.

'The Conquest of the Air,' by John Alexander, announced by A. Wessels Co., will have a preface by one of the conquerors, Sir Hiram Maxim.

Taine's Correspondence in an English version will be brought out in this country by E. P. Dutton & Co.

For an occasional lighthouse-builder like F. Hopkinson Smith, there is obvious propriety in naming "Beacon Edition" the new output of this versatile author's works in ten duodecimo volumes by Charles Scribner's Sons, by arrangement with Houghton, Mifflin & Co. It is also highly appropriate that Mr. Smith should be the artist of the colored illustrations, and this is the case with volume one ('Laguerre's and Well-Worn Roads'); in volume six ('Caleb West, Master-Diver'), on the other hand, the drawings are by Reuterdahl. We can say no more at present of this attractive collection, which is handsomely printed, and tastefully bound in crimson cloth. Several volumes are still to come, and the whole is a subscription publication.

The fourth volume of the 'Theory of Differential Equations,' by Prof. Thorpe (Macmillan Co.)—virtually the fifth, since his 'Treatise' ought to be regarded as an introduction to the 'Theory'—is perhaps the last volume, though one more, at least, ought to follow. It is the most practical of the four, since it relates to ordinary linear equations. Nothing quite equivalent to this work exists in any language; nothing at all in our language supplying the same need of all who use differential equations.

Drude's 'Theory of Optics,' translated by C. R. Mann and R. A. Millikan (Longmans, Green & Co.), is the only work in our language, if not in any language, which presents the modern theory in the form of a text-book. No one whose business it is to be acquainted with the modern theory of light can afford to leave this work unstudied.

It is a common misconception that the pulse is an expansion of an artery (popularly confined to the wrist) from an increased volume of blood forced through it by the heart beat. In fact, the artery does not expand, and more blood does not pass any given point at a fixed time. The blood flow is continuous, and the impulse felt on pressure against a resisting background is that of a wave running along the channel. Its bedside lessons are traditionally of the greatest value; but the common impression that frequency and force are the only essentials to be observed, and that the nurse who makes a record of the number of beats relieves the educated touch from its delicate duty, is quite erroneous. The blood wave has numerous features besides mere force and frequency, and each tells its story to the instructed mind. Dr. James Mackenzie's 'Study of the Pulse' (Macmillan) is a delightfully clear and careful discussion of the whole subject, with special inquiry as to the diagnostic value of pulse irregularity, and includes a survey of the venous and the liver pulse. For twenty years the author has been accumulating and reflecting upon these facts. We especially commend section 104 to those insurance companies which make bradycardia an unqualified cause for rejection. Dr. Mackenzie has, in our opinion, added a classic to the literature of clinical medicine.

The *Beilage* of the Munich *Allegemeine Zeitung*, No. 130, contains, from the pen of Albert Mayr, an instructive report of the excavations made during the past twenty-five years by Father A. L. Delattre on the site of ancient Carthage, which have resulted practically in restoring in outline the old Punic city, and shed a flood of light on the life and antiquities of that mighty rival of Rome. The whole work has consisted virtually in unearthing one vast necropolis; the number of tombs from the oldest period alone, between the sixth and eighth centuries, being more than

eleven hundred. The finds from each period reflect the political and business relations of the Carthage of that time; the oldest being largely under Egyptian and Phœnician influences, the later under Greek and Roman. They consist chiefly of amulets, rings, chains, coins, etc., in gold, silver, bronze, glass, terracotta, etc. These are each represented in hundreds of samples, and are deposited in the special museum established by the White Mission Brotherhood of Northern Africa.

Russia has decided to found an archæological museum in Sebastopol. The building is to be erected in the style of an old Christian basilica, and to be arranged for three departments, one devoted to the Greek, one to the Roman, and a third to the Byzantine period. The whole project has been intrusted to the management of Grand Duke Alexander Mikhailovitch.

One of the most valuable developments resulting from Germany's colonial enterprises has been the establishment of the Oriental Seminary in Berlin, the purpose of which, modelled to a certain extent after similar institutions in Paris and London, is chiefly to furnish practical instruction in Oriental languages, history, etc. Double courses are arranged in leading departments, one theoretical, in charge of a European specialist, and the other practical, with a native teacher. The faculty, headed by Professor Sachau of the University, now numbers 24 European and 8 native instructors. The attendance is constantly growing, the present semester having an enrolment of 146, of whom 3 are women. These students represent the departments of law, philology, pedagogics, business, state officials, army and navy, medicine, theology, and technical branches, all being candidates for positions in the Orient. The languages taught were Chinese, Japanese, Arabic (three dialects), Persian, Turkish, besides a number of modern European tongues.

The Senate of the University of Berlin recently took action on a formal petition of the women in attendance, asking that the authorities admit women who apply with the equivalent of a *testimonium maturitatis* from a recognized secondary school, to the full university privileges of matriculation and degree. The action was a refusal, and for the first time a university of Prussia has taken a positive official step in this matter. The influence of cosmopolitan Berlin will doubtless be followed by the other schools of this grade in Prussia, and Prussian precedence in higher educational matters is generally decisive for the rest of Germany. Only Baden of the German States in the two territorial institutions of Heidelberg and Freiburg admits women to university privileges on an exact equality with men, and this State has also provided special secondary girls' schools leading up to entrance into the University. Berlin, however, notwithstanding the hostility of the authorities to women students, still constitutes the chief attraction for this contingent, the enrolment last year having been 611, or exactly half of the total number in attendance at all of the twenty-two German universities. Since the summer of 1896, when the first women were permitted to attend lectures, the number has increased from forty to more than fifteen times as many. The growth has been regular and steady.

A significant testimony to the change of opinion in India in regard to the difficult and delicate problem of female education was given by the Maharajah of Gwalior, one of the largest of the native states, at the coronation banquet of the Royal Asiatic Society. He said that the success of the girls' school founded in his state four years ago had been so unexpectedly great, notwithstanding "much opposition and prejudice," that "a special institution has been established within the last few months for the daughters of my nobles, a class who keep their daughters in seclusion, and who, a short time ago, would have been most unwilling to send them to school." He closed with a glowing tribute to Lord Curzon's interest in education, especially in the matter of "chiefs' colleges" and in his organization of the "Imperial Cadet Corps to provide a military career for those scions of noble houses whose inclinations lie in that direction."

—The Bodleian Library has lately entered upon an enterprise most deserving of support, from other libraries in particular. It undertakes to furnish photographic reproductions in several classes, of which the circular before us exhibits six: (1) the Bodleian buildings, in six views (silver prints); (2) seven Shelley relics, including the Sophocles with which he was drowned, and of which "the edges are supposed to show the mark of his thumb, incrusted with brine" (collotypes); (3) four rare impressions, as Caxton's Advertisement of 1477, and Columbus's Letter to Sanxis, 1493 (photolithographs, original size, in colored paper covers, with introductions); (4) miscellaneous objects, from an abbreviated signature of Shakspere to Woolner's bust of Gladstone (collotypes); (5) bindings, as of a New Testament reputed to preserve "a piece of the unfortunate King Charles's waistcoat" (collotypes); (6) palæographical (collotypes, with long or short note as necessary). All these pieces have their order numbers and prices affixed, ranging from sixpence to two shillings. The circular lays special stress on the palæographical series, which will be extended as rapidly as the demand warrants, and in the case of MSS. written by more than one contemporaneous scribe examples will be given of each hand. Number 1 on the present list ("Actus Apostolorum"), of the middle of the eighth century, proceeds from an "English *scriptorium* of women," namely, the nuns of St. Mildred's Abbey, Isle of Thanet. It is written in four hands.

—'The Journal of James Melvin, Private Soldier in Arnold's Expedition against Quebec,' has been reprinted with notes and an introduction by Mr. Andrew C. Melvin (Portland: H. W. Bryant). There are numerous diaries of this dolorous but heroic campaign by men who took part in it, and most of them are longer than Melvin's. Indeed, nothing could be briefer than are the notices in this journal throughout the greater part of its course. For weeks at a time, it is hardly more than a chronicle of the weather. The present editor, by the aid of copious extracts and illustrations, manages to make the text occupy forty-three pages, but, printed without comment, it would hardly be longer than an ordinary descriptive letter of the eighteenth century. Yet, notwithstanding their extreme brevity, Private Melvin's notes are occasionally of some interest. The late Mr. Codman's conclusion that it was a great mistake to carry batteaux is supported by many passages in this as in the other journals. Melvin was taken prisoner at Quebec, and remained in confinement from January to August of 1776. His diary, however, is of little value after the death of Montgomery. On the whole, we must rate it lower than its first editor, Mr. W. J. Davis, did, or than Mr. Melvin does. While it gives some pitiful details of hardship and anguish, it furnishes few facts or comments which seem to throw important light upon any part of the expedition. Perhaps one reason for reprinting this bare and partial register of events was that an introduction by the editor might stand before it. At any rate, the introduction must be looked upon as the most considerable feature of the book. According to Mr. Melvin, the failure of Arnold's expedition was a blessing in disguise. "We cannot," he says, "doubt God's overruling providence dispensed American defeat in Canada; and, studying the event with its time and place in history, and trying to extract proper historic lessons from the same, we will [shall] be led to see in it a signal instance of Divine providence in our favor." Apparently the author has failed to profit by some of the most important literature on the period—for example, Professor Coffin's 'Quebec Act and the Early American Revolution.' The book is well printed, but the handsome appearance of the page is sometimes marred by careless proofreading.

—The 'History of Wachovia in North Carolina,' by John Henry Clewell (Doubleday, Page & Co.), presents the interesting narrative of the southern province of the Moravian Church in America from the first surveys made by Bishop Spangenberg in 1752 down to the present time. It makes no pretensions to literary excellence, but is a plain and simple account of the trials and tribulations of the early settlers, of the missionary and educational work of the Church, and of the material prosperity of Winston-Salem. Prior to the civil war the most important missionary work of this branch of the Moravian Church was done among the surrounding colored population, but this has now almost ceased, as the negroes have assumed full charge of their own religious exercises and no longer care to be instructed in morals by the white man. The Moravians have been active in educational work since the time of Comenius, and the seminary at Salem has a long and satisfactory record of usefulness which is fully detailed in this volume. Interesting information, hitherto unknown to engineers, is given regarding the water-supply system installed at Salem in 1778, the third public water supply constructed in the United States, and also concerning fire service, two fire steamers having been imported from Germany and put into use in 1785. The book closes with an exposition of the doctrinal position of the Moravians, and with biographical sketches and statistics. Ten ministers now serve twenty-six congregations on and around the tract of land originally called Wachovia, these congregations having 5,401 communicants and 4,296 pupils in their Sunday-schools, and at their spiritual head is one bishop. Altogether, this work stands on a different

plane from the local history of a town, for it contains many matters of colonial and national interest taken from the carefully kept diaries of the officials of the Moravian Church.

—"A. M. F.," author of 'Foreign Courts and Foreign Homes' and 'On the Banks of the Seine,' has recently published another volume which deals with court and diplomatic circles. The title of this book is 'Tales of My Father' (Longmans), and the anecdotes which it contains belong to the middle part of the last century. The cover bears a profile of Queen Victoria, and there is more than one hint that the writer was led to print these reminiscences by the circumstance of the Queen's death. "My father," says she, "was at one time of his life intimately acquainted with the royal family of Great Britain, for he was constantly with Ernest, Duke of Cumberland, who treated him with the greatest confidence, disclosing to him all his hopes and fears, all his ambitious views, and all his quarrels (and they were many) with his royal brother." Through and through, it is a book of gossip, with one or two digressions into the realm of the marvellous. The gossip is by no means malicious, but it is thin and possesses little historical value. While abundant proofs of an amiable personality are to be found, and the style is that of good conversation, we are seldom brought very close to subjects of importance. The officers whose friendships and acquaintances are recalled, seem to have been on good terms with a number of royalties, but their phrases of civility and personal good will are not of the widest interest. Perhaps the best anecdotes are those connected with Napoleon III. in the closing days of his obscurity. Such a vast number of stories, whether true or invented or embellished, are told about this period in the Emperor's life that it is hard to contribute anything novel or especially characteristic. However, the author's father and Lord Malmesbury, when travelling together on the Continent in 1845, came across Prince Louis Napoleon at Florence, and saw a good deal of him both there and at Geneva. The stories of the royal adventurer which we get in these pages seem less highly colored and more authentic than such tales usually do.

—The April Proceedings of the German Asiatic Society of Japan very appropriately celebrates the tercentenary of the arrival in Japan of William Adams, the English pilot who influenced very considerably the naval architecture of 17th-century Japan. Pilot Street (Anjin Cho) in Tokio, his own Siamese curiosities, and the handsome monument erected to his honor in the village of Hemi, a few miles from Yokohama, are the obvious relics of this first Englishman in the Far East. Mr. Ludwig Reiss, in a paper on "Will Adams and his 'Grave' in Hemi," shows that Adams really died on the island of Hirado, and that the tomb at Hemi, where his legitimate Japanese wife and children lived, is a cenotaph erected most probably at the time of the death of his widow. In old Yedo the honor awarded to Will Adams grew into a sort of cult, pilgrimages being made every year to Adams's grave from the great city down the bay to the temple at Hemi, where masses were said for the repose of his soul, and in 1798 two handsome memorial stone lanterns were erected. A delightful paper on Japanese personal and family ceremonial, such as salutations, remembrance of the dead, the various social duties and anniversaries of each month, and the more festal occasions, are noted and described with a bibliography and four first-rate folding-page illustrations, by Mr. Schiller. The strong paper on "The Reform of Japanese Script," with copious wood-cut illustration of the comparative forms of the Japanese and foreign (Dutch. English, and French) laryngal openings during pronunciation, throws new light on a very important subject. It is a piece of German thoroughness, and has been done by Prof. Dr. K. Florenz in collaboration with Japanese scientific men. Accounts of meetings and a table of contents of the eight stout volumes of Proceedings, which reveals astonishing richness, complete a very satisfactory number.

## LIEUT.-GEN. SIR HARRY SMITH.

*The Autobiography of Lieutenant-General Sir Harry Smith*, Baronet of Aliwal on the Sutlej, G.C.B. Edited, with the addition of some supplementary chapters, by G. C. Moore Smith, M.A. Two volumes, with portraits and illustrations. London: John Murray; New York: E. P. Dutton & Co. 1902.

Sir Harry Smith, who died in 1860, had, notwithstanding his long and honorable service, dropped from the memory of the present generation until the siege of the town of Ladysmith in Natal, by the Boers in 1900, recalled the name of his wife. Her career had been hardly less full of picturesque adventure than her husband's, and moved the editor of these volumes to make inquiry concerning possible memoranda of the life of his great-uncle, with the surprising and gratifying result of the discovery of a mass of manuscript, written in the intervals of Sir Harry's active service, entitled "Anecdotes and Events of my Life." Sir Harry had a modest estimate of these literary remains, which he suggested might be worked up by some skilful romancer into a readable story. But the bare truth as he records it, with no false modesty in the details of his part in stirring events of historical importance, but rather with the naïve frankness of one who is writing for personal friends and kindred, makes a sufficiently attractive tale without the need of any touch of art.

It was indeed a romantic career of which Sir Harry left these notes. He obtained, by the customary purchase, a lieutenancy in the English army when he was eighteen, and straightway was sent upon some military expedition to South America, in which he saw vigorous fighting. Six years later, in 1814, he was aide-de-camp to Gen. Ross in the burning of the national capital, Washington (of which exploit he seems to have been ashamed), and, having in the meanwhile recrossed the sea as bearer of dispatches to London, was back in time to take part in Pakenham's disastrous assault upon Jackson's entrenchments at New Orleans. He was in the thick of the battles and sieges of the Spanish Peninsula under Sir John Moore and Wellington from 1808 to 1814, and had hardly returned from the United States when Napoleon's escape from Elba summoned him, with the rest of the Peninsula veterans, to Waterloo and the subsequent occupation of France by the Allied armies. Then he was sent to South Africa, and showed characteristic vigor and wisdom in quieting a Kafir uprising; was next appointed Adjutant-General of the Army of India, in which country, in the course of time, he earned his highest title of Lieutenant-General, and his decoration of the Grand Cross of the Bath. His subjugation of the Sikhs in the Punjab, in 1845-46, crowned by his brilliant conduct of the battle of Aliwal, enhanced his already distinguished reputation as a soldier, and elicited from Wellington a hearty panegyric in the House of Lords; indeed, Wellington took occasion frequently to give expression to his admiration for Smith's ability in whatsoever military post he occupied.

Smith was Governor of the colony of the Cape of Good Hope in a critical period of South African history, from 1847 to 1852, and it was in grateful memory of what he then did that the towns of Harrismith and Ladysmith were named. He served, either in civil or in military commands, in Jamaica, in Canada, and during some labor agitations in Scotland, but the outbreak of the Crimean war found him too old for the field.

It is with these varied experiences that his anecdotes deal; and if they do not pretend to be a critical history of momentous events, they are graphic and entertaining accounts of personal risk, hardship, and good-natured endurance by a soldier who seems from the first to have won the affection and confidence of his companions and his superiors, and who, to the end, even under treatment from the home Government which excited his sharp resentment, remained a frank and good-natured, if often a blunt-spoken, gentleman, incapable of malice or bad manners.

In the Peninsula there were abundant openings for volunteer labor and bravery by a young officer ambitious to win his spurs, and Smith seems to have gained the reputation of untiring love of the dangerous spot in a campaign, and thorough performance of whatsoever duty might be laid upon him. Out of it all he plucked sport and romance as well as reputation. At the siege of Badajos, in the spring of 1812, his Light Division was assigned one of the imminent deadly breaches in an assault whose fury, as well as the savagery of the subsequent sack of the city by the English soldiers, Napier has painted in dark hues; while also the great historian wrote of the conduct of one of the heroes of the attack, in a sentence which has become classic; "No man died that night with more glory; yet many died, and there was much glory." Amid the salvage from the horrors of the day, of which the light-hearted youth speaks with a few words of detestation, Smith found the wife who was thenceforward to be seldom separated from him, even in the most severe hardships of campaigning. This is the account of her appearance as given by a companion of Smith's:

"I was conversing with a friend a day after the capture, when we observed two ladies coming from the city, who made directly towards us. The elder of the two, still a young woman, at once addressed us. Her husband was a Spanish officer in a distant part of the kingdom. But yesterday she and this, her young sister, were able to live in affluence and in a handsome

house; to-day they knew not where to lay their heads. Her house was a wreck, and, to show the indignities to which they had been subjected, she pointed to where the blood was still trickling down their necks, caused by the wrenching of their earrings through the flesh by the hands of the worse than savages, who would not take the trouble to unclasp them." "For herself, she said she cared not; but, for the agitated and almost unconscious maiden by her side, whom she had but lately received from the hands of her conventual instructresses, she saw no security but the seemingly indelicate one she had adopted, of coming to the camp and throwing themselves upon the protection of any British officer who could afford it."

This maiden was but fourteen years old, but her beauty moved the susceptible hearts of many of the young officers, of whom Harry Smith was the most courageous and persuasive wooer; and he straightway called in the service of a *padre*, and made her his wife. This girl had not been wholly unaccustomed to warfare, for she had been in three sieges of her native city, in one of which her brother died in her arms. She quickly adjusted herself to the difficult conditions of her new estate, and thenceforward became an attractive centre of the soldiers' chivalry. She learned to ride well, ran great risks, and plunged into rivers and faced storms and rough bivouacs with cheerfulness; and, as the husband avers, far from disheartening him for his duties, rather stimulated him to greater zeal to rise in honor.

The young couple were separated at the end of the war in the Peninsula by Smith's dispatch to the American army; but when Wellington was marshalling the forces for Waterloo, Smith and his wife hastened to the post of danger. The wife was left with the non-combatants at Brussels, and was swept towards Antwerp in the panic which fell upon the city on the evening of the 18th of June. The Antwerp hotels were filled with the English refugees, but Col. Craufurd, in command of the Citadel, received her cordially into his home, where she divested herself of the black mud of the road, which had soaked her from head to foot. In the afternoon of the 19th she heard of the Allied victory, and hastened towards the field, spurred, as she approached, by the report of some stragglers that her husband was killed. At midnight she found him unhurt. She had been in the saddle since three in the morning, and had ridden some sixty miles, from one point to another of her search. And he, as usual, had been in the hardest of the fight, having two horses killed under him. It was his opinion that Napoleon fought the battle badly; for "the Duke's army was a heterogeneous mass, not the old Peninsula veterans; young Second Battalions, most of them; others intermixed with the rabble of our allied army." "I have been over many a field of battle, but, with the exception of one spot at New Orleans and the breach at Badajos, I have never seen anything to be compared with what I saw. At Waterloo, the whole field, from right to left, was a mass of dead bodies."

During the three years' occupation of France by the Allies, the Smiths were luxuriously billeted at Cambray, in the house of one Monsieur Watin, who was agreeably surprised to find his enemies such courteous tenants. "We were fêted by every one. I was the huntsman of a magnificent pack of hounds, steward of races, riding steeplechases, etc. My wife was taken notice of by every one, especially by the Duke, who, having known her as a child, always called her his Spanish heroine, Juana." The typical British passion for hunting was Smith's inveterate diversion, wherever he was. In the Peninsula he recorded that once, after a dismal day's march in cold and wet, he and his wife were crowded into a little hut with his pack of dogs, *thirteen in all*. But his ardor gave them many a dinner of rabbits when rations were short.

When, in 1835 and 1836, he had laid upon him the perplexing settlement of antagonisms betwixt the Kafirs and the Boer and English immigrants, he acted with untiring energy in the initiation of the policy of thoroughly subduing the natives by rapid forced marches upon their villages, and the seizure of their most formidable chiefs as hostages, and then of conciliating their good will by a generous protective government, to relieve the masses from the savage despotism which the rule of the chiefs invariably was. His policy was reversed by the home Government, and he was superseded under charges of cruelty to the Kafirs—charges which, under investigation, were soon withdrawn. But the colony of Queen Adelaide was restored to native control, with the immediate result of an emigration of the Boer farmers, who had looked to the English army for their protection, and who bitterly complained that they had been shamefully abandoned to the mercies of savages.

When Sir Harry came back to the Colony twelve years later, as Governor, he felt confident that the kind relations which he had formerly established with all classes, native and European, would enable him speedily to pacify all hostilities; and for a time his success seemed assured. But the increase of immigration, and the rise of new and complex problems of representative government, to whose settlement, very likely, the methods and temper of an impulsive soldier were not in the highest degree adapted, and a renewal of the Kafir wars with much ferocity, created grave dissatisfaction towards him on the part of Lord Grey, the Colonial Minister, and afforded occasion for his summary recall, not, however, under criticism of his civil administration, but for alleged want of energy in conquering the Kafirs. Here, at least, his old friend, the Duke of Wellington, was a competent and convincing witness in his defence, for, in the House of Lords, the Duke declared: "I, who am his commanding officer, though at a great distance, entirely approve of all his operations."

Before Sir Harry had reached England the hostile administration of Lord John Russell, in whose Cabinet Grey was Minister, had fallen; the chief cause of the change of government being popular discontent with the colonial policy. Sir Harry, in reply to the criticism of his superiors, defended his conduct with great dignity and spirit, but on his return considered the case closed so far as any personal feelings had been disturbed, and took an early occasion to accept an invitation to dinner from Lord Grey; conduct which the latter recognized as "most handsome and honorable."

## PATTEN'S THEORY OF PROSPERITY.

*The Theory of Prosperity.* By Simon N. Patten, Ph.D., Professor of Political Economy, University of Pennsylvania. The Macmillan Co. 1902. Pp. ix, 237.

Little did the world of 1876 think that the cry of "Back to Adam Smith" would ever become to economics a significant rally. On the occasion of the centennial of the appearance of the 'Wealth of Nations,' it was evident to those who took part in the celebration of that event that the exercises really marked the extinction of Smith's most essential notions. The political economy of to-day, it was argued, had departed from the lines laid down by Smith, and in the future the emphasis would be upon points which he had paid but little attention to or had overlooked. The history of economic theory between 1776 and 1848 is a history of the development and refinement of ideas first brought into prominence by Smith, a process reflected in the pages of Ricardo, Malthus, and James Mill. All these and other writers of the period were principally concerned with making clear certain phases of economic doctrine that appealed especially to them, and there was practically no systematic writing in economics until J. S. Mill's work appeared in 1848. In rewriting political economy, Stuart Mill dropped the obsolete parts of the 'Wealth of Nations,' garnered the results of the years of economic discussion, and gave to the world a work that represented English economic thought in the middle of the nineteenth century. For a quarter of a century Mill's work dominated economic theory, and then the break-up began again. From every quarter, attacks were made upon the classical edifice that had been so patiently constructed. These attacks necessitated a restatement of old doctrines, the incorporation of new principles; but there was no thorough revision of the whole subject upon a new basis.

Smith's work was in reality a theory of prosperity, the part on Distribution being merely supplementary to account for the elements of Price; but by Mill's time the controversies of Distribution had become the centre of economic controversy, and since that day these problems have absorbed all the energies of economists, and have come to be regarded as making up the content of any significant economic discussion. The force of this movement has been to confine economic thought within narrow lines without reaching the general economic problem; thus justifying the criticism that the conventional economist failed to see the forest for the trees. For instance, in Mill's hands, the theory of Production became little more than a preparation for the subsequent theory of Distribution which affects to divide Income into definite shares, whose apportionment is determined by economic causes. As a matter of fact, he was really discussing the Distribution of Wealth among economic categories labelled Laborers, Capitalists, and Landlords. Moreover, the shares were made definite by the existence of the historical racial and social differences that divided English society, which differences disappearing, the shares lost their definite character.

The confusion that has arisen out of the efforts to redefine the economic terms has gone far to give the subject the character of that decayed species of mental gymnastics known as Scholasticism; with the re-

sult of forcing many who have concerned themselves with economic problems to resort to the expedient of speaking not as economists, but as "social philosophers." With the great changes in the industrial organization and the disappearance of the so-called economic funds, social distinctions can no longer serve as the basis for theories of distribution; while the terms rent, profits, interest, and wages cease to be clear demarcations of income, and must be newly defined or entirely discarded. The point of view of the book under review is that society must be studied from the standpoint of the Smith doctrines of prosperity, rather than the Marxian one of Distribution:

"That social evils are economic in their origin is a mere assumption. Economic laws are the outcome of forces acting in the present environment. Evidence for or against them must come directly from the relations existing between men and the environment in which they live. All economic forces arise out of existing conditions and exert an influence on the present race of men. An environment once left is no longer a living force. Its effects, however, may influence men, but it will be through heredity, morals, and traditions. The present environment acts on men through its economic forces; past environments through heredity and its accompanying habits, customs, and impulses. Long-standing evils, therefore, showing themselves in many races and at various times, are more likely to be the result of heredity than of environment. They are more nearly the same in all existing races than are their present environing conditions" (pp. 1, 2).

Up to this point current economic theory has not felt the force of evolutionary doctrines. Nor has biologic thought sufficiently recognized the importance of economic conditions; so that Prof. Patten's attempt to focus these two groups of discussion is significant, as is also the emphasis he lays on the different views of Production, each of which throws light on some problem. The laborer's view consists of the reactions between man and nature: work is the output of energy; pay is the return in goods. The view of the buyers and sellers lays stress on market relations, of which so much advantage is now taken. A third view is that of the investor, who is interested in the permanent aspects of production, and regards all conditions as due to forethought and organization of economic forces. All of these views deal with existing conditions, reflecting the relations between men and their present environment—each view showing the disposition of income under the conditions where it is dominant; and, by ignoring race differences, these views present a Normal Man who seeks an equilibrium between the outgo of energy and the return flow of goods. Race differences exist and cannot be ignored, but should be treated by themselves and discussed from an evolutionary standpoint. The growing powers of men constantly modify their relations to Nature, and change the normal tendencies which it is the end of economic forces to attain. Race problems affect income in three ways. First, the struggle for supremacy causes the subjection of the weaker and leads to their exploitation (this, however, is merely a redistribution of income, no increase). Second, the increase of income is due to adjustment (men are modified to meet new conditions, and the laws of this modification are of economic interest in so far as they augment the total income by increasing adjustment). The third way in which racial influences affect income is through the creation of economic rights: the strong allows more than would result from mere struggle to go to the less efficient and even to non-producers, causing to arise tendencies toward equality that pure economic forces would not create. The great criticism of the bulk of economic literature of the early half of the nineteenth century is that it does not deal with the right subject-matter, which ought to take account of changes socialistic and communistic. It is the irony of the situation that some of the keenest weapons of the Socialists have been drawn from the arsenal of economic classicism; an arsenal furnished from the Corn-laws and Poor-law controversies, and unprovided with arms of precision for the more recent warfare growing out of the social consequences of the industrial revolution.

Another notable feature of Professor Patten's book is the way in which the newer economic doctrines are deprived of the coloring gained from their original relations to particular discussions, and so correlated as to form a new economic outlook. The work serves as an exposition or restatement of recent theories, and at the same time brings back economic theory to the broader ground on which it was placed by Adam Smith. The theory of prosperity is thus restated in the foreground, and present industrial conditions receive an explanation which the older theories fail to supply. *Wages* are the pay of all who come in contact with nature, and not the pay of unskilled workmen who form for this reason a distinct social class. *Rent* is the gain of all who have monopoly advantages, and not merely an income dependent on the peculiarities of English landlords. *Capital* is the accumulated results of forethought and prudence, and not a fund to support laborers who live from hand to mouth. Real issues thus come to the front and get an answer.

In its main outlines the book is one of theory, and yet it is practical in the real and best sense of the word. It shows the condition on which progress rests, and at the same time formulates a code of rights that result from the premises used; in this way a programme of reform is presented much more definite than many of the schemes based primarily on compromise or on the details of practical life.

---

*The French Revolution and Religious Reform.* By William Milligan Sloane. (Based on the Morse Lectures for 1900, before the Union Theological Seminary.) Charles Scribner's Sons. 1901.

An author writes his book in order to work out his own conception, and he not unnaturally complains when the reviewer finds fault with him for not having worked out a totally different conception. Feeling that the author should at least be permitted to name his own book, we pass criticism upon the title of Professor Sloane's volume with considerable misgiving. However, if a title is intended to give the key to the contents, we must demur at the outset to the expression "religious reform." As the second title explains, this is "an account of ecclesiastical legislation and its influence." Religious reform, in a distinctive sense, is not the theme and cannot be, inasmuch as the French Revolution did little or nothing for the readjustment of religious convictions. It would doubtless be possible to write a history of the years 1789-1804 from the purely religious standpoint, but that is not what Professor Sloane has done. His sketch deals first and foremost with ecclesiastical legislation. Of course matters which lie outside the sphere of practical politics are touched upon. Under the Constituent and the Convention ecclesiastical legislation reflected public opinion—not always national opinion, but certainly the characteristic views of leading parties. Therefore the genesis of the opinions, whether Erastian, anti-Roman, or anti-Christian, which were embodied in legislation becomes an important matter, and thereby the scope of the treatise is enlarged. Nevertheless, the discussion is much more political than religious, and we must submit that if the book had been associated by its title with ecclesiastical politics, and not with religious reform, it would have been better named.

In his opening chapters Professor Sloane goes back to the feuds of Jesuit and Jansenist, to the struggle of the *parlements* with the Church, and even to the Concordat between Leo X. and Francis I. At the other extreme he reaches Napoleon's Concordat with Pius VII., and closes by describing the enforcement of that measure. The three main subjects are the state of the Church in France on the eve of the Revolution; the development of ecclesiastical legislation in the days of the Constituent Assembly; and the negotiations between Malmaison and the Vatican during the opening months of the Consulate. While the periods of the Legislative Assembly, the National Convention, and the Directory are not altogether overlooked, the chief interest of the study centres in the measures which accompanied the beginning of the Revolution and its end.

When we think of the Palais Royal, of the *tricoteuses*, and of political leaders like Mirabeau, Talleyrand, Barras, and Bonaparte, the signs of a great religious movement are not disclosed to view. What the tone of the salons was during the régime of Calonne and Loménie de Brienne may be gathered from La Harpe's 'Prophecy of Cazotte.' But though philosophers might scoff at Romanism and at Christianity, they were still philosophers, and their creed meant intellectual freedom. To be truly successful, the Revolution should have given France religious liberty. Its failure at this point was so glaring that no historian can pass by the coercive, intolerant laws of the triumphant Radicals without offering some theory regarding their origin. Professor Sloane, like others, is deeply impressed by the weakness of Revolutionary legislation in respect to toleration, and gives it much of his notice; but whereas most previous writers have been content to dwell upon the political connection of the upper clergy and the non-juring priests with the cause of the monarchy and with the national enemies, he seeks an ultimate reason in the "substitution of subjective for concrete thinking which was the Roman heritage bequeathed to Gaul and to France." This classical feeling was not rooted out by Christianity, and in France it has distorted the whole philosophy of emancipation and liberty.

"To the French mind, liberty was either license under a hypothetical law of nature, or political equality under political tyr-

anny; in no sense was it the personal independence, compatible with legal and moral rights and guaranteed by a forbearing and enlightened public opinion, which is the resultant of righteousness in the persons forming society. This Latin concept of liberty was the poison to be injected into the veins of the body politic as an antidote to the poison of the prevalent infamy; organized and tyrannical secularism was to destroy organized and despotic ecclesiasticism, monarchical absolutism was to make way for democratic absolutism. The latter was the device of Rousseau; it was his passion and his fire which entered the soul of France and so moulded, alas! the whole Revolution."

We emphasize this aspect of the subject because throughout the whole work Professor Sloane's strongest impulse is the love of religious liberty. One sees it in his admiration of Grégoire of Blois, "spotless in character, wise in administration, and successful in his pastoral work." But, after all, he is less indebted for Professor Sloane's good will to his personal merits than to his steadfast defence of toleration, and especially to his great speech of December 21, 1794, when "once more and with glowing logic he began to plead the cause of religious liberty, nor did he feel the slightest tremor before the yells and execrations of the bedlamites among the Deputies who opposed him. His one repeated cry was for complete liberty of thought and worship, a total emancipation of religion from the tyranny of the state. His most powerful effort was that speech which he had ready for the decisive moment." And not only does Grégoire gain Professor Sloane's approval, but all those who sinned against the ideal of religious freedom invite his chastisement. Thus, he attacks the clergy, whom Voltaire attacked; thus, he inveighs against Chaumette and Hébert. The most notable victim of his censure is the National Convention. "The course of the sovereign assembly was correspondingly a swift descent to hell, in which every type of extreme fanatic heathen took his turn at the helm and was swept into perdition to make room for another, until the engulfing maelstrom was reached and the faint-hearted, shallow Robespierre sounded the alarm."

So profound has been the effect of the Concordat upon the life and politics of modern France that many readers will turn with the greatest curiosity to Professor Sloane's account of the measure and its effects. Here his most important contention relates to the "organic laws" which were and remain part and parcel of the system inaugurated by the Concordat. On the one hand, there is the theory which conceives Napoleon's motive to have been purely selfish; on the other, there is the plea of his admirers that he was guided by considerations of prescient statesmanship and a desire to restore religious liberty. Professor Sloane discards both of these theories because they leave out of account the "organic laws" supplementing the Concordat, with which Pope and Church had nothing to do. Here the First Consul legislated in direct contravention of canon law, and enacted rigid rules whereby the secular power was rendered supreme. "Determined to suppress alike the White and the Red Terror, . . . he aimed to restore the hierarchy in name and form; but in so doing he intended to make it subject to the secular power without reserve, keeping intact, as he wished ever to think, both the immemorial tradition of secular supremacy and the fundamental principle of the Revolution—absolute religious liberty and equality." Notwithstanding this general definition, Mr. Sloane admits that the French Liberals have some ground for regarding the Concordat as a reactionary measure, since it has permitted the rise of religious associations to great power, the decline of secular education, and the unification of all parties within the Roman Church.

While Professor Sloane's labors have been facilitated by the existence of such works as Robinet's 'Mouvement Religieux à Paris' and Gazier's 'Histoire Religieuse de la Révolution Française,' this volume represents original thought and investigation. Our opening remarks concerning the title call attention to what, if it be considered a fault, is but a slight one. On the whole, these lectures form an admirable monograph. They are thoroughly instructive and they prompt reflection. The only adverse criticism which we feel bound to make affects the manner of expression. Professor Sloane's style, though not at all obscure, is somewhat less rapid and incisive than we expect to find in historical writing of the highest class.

---

*The Sacred Beetle:* A Popular Treatise on Egyptian Scarabs in Art and History. By John Ward, F.S.A. Five hundred examples of scarabs and cylinders; the translations by F. Llewellyn Griffith, M.A. Charles Scribner's Sons. 1902. Pp. xvi, 122. 16 plates.

The author of 'The Sacred Beetle' is an amateur, but his book is a distinct contribution to a branch of a large subject of growing importance. It is dedicated to that indefatigable explorer, Prof. Flinders Petrie, whose words serve as a motto: "The distinction of the styles of scarabs is as much a special subject as the discrimination of the manner of painters, and as invisible to those who are unfamiliar with the study."

The book begins with an account of the scarab itself, and incidentally mention is made of a number of other subjects. While what is said is quite accurate in the main, some things might have been added without wearying the reader, and some might have been omitted without loss. The scarab or dung-beetle of Egypt became the symbol of "being," of continued "existence" and so of "immortality," possibly by reason of the popular myth which attributed to it the power of sexless self-propagation. Given form and significance, it afforded a double opportunity to the artist in stone, metal, or pottery, in the shape of the beetle itself with its fine details, and the smooth under surface which lent itself to inscriptions, mottoes, and fanciful designs. Mr. Ward has arranged his specimens chronologically as far as possible, using the royal names that frequently occur. The arrangement, of course, is not as plain in the case of those whose antiquity can be determined only by a process of comparison, or by a knowledge of their exact provenance. These are arranged by similarity of design or general likeness of pattern. Fortunately, the photographic method of reproduction has been adopted, thus giving the book a value which it could not otherwise have attained. A uniform greenish tint has been applied to all specimens alike, but this is hardly an unmixed good.

After the general account, follows a detailed description of the various specimens shown. Here the author has evidently been in a strait 'twixt two, whether to write for the reader who only possesses an uninstructed interest in the subject, or for the more advanced student who has no need of transliteration or translation. At times he has written for one, at times for the other. In the historical portion of the volume there are many illustrations in halftone, and many historical remarks showing the importance of a given king, the monuments which he left, or his relation to those who preceded or followed. These things are instructive and illuminating to the general reader particularly. Mr. Ward remarks the frequency of scarabs bearing the name of Thothmes III., supposing that it "became a watchword of religious supremacy, and so remained for many generations." This explanation, however, is quite insufficient. The name was written with three characters, *Ra-men-kheper*—the supreme solar deity; permanent; exist. When combined, these words form a prayer that Ra would grant permanent existence, a most appropriate petition or wish when applied to a mummy whose preservation intact in its tomb was a condition essential to the continued existence of the soul of the late departed. Scarabs thus engraved were used as amulets, and they are also found fastened to the foreheads of mummies. A specimen of the latter use may be found in one of the cases in the Metropolitan Museum, in this city.

Mr. Ward holds to the theory that the ancient Egyptian religion was "pure and simple," and that it "gradually degenerated into a species of polytheism." He holds that, "as the old faith waxed or waned," scarabs became plentiful or scarce, comparing their use to that of the cross among Christians. Exception must be taken to this, and to some of his historical statements, but for the most part, these have no connection with the principal subject in hand, and may be disregarded. The severest criticism must be aimed at the meagreness of the descriptive text in the latter part of the book, for this appeals to the lay reader, and for his benefit a glossary of terms might have been appended with advantage. The thanks of the expert need extend no further than the admirably executed plates, which present the objects almost as well and plainly as though they themselves were present in the round. Strangely enough, Mr. Ward gives no adequate reference to the widespread use of the design in other lands besides Egypt. Cyprus, for instance, has furnished many specimens of beautifully modelled beetles, cut from agate, chalcedony, rock crystal, and other hard substances, and engraved with designs more delicate and beautiful than any shown in this volume. These may be seen in the Cesnola collection of engraved gems exhibited in the gold room in the Metropolitan Museum. Some of them are of Egyptian workmanship, and show unadulterated purity of design. Others are Phœnician imitations; others still are Greek. In the course of time, all detail of form was lost, and the scarab became the scaraboid, and afterward was reduced to the oval convex bezel of the seal ring and even of the amulet.

*Breaking and Riding*, with Military Commentaries, by Joseph Fillis. Translated by M. H. Hayes. Scribners. 1902.

Mr. Fillis, head riding-master of the Central Cavalry School at St. Petersburg, published, some ten years ago, his work entitled, 'Principes de Dressage et d'Équitation,' and the present translation is by Capt. M. H. Hayes, formerly of the British army, himself a prolific writer on the subject of the horse. The success which has attended Mr. Fillis's career makes his advice very valuable, and no horseman can peruse this work without a feeling of satisfaction. In all European countries riding-masters are provided for the cavalry service, but in the United States the same practice is followed in regard to the mounted branches as with the foot troops—that is, the best instruction possible is given to the young officers by their superiors, and the former are then required to instruct the men and supervise the training of the animals to be used. This does not result in the development of high-school horses. For all practical purposes, such a horse is not necessary; and while time devoted to such training is not thrown away, it is deemed best to limit it, in order that other and important things may be learned.

In the United States the ability to stick on a horse has often been rated as of greater importance than real horsemanship, but during recent years this view has changed quite generally, and riders as a class have learned that much more can be got out of the horse by accomplished horsemanship than by mere sticking on. Mr. Fillis sums up his views on this subject by saying that the chief good point about the rider is firmness of seat, which is obtained by correct position and practice. The rider should have not merely blind pluck, but self-confidence and coolness, without which he will not be able to utilize the useful things he has learned.

In preparing the horse for riding, Fillis uses some methods which differ from those of Baucher, who really is the father of modern high-school riding in France, though he did not, of course, originate all that he taught. Not enough attention has been paid in cavalry service generally to the employment of flexions in training horses. A horse that has had proper training in the bending lessons, which has been taught to stand quiet while being mounted, and to preserve his equilibrium with a rider upon his back, is valuable for all ordinary purposes. Of course, for jumping, both in hurdle-racing and in hunting, additional special care is necessary in selecting and training horses. Fillis's remarks upon the subject of jumping are well worth careful reading, since he demonstrates, what ought to be apparent to any sensible rider, that no general rule can be applied to all horses in teaching them to make difficult jumps. He especially urges that the natural stride of the horse be not hampered at the moment of taking-off by efforts to raise him with the bit for the jump. In order to jump successfully, a horse should have his head and neck quite free; the rider being prepared to sustain him at the moment of landing, should he stumble. It is quite certain that the average horse is better able to take his bearings and decide the distance over the obstacle, and the instant when he should take-off for the jump, than the rider can possibly be. The rider's hand should, of course, not lose touch with the horse's mouth while approaching the obstacle; but the horse should have his head while jumping. Not only should the rider's legs support the horse by pressing him forward to the jump, but the close contact should be maintained when passing over the obstacle, and particularly when landing, for it is at that instant that the forelegs receive their greatest strain, and should be relieved as much as possible from any jar.

In discussing the army horse, Fillis pleads for a reduction in the age limit to three and one-half years, upon the theory that at that time the horse is more supple and can be more easily educated than when five years old. The custom in the United States cavalry is, in time of peace, to buy horses from four to six years old, but in time of war no horses under six years of age are purchased for cavalry service. The reason for this is that the young horses are subject to influenza, commonly called "shipper's fever," which rapidly disables cavalry commands mounted upon young horses. It is perhaps not generally known that during the civil war the number of horses and mules in service averaged one to every two soldiers under arms, and that the losses averaged 500 per day. Under these conditions it was absolutely necessary to reduce the probable mortality by purchasing animals of such age as would assure them against the diseases which attack colts.

A letter under date of February 13, 1865, to Gen. Grant from Gen. Halleck, Chief of Staff, states that there were, on January 1, 1865, 105,434 cavalrymen present for duty, and that there were only 77,847 serviceable horses, although 154,400 had been purchased during the year, no less than 180,000 horses having been used up by the cavalry in that period. With these actual conditions attending active field service, it must be apparent that there is no time for high-school training of cavalry horses for real war. As a matter of fact, the number of horses that have been trained for high-school purposes is very small, Baucher and Fillis together having trained in a lifetime less than sixty horses.

There is much in Fillis's book of value to those who may, through inclination or duty, undertake the training of horses. It is a much easier matter for the trainer to omit some of the high-school lessons after acquiring a knowledge of them, than it is to originate ideas concerning the various elements which go to make up the trained horse.

---

*The Discovery of the Solomon Islands by Alvaro de Mendaña in 1568.* Translated from the original Spanish manuscripts. London: Hakluyt Society. 1901. 2 vols., 8vo. Illustrations and maps.

The Solomon Islands have had a strange history. They were discovered in 1568 by some Spaniards who brought back a detailed account of their six months' exploration of eight islands which stretched in an almost unbroken line for 600 miles. On their return, ship after ship was sent out to revisit them, but so completely without success that, their very existence being doubted, they were expunged from the charts. Two centuries passed before a French navigator rediscovered them; and though they have been frequently visited since, they are still practically unexplored, the largest and the least-known of the island groups of the Pacific.

The story told by the original discoverers, now published for the first time as a whole and in English, by the Hakluyt Society, is also remarkable. The expedition, consisting of two small vessels manned by 150 sailors, soldiers, slaves, and four Franciscan friars, left Callao, November 19, 1567, to discover and make a settlement upon a rich continent supposed to be within easy sail of Peru. Eighty days later Isabel was reached, a boat was built, and six months were spent in explorations. Then, the natives having proved hostile, food being scarce, and most of the people being sick, "I assembled all the company," writes the leader Mendaña, "captains and soldiers as well as pilots and sailors, and asked them all without distinction what was best to be done, and whether we should make a settlement here or not." The majority of this "parliament," in which fifty-eight gave their opinion, voted to return, and four days later the homeward voyage began. Though both ships were dismasted and separated in a hurricane, they arrived at a California port within two days of each other, and returned in company to Callao, where they cast anchor July 26, 1569, having lost only thirty men.

The sources of information are six manuscript narratives of the commander and several of the officers, the fullest being that of the chief purser. These have been translated and edited by Lord Amherst of Hackney, with the aid of Mr. Basil Thomson, author of several works on the South Seas, who also has written the scholarly introduction. Mr. C. M. Woodford, H. M. Deputy Commissioner for the islands, and some others have contributed many valuable notes upon the native customs, and in identification of the places, mentioned in the narratives. These simple records of each day's incidents, in which the relations with the natives are described with great fulness of detail, show the Spaniards to have been courageous, humane, and sincerely pious. They had frequent conflicts with the natives, but at first the natives were invariably the aggressors, and all Mendaña's efforts to maintain friendly intercourse were unsuccessful. This treacherous character of the islanders is unchanged. Mr. Thomson says that men who have been long in contact with Europeans, "who have paraded the streets of Townsville and Suva [Fiji] almost foppishly clad, may be seen two months later on their native beach in Malaita, arrayed in a pandanus leaf, with rifle in hand, to shoot at the crew of a passing schooner." Cannibalism was the great barrier separating the two races. On one occasion a chief with a flotilla of fifteen large canoes came to the ships and sent a quarter of human flesh to Mendaña, evidently the highest honor he could pay him. A grave was immediately dug at the water's edge and the quarter buried in the chief's presence. "He regarded this very attentively, and, seeing that we set no value on the present, they all bent down over their canoes like men vexed or offended, and put off and withdrew with their heads bent down."

A comparison of these accounts with those of recent visitors reveals this remarkably suggestive fact that, as the na-

tives were three centuries and a half ago, they are now, having neither progressed nor deteriorated. They are head-hunters, eat the bodies of the slain, use the same arms, build the same vessels, and wear the same ornaments. They had reached a stage of progress beyond that of any other of the Pacific islanders, as is shown by their graceful plank canoes, their elaborately built and decorated houses, and their sculpture, "correct even in anatomical detail"; and there they have stopped, furnishing another example, on a small scale, like that of China, of a people remaining stagnant.

Among the few passages difficult of explanation is one in which it is said that the expedition

"found some temples, and snakes, lizards, and scorpions in them, and in each one they found two or three *sabandijas* [? reptiles], which they keep in their nests in the wood of the temples, and they place food for them. We understood that they worshipped them; but our men also found them in their houses, near the spot where they made fire. They hung as many of these as they found on a stick, where the Indians could see them, and they sang at night, differently from other snakes (*culebras*), and like birds. One of them bit Francisco Garcia Tarifeno, a soldier, who put his foot upon it, but it did him no harm."

A missionary has seen the little green tree-frogs kept as pets in the houses of Isabel for the sake of their piping at night, and he himself has mistaken their note for the call of a night bird. They are also tied to sticks by the leg, but they do not bite, and it is difficult to see how they could be compared with snakes. An interesting illustration of the childlike faith of the explorers is that they attributed their discovery of a port to the intercession "of the three Magi, who had ever been our advocates," says Mendaña. "For at about ten o'clock in the morning, after we had put out to sea, and just as we were reëntering the shallow water, we saw above the middle of the maintopsail a resplendent star, which we took to be a guide sent to us by them to show us the passage through the shallows. . . . I called the port Bahia de la Estrella (Bay of the Star)."

A number of photographs, facsimiles of manuscripts, and maps add to the value of this most interesting narrative of a voyage, "remarkable even in a century famous for maritime discovery."

---

*Philip Freneau, the Poet of the Revolution:* A History of his Life and Times, by Mary S. Austin. Edited by Helen Kearny Vreeland, great-granddaughter of the poet. New York: Wessels.

It is now more than half a century since Charles Fenno Hoffman, then conspicuous among New York literary men, wrote thus to Rufus Griswold, in regard to Philip Freneau, Griswold having just published his 'Poets of America':

"Do you know, I think you missed it in not giving him [Freneau] more room; that piece, 'His blanket, tied with yellow strings,' etc., should have been in. There is more of nature and poetry about him than in all the Yankees that follow till you come to Hillhouse. Dwight, Barlow, etc., were men of great intellectual vigor, but their poetry was an exercise of mental ingenuity merely. Freneau, if half an idiot, would still have had more poetry in the other half than could have been squeezed out of all the others boiled down to a consommé." (Griswold, Correspondence, p 185.)

This terse verdict has been, on the whole, confirmed by time; since we must remember that the Dana-Bryant-Percival period came after the years when Hillhouse was in his youthful glory; he having been born in 1789. The fuller editing and criticism of Freneau is therefore eminently appropriate, although the book before us is perhaps too large, as is certainly the case with the style and epithets of its editors.

It is perhaps unfortunate for the memory of Freneau that the author or authors of this bulky volume should have felt bound to make it a history of his times as well as of his life. When we reflect on the hundred thousand or more books which have grappled with that period, and the very few which have had much to say of this man, it would seem quite time for the man to take his turn, and not to be still further submerged, as in this particular book. Freneau, whatever his limitations, may now be justly regarded as the pioneer American poet, and it is a pity that he should not have been treated biographically, instead of merely glancing in and out upon the stage, as occasion serves. When we consider that the first four chapters, including sixty-eight pages, are occupied with events which took place before he was born, it is hard not to be reminded of that memorable autobiography of the French George Sand, in which it requires three volumes—if we remember rightly—to bring us to the birth of the narrator's grandmother.

After the beginning of chapter five, in the present work, we really have a great deal about the poet himself, though seldom systematically arranged, and often encumbered with more general matters. The authors show themselves unaccustomed to literary work and not abounding in literary knowledge. It seems almost incredible, indeed, that a song so well knewn as George Stevens's

"Cease, rude Boreas, blustering railer!
List, ye landsmen, all to me,"

should have been assumed to be by Freneau, and regarded as hitherto unpublished, simply because he had transcribed it in pencil. The authors have, however, brought out, with much fidelity, the remarkable compliments paid to Freneau by Scott and Campbell, when each borrowed unquestionably for his own verse a line from the American poet. The line taken by Campbell was from the striking imaginative picture in "The Indian's Burying-Ground," where Freneau writes:

"By midnight moons, o'er moist'ning dews,
In vestments for the chase array'd,
The hunter still the deer pursues,
The hunter and the deer—a shade."

Campbell transfers the last line, less effectively, in his "O'Connor's Child":

"Now on the grass-green turf he sits,
His tassell'd horn beside him laid;
Now o'er the hills in chase he flits,
The hunter and the deer a shade."

Again, Scott uses in his introduction to the third canto of "Marmion," where he has the lines,

"And Prussia hurried to the field,
And snatched the spear but left the shield,"

another extract from Freneau, who had written, in a poem on the "Heroes of Eutaw":

"They rushed to meet the insulting foe,
They took the spear—but left the shield."

In this case, while we have no direct recognition of the borrowing, it is known that Scott had met with the "Eutaw" poem in a magazine, that he knew it by heart, and pronounced it to be "as fine a thing of the kind as there is in the language" (p. 220).

These little literary honors counted for much at that nascent period of our literature; and everything goes to show that Freneau was a man of absolutely simple nature, though often over-vehement, irascible, and a partisan by temperament. The highest point reached by him in his varied career was the moment when, after a life of habitual distrust and disapproval of slavery, he emancipated his own slaves, some time before his death, and continued to support the aged and infirm among them; all this happening some time before the passage of an Emancipation Act by his own State, New Jersey (p. 195).

Freneau died a picturesque and tragic death at the age of eighty, he being on his way home from a political meeting and being caught in a sudden snowsquall, which hid from view the light that his wife always placed in the window for him; he fell in the snow, broke his hip, and was found dead. He was, on his father's side, a French Huguenot, and his leadership, in respect to time at least, among American poets, recalls the remark of Mrs. Frances Kemble Butler, who pointed out that, so great and rapid had already been the mixture of blood in this nation, the future American must not be viewed as merely a transplanted Englishman, but as a new type to be classed somewhere between Englishman and Frenchman.

---

*Folk-Tales of Napoleon.* Translated, with Introduction, by George Kennan. New York: The Outlook Company. 1902.

The two folk-tales contained in this slender volume might fitly be issued by the Peace Society as a tract against war. Of the second, "The Napoleon of the People," little need be said. It is already more or less familiar to the public in its original place, Balzac's 'The Country Doctor,' and, while it is good and sufficiently suggestive in its way, it pales into insignificance by the side of the first story, "Napoleonder." The latter is a fine specimen of the wit, wisdom, and peaceful tendencies of the Russian people as a mass. In its present literary form it is the production of Alexander Amphiteatroff, and was published in a St. Petersburg newspaper at the end of 1901. But it is obvious to any one who is acquainted with the legendary and poetic talents and style of the Russian peasants, that Mr. Amphiteatroff has done little except act as a faithful mouthpiece. The general idea set forth is, that the Emperor Napoleon I., with whose campaign in Russia in 1812 the legend chiefly deals, was created by the devil, accidentally endowed with a soul by God, and then used by the latter as an instrument wherewith to chastise the peoples of the earth for their wickedness. But the pith of the idea, that which renders this simple folk-tale more powerful as a peace sermon than any scientific argument or philippic volumes long against war, is, that Napoleon conquered purely by virtue of the fact that he felt no pity. The moment a sentiment of pity entered his heart he was overthrown. The phantom hosts—his dead troops, who rallied again and again

to his standard, from their graves, at his call of "Bonaparty!"—ceased to respond when "Ivan-angel," in the guise of a mortally wounded young Russian soldier, asked the Conqueror: "Tell me, please, what have you killed me for?" and so set in motion a train of thought which speedily softened the heart of stone. The young soldier's arguments on the subject of war in general could not be improved upon.

We commend the little story to the attention of both the warlike and the peacefully inclined who have not had the good fortune to make acquaintance with it in the pages of the *Outlook*. The translation is as racy as the original, and that is the highest compliment which can be paid. The sole defect is a lack of footnotes. For students of folk-lore, they would have been especially valuable. There are exceedingly curious traces of the Epic Songs (which are famous for having been handed down for hundreds of years by word of mouth only), intermingled with historical facts in the most telling manner. For example: Napoleon is said, in epic style, to have "desolated the whole Mohammedan kingdom" before he finally marches on a Christian country, Holy Russia. An amusing touch is the reason assigned for Alexander I. being called "the Blessed"—because he now "stands on the top of the column in Petersburg-town, and blesses the people with a cross"; the fact being that the figure on the Alexander column in the Winter Palace Square is an angel. The Emperor Alexander is then represented as leading his army to "the field of Kulikova," where he waited for "the miscreant Napoleonder," and a battle ensued. The Russian army then flees "from Kulikova-field to Pultava-field; from Pultava-field to the famous still-water Don; and from the peaceful Don to the field of Borodino, under the very walls of Mother Moscow." As in an earlier reference to "the great fighter, Anika," of the "Cycle of the Elder Heroes" and "the island of Buan, in the middle of the ocean-sea," "Kulikova-field" (which reappears, under another title, in "the peaceful Don") is an echo of the "imperial or Moscow Cycle" of the Epic Songs, and refers to the famous battle fought in 1370, which broke the Tatar dominion; while "Pultava-field" represents the famous battle between Charles XII. of Sweden and Peter I. in 1709; and the field of Borodino is far from being in the immediate neighborhood of Moscow. All three were fateful battles for Russia, as each annihilated a foreign Power, and the combination is capital. The statement, also, that Tsar Alexander had Napoleon put into an iron cage, and carried round and exhibited to the people at country fairs for the space of thirty years, is derived from the legends and epic ballads about the popular kazak brigand, Stenko Razin, who was executed in 1671, and of Pugatcheff, the pretended Peter III., about a century later.

*Qualitative Chemical Analysis.* By Albert B. Prescott and Otis C. Johnson. 5th ed. entirely rewritten. New York: D. Van Nostrand Co. 1901. 8vo, pp. 420.

*Victor von Richter's Organic Chemistry.* Edited by R. Anschütz. Translated by Edgar F. Smith. 3d American from 8th German ed. Philadelphia: P. Blakiston's Sons & Co. 2 vols., 8vo, pp. 625, 671.

*The Elements of Physical Chemistry.* By Harry C. Jones. Macmillan Co. 1902. 8vo, pp. 565.

Our readers would be far from curious to see minute dissections of technical books performed before their eyes. The volume from the Laboratory of Physiological Chemistry of the Sheffield Scientific School contains some two dozen experimental researches into different points of that science, well sustaining the high character of their home. They are preceded by an interesting catalogue of all the publications of the Laboratory since its institution in 1875.

The 'Qualitative Analysis' of Profs. Prescott and Johnson is a handbook every way modern, distinguished by its completeness. An introduction of 26 pages sets forth concisely the principles of the art, including sections on dissociation, the periodic system, etc. All the rare metals, excepting only such things as Polonium and Radium, are included; and the selection of acids treated is large. The authors, it is plain to see, have searched the "literature" of the subject exhaustively, and have not neglected experimental verification, wherever it was possible. Sufficient details are given as to precautions to be observed, and there are useful explanations of why peculiar phenomena are as they are. Earlier editions are well known, but this present work is largely new and a great improvement. In every respect, it will be most serviceable, especially to the accomplished chemist.

Von Richter's 'Organic Chemistry' has been so often rewritten that one might begin to fear effects of new wine in old bottles. Nothing of the sort appears. With what ingenuity a vast ocean of facts is packed away into these few, thirteen hundred pages, can be learned only by personal inspection. The digest is so uniform that one knows precisely what one may expect to find and where to look for it. The exposition is so luminous that a student who has once acquired the chemical memory can, with a reasonable amount of study, bring away all the outlines and many of the details. The first volume is chiefly given over to the fat-allied bodies; but, after they have been treated, room remains in the same volume for the carbohydrates, the albuminoids, and all that is beyond the ken of chemical theory to-day. That leaves the second volume for bodies of so-called cyclical constitution exclusively. This second volume carries authority as to fact beyond what one would have a right to demand of a compilation. Not only has it been executed with great *general* chemical judgment, but special parts have been revised by men specially acquainted with special groups of substances. The German editor's skill in exposition gains in this second volume, too; and the American translator manipulates his own language with more accomplished neatness. This work may be recommended as quite the most suitable that exists for almost every person who may desire to undertake almost any kind of study of organic chemistry. Common sense will set certain limits to this statement; and there are no others. If every person whom the description fits were provided with a copy of these volumes, the sales would run up into quite modern numbers.

As to the subject of Professor Jones's book, one can go further. Every man of education would like to know something of organic chemistry; but every such man needs to know the principles of physical chemistry in about the measure in which Professor Jones's volume sets them forth. There are really two departments of science which join hands in this volume; first, the new Physical Chemistry, which takes account of the time of reaction, of dissociation, of the influence of mass; second, that somewhat ill-defined congeries of studies which used to be called Chemical Physics. Why should not these two phrases be allowed to stand, each in the peculiar sense in which it is usually employed? The newer subject captivates by its unexpected and prompt explanations of most important facts for which one had not seen any reason. It looms large from the viewpoint of to-day's science. Professor Jones's exposition of this branch is in almost every point excellent, and in the most important parts is everywhere more than excellent—often admirable. The older subject, the knowledge of which is fully as valuable, although at the present time it is not so active a factor in the metabolism of science, evidently does not interest the author so keenly. This is unfortunate, because this division is naturally placed first, and among the students of this work there will be some who, though somewhat at sea in chemistry, have pretty distinct and tolerably accurate notions of what good logic is and what bad. If a Clerk Maxwell could have been found to perform this more perfunctory part of Professor Jones's task, what a masterpiece might the two have made of it!

---

*Tribal Custom in Anglo-Saxon Law:* Being an Essay Supplemental to (1) 'The English Village Community,' (2) 'The Tribal System in Wales.' By Frederic Seebohm. Longmans. 1902. 8vo, pp. xvi, 538.

In this volume Mr. Seebohm tries to throw light on the division of classes in Anglo-Saxon society and the character of their holdings by investigating the subject from the point of view of tribal custom, whereas in his 'English Village Community' his chief purpose was to trace the origin of the manorial system by a careful study of the open-field system of agriculture. His main clue to an understanding of the division of classes is the amount of the wergelds or death-fines which were paid in lieu of the feud between kindreds, and his treatment of this subject leads to some long digressions concerning the currencies in which the death-fines were paid. He concludes "that there was a general correspondence in the amount of the wergelds tenaciously adhered to by the tribes of Western Europe, whether remaining in their old homes or settled in newly conquered countries." About half of the book is occupied with an examination of the tribal customs and monetary systems of the Welsh, Irish, Scots, Scandinavians, Burgundians, Visigoths, Franks, Saxons, and other Germanic tribes, so that the work might properly have been called 'Tribal Custom in the Early Laws of Western Europe.' The comparative method of historical study, when applied to early institutions, requires

much laborious research, and has been employed by Mr. Seebohm with more success in some chapters than in others. For example, it is difficult to follow or accept his new explanation of the terms twelve-hynde and twy-hynde men; but by investigating the evidence of the Norse laws regarding the wergelds of the leysings he is able to give a plausible explanation of the status of the Kentish laets, whose position in society has always been obscure. He deserves much credit for his courage in undertaking the arduous task of bringing the Continental evidence in line with the Anglo-Saxon; and if his example is imitated by others, we may hope for a better knowledge of early English institutions.

It is difficult briefly to formulate the new results reached by Mr. Seebohm. He throws some new light on various questions concerning the wergeld system, the bond of kindred, and classes of society; but, though the Anglo-Saxon nobility is one of his main themes of discussion, he has not cleared away the darkness surrounding the meaning of the terms eorl, gesith, and thegn, and some of his statements regarding them are perplexing. For example, he tells us that the gesith in Ine's time was the twelve-hynde man, and belonged to a class lower than the thegns (pp. 410, 417), and yet he does not question the chapters of the so-called Laws of Henry I. which equate the thegn with the twelve-hynde man (pp. 325, 328). Then, too, some of his conclusions are based on his questionable dating of fragments of Anglo-Saxon law, notably the 'De Institutis Lundonie,' the 'North People's Law,' and the 'Northumbrian Priest-Law' (pp. 340-43, 364, 399). The fact that the Danish ore of sixteen pence is found in the Domesday Survey, as well as in the 'De Institutis Lundonie,' might be used as an argument against his assumption that this fragmentary collection should be assigned to the reign of Cnut, and in favor of Höhlbaum's contention ('Hansisches Urkundenbuch,' iii., 379) that it belongs to the period immediately following the Norman Conquest. Finally, in dealing with the wealh class (pp. 402-4) our author overlooks Liebermann's essay on the Ordinance concerning the Dunsetas, in *Archiv für das Studium der Neueren Sprachen*, 1899, volume cii.

The discussion of the classes of society naturally leads to some consideration of manorial development, and it soon becomes evident that Mr. Seebohm has modified his well-known theory that the English manor was a survival from Roman times. He now believes that the Anglo-Saxon settlers brought with them from the Continent traditions of tribal or family ownership; "and tribal custom left to itself would give to them landed rights quite different from those of the individual owner." The law of tribal gravitation tended to place the ceorls with an imperfect kindred in a dependent position at the bottom of the social ladder; they became dependent on the landholders (gesiths or twelve-hynde men), whose separation from their kinsmen in the period of conquest and settlement brought them in closer relations with the king. The ceorls paid gafol and did service to the landholders, and these paid gafol and did service to the king. Seebohm thus accepts Maitland's definition of the manor as "the fiscal unit from which gafol is paid directly to the king, while its lord is the receiver of the payments and services of its tenants." Moreover, he asserts that manorial jurisdiction "may have grown from the root of the tribal principle involved in the sacredness of the precinct or area of protection of the chieftain and, in degree, of every grade of tribesman who possessed a homestead." The importance which he ascribes to the tribal element necessitates a modification of the theory set forth in his 'English Village Community' that the Anglo-Saxon manor was directly derived from the Roman *villa*, and that English history "begins with the serfdom of the masses of the rural population under Saxon rule." He still believes, however, that Roman methods of land management exerted considerable influence, especially in establishing uniformity of holdings on manorial estates, and he is inclined to push back the serfdom of the masses to a period at least as early as the reign of Ine.

***The 2d Volume, 1809-1828, of***

**GORDY'S POLITICAL HISTORY OF THE UNITED STATES.**

By Prof. J. P. GORDY of New York University. 581 pp. 12mo, $1.75 *net* (postage 14c.).

Vol. I., 1783-1809, is a well-rounded history of the Federal period. In Vol II. much attention is paid to the financial side of the War of 1812, and to the curiously similar attitudes of the North and the South towards the negro in those early years. Vol. III., 1829-60, and Vol. IV., from 1860 to the election of Cleveland, are in active preparation.

"May be read not only by beginners but by almost anybody with profit. It is written in a clear and simple style, and is entirely non-partisan."—*Nation*, on Vol. I.

Facing on Berkeley, Boylston, and Providence Streets; but one block from the far-famed Public Gardens and the same distance from Copley Square, is but two minutes' walk from the Art Museum and Trinity Church; is directly opposite the Institute of Technology, and but five minutes to all theatres, shops, and the business section. Restaurant à la Carte, Dining-Room, Table d'Hôte, Café and Billiard-Room for Gentlemen.

# AN EDUCATIONAL DIRECTORY

I.—The Nation stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the pirncipal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do-classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in The Nation has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

**The Nation, 206 to 210 Broadway, N. Y.**

# THE BEST NEW BOOKS FOR SUMMER READING

"Masterly, simply captivating."—*Globe-Dem.*, St. Louis.

"Easily the best of the Western novels that have appeared."—Tucson *Citizen.*

*SIXTH EDITION—30th THOUSAND*

## THE VIRGINIAN

A HORSEMAN OF THE PLAINS

*By Owen Wister*

Illustrated by ARTHUR T. KELLER. 504 pp. **$1.50.**

## THE MACMILLAN COMPANY 66 FIFTH AVENUE NEW YORK

# The Nation.

NEW YORK, THURSDAY, JULY 31, 1902.

## The Week.

The Cuban Secretary of Agriculture, Señor Terry, having made arrangements with certain bankers to furnish a loan of four millions for the relief of the planters, recently applied to the Cuban Congress for its authorization. Instead of granting it to him at once, the House is now proposing to make the loan one of $35,000,000, with a view to paying off the Cuban army. This question has been a stumbling-block in the path of the new republic from the start, and is one which must cause President Palma no little anxiety until it is finally disposed of. Meanwhile it is very doubtful whether such a large loan could be placed by the republic, and the outlook for the planters, large and small, is as hopeless as ever. The first serious failure, reported last week, was that of a large cattle dealer. Fortunately it has not, as yet, been followed by others, but the anxiety at Havana and the general prostration of industry and business continue. For all of which, it must not be forgotten, the blame rests squarely upon the Republican majority in Congress.

Newspaper gossips have had much to say of late in regard to the future of Gen. Wood. Last week it was solemnly announced that he was to head the Panama Canal Commission. Now that this rumor has been authoritatively denied, it is stated that he is to become the head of a "commission to reorganize the army." This story is plainly as unfounded as the other. The army has been reorganized under the direction of Secretary Root, and there could be no possible excuse for such a commission as is suggested. What Gen. Wood's friends must wish for him is a chance to learn a little something about his profession, that he may be worthy of the high rank to which he has been promoted. Until the war with Spain, it must be remembered, Gen. Wood was a doctor. While Governor-General of Cuba, his duties were purely administrative and of a civilian character. With the exception of his service with the "Rough Riders," which lasted exactly sixty-one days, and his pursuit of Geronimo when attached to Gen. Lawton's column, Gen. Wood has had absolutely no military training or experience. His trip to Europe has been arranged that he may learn something about foreign military methods. He himself will be very much of a curiosity when he appears on the German parade grounds.

The committee appointed in April to look into the evils connected with military operations in the Philippines have printed an open letter to the President which is frank if not complete. Messrs. Adams, Schurz, Welsh, and the other gentlemen composing the committee were bound to acknowledge, as they do handsomely, that the situation has greatly changed since the date of their appointment. The President has had something to say, in the interval, and has confirmed his emphatic words by appropriate action. This could but be gratifying to the investigating committee; and, in fact, they do give Mr. Roosevelt praise for having done what he could for "the reëstablishment of the national prestige and the restoration of the morale of the army." This is the general attitude. The committee, however, urge further action in certain "concrete cases," as to which they are unfortunately vague. They allege, that is, the commission by men in the United States uniform of the crimes of kidnapping and robbery, and murder, and torture, and rape, but without specifying either the number of instances or the proof, though they state their entire readiness to produce it on request. Special facts, buttressed by detailed and unimpeachable testimony, were what the occasion seemed to call for; and these we miss in the committee's letter. Nevertheless, we can but praise the temper in which they have performed a disagreeable task.

Vermont for once is having a State campaign on State issues which is full of interest. In the nearly fifty years since the formation of the Republican party, there has never been a canvass when the slightest doubt was felt by anybody that this party would elect its ticket by an overwhelming majority—usually by a vote of more than two to one. This time it seems possible that, a month hence, the Republican candidate for Governor may lack a majority at the polls, although this would only postpone a little his success, as the Legislature, which must settle the matter in such a contingency, will undoubtedly be Republican. Percival W. Clement of Rutland is the man who has upset the State by pushing to the front the issue of a local-option and high-license system as against prohibition, and by taking the field as an independent candidate for Governor when he had failed to secure the regular nomination. Some Democrats have favored the idea of endorsing Mr. Clement, but their State convention decided against this plan by a vote of 254 to 99, and thus removed all possibility of his election. How largely he will detach Republican voters from their allegiance, it is as yet too early to judge, but his candidacy is weakened by the fact that the convention of his own party practically accepted his platform on the liquor question. Mr. Clement complains that the man who beat him for the regular nomination bribed voters in the caucuses, and he urges various reforms in other matters than liquor legislation; but his candidacy does not appear to present that clear-cut issue which is needed to make a bolt successful. However, the disturbance of the body politic which he has caused will do a vast deal of good to a commonwealth that has long suffered from sluggishness.

There is nothing new in the attempt being made in Mississippi to divide the school taxes between the white and negro schools in proportion to the taxes paid by each race. Similar movements have been started in almost every Southern State for at least fifteen years past, but always without success. Strong as has been the race prejudice in many sections, it has never been able to blind a majority of the whites to the fact that the proposition means ignorance and illiteracy for the blacks, and therefore wholesale injury to the South or to the individual State. Now that the negro has practically been disfranchised, the argument that education only teaches the negro to vote against the white man has fallen to the ground. Far more important than this is the fact that the new Southern educational movement has opened the eyes of thousands to the absolute necessity of negro education by the State. The attitude of men like Gov. Aycock of North Carolina, of Hoke Smith, and of many other prominent citizens makes the commission of such an outrage as is again proposed in Mississippi an impossibility. Moreover, in North Carolina the courts have declared the proposed division of the school funds unconstitutional.

The Alabama committee on the employment of children in factories has just published a pamphlet entitled "The Case against Child Labor," of which its chairman, the Rev. Edgar Gardner Murphy, is the author. It puts the facts about this terrible abuse in compact form, and should be in the hands of all interested in rescuing the poor slaves of the spinning-room from a childhood of drudgery. According to Mr. Murphy's statistics, the number of children under sixteen years of age employed in the cotton factories increased 140.9 per cent. during the decade ending in 1880, and 106.5 per cent. between 1880 and 1890. Between 1890 and 1900 the increase was no less than 270.7 per cent. Of the 45,044 textile operatives in North Carolina, 7,996 are under fourteen years of age, while the aver-

age wage of the child has decreased from 32 to 29 cents per day in that State. In some places in the South the daily wage is as low as 9 cents a day, incredible as it seems, and this for twelve hours of labor! In all, it is estimated that there are at least 22,000 such child victims of the rapacity and selfishness of the Northern and Southern owners of mills in the South, and from 9,000 to 10,000 of these are under the age of twelve. Among the planks adopted by the Texas Democratic convention on July 15 was one demanding "the enactment of a law prohibiting the employment of children under twelve years of age in factories using machinery." This followed upon precisely similar action by the Democratic Convention in South Carolina, and gives good ground for hope that the abuse has reached its worst stage.

---

Italian emigration to America has become important enough to have its own review, the *Revista Italo-Americana*, the first number of which contains tabulated statistics of emigration for the year 1901. Nothing is more striking in this table than the movement of population which is set down as temporary emigration. Thus, the total number of emigrants for the year was 533,245. Of these, 281,668, according to their own declaration, sought only temporary employment elsewhere with the intention of returning to Italy, while only 251,577 were actually seeking permanently a new home. Of these temporary emigrants 68,250, in the year 1901, went to Austria, 52,563 to France, 45,667 to Germany, 44,383 to Switzerland, and 20,221 to this country. Remarkable is the complete interpenetration of the life of this northern nation by the Italian, and the general prosperity of a class of immigrants which it has been the custom to regard as detrimental. If you wish to have your door-yard tidied up within the suburban radius of any of our great cities, you must appeal to a member of this "backward" race. Ride or drive among the truck gardens to the north of this city, and the language and costume of Italy are everywhere in evidence; not only the smaller shops in this region, but even the saloons, bear Italian names, and the mandolin is commoner than the concertina or other indigenous instrument. Meanwhile your friend is building his Massachusetts summer home exclusively with Italian labor; and your forest camp in Maine, however far from civilization, is not forgotten by the banana man.

---

The adding of an undergraduate department to Clark University, Worcester, Mass., is, we believe, rather in accordance with a requirement of the founder's will than with the preference of the present administrators. The faculty is a strong, if a small one, and one may assume that the baccalaureate degree conferred under its recommendation will be the equivalent of that of our best colleges. In founding a collegiate department, however, Clark University foregoes its unique distinction as a school of pure research, and, with scantier resources, accepts the conditions common to our historic universities. It is hard to see in New England any pressing need of a new university of the ordinary type, and it is yet to be hoped that the administrators of Clark University may find some special and restricted field of activity, so that the institution under their charge may not become merely a smaller Harvard, Yale, or Brown. It must be assumed that President Hall's ideals for the graduate school of research remain unchanged, and one must hope that, in the altered condition of the university, there may be—in the greater diversity of interests represented, or otherwise—some compensation for a certain loss of distinctive character.

---

The consolidation of the *Evangelist* and the *Christian Work* is another illustration of the change which has come over the field of religious journalism. A generation ago, the *Evangelist* was the most prominent, influential, and profitable organ of the Presbyterian denomination in the country, and most conservative business men would have considered its purchase on a pretty high valuation a good investment. The fact that its editor was then one of the best-known clergymen in the United States, the Rev. Dr. Henry M. Field, and that he retired from its control some years ago, may be considered one element in its decline; but secular journals which once had famous men as editors and then lost them have, nevertheless, continued to be successful. Moreover, the change in the *Evangelist's* fortunes is not exceptional. It is probably safe to say that there is not a single purely denominational newspaper in the United States which is anything like as profitable now as it was a quarter of a century ago. In New England more than one State organ of the Congregationalists has been merged in the journal bearing that denomination's name which is published at Boston. Elsewhere in the country many of the smaller newspapers devoted to the interests of a single church have disappeared, and there are denominational organs of much pretension which are supposed by the general public to be still flourishing that are known by insiders to have a gloomy outlook.

---

Lord Dundonald, the English cavalry general who relieved Ladysmith, and who is about to become the head of the Canadian militia, has put forward some interesting suggestions as to the development of close relations between the English and colonial military forces. He is not in favor of the present system of garrisoning the colonies with regiments from the United Kingdom. Like Sir Edward Hutton, he would have each colony raise its own troops and look after its own fortifications, as he believes this would have to be done in the event of a war with a powerful nation. Lord Dundonald is also in favor of giving such high commands as he himself is about to assume to competent colonial officers. Promising military men from any outlying portion of the empire would be given service in Great Britain or India, were his plan to be adopted. But he would always have the colonial officer keep his individuality as such, and not have him enter a regiment like any British cadet. Such a system as he proposes would require an enormous amount of supervision and very heavy expenses in the way of training officers so far from the hub of the empire. But the acclaim with which Lord Dundonald's elaborate suggestions have been received, goes to show how eager the public and the War Office are to take advantage of the close military relations of the various parts of the empire since 1899. Apparently everything possible is to be done to build up an elaborate system of "imperial defence" with great levies of men, no matter what the expense to which the taxpayer may be put.

---

Wherever the British Parliament wanders, it infallibly comes back to the Education Bill, for the discussion of which the session may again prove too short. But the attitude of the Government has notably changed since last summer, when the tendency was to cram a roughly prepared measure down the Liberal throat. This year successive amendments are bringing the bill nearer to the Liberal way of thinking, and it is evident that Mr. Balfour will make every concession short of the general principle of the bill—namely, that the seat of educational authority is to be not the school boards, but the 338 county and municipal councils. Upon this general matter of educational polity the Liberal adherents of the board-school system will naturally conduct a vigorous opposition. Meanwhile, recent amendments have greatly reduced the offensiveness of the bill, both to the local taxpayers and to those who saw in it an insidious move of the Church of England. The two most important amendments respectively promise to the poorer councils liberal support from the Exchequer, and forbid the teaching of any denominational creed or catechism in all schools supported from the rates. It is needless to say that this is a sad blow to the high-churchly of Lord Hugh Cecil's stamp, and that it will probably relegate the more ecclesiastical of the voluntary schools to their proper status as private institutions. It would seem as if Mr. Balfour had really grasped the idea that public education must be secular, and that only upon this basis

can the various primary schools of England be fused into a common system. This is a great advance for a Tory Government to have made.

---

The Kaiser will perhaps never more completely look the war lord than when, in the coming September manœuvres, he leads 90,000 troops into the Polish provinces of the Empire. In a time of friendly feeling such an entrance would seem unnecessarily spectacular. When the Kaiser makes it in response to a warning to avoid the Polish region, it is a significant reminder that the Empire has the means of enforcing loyalty. Whether such a demonstration is either wise or necessary, is very doubtful. The problem of racial antagonism in Posen and Silesia must work itself out gradually; it cannot be settled in a day by heroic expropriation of Polish land-owners, or through the execution of impressive manœuvres by the army. Such measures, indeed, are likely to deepen the misunderstanding, and it is clearly unwise for Germany to embitter a quarrel in which all the odds are in her favor.

---

The assumption of a Korean protectorate by the Anglo-Japanese alliance is a step of great importance. It gives check to all ulterior ambitions of Russia in that direction, and it asserts the constructive and aggressive character of the pact so lately made. Taken in its literal sense, it is almost in the nature of a self-denying ordinance on the part of Japan, while, assuming that the attempt to build up a vigorous nationality in Korea will prove successful, it may eventually mean applying to the Far East the policy of buffer states, which has been well tested in European Turkey. It would be strange to find an identical regimen—in either case of British contrivance—applied to both sick men of the East. A minor but a striking feature of the *entente* is the inclusion of the United States with the two treaty Powers as the possible accepter of a Korean loan. How far this is a privilege, financially speaking, may be doubtful; but it can hardly be considered otherwise than as a friendly overture to a nation which, without the formality of treaties, is firmly committed to the doctrine of maintaining the integrity of the Chinese Empire.

---

Russia is clearly in earnest about her international conference to deal with Trusts, for she has formally invited the English Government, which is considering its answer, so the Prime Minister said in the Commons on July 23. This would make the omission of the United States singular, if not invidious. It was, indeed, hinted from Washington the other day that only the Powers represented in the Brussels sugar conference were to be invited, and also that Russia well knew that we could take no part in European congresses. But it is not merely bounty-grown sugar that the Russian invitation specifies among the products whose "artificial depression" in price by Trusts it is desired to combat. Besides, we *do* have a place now in European diplomacy, where, according to the *Spectator*, we "weigh heavily." We were represented at the Czar's disarmament congress, so why not at his anti-Trust conference? President Roosevelt has declared it necessary to regulate Trusts by State laws and Federal legislation; surely he could not decline to accept the added curb of an international agreement. For our part, we feel almost like demanding an invitation as a right. We cannot let it be believed that we are so much the country of Trusts *par excellence* that it is impossible even to ask us to discuss methods of restraining their evils. If the European nations are to have a banquet of that sort, the United States ought to be present in some other guise than the fatted calf.

---

That Premier Combes's decree closing some twenty-five hundred monastic establishments would arouse bitter opposition, it required no extraordinary gift of prophecy to predict. Much of the rioting on the occasion of the closing of convents and conventual schools in Paris has been unquestionably of a political nature, but the barring out of the police from proscribed schools by the Breton peasantry shows very clearly that the country generally will interpret the decree as an anti-Catholic measure. There is, in truth, much reason for such a feeling. Most of the schools which have been closed by the recent order are girls' schools, conducted by the various orders of nuns. Many Frenchmen who are not at all of the Clerical stamp will remember that the case of the anti-Clerical Socialist Jaurès, whose daughter recently took her first communion, is not unique in the Chamber of Deputies and will feel that this harsh treatment of the nuns, however technically lawful, is excessive and unjust. On Premier Combes's side it must be noted that the recalcitrant orders are said to be very generally applying for authorization under the Associations Law. Until the statistics of suppressed and of newly authorized establishments are at hand, it will be impossible to tell whether the present proscription can be justified on any such grounds of discipline. Every Roman Catholic country must periodically have it out with the religious orders—history has shown nothing more clearly than this. Whether Premier Combes has not rashly opposed the Church itself, is the challenge he will have to meet when Parliament reassembles.

---

There is fresh evidence that the system of settling labor disputes in New Zealand by conciliation and arbitration continues to work well. A commission appointed by the Victorian Parliament recently returned to Melbourne after spending a long time in taking the testimony of all sorts of people in all the centres of industry. Only one of the many witnesses disputed the soundness of the principle upon which the new system is based, or desired to return to the old order of things; and among those consulted were the President of the chief Chamber of Commerce, officers of ratepayers' associations, and representatives of various industrial unions. All agreed that the arbitration court works well, but the Victorian commission, like previous investigators, found that the conciliation boards are not equally satisfactory. These boards take evidence and can then send to the arbitration court for final decision on points in dispute. A number of witnesses want to have the boards invested with power to give their recommendations the force of law, until reversed by the court. One amendment of the Arbitration and Conciliation Act is urged which is obviously needed—that seven men in a trade shall not have the right to bring all who are engaged in it before a court, perhaps on the merest quibble or out of sheer malice, but that the machinery of the Act shall not be put in operation unless half the employees petition for it.

---

In considering this latest picture of industrial harmony in New Zealand, the outsider cannot resist the suspicion that a concurrence of prosperity with good fortune in the first choice of officials to enforce the Arbitration and Conciliation Act has given a successful start in a new country to a system which might work badly in a nation as old and as politician-ridden as the United States. Here is a colony of only 800,000 people, among whom at present there are no unemployed. One industry of some importance is the digging of Kauri gum, much used in varnish manufacture; and when things are quiet in other lines of industry, men can go after gum and earn from £2 to £5 a week. It should be pretty hard for a "walking delegate" to work much mischief in a country where one can earn a good living so easily. As regards the operation of the act, the commissioners note that the Arbitration Court, with which all are satisfied, is presided over by a judge who "seems to be cut out for that kind of work," while "the success or failure of the conciliation boards depends upon the character of their personnel." One of these which is highly regarded has for its moving spirit a man of trained mind and considerable tact, while others have plainly failed because they lacked men of this type.

*CATHOLICS AND THE PHILIPPINES.*

Archbishop Ireland's statement last week is a sure sign that the Republicans are getting a little nervous lest the Philippine question become temporarily a Catholic question. The Archbishop's relations with their party have long been close. A prelate of high standing and great influence in all the Northwest, he has been one of the few men in the Catholic hierarchy to whom the Republican managers could turn for sympathy and assistance. This he has given on unselfish and patriotic grounds, we doubt not, and as a part of that "Americanism" in the Catholic Church with the movement for which he was understood to be identified until the Pope put it under ban. His activities in public matters have often and perhaps necessarily had a political aspect; and the politicians among the Methodist Bishops have been observed to shake their heads gravely over the spectacle of the Catholic Archbishop of St. Paul being called into the party councils. For them to boast of electing Presidents was a part of their American birthright, but for him—well, it was Erastianism, to say the best of it.

The rôle which the Archbishop now essays is that of a mediator; but we fear that the proverbial cuffs of the peacemaker will be his lot. Certainly his references to the "irresponsible Church societies and newspaper editors" that have been engaged in "movements and declarations regarding religious matters in the Philippines" will not allay the growing suspicion and bitterness with which Catholics in this country have been writing and speaking of what they consider injustice done the friars in the Philippines. To say that this spreading Catholic agitation "does no honor to those participating in it," may gratify the Administration, but it will only infuriate the Catholics concerned.

On the other hand, we can but think that the Archbishop has unwittingly rubbed the wrong way some of the most violent religious prejudices of Protestant supporters of the McKinley Philippine policy. In order to reassure the Catholics, he reminds them how the Administration has "responded graciously to the wishes of the Vatican." Why, that is a veritable red rag—a sleeve of the gown of the Scarlet Woman—waved in the face of those American denominations which have been bred in the belief that the Pope is the Man of Sin, that Son of Perdition. Fully as exasperating, we fear, will be the Archbishop's statement that no one who knows Messrs. Taft and Root and Roosevelt could imagine either of them would "do aught to detach the inhabitants [of the Philippines] from the Catholic faith." What, then, is to be said to the missionary societies which have been enthusiastically sending men and money to Manila? The Rev. Dr. Brown of the Presbyterian Board recently published a missionary report on the Philippines in which he spoke of the field there as one white for a Protestant harvest, the natives having only a "thin veneer" of Christianity, and being ready to repudiate their former religious teachers. Are our Protestant missionaries now to be told, on the authority of a Catholic Archbishop, that their labors in the Philippines are distasteful to the Administration?

We refer to these thickening religious difficulties in the Philippines not to rejoice over them, nor in the hope that they will prove insurmountable. They are one of the evils upon which our Philippine annexationists rushed blindly, though they were warned betimes. This friar question is a part of the legacy of trouble which President McKinley bequeathed to Mr. Roosevelt. With incredible lightness of heart and lack of foresight, our Peace Commissioners at Paris tied up our Government by a sweeping guarantee of the personal and property rights of the very men who had done most to drive the Filipinos to insurrection. That insurrection was going on very well, and was in a fair way to attain its great object in the expulsion of the religious orders; but we rashly bought it, and still more rashly agreed to make good the titles of what Archbishop Ireland happily calls "the landlord religious orders." With that treaty obligation resting upon us, there was nothing for it, if we were to stay in the islands, but some such adjustment as the President and Secretary Root have sought. Their course has been straightforward, and they have done their best to treat the whole question as one merely of government, not of religion. We ourselves do not know of a word or act of theirs in all this business which could fairly give offence to sensible people, whether Catholics or Protestants. They have honestly endeavored to maintain the American principle of the entire separation of Church and State. But religious prejudice was certain to be stirred up by this question of the friars, and it evidently has been, to an extent beyond the mollifying powers of Archbishop Ireland to quiet.

As we hear that our exposition of the legal status of the holdings of the religious orders in the Philippines has set some credulous people wondering if we were going to become cowled churchmen ourselves, it seems opportune to repeat what we have said dozens of times before. The evidence is to us conclusive that the Filipinos do not want the friars restored to their parishes. We are in favor of forcing upon the inhabitants neither religious ministers nor a form of government hateful to them. Purely as a governmental measure, it is much to be desired that the friars do not return to their provincial estates. This we have said again and again. But we have also said that justice must be done, and that our treaty obligations, even though irksome, even when taken upon ourselves thoughtlessly, must not be repudiated. We have, therefore, had no sympathy with those loose-tongued Americans who have said that the friars were a set of pestiferous interlopers who ought to be bundled out of the islands without ceremony; and it has seemed not a little ludicrous to us to suppose, as apparently the whole American press did, that the Vatican would waive, without any *quid pro quo*, and merely to oblige us, so clearly established a legal right as that we had bound ourselves to maintain in the case of the Philippine friars.

*THE MINING SITUATION.*

The strike among the anthracite coal-miners of Pennsylvania has reached a stage which is without precedent in the history of such struggles. That it has lasted considerably more than two months would alone render it a notable controversy, but what distinguishes it from previous troubles of the same sort is the refusal by practically all the employers to attempt the operation of their mines. There are, to be sure, rumors of preparations to resume work by one of the smaller operators, but the great companies still maintain their attitude of inaction. For the most part their representatives refuse any explanation of this course, although occasionally somebody curtly remarks that they do not try to mine coal because they do not think it to their advantage that they should attempt to resume work.

Meanwhile the price of coal has gone up to very high figures everywhere, and still higher prices are threatened within a week or two. Moreover, it seems clear that, even after the settlement of the strike, the cost of coal can and will be kept far above normal rates throughout the autumn and winter. In other words, everybody who uses coal and who did not put in a year's supply last spring, must suffer in pocket by reason of this labor controversy in the coal fields of Pennsylvania. The worst penalty will fall, as always happens in such cases, upon the poor of the cities, who have neither money nor space to store a large amount of fuel, and who must consequently buy in small quantities. With the steadily growing scarcity of hard coal, the public must also endure increasing discomfort and injury from the substitution of soft coal and the nuisances that follow in its train.

A new question is raised by the existing situation which invites discussion. An ordinary strike in any trade is a matter of only limited concern. If the building trades in Chicago, for example, are "tied up" by a dispute between employers and employed, only a portion of the people in one city are affected. Even such a strike as that of the steel-workers, last

summer—important as that vast industry is—did not come home closely to a very large element of our population outside the workers immediately concerned. But coal is a necessity in so many kinds of business and in so many homes that a long-continued suspension of its production means discomfort and hardship to a host of people, from the very mouth of the closed mines to cities, towns, and villages many hundreds of miles away.

The public is deeply interested in the operation of the street-car system in any town. Under the tendency toward consolidation of local transportation companies, a single company in more than one large city practically controls the operation of all the lines. A suspension of operations by that company involves a dislocation of the whole industrial movement throughout the city. A franchise for a street-car line always requires the holder to run cars over it, and the whole right may be forfeited by a company's refusal to furnish the promised accommodations to the public. A strike may break out, and the company may think that its employees have made demands so unreasonable that they ought to be forced into coming back upon the company's terms; but it is legally bound—and it can easily be held to the obligation—without delay to hire new men and set them at work, on whatever terms it can make. The public insists that the street-cars shall run.

The Pennsylvania Railroad is bound by law to transport passengers and freight between Philadelphia and Pittsburgh. Its franchise requires that it shall furnish the public reasonable accommodation in the matter. If all its present engineers, firemen, and trainhands should strike to-day, it would be under compulsion to make every possible effort to man passenger and freight trains with capable new men as soon as it found that it could not make terms with the old ones. The present employees might demand higher pay than the company would feel warranted in paying, but unless an amicable adjustment of the controversy could be promptly reached, the company would have to hire new men as fast as it could find those who could safely be trusted. The public would insist that trains should be run.

The mining of coal in Pennsylvania is of immensely more importance to the people of the United States than the running of the street-cars in Philadelphia, or the operation of passenger and freight trains between the two chief cities of the State. Users of anthracite coal throughout the country are dependent upon Pennsylvania in this matter, which means that they are dependent upon those who operate the mines in that State. To all intents and purposes, people in New Jersey, New York, New England, and other sections have an interest in the normal production of coal at the Pennsylvania mines, quite as real and as vital as though those mines were in their own vicinity. In other words, here is a case where many millions of people elsewhere have a common concern with the residents of the Keystone State.

We suppose that at present neither the State of Pennsylvania nor the general public outside that State has any means of bringing legal pressure to bear upon the great operators who control the mining of coal so that they shall resume production on the best terms they can make with whatever men they can employ. Apparently the representatives of the powerful corporations concerned can refuse to grant the demands of their former employees, and also refrain as long as they like from trying to work the mines with new men. If they think that, in the long run, their own interests will be promoted by keeping the mines closed, starving their former miners into surrender, and breaking up the union organization, there seems to be no legal weapon available for bringing them to terms.

There is one weapon, however, which can be used against them. Public opinion may be brought to bear. The mining of coal should be resumed. The operators ought to man their mines as fully as they possibly can by employing all fit men whose services can be secured. The authorities are bound to furnish them all needed protection, and they should demand it. It will be wise for the corporations affected to heed public sentiment in this matter. The public may not have any legal means of bringing such offenders to terms now, but he knows little of the temper of the American people who supposes that they will permanently permit a small group of men to keep them from having on reasonable terms the fuel which is essential to daily human comfort.

## *DIRECT NOMINATIONS.*

We have received a circular urging in strenuous terms the merits of the direct-nomination system for party primaries. From this circular we learn that an organized effort will be immediately begun to secure the adoption of this system in New York, through an appeal to the next Legislature to enact a direct-nomination law. The movement lends a new interest to the discussion of this subject, which is now attracting wide attention in the Middle West, notably in Wisconsin, where the direct primary is one of the chief issues of the State campaign just opening.

It is quite clear that reform in the method of nominating party candidates is a step which logically follows the establishment of a ballot that is practically honest and a count that is practically fair. A decade and a half ago, practical reformers were devoting themselves to securing beneficial changes in the ballot systems of the various States. In 1888 Massachusetts adopted the secret ballot, modelled after the Australian system, and, in the year following, eight other States enacted similar laws. The two essentials of the new system were secrecy of voting and complete official supervision and control of the ballot. The popularity of the reform was instantly established, and, in the comparatively brief period since this beginning was made, State after State has fallen into line, until now the secret ballot, with absolute official supervision and control, is the rule in almost every section of the Union.

With this reform, wherever it was adopted in good faith, practical purity of the ballot was established. Intimidation did not cease, of course, nor violence, nor fraudulent practices of the grosser sort; but there was no more voting in "blocks of five," and no more wholesale purchasing of votes; ballot-box stuffing became rather a tradition than a practice, and successful trading was rendered well-nigh impossible.

Probably the extreme reformers of those times supposed that, when their end was gained, a free expression of the people's will would result from every election. It is quite easy to fancy them speaking in terms fully as extravagant as those used by the writer of the direct-nomination circular which we have in hand, when he declares that "it is universally admitted that the primary system as it at present exists, is *responsible for all of the political evils found in our municipal governments.*" But when the secret ballot was established, those who had held extravagant views of the results likely to follow were disappointed. It was seen that between the people and a full and free expression of their will still stood the bosses, panoplied with the machinery of caucus and convention. Public sentiment, aroused by exposures of extensive election frauds, had brought about the reform of the election laws. Public sentiment now began to demand supervision of the nominating machinery.

The agitation in this State was quite as widespread and quite as effective as elsewhere. In 1890 the secret ballot was adopted, and other reforms followed, notably the separation of State and municipal elections, by the new Constitution adopted in 1894. In 1898 the demand for the regulation of party as well as of election machinery found its first real expression in the laws of New York, and this was followed by important amendments in 1899, establishing the present system of the open enrolment and the open primary, regulated by law and supervised by legally constituted officials.

Meantime another system, more radical in its nature, was devised in the West, and was enacted into law in Minnesota, with the restriction that it should

at first apply only to Hennepin County, which includes Minneapolis. This was in 1898, the same year that we began our primary reform. The aim was to abolish the party caucus or convention altogether, and to do the nominating at the primary. Candidates for party nominations declared themselves at a certain period before the primary. Official ballots for each party, each ballot containing the names of all the prospective candidates of that party, were prepared at public expense. On entering the primary, a voter was handed a ballot of each party. In the secret booth he selected the party ballot which he wished to vote, indicated his choice among the candidates thereon, and returned the other party ballot unused, voting the one of his choice. The law had its first trial in September, 1900.

The result was at the time considered satisfactory, even inspiring. The circular which we have received describes it as an "unqualified success." Nevertheless, a very bad man, as it has turned out, was nominated for Mayor by the Republicans and was elected. It is now alleged that the nomination, even, was obtained by fraud. At any rate, the municipal administration placed in power as a result of the election of that year has recently collapsed in exposure and disgrace. The law was amended by the last Legislature so as to prevent voters of one party from intruding upon the party of another. The direct-nomination system proposed by the dominant Republican faction in Wisconsin is modelled after this Minnesota system. It was strongly advocated, two years ago, when Gov. La Follette was elected, and the Legislature undertook to pass a measure aiming in this direction, but the result was not satisfactory to the Governor, and he vetoed the bill.

As to the worth of the system, it is yet too early to speak with certainty. The result in Minnesota has thus far wholly failed to fulfil the promises of its advocates. As evidence that the people everywhere are demanding with increasing force to be permitted to conduct their government without the intervention of political bosses, the agitation is undoubtedly encouraging. But, granted reasonable safeguards, it must always be true that the spirit of the people is more important than the system. There are some questions about the direct primary which are yet to be answered. One of them is: How could a poor man conduct his preliminary contest for a nomination, with the prospect of another expensive contest for election to follow? Perhaps this and other questions may be satisfactorily answered, and perhaps it may be wise to adopt the direct-nomination system. But even then it must be the spirit and activity of the voters, rather than the system, which will prevent the evils of control by the bosses.

## *THE HISTORICAL NOVEL AGAIN.*

This subject, which has been considered from pretty nearly all possible points of view, receives additional illumination through a recent study, 'A Guide to the Best Historical Novels and Tales,' by Jonathan Nield. Mr. Nield has simply tabulated several hundred historical novels according to the period in which their scenes are laid. Without raising the question whether his table of "best" novels was compiled "somewhere east of Suez, where the best is like the worst," every reader of historical fiction will admit the convenience of an arrangement by which one may see at a glance the periods of history that novelists have chosen or neglected.

Naturally, the novels decrease as the period becomes more remote from the present day, for two reasons: first, the difficulty of finding documentary material in sufficient abundance; second, the complete indifference of the readers of historical fiction to any but what may be called the fashionable periods of history. Thus, it is not surprising to find that the entire pre-Christian era has supplied the setting for only eighteen novels, while the century just elapsed has inspired one hundred and forty novels of the historical category.

The space allotted to each century very regularly expands or diminishes according to the familiarity of its history to the average reader. The early Christians are characters in seventeen novels, a figure that is not approached again until the century which saw the Norman conquest. The low-water mark is the eighth century, which is saved from oblivion only by G. Griffin's 'The Invasion,' 1832, and here we remark that it is most surprising that the novelists have let Charlemagne—favorite of the mediæval *jongleurs*—severely alone, though Mr. Nield really should not have omitted under this head Mr. Arthur Sherburne Hardy's charming 'Passe Rose.' The renowned name of King Alfred carries the ninth century to eleven numbers—a figure which might be considerably increased by the inclusion of novels occasioned by the recent jubilee.

The Middle Ages are reasonably covered by the novelists, though still in a fortuitous way. The twelfth century, for example, has twelve novels, mostly concerning the Plantagenets, while the thirteenth century presents as many as seventeen, but all of appalling obscurity. Chaucer's century comes off ill with twenty-seven items, few of which are readable by any man who values his time or his pleasure. The fifteenth century, with fifty-two novels to its credit, and many excellent ones, is the middle ground between the period where the novel is more or less a waif and a stray, and that in which it asserts a kind of proprietorship; and before entering the very lair of this genre, it should be said that the comparative neglect of the earlier periods by novelists disposes, once for all, of the kindly theory that the historical novel is a passable substitute for history. In every case history is the least of it, and the story is the thing.

With the sixteenth century the historical novel is under full sail, the courses being traced by Scott and Dumas. As the seventeenth century adds gallantry and intrigue to heroism, the figure rises from one hundred and nine to one hundred and seventy. Everybody has had his try at Mazarin and Richelieu, except those who have preferred Buckingham and the Stuarts. In the eighteenth century the Jacobite plots, the American Revolution, and the French aid to carry the index to one hundred and ninety-seven—the high-water mark.

From this dry, but necessary, enumeration it appears that, when we speak of historical fiction, we mean—with a few notable exceptions, including Flaubert, Pater, and Scott—that fiction which finds its subject in the centuries from the sixteenth to the present day, corresponding thus very closely to the periods which historians call renaissance and modern. The reasons for this state of things are not far to seek. It is these centuries which have been admirably treated by Scott and Dumas; and a vast amount of the writing about the Valois, the Stuarts, and the Revolutionists must be set down to imitation, conscious or unconscious, of these masters. It is clear that since these great pioneers the historical novelists have been, in the main, of a very sheeplike habit. They have hardly succeeded, as did both Scott and Dumas, in popularizing remote and unfamiliar periods, but have been content to follow these models only where their successes lay within the range of association of the average reader, although here the American colonial novels are laudable as an attempt, if not as an accomplishment. As a class, however, the writers of historical fiction show a certain lack of enterprise, in which respect, at least, they compare unfavorably with the analytical novelists, or even the amateurs of local color.

On the other side, we should hear Mr. A. T. Quiller-Couch, who writes in a recent Monday *causerie*.

> "A novelist, like any other artist, has to start by taking certain things for granted; and by hoisting (so to speak) a placard at the back of the stage—'England, Seventeenth Century,' or 'France, Reign of Terror'—he gets on terms with his audience at once, sparing himself a vast labor of invention and sparing them much preliminary boredom."

This may be admitted, and yet the practice of hoisting the placard pretentiously behind very ordinary melodrama be reprehended. Assuredly, the novelist must in the main count upon the associations already existing in his reader's mind; to a few only is it given to create associations; but that teller of fairy tales who merely rung the changes upon the

traditional "Once upon a time" would find small favor among intelligent children.

### *WHY DO MEN WRITE BOOKS?*

The mysterious working of the impulse to literary production has again been discussed in connection with the recent death of the most learned man in England, and perhaps in all Europe. Lord Acton was apparently a born author. The acquisitive hunger was strong upon him from youth. To the end of his life he worked at least eight hours a day, so that his minute and accurate yet wide-ranging knowledge was the astonishment of those who knew its vast stores. But he published almost nothing. The one man who could best have written, for example, a history of the Middle Ages, left behind him only a huge library of annotated books, and heaps upon heaps of careful notes, to show what he might have done. The stimulus to produce was somehow wanting.

In discussing the case, the *Spectator* thinks that Lord Acton may be regarded as an example of the "reticence of learning." Yet all learning is not reticent. Let a man add to his learning a strong hortatory or reforming instinct, and he is the very one to set the world right in forty volumes. The Duke of Argyll was of this type. His page was as voluminous as Sheridan said privately that he had characterized Gibbon's—though he was understood in his speech to say "luminous." Gladstone was another whom a sort of combative passion drove to profuse writing. He could not sit in calm indifference in the presence of "the feverish volubility of ignorance." Bagehot long ago described the irresistible way in which Gladstone would be driven by the expression of perverse or mistaken opinion to try to correct it on the spot. "Let me get at the crooked reasoner, and I can persuade him of the truth." That motive agitating a learned breast will cleanse it of no end of printed perilous stuff. Lord Acton was not a meagre producer simply on account of the weight of much learning. Too nice and exhaustive scholarship may, indeed, lay a kind of paralysis upon the productive faculties; yet this comes about not through modesty, or a superior Olympian indifference to vulgar error, but through a haunting dread of not having reached the ultimate filament of truth in any given investigation. Like Mr. Brooke in 'Middlemarch,' the scholar must "pull up" somewhere in his collection of material if he is ever going to become a writer.

We are forced to fall back, we imagine, upon some hidden and unaccountable spring of activity in the writer of books, when we ask why he, rather than another, actually wrote them. It is not learning; it is not money or the lack of it, fame or the hope of it or contempt for it; it is not inheritance or opportunity, which tells the whole story. Heaven knows that it is not a conscious ability to instruct or amuse which lies behind the making of many books. Take two men of equal education, similar social status, kindred tastes, equivalent talents—what fate is it that makes one a victim of the writer's madness, and allows the other to go scot free? We cannot tell. It seems to be one of the ultimate mysteries. The pen scratches, or the typewriter clicks, where it listeth. The man who writes can give no real explanation except that he sings as do the linnets; while the Miltons who remain mute and inglorious can only say that the numbers did *not* come.

It is agreed, of course, in this age of special privileges to none, that one man is as antecedently likely as another to produce books. One good novel, it is common to say, lies in every human experience. Nay, if what Gray wrote to Walpole is true, "any fool may write a most valuable book by chance, if he will only tell us what he heard and saw with veracity." This being so, what is the magic touch, the slight disturbance of brain-stuff, which makes one fool write and another stay his pen? Pecuniary motives are much invoked in current explanations of the mystery. Yet the part which money plays in the production of literature is too uncertain and contradictory to make us attach much literary value to the jingling of the guinea. The possession of an independent fortune may appear to stimulate, or may seem to stifle, literary productiveness, and you can never tell which it will do. The "spur of poverty" may incite to a Pegasus flight, or may drive the hard-ridden hack to bolting the literary road altogether. Even the dignity and propriety of the pecuniary motive are in dispute. Hawthorne said he would never have written a page except for pay. Motley thought that it was all up with a writer when he began to consider the money he was to receive. But Hawthorne needed the money to live on, while Motley had a father and uncle to back him in his literary labors.

It will have been seen that we have no wisdom to bring to the solution of the puzzle why men write books. We have, however, two practical suggestions to offer. One of them is that any man who feels the stirring of the *cacoethes scribendi* in his bosom ought to study it conscientiously, to decide whether the prompting comes from a good or evil dæmon. He can see that many others have mistakenly thought they were called to be writers; why should he add to the number of books which might better never have been born? We think it time that the reticence of ignorance were urged as a duty, as well as the reticence of learning praised. Then we should also heartily approve the plan recently proposed of paying authors for the poor books they might have written, but refrained from producing. If Mr. Carnegie would see to financing this method of rewarding literary merit, he would have to provide, we are sure, less library room for books which arouse no question so urgent as that why on earth they were ever written.

### *THE APPRAISAL OF LITERATURE.*

Although we have not placed the above title within quotation-marks, the phrase is one which connotes, or ought to connote, the name of Mr. George Iles. It is true that Mr. S. S. Green and others have sought, by various means, to prevent a well-intentioned public from seeking its information and ideas in worthless or trifling books; but of systematic "appraisal" on a large scale Mr. Iles is the great apostle. With words of conviction which have been accompanied by a notable generosity of purse, he has proclaimed for years the need of furnishing counsel with books, of assisting the reader by a note, of placing the expert at the elbow of the beginner. To the days when he was more or less a *vox clamantis* we need not now revert. At present he finds his warmest support within the ranks of the libraries themselves; he can point to several short bibliographies that have been brought out in pursuance of his views; and, through the recently published 'Literature of American History,' he can illustrate more fully than at any previous date the main articles of his belief.

The appearance of this work, to which an eminent editor and forty qualified contributors have set their hands, furnishes a reasonable ground for the discussion of Mr. Iles's project to annotate the literary output of the modern world. The subject can be approached in the most practical way by a reference to the spread of public libraries. Were it not for the existence of so many well-endowed institutions which have for their object the free and universal diffusion of literature, we doubt whether the appraisal scheme would as yet have passed beyond the academic stage. No men in the world are more impressed with a sense of their duty towards the public than the librarians. It is the whole aim of their profession to help the reader. The doors of the library are thrown open wide. Books are loaned to applicants from a distance as well as to residents of the town. A vast amount of thought and care is lavished upon the ever-recurring problem of liberality versus security. Thus, from morning to the mid-watches of the night, a good librarian is constantly excogitating devices for making his collection serviceable to all mankind.

Into the stack pours a hodge-podge of books to be used by the masses for their amusement, as in the case of fiction, or for their enlightenment in the different branches of knowledge. The catalogue introduces some order, but its function stops short with advertisement and classification. To be sure, the reading-room officials may put an ignoramus in the way of learning the elements of bibliography, but their time is so taxed that they can do little for each individual. Knowing how mixed his books are in point of quality, and how much the efficiency of the whole de-

pends upon the circulation of the best, the conscientious librarian is afflicted with deep searchings of heart. It is not a question of censorship or even of advice; but merely one of information. Good, bad, and indifferent stand side by side with their various allurements of title, print, binding, and illustration. Then in comes the "general reader" upon whom all this cost of fabric, endowment, and administration is lavished. He looks around at the shelves or into the catalogue, and possibly he asks a question at the desk; but when he makes his choice of the three caskets, the chances are considerably against him.

So much for the main consideration which gives the appraisal scheme its popularity. Yet here, as everywhere, there are objections. In the first place, a mining engineer does not give his report for nothing—and the value of an edition is often greater than that of a mine. In the second place, criticism varies just as much in its quality as bookmaking does. Into the matter of expense we shall not enter, for that is not the essential question. If Mr. Iles's propaganda succeeds in moulding the best opinion, money will pour forth for this, as for every other, branch of library development. We approach the crux of the situation when we ask, "Is it practicable to secure such judgments of books as will really be useful to large masses of readers?" Unless large masses are aided, the scheme must fall to the ground, because otherwise the game would not be worth the candle.

In our opinion the business of appraisal deserves to be organized and put on a permanent basis, if only two conditions are observed. Annotation should be restricted to certain classes of books, and the very best critics should be enlisted. As to the first of these conditions, it may be pointed out that 'Herod' and 'Virginibus Puerisque' and 'Kim' cannot have a value placed upon them in ten or twenty lines even if we admit that such productions can be given their due rank by immediate contemporaries. There would seem, indeed, to be a pretty clear distinction between imaginative literature and the literature which deals with what is matter of knowledge. In the case of poetry, fiction, and the highest class of essays less, certainly, can be done by the brief directive note than in cases where the subject falls within the realm of science. Mr. James Douglas, for example, might be justified in speaking dogmatically about a book on the metallurgy of copper, whereas no literary critic could speak with the same degree of confidence concerning the latest batch of sonnets. It might be found possible to convey information which would prove important to the tyro in pure literature through a semi-bibliographical or historical note, but to pass summary judgment on novels and poems is quite another thing. Where one is reading for amusement or the gratification of his æsthetic sense, he will follow his own taste and can hardly be brought up on the sheltered plan. Moreover, a vast body of technical literature, which the beginner could not understand or use, would lie outside the range of appraisal.

But, after we have restricted the field by limiting the definition, enough remains to satisfy even a strong believer in the theory of evaluation. There are still popular science, geography, many branches of history, and, in general, all those classes of books which are likely to exert a wide influence by supplying the facts whereon private judgment will eventually rest. We believe that a distinct service might be rendered to a large number of readers if the best specialists could be induced to look with favor upon Mr. Iles's scheme and to lend their aid. Brief though it must be, the purpose of a directive note is at least two-fold. The critic should give information about the book, indicating its scope, the nature of its contents, and the relative importance of its different parts. He should also set up some standard of comparison by which its merits or shortcomings may be made known. Of course, he should be strictly impersonal, and shun with the most scrupulous sense of honor this opportunity for enforcing his own views, unless he knows that, where there is room for reasonable difference of opinion, the opposite view will be given due representation. Over many such details difficulties will arise, and the best type of note can be evolved only after some experiment. At the same time these obstacles would not be insuperable if by financial inducement or an appeal to public spirit the students and critics of highest standing could be made the sole contributors.

One great point of advantage which such an annotated bibliography would have over Allibone springs from its unity of conception. Each note would be part of a well-modelled whole, and each would be complete in itself rather than a fragment wrested from a long article. We all know how useful are bibliographies like 'Best Books' and 'The Reader's Guide.' Following the appraisal idea, works of a much more elaborate and satisfactory character than these would soon be produced—to the great convenience of many in every town where a public library exists. The judgments pronounced would carry immense weight if they came from the highest recognized authorities and bore the sanction of the American Library Association. On this account they should be free from pure dogmatism and penned with a grave sense of responsibility. Otherwise, a source of authority might be created that would do more harm than good.

The 'Literature of American History,' of which Mr. J. N. Larned is editor, represents the most complete expression up to the present of Mr. Iles's ideal. Although rather too many of the notes are drawn from reviews which have been written with another purpose, the work has true unity of design, and although some *obiter dicta* may be discovered, they do not form a serious blemish. But we must defer closer criticism. It is the fate of this book to be rapidly read out of its covers in the large libraries—an honorable distinction which it well deserves. More important still, it is not unlikely to help forward Mr. Iles's plans for a wider appraisal of literature, by the force of a successful example.

## A FRENCHMAN'S DIARY IN OUR CIVIL-WAR TIME.—III.

January 7, 1865.—From New York to Washington, being ferried across the Susquehanna, full of floating ice. Called on Charles Sumner; went up to the Capitol. Sumner took me to the White House to call on Lincoln, saying, "You will see Saint Louis under the oak of Vincennes." We entered a large room, very simply furnished, in which a dozen persons were seated awaiting their turn. On the walls, maps were hung over the fireplace, and a portrait of President Jackson, whose hard and shrunken face bore the imprint of great energy; on the mantelpiece was a photograph of John Bright. Through two great windows I saw a white streak of the Potomac, the Virginia heights, the unfinished Washington obelisk. Between the windows was a desk, at which the President was seated. He did not heed our entering, being absorbed in a communication which some one was making to him. After this visitor came a woman, asking that her husband, a soldier in the regular army, be allowed to return to her. "Let me help you," said Lincoln; and he questioned her with the method and clearness of a lawyer. Against the white light of the window his angular profile stood out in shadow; his hand, frequently passed through his hair, raised it in disorderly tufts. While he spoke, all the muscles of his face were in motion; his voice had an almost paternal gentleness. "I cannot," he said finally, "grant your request," adding with a strange laugh, "I can disband all the Union armies, but I cannot send a single soldier home. Only the colonel of his regiment can do that for your husband." The woman complained of her poverty: "Never have I suffered so much." "Madam," replied Lincoln, changing the tone of his voice and with a measured solemnity, "I sympathize in your disappointment; but consider that all of us, in every part of the country, are to-day suffering what we have never suffered." He then bent towards her, wrote some words on a paper, handed it to the entreating woman, and dismissed her.

Next in turn came a young man who, approaching the President, but without sitting down, said to him: "I have only come to shake hands with Abraham Lincoln." "Much obliged, sir," said Lincoln, stretching out his large hand.

Perceiving Mr. Sumner, he beckons to him, and I am presented. Lincoln extends his hand, and after a brief exchange of courtesies our visit comes to an end.

We then directed our steps to Mr. Seward. The Secretary of State is much more inaccessible than the President. His photographs had not conveyed to me an exact idea of this subtle face, these small, inquisitive eyes, hid beneath gray brows, which seem ever to be searching out the inmost thought of his interlocutor. He read deliberately the two letters from the Comte de Paris and the Prince de Joinville which I brought him, and conversation began rather laboriously. Sumner turned it on the letters published in the London *Times* by "Historicus" (Vernon Harcourt), touching delicate points of international law. "It is sometimes a good thing," said Seward, "not to know too much of it. We have a solid enough base when we stick to general principles. I am not much afraid of precedents; England furnishes us a rich mine in comparison with what she can find over here."

January 8.—Religious service by Dr. Channing, nephew of the celebrated Channing, whose congregation meets at the Capitol in the Representatives' chamber. After the singing of hymns, Dr. Channing delivers a sermon in which he contrives to introduce

Laboulaye, Gasparin, Guizot, Goldwin Smith, John Bright, Sumner, Garrison, and George Thompson. In the course of the day I called with Sumner on the foreign Ministers.

In the evening at Mr. Seward's, who was in a very genial mood and conversed freely. He told me that in 1833 he went to see Lafayette at La Grange. The latter, who had just fallen out with Louis Philippe, predicted that the new dynasty would survive only eighteen years. "Would he were there to-day," said I, "to make as accurate predictions!" "You have," answered Seward, "a revolutionary cycle in France. When, in England, I saw Queen Victoria and her children, the idea never occurred to me that anything could disturb the future of that family and the order of succession [this was uttered with a smile intended for Mr. Rose, the Canadian delegate, then in Washington]. At Compiègne, when the Empress presented her young son to me, I kissed him on the forehead, thinking that if his father should die, his only portion would be exile." "It is not my judgment," he continued, "that the Emperor is hostile to us. It seems to me that I could bring him over." And again: "In France you appear to me to have four parties—Legitimists, Orleanists, Republicans, and Bonapartists. Under each government the beaten parties coalesce against the more fortunate rival."

January 9.—Visited the Supreme Court, Chase Chief Justice with seven associates. In the Senate, while chatting with Sumner on a sofa, Senator Powell, ex-Governor of Kentucky, came up and said to Sumner: "When will you accept delivery of the twenty-five niggers I've been offering you for three years? I will pay their travelling expenses. Your bill [the bill under discussion emancipated the wives and children of blacks enrolled in the army] is going to make more unfortunates—as if you had not made enough already. You are a handful of fanatics engaged in destroying the country. It is very nice of you still to talk about the Constitution; why not frankly trample it under foot?" He went on for a long time in this strain, with frequent interruptions of his wrath to eject a yellow saliva on the carpet. Sumner listened to him without a word. When Powell had retired, "That," he said, "is what I have had to bear for years. From the manner in which they treat us when in power, you may guess what it used to be."

Evening reception at the White House. Mr. and Mrs. Lincoln, Sumner, Seward.

January 10.—Soirée at Senator Harris's (of New York). Trumbull, Sprague.

January 11.—In the evening, called with my wife on Mrs. Lincoln. Her language now and again betrayed her humble origin, but she said nothing indiscreet or out of place. There was some very critical talk of General Butler, but she was very diplomatic. She spoke becomingly of an old female friend now a flaming secessionist. Of the soldiers she spoke, quite unconsciously, as a Princess might have done: "In our public ceremonies, what I always like to see best is our dear blue-coats."

January 12.—Drove to Arlington with Mrs. Hooker and Miss Motley, crossing the Potomac at Georgetown. On the Virginia side there is a pretty steep ascent of the heights on which the Army of the Potomac was so long encamped. The ground we traversed formerly belonged to Mrs. Washington; before the war, to Gen. Lee. Lee's house is small and dilapidated. It commands an admirable view. From the portico, Washington determined the plan of the Capitol of the United States.

Visited the freedmen's village on Arlington Heights.

In the evening, dined at Seward's with Sumner and Farragut. The service was of Sèvres, presented to Seward by Prince Napoleon.

January 13.—Mrs. Lincoln drove us through the suburbs. From the Soldiers' Home the prospect is even finer than at Arlington. In the evening, with Mr. and Mrs. Lincoln and Charles Sumner, we went to the theatre direct from the White House. There was no private entrance to the proscenium boxes, and we had to pass behind the spectators in the galleries. The double box we occupied was very spacious, but so plainly furnished that they had not taken the trouble to cover with velvet or cloth the front planking, but had just tacked some red velvet on the rail. The play was "King Lear," with Forrest in the leading rôle. His part was fairly well rendered, but with too much exaggeration. The rest of the troupe was wretched. The President listened very attentively. He seemed extremely familiar with Shakspere, and in several places remarked on the changes made in performance. His boy of eleven was beside him, and the father often clasped him very tenderly, as the child leaned his head upon his shoulder; and when the little fellow, as he often did, asked for explanations, Lincoln invariably made answer, "My child, it is in the play." When the traitor was thrust through with a sword, Lincoln said: "I have only one reproach to make of Shakspere's heroes—that they make long speeches when they are killed."

## THE EXCAVATION OF CORINTH.

OFF THE COAST OF DALMATIA,
June 25, 1902.

It is from no mere desire to exploit an enterprise in which I happen to be interested, but from a sense of duty towards the American public, that I have from time to time given in the columns of the *Nation* information concerning the progress of the excavations carried on at Corinth since 1896 by the American School of Classical Studies at Athens.

Last year I omitted my usual letter, because our results were not important. In fact, in my report of that year to the Managing Committee of the School, I frankly admitted that we had for the first time suffered a defeat. While holding to the principle that a war is not lost by the failure of a single campaign, I entered upon the campaign of the present year with the conviction that it would either be the last, or would show that our work would have to go on and perhaps take larger proportions than ever. The latter has proved to be the case.

It would be an overstatement to say that last year's work was an *absolute* failure. In excavations like ours, a negative result is, after all, worth something as a guide, telling us where not to dig. We happened to choose a part of the Agora which proved to be empty, and to uncover which involved the removing of an enormous quantity of earth that contained nothing of interest. But we found a considerable number of inscriptions, both Latin and Greek, of the Roman city, two statue bases inscribed with the name of Lysippus, as well as a considerable quantity of Proto-Corinthian bases, mostly in fragments. We also found part of a line of vaulted chambers on the south side of the Temple hill (similar to that found in 1898 on the east side, bordering the street leading from the Agora towards Lechæum), with remains of a stylobate of a porch thrown out in front of them, as in the east-side system. To say nothing of the fact that we cleared the Temple foundations of all the earth covering them, we got one positive result in the last three days of the campaign in the discovery of the stumps of two Doric columns resting on a stylobate. These pointed out a hopeful place for beginning work this year.

We began early in order to push matters to a conclusion, and had the longest campaign of all that we have had, from the beginning of March to June 14. The columns just mentioned proved to belong to the front line of a Greek portico running east and west back of the vaulted chambers found last year, as long as the well-known stoa of Attolos at Athens, over 100 metres long. Its breadth was so great that it was provided with an interior line of columns of the Ionic order, with intercolumniations twice as great as those of the Doric columns at the front. At its back the rock of the temple hill was cut away to make room for it. It had perhaps already been destroyed when the Roman vaulted chambers were built in front of it, inasmuch as there is an interval of only about three feet between its front and their back line. But stumps of the Doric columns remain all along the line, with here and there one lacking. Of the Ionic columns we have for the most part only the bases and capital. Enough remains of the Doric capitals and entablature to allow a restoration of the whole on paper. The architrave and triglyphon are in every case composed of a single block. The cornice blocks bear a great deal of paint on their under sides.

When we had uncovered about fifty metres of the east end of the portico, it became impracticable to carry the earth to our railroad, which had been stopped by intervening walls; and to find the dimensions of our portico we tapped the line of its front stylobate farther west, then tunnelled for a space, and then tapped again, until at last we found the end imbedded in a mass of late masonry. The uncovering will have to be completed next year by bringing the track to this west end and securing dumping privileges in this quarter. But to secure dumping privileges, "there's the rub."

As far as we did clear the portico, we also cleared back of it, following the slope of the bed rock up to the temple. We did the same back of the east line of chambers, the north end of which we excavated completely, ascertaining its extent, and found that there were eighteen chambers in all. In this part of the work we found another Greek stoa of larger dimensions than that already described on the south side of the hill, but much more broken up, only one column being found *in situ*. The Romans probably broke it up when they laid out their system in front of it and lower down. Back of the Greek stoa and much higher up the hill is the stylobate of a late Roman or Byzantine stoa, which

probably coexisted with the Roman chambers with their porch at the front. Porch above porch must have given this side of the Temple hill a fine aspect from Pirene and the Lechæum road. The whole area between this upper stoa and the back of the vaulted chambers was filled up to make a broad area for circulation of the populace.

Our excavation back of the Roman systems and to a much deeper level in front of the corner where they approach each other at the southeast, brought a rich reward in single finds. Old Corinthian and Proto-Corinthian pottery in abundance, measured by bushels; terracotta figurines, some of them extremely archaic, and at the same time finely wrought; several old Greek inscriptions, one of them at least as old as the sixth century, and in the local Corinthian alphabet; two hundred terracotta lamps with interesting representations and inscriptions on them, ranging from the sixth century B. C. to the fifth century A. D., most of them found in a large water conduit which ran about fifteen feet below the south-side porch—all these are far from making a complete catalogue of our finds.

But it is, after all, the parts of the ancient city now laid bare to the inspection of the modern world that constitute the real success of our undertaking. Corinth now claims attention as a place that must be visited as must Olympia and Delphi. Six years ago it seemed to many as hopeless to attempt to find Greek Corinth under the modern, the Byzantine, and the Roman Corinth, as it would be now to try to find Greek Byzantium under the modern Stambul. But we were singularly fortunate in getting upon the track of Pansanias at once. In the first campaign we found the Theatre; in the second, Pirene; in the third we found the Agora and the fountain Glauke, and gave the correct name of Temple of Apollo to the venerable ruin, the only landmark of ancient Corinth up to 1896. After that we ceased to be under heavy obligations to Pausanias, and in our work of this year we could give him points. We have been dealing with things that were already underground at the time of his visit.

Our work in the Theatre in 1896 was of value chiefly as giving us the necessary starting-point in the topography. We found the cavea in an absolutely ruinous condition, and decided to let the Theatre lie while we grappled with the more interesting region east of the Temple. But it had always troubled my conscience that we had made no serious examination of the stage building. This year we dug a trench from what appeared to be the centre of the orchestra, at right angles to the supposed line of the stage. As a result, we found so many walls all running at right angles to our trench, that we hardly knew what to make of them. When we reached virgin soil at a depth of about eight metres, our trench, which was six metres wide at the top, was narrowed down to about two metres, and we could not move to the right or left without going beyond the limits of a tentative excavation. But it now seems clear that the orchestra and stage ought to be thoroughly cleared. The walls which we found probably belong to two stage buildings, the Greek and the Roman. In our trench we found a great quantity of marble fragments, mostly architectural; other pieces seemed to belong to a large medallion containing a head of Medusa in high relief. In addition to these fragments there was found at the very bottom of the trench a marble head of a youth, which is not only the best head found at Corinth, but is a real prize, and would be an ornament to any museum. Close beside it was a piece of marble inscribed thus:

Σ ΑΘΗΝΑΙΟΣ ΕΠΟΙΗΣΕ

It is unfortunate that of the artist's name only the last letter, and that a sigma, survives.

It will be seen, then, that our future work is prescribed for us in two places. It would be a thousand pities to turn over work of this kind at this stage to another nation. There is no question that somebody will do it. Although I have not been able to make a large plan and carry it out as I could have done had I had a large fund put at my disposal at the outset, yet I have no more right to complain of my support than of the results. Men were thanked in ancient Rome "because they had not despaired of the Republic." I should like to thank the good men and women in America who have not despaired of this enterprise. At the head of the list I should put the name of the Hon. John Hay, who, in 1898, when we were in a tight place, grappling with Pirene, sent us £100 from London, not his first contribution, with the remark, "I am glad to be interested in your work to that extent." The late Benjamin T. Frothingham, Esq., of Brooklyn, who from the beginning sent in his contribution unsolicited, sent it this year when we were already in the field, with the remark, "I hope my contribution is not too late." I do not mention these as the largest contributors—they are not—but as showing the spirit in which the work is supported. It would hardly be befitting to parade here the names of the donors, which are given in the official reports of the School. Without trenching upon such a list I may add that Gen. William J. Palmer of Colorado Springs, on leaving Greece five days ago, put into my hands fifty pounds (not his first gift), as a nest-egg for next year. No question is more frequently asked me by foreigners visiting the excavations than: "What funds does your Government give you?" I reply, "That is not the American way. I depend on American men, and so far they have not failed me."

A whole generation of young men engaged in this work have by it become archæologists. It stirs interest to handle material which you take out of the ground yourself. As for myself, if I should live to be an octogenarian, I never expect to associate myself with so honorable an enterprise. RUFUS B. RICHARDSON.

---

## THE CHOISEULS.—II.

PARIS, July 18, 1902.

A short time after the death of Madame de Pompadour occurred an event of great importance—the expulsion of the Jesuits from France. Choiseul has been accused of having taken the initiative in this matter; not quite accurately, as he took sides against the celebrated society only after the Parlement had engaged in hostilities. That body ordered the Jesuits to present their *constitutions* for examination, and afterwards issued several judgments against them; finally, the Order was suppressed. The Jesuits had been expelled from Russia in 1719; in Portugal, in 1758, Pombal had taken Draconian measures against them, after an attempt which had been made on the life of the King of Portugal; in 1764 they had been turned out of Spain by Charles III. The powerful Company has survived all the attempts made against it. It has been said of its members, "They go out by the door, and return by the window." This persistence should be a lesson to those who resort to violent measures against any spiritual force.

The Society of Jesus had powerful friends at court, the Queen and the Dauphin in particular, and Choiseul became the object of their enmity. The place of a favorite was vacant, and Choiseul's adversaries tried to give it to a friend of the Jesuits, the Countess d'Esparbès. She was already on the point of being recognized (what was called *déclarée)*, when Choiseul intervened, threatening to leave his post of Prime Minister. He accompanied a letter to the King, in which he complained of all the intrigues of his enemies, with a long memoir, in which he recalled, not without some pride, all the acts of his ministry; he set forth the state of all the departments at the time when he was put at their head, and explained the situation in which he left them. After having read this memoir, the King sent for Choiseul and asked him to remain in power. Choiseul consented, without having many illusions as to the future. "Your Majesty," he said, "will have it so. I remain; but a time will come when, after all these marks of kindness, your Majesty will send me into exile." These words were prophetical. The same day Madame d'Esparbès received a *lettre de cachet*, which exiled her to Montauban, near her father, the Marquis de Lussan. The Jesuits had some hope that the Dauphin would obtain their recall; but he fell ill at Compiègne after some manœuvres, and died soon afterwards. His wife was not long in following him, and Choiseul's enemies did not hesitate to spread calumnious reports about these successive deaths; the word poison was pronounced, but it is absolutely certain that both the Dauphin and his wife died from natural causes.

It was in the year 1765 that Madame de Choiseul met Horace Walpole at the house of Madame du Deffand. All the readers of Walpole's charming letters know the pages in which are found portraits of those two ladies. Walpole was immediately drawn to Madame de Choiseul, but his sympathy, which was rather cold at first, became by degrees a real admiration, even a sort of enthusiasm. He was not so much charmed with the Duke, and found him rather too volatile. Towards the sister of the Duke, Madame de Gramont, he felt sentiments almost of hatred, and did not hesitate to give credence to the rumors which were current as to the nature of the relation of the brother and sister. In the curious collection of the drawings by Carmontelle of which I spoke lately, and which are preserved in the château of Chantilly, there is a very interesting one representing Madame du Deffand with Madame de Choiseul; they are beside each other in the chamber of the Convent of St. Joseph where Madame du Deffand lived. She is sitting, as usual,

in the sort of chair which was called a *tonneau;* the Duchess is standing and is offering her a doll, as is suitable for a "grandmother" visiting her "granddaughter." This drawing was sent to Walpole (Carmontelle generally made copies of his drawings), who was delighted; he found fault only with the likeness of Madame de Choiseul, but Madame du Deffand's likeness was pronounced perfect.

The Duchess de Choiseul spent some months every year at Chanteloup, a place she had bought and where she found rest after the agitation of court life. We have some letters which she wrote from Chanteloup to her friend Madame du Deffand. In one of them (dated July 17, 1766) she gives her opinion of J. J. Rousseau, who was filling the world at the time with the noise of his quarrel with Voltaire. She speaks of Rousseau as

"a man always subjugated by his vanity, who has made himself singular in order to become famous, who has always denied himself the pleasure of gratitude in order to avoid the slightest obligation; who has preached to all nations, screaming to them, 'Hear, I am the oracle of truth; my odd manners are only the mark of my simplicity; I am the fabricator of virtue, the essence of justice.' . . . I have always distrusted this Rousseau, with his singular systems, his extraordinary accoutrement, and his pulpit eloquence transported to the housetops. He has always appeared to me a charlatan of virtue."

Some parts of this long letter, bearing on politics and on the foundation of good government, are curious enough if you remember that J. J. Rousseau afterwards became a demigod to the Terrorists of the French Revolution. Madame de Choiseul shows herself fully in one passage in this interesting letter. After her condemnation of J. J. Rousseau, she alludes to other hypocrites who affect timidity and modesty:

"I believe no more in these than in the first. Real virtue is more simple. She is unostentatious because she believes that she has not to be proud of anything; she conceals nothing because she does not think herself to be in view, and does not expect any praise. She is neither vain nor modest because she is simple, and she is simple because she is true."

Madame de Choiseul's letters to her friend are admirable for their good sense and their reason. "Do you know why you are so *ennuyée?*" she inquires of Madame du Deffand, who was perpetually complaining of being bored; "it is precisely because of the pains which you take to prevent, to foresee, to combat this ennui. Live from day to day; take time as it comes."

There was so much wisdom in Madame de Choiseul that Madame du Deffand, old as she was, used to call her her "grandmamma," and Madame de Choiseul in turn called Madame du Deffand "my grandchild." Madame de Choiseul spoke her mind very freely to her friend. She once became incensed with Voltaire, who had dared to write these lines to Madame du Deffand on the subject of the Empress Catharine:

" I am her knight against everybody. I know very well that people reproach her for some bagatelles in the matter of her husband, but these are family affairs, which do not concern me; and then it is not bad that there should be a fault to repair."

The Duchess did not appreciate these ironical remarks of the philosopher:

"What!" says she; "Voltaire finds a subject of pleasantry in an assassination? And what an assassination! the murder of a sovereign by his subject, of a husband by his wife! This woman conspires against her husband and her sovereign; she takes from him his life and his empire in the most cruel manner; she becomes an usurper against her own son, and this is what Voltaire calls family quarrels."

Madame du Deffand had herself answered Voltaire in a less serious way:

"Never, sir, resist the temptation to write to me; you cannot imagine what good your letters do me. The last one especially had an admirable effect; it rid me of the spleen of which I was a victim. There is no *humeur noire* which could not be combated by the eulogy you make of your northern 'Semiramis.' Those bagatelles which people repeat regarding her husband, and with which you will not concern yourself, since they are family affairs, would make even the dead laugh."

It must be confessed that Madame du Deffand has here the advantage of her "grandmamma." The Duchess, though she could be very angry with Voltaire, admired him greatly, and rendered him many services while he remained at Ferney.

After the death of Madame de Pompadour, the surroundings of Louis XV. remained for several years what they were before; Madame de Choiseul, Madame de Gramont, Madame de Beauvau, Madame de Mirepoix continued to be assiduous at the King's suppers and journeys; but things changed when he distinguished Madame du Barry and felt a senile passion for her. The extraction of the new favorite, the depravation of her early youth, her vulgarity, her ignorance, produced a revolt at court. Choiseul could not but espouse the cause of his wife, who refused to associate with Madame du Barry. He tried with all his might to prevent her formal presentation. Madame du Barry triumphed over his resistance, and was presented on the 27th of April, 1769. From that day, it could be prophesied that Choiseul's power was coming to an end. The relations of the Minister and the favorite were courteous, and Louis XV. amused himself by bringing them together as often as he could. But, with all his levity, Choiseul could not be subservient to her; he was helped by his pride. He was for a moment afraid that the King would marry his young favorite (Maria Leczinska had died on June 24, 1768); the King promised him not to do so, in a curious letter in which he said: "You manage my affairs well; I am satisfied with you. . . . You know Madame du Barry; she is pretty; I am satisfied with her. . . Very certainly, you will not see me taking a *dame de Maintenon.* I need not ask you to consider this private."

Madame du Barry and the Chancellor Maupeou began open war against Choiseul, with the help of the Duke d'Aiguillon. They had on their side the friends of the Jesuits, the devout party; Choiseul had with him the Parlement, but he was defeated, and Louis XV. finally signed the *lettre de cachet* which exiled Choiseul to Chanteloup, his country place.

# Notes.

Dodd, Mead & Co. have in press the authorized 'Biography of Bret Harte,' by T. Edgar Pemberton; 'The Uganda Protectorate,' by Sir Harry Johnston; 'A History of the Nineteenth Century, Year by Year,' by Edwin Emerson, jr.; and 'The Weather, and Practical Methods of Forecasting,' by E. B. Dunn.

The Century Co. will bring out in the autumn 'The Story of Athens,' by Howard Crosby Butler, lecturer on architecture at Princeton University, some of whose drawings will be joined with the abundant photographic illustrations.

As products of the printer's art, the three handy volumes of the Lewis and Clark Journals forming part of the New Amsterdam Book Co.'s "Commonwealth Library" are to be commended without reserve. The type employed is small but distinct, and the general appearance is tasteful. We should criticise it as a too slavish reprint of Biddle's 1814 recension of the original diaries in that it does not even contain the name of Biddle, so that the Paul Allen who signs the preface and seems to identify himself with the editor (whereas he only saw the work through the press) will impose on present-day readers. Moreover, the opportunity to supply an index and modern maps has been put by, so that the publishers exhibit the minimum of enterprise.

Since we last took notice of the commendable Temple edition (Dent-Lippincott) of the Bible, the little volumes have been multiplying apace—four for the Old and six for the New Testament. The scheme is well maintained of a popular critical introduction and of appendices synchronizing the history of the period for several ancient countries, and indexing the pertinent Biblical references in English literature; better still, the text is rationally paragraphed and the poetry printed as poetry. The limp olive-green covers are an invitation to the companionship of the pocket.

It smacks somewhat of anachronism to have, twenty-nine years after its original publication, the well-known and much-read work of Georg Brandes, 'The Romantic School in Germany,' being the second volume of his "Main Currents in Nineteenth-Century Literature," appear in an American edition (Macmillan); and it is hardly worth while at this late date to enter once more upon its grave defects and its unquestionable merits. Its arbitrary combinations, its rough-and-ready judgments, its lack of sympathy with the deepest aspirations and the finest ideals of German Romanticism, are a matter of public record. One only needs to compare it with Ricarda Hach's 'Blütezeit der Romantik' (Leipzig: 1899) to see at a glance how antiquated from the literary point of view this book is, how much closer to the heart of the Romantic movement we have come since its first appearance, how much more Romantic we have ourselves become. One sentence of the introduction, "Regarded as a whole, German Romanticism is reaction," should be enough to show that Brandes's book cannot be classed with the standard works of objective history. If it nevertheless has a vitality of its own, if in a way it is a classic production, it derives this distinction from the bold subjectivity of its author, from his fearless courage in speaking his mind, in asserting his principles at all hazards, in turning even a literary study into a political pamphlet. As a brilliant manifesto of the political and religious liberalism of the middle of the nineteenth century, this book will always retain its value.

In politico-statistical handbooks our Canadian neighbors are much in advance of ourselves. There is nothing to compare, on our side of the line, with 'Morang's Annual Register of Canadian Affairs,' just launched at Toronto by George N. Morang & Co., under the direction of J. Castell Hopkins. It is a stout volume of 540 pages, of which the last thirty are occupied by an index of names and another of "events and affairs." At the beginning is a conspectus of the Governments of the Empire in 1901 (such as are represented in the present London conference of the premiers), followed by the personnel of the Governments of Canadian Provinces, of Senate and House of Commons of the Dominion, and a list of daily newspapers. The Register fairly opens with sections on Canadian Agriculture, Mineral Development, Forests and Fisheries, Manufacturing Industries, Trade and Commerce, Finances; to which succeeds the historical chronicle of Canada and the Crown (from the Queen's death to the King's birthday), the Royal Tour of Canada, Canada and the War. Next in order (or shall we say, out of order?) come Education in Canada, Transportation Interests, Population and Immigration, Government and Politics; The Canadian Militia, Financial Interests, and, finally, Canadian Obituary for 1901. Under Government and Politics, each province is considered in turn with more or less particular report of parliamentary debates. The utility of this compilation is apparent, and time will no doubt bring improvement in it.

One of the chief obstacles in the way of the student of philosophy arises from the unsettled state of the frontiers of the subject, and the consequent difficulty of grasping its proper standpoint and its exact relations to adjacent subjects. Hence teachers of philosophy will probably welcome the late Prof. Henry Sidgwick's 'Philosophy: Its Scope and its Relations' (Macmillan), which treats of these topics in the form of a course of introductory lectures (dating from 1892). In spite, however, of an abundance of shrewd remarks and of a characteristically scrupulous and dispassionate method of discussion, the first impression of the result is somewhat disappointing, and a cursory reader may even be led to think that the subject is finally left very much where it was taken up. For Professor Sidgwick certainly never seems to reach a formal and clear-cut classification of the philosophic sciences such as is needed to remove the existing confusion, inconvenience, and ambiguity. Still, a lucid discussion of such difficult problems by the mature powers of one of the finest critical intellects of our time is bound to be instructive and stimulating to philosophers of every school, and in this sense Professor Sidgwick may be said to have succeeded. Beyond that his common-sense method of looking for formulas to which all parties might subscribe, could hardly be expected to carry him, for, as matters stand, the divergences in conception, aim, method, and terminology of the various philosophic sects seem to be irreducible. A wholly satisfactory solution, therefore, would require either the promulgation of a systematic scheme of such manifest utility as to lead to its general adoption, or the deliberate acceptance of a common terminology by all parties. Neither of these alternatives seems immediately probable, but to either Professor Sidgwick's work ought to smooth the way.

'Otto Hübner's Geographisch-statistische Tabellen aller Länder der Erde' (Frankfort: H. Keller; New York: Lemcke & Buechner) enters on its second half-century of usefulness with the annual issue for 1902, under the editorship of Prof. Dr. Fr. von Juraschek. The table of sources alone for this compilation is worth a large share of the price of the thin volume. In the first section each country of the world is tabulated, with the name of its chief ruler, its area, numerical population, racial composition, religion, budget, army, navy, merchant marine, etc.; and these details are supplemented in the second section with railroad, telegraph, coinage, measures, products, capital and chief-town statistics; while the remaining tables offer convenient economic comparisons between the leading civilized nations, and show the world's gold and silver output for two decades, its exports and imports, etc.

We have received from the publisher, Armand Colin, the *Annales* of seven of the eight sections of the International Congress of Comparative History held in Paris in 1900 (that of Music being unreported). The first volume (General History and Diplomatics) contains the names of the committee of organization, and of members, in addition to the several papers which make up each volume. Comparative History of Institutions and Law; of Social Economy; of Religious Affairs; of the Sciences; of Literatures; of the Arts of Design, furnishes the material for the succeeding volumes —the fourth (on Religion) being notably the thinnest. On some of these we may touch in detail hereafter. The letterpress is beautifully clear and open, and there are occasional illustrations.

The central piece in the current (38th) number of the Year-book of the German Shakespeare Society is a reprint of the first (the Italianate) version of Ben Jonson's "Every Man in his Humour," which has thus far strangely escaped the zeal of the modern editor of reprints. Thus once again does this excellent annual vindicate its indispensable value to the student of Shakspere and the Elizabethan drama. Other noteworthy contents are the address on the question of the origin and early versions of "Hamlet," by Professor Schick, a reprint of the closing scenes of Thomas Heywood's "If you know not me, you know nobody," various documents dating from 1602 and the following years relating to the visits of English actors to the court of Duke Philip Julius of Pommern-Wolgast, and many shorter notices and book-reviews in its field, together with the customary extensive annual Shakspere Bibliography.

The house of E. A. Seemann, Leipzig (New York: Lemcke & Buechner), has begun a serial publication of colored reproductions of 100 contemporary German painters ('Hundert Meister der Gegenwart'), of which the first number is to hand. It contains five examples—a head of Bismarck by Franz von Lenbach; a study of a female head by F. A. von Kaulbach; Falstaff, by Eduard Grützner; a newspaper reader, by Wilhelm Leibl; and two Dutch girls on the dunes, by Hans von Bartels. The accompanying text is from the pen of Fritz von Ostini, but other writers will share in the description of the artists and their works. The publisher's aim is not to cover the field as regards artists—for the choice of a hundred must be arbitrary—but to give characteristic specimens of the art of the group determined on. It is obvious, and it appears incidentally from Ostini's letterpress, that the scale of the original may be departed from, but this is not expressly indicated, nor is the whereabouts or ownership of the original indicated. The color process is not equally successful in all the cases to which it has been applied, but it serves well enough for a memorandum and will be popularly appreciated.

The latest number of the *Archiv für Papyruskunde*, edited by Prof. Ulrich Wilcken of the Würzburg University, and published by Teubner in Leipzig, contains several articles of special interest. The first of these contributions is by the well-known papyrologist, Jules Nicole of Geneva, who describes and translates a papyrus on which are written questions and answers concerning surgical operations, showing how medical examinations were conducted in Egypt eighteen centuries ago. Unfortunately, it is only a fragment, but its contents, so far as they have been preserved, indicate a fair knowledge of anatomy and treat the subject from quite a modern point of view. The questions are such as might be properly put in a medical school of the present day. The second paper is a History of Circumcision, by the editor, with an article on Circumcision in the Old Testament, by Professor Gunckel of Berlin. Both writers agree that this rite was common to primitive tribes, especially in hot countries, and was hygienic in its original character. The Hebrews did not borrow it from the Egyptians, but it was practised by both peoples long before the sojourn of the Israelites in Egypt. A third contribution, to which we wish to call attention, is entitled "Zwei Bankanweisungen aus den Berliner Papyri," by Prof. Otto Gradenwitz of Königsberg, who shows that banks existed in Egypt and issued and accepted checks and bills of exchange two thousand years ago; and, although the form of these drafts was more complicated than at present, they amounted simply to orders to pay a certain sum to a certain person clearly specified, and to charge the same to the account of the undersigned.

We have already indicated the general contents of the unusually rich volume of Proceedings (xv. of the second series) of the Massachusetts Historical Society. Prof. Franklin B. Dexter's communication regarding the Jonathan Edwards MSS. now in the keeping of the Yale University Library possesses a more than curious interest, as either suggesting or demonstrating traits of character which serve to make Edwards a living human figure. For instance, Mr. Dexter's conviction, on examining this mass of his papers, is that "Edwards himself was, with all his genius, altogether practical and efficient in business affairs." Later on in the volume Mr. William P. Upham publishes the results of his decipherment of Edwards's shorthand, which is shown in facsimile and in carefully drawn characters, so far as the extant script supplies material. There are twenty consonant characters, four digraphs, and signs for *some, small, world, because,* and *perhaps.*

Mr. Joseph G. Rosengarten, Philadelphia, has reprinted from the *Pennsylvania Magazine of History and Biography* his translation of the Hessian Stephen Popp's Journal of his service in the Bayreuth-Anspach

regiments in our Revolution (1777-1783), to which we have already directed attention. Two of the three military pencil maps accompanying the original manuscript in the Bayreuth city library are here reproduced, together with a fourth not alluded to in the prefatory note.

The convenience of our English term "record," in the sporting sense, finds illustration in this item from *Minerva* of June 29: "L'Equador tiene il *record* dei vulcani" (Ecuador holds the record for volcanoes).

The National Central Library in Florence is rejoicing in the Chamber of Deputies' confirmation on June 27 of an agreement between the State and the municipality with regard to the long-awaited construction of a new home for this great institution—not only commodious but "worthy of the city's glorious traditions." The site chosen is on the Corso dei Tintori, fronting the Piazza dei Cavalleggeri, now occupied in part by the ex-convent of Santa Croce, of which Brunellesco's cloisters will be preserved and restored. The building is to be completed, with the books installed, not later than "December 31, 1909" (1907?), at an estimated cost of $580,000.

The assembling of nearly eight hundred of the school-teachers of the Transvaal and Orange River Colony at Johannesburg on July 2, for a ten days' conference, has great significance. In the opening address, Mr. Sargant, the Director of Education, stated that "colored children had just as much right as the children of other taxpayers to access to Government schools, and the Government recognized its duty to provide schools for them. It was impossible, however, to disregard the social usages of generations. Therefore, in spite of the extra expenditure involved, separate schools, just as well equipped, would be provided for the colored population." The instructive part of the conference consisted of a series of lectures on various subjects connected with teachers' work, technical education, mining, and voice production. The Astronomer Royal of the Cape, Sir David Gill, gave three lectures on astronomy, and Major-General Baden-Powell impressed upon the teachers the value of the cultivation of habits of observation. The citizens of Johannesburg subscribed a large sum to defray the cost of the conference, besides opening their homes to the visitors. Among the entertainments provided were theatrical performances, musical soirées, visits to the mines, and excursions in the neighborhood.

The broadening influences at work respecting the common-school or secondary education in England are indicated by the fact that the Government has provided sixteen holiday courses for the study of modern languages by teachers and others. Seven of these are to be held in different places in France, including Paris and Tours, four in Germany, three in Switzerland, and two in Avila and Santander in Spain.

A reader has done us the kindness to expose a sad lapse of the pen by which Professor Forsyth's 'Theory of Differential Equations' was ascribed in our last issue (in the brief note at p. 71) to Professor "Thorpe."

—The *National Geographic Magazine* for July contains the preliminary report, by Mr. Robert T. Hill of the Geological Survey, of his personal investigations of the Martinique disaster. A sketch of the geologic and volcanic history of the Caribbees introduces a detailed account of the actual events of the great eruption from the statements of eyewitnesses. It is made apparent that the warnings were numerous and continuous for at least two weeks before May 8. Mrs. Prentiss, wife of the American Consul, wrote that on April 23 "she heard three distinct shocks or reports in St. Pierre, which were so great that the dishes were thrown from the shelves and the house rocked." A few days before her death she records this significant fact: "The smell of sulphur is so strong that horses on the street stop and snort, and some of them drop in their harness and die from suffocation." The devastation was confined to a comparatively small district, and the changes are "merely the superficial destruction of vegetation and the veneering of a small triangular area with a thin layer of ashes and mud. . . . Nineteen-twentieths of the area of Martinique is as green and beautiful to-day as it ever was." As a result of his observations, Mr. Hill concludes that the eruptions were repetitions of old phenomena, and their cause "was not the development of a local fissure suddenly letting the water of the sea down to the depths of the hot magma, but, upon the contrary, resulted from a widely occurring disturbance within the interior of the earth's magma, which caused it to rise to meet the upper wet zone, rather than the water of the latter to descend to it, and which is as yet inexplicable." In his somewhat optimistic account of the political and economic conditions of Martinique, he contrasts the prosperity and happiness of the people under local self-government with the English West Indies, which are "blighted and dying from the colonial system of government." Prof. I. C. Russell of the University of Michigan gives the results of his observation of the eruptions on the island of St. Vincent. At one place a narrow river-valley had been filled "to a depth of fifty or sixty feet with freshly fallen débris. Through this material, surface water was working its way, and, meeting the still hot stones and dirt, was being changed to steam, which, escaping from thousands of vents, formed white columns that rose at times hundreds of feet into the air." The specimens of the products of the eruptions collected by Messrs. Hill and Russell are described, geologically by J. S. Diller, chemically by W. F. Hillebrand. There are several interesting photographs and maps. We have noted errors in the latter which should have been avoided in a scientific journal.

—'A Foreign View of England in the Reigns of George I. and George II.' (Dutton) is a beautifully printed volume made up of letters written by M. César de Saussure to his family during the years 1725-1730. The translator, Madame van Muyden, gives us, in a preface of three pages, such essential facts regarding the author as are required to explain the character of this correspondence, and the general nature of the experiences out of which it sprang. M. de Saussure's father was a Huguenot exile resident at Lausanne, and the writer himself had seen nothing of the world until at the age of twenty he set out for England by way of Yverdon, Solothurn, Basel, and the Rhine. Until now the letters have remained in manuscript, but they seem to have been read rather widely at Bern, Geneva and Lausanne during De Saussure's lifetime. The most illustrious of their readers in the eighteenth century was Voltaire. When at Montriond, Lausanne, in 1755, he heard of them, and asked to see them. On returning them he sent a card with a message of thanks written in his own hand: "Monsieur de Voltaire et Madame Denis offrent leurs obéissances à Monsieur et Madame de Saussure, et renvoyent les manuscrits. On ne peut trop remercier Monsieur de Saussure de la bonté qu'il a eue de prêter un ouvrage si amusant et si utile." That this was not altogether the language of compliment will be the opinion of those who read the letters of De Saussure to-day. They depict English life as it was seen, more or less from the outside, by an intelligent and well-educated Swiss, who was shocked that the "profane and godless Woolston" had published a treatise against miracles, but felt deep admiration for English political institutions. In the eighteenth century Lausanne was already a home of primness and schoolmasters. There is something of the pedagogic air about De Saussure, although it is not unmixed with natural sprightliness. So far as can be seen from his letters, he did not move in court or official society, but he had very respectable friends in England. At one time he became first secretary to the British Embassy at Constantinople, and at another he was made secretary to Lord Cathcart, then commanding a portion of the British fleet in the war with Spain. The most valuable feature of these letters is their close observation of national eccentricities, or of those habits which to a foreigner must have seemed eccentric. It is the England of 'Tom Jones' and 'Roderick Random'—a coarser if not a more profligate England than that of 'The School for Scandal' and the Westminster Election. Madame van Muyden's translation is smooth and graceful.

—We must confess a certain initial feeling of prejudice against 'The True Napoleon' of Mr. Charles Josselyn (Russell), which is due to its question-begging title. This phrase—'The True Byron,' 'The True Shelley,' 'The True Napoleon,' etc.—has, however, grown so hackneyed during the past ten years that the day of its departure is surely close at hand. Mr. Josselyn does not seek to come at the truth by any process of criticism, by any examination of witnesses, by any test of veracity in the case of the memoir writers upon whom he relies. His leading authorities are Bourrienne, Las Cases, O'Meara, and other writers who had a sharp eye to the public, and were not afraid of seasoning their stories with the salt of Gascony when occasion required. We are quite sure that Mr. Josselyn has not been consciously unfair in his use of historical materials, but he is uncritical and plainly the amateur. The modesty of the preface is so disarming that we are relieved from trying this book by standards which would be applied to the works of Fournier and Rose—or even, let us say, to those of Mr. Watson and Miss Tarbell. "It is not my purpose," says Mr. Josselyn, "to write a life of Napoleon; this volume is simply a compilation of anecdotes and opinion incident to himself and his times, and like J. T. Headley, author of 'Napoleon and his Marshals,' I pretend to no originality, except that, like him, I have grouped what I believe to be interesting facts al-

ready known to the world, and have used without any hesitation any reliable author that could help me." As for the spirit in which these anecdotes are collected and arranged, it may be gathered from another passage of the preface. "That Napoleon had faults, was sometimes untruthful, cruel, even vicious, is admitted, but the good he performed, the great results he achieved, may possibly overbalance many of these unpleasant and bad qualities; and these, I think, in a great measure, are buried beneath his many noble deeds." The method pursued can be briefly indicated. Apart from a section on the chronology of Napoleon's life, there are five chapters which are devoted to the following subjects: "Boy and Man," "The Soldier," "Emperor and Statesman," "Exile and Philosopher," "The Man of the World." A lack of just perception in the choice of sources is the chief fault of this book, but it is not without other blemishes. The construction of sentences is sometimes defective, the subjects of the illustrations are not, as a rule, the best, and the most cursory glance reveals signs of carelessness. For example, the first line in the table of contents runs: "Napoleon: Boy and Man, 1767-1821," while the first sentence of the first chapter informs us that "Napoleon Bonaparte was born at Ajaccio, in Corsica, on the 15th of August, 1769." As partial compensation, the printing is good, and there is an accumulation of much entertaining gossip.

—'The Early History of Venice,' by F. C. Hodgson (Dutton), is a work of both coordination and research. As may be inferred from the title, it begins with the foundation of the city, and its closing episode is furnished by the share which the Venetians took in the Fourth Crusade. No writer on the origin of Venice or on any portion of its history can fail to accentuate the broad cosmopolitan character of the relations into which it was brought by its unique position, but there is room for either failure or success in the treatment of this theme. Mr. Hodgson shows skill in selecting the main lines of a complicated development, and, without sacrificing the local aspects of his subject, lets us see clearly how the town bore itself towards its Italian neighbors as well as towards the trading communities of the Levant. In all respects this must be considered a narrative history rather than a study of municipal and commercial institutions or of social life. In his notice of Venetian government and administration, Mr. Hodgson dwells strongly upon the absence of feudal instincts and influences. "If we turn," he says, "from the external aspect of the city of Venice to the political principles that prevailed there from the earliest days, we shall find that, perhaps more than any other of the states that formed the Western Europe of the Middle Ages, it embodied the ideas that had been bequeathed by the Roman Empire." It was by the route of Constantinople that the ideas of municipal government and of imperial majesty came to Venice, for the first doges were Byzantine officers who gained their appointment in days when the exarchate of Ravenna was still more than a name. Dealing chiefly, as he does, with events, Mr. Hodgson is led to emphasize the exploits of great leaders like Pietro Orseolo II. and Enrico Dandolo, and to pass lightly over those less palpable tendencies which are seized upon by the professed critic. We would not imply, however, that Mr. Hodgson is deficient in critical aptitude. His introduction gives proof alike of discriminating taste in the choice of authorities and of candor in avowing what he has not read. We are particularly glad to see that he has placed no reliance upon Daru, and that in using Gfrörer's 'Byzantische Geschichten' he is well aware of the author's bias against *Byzantinismus*. On the other hand, he seems less cordial towards Romanin than we could have wished. This is a scholarly and valuable book. It is also one which should prove attractive to mediævalists at large.

—Francisque Vial, author of 'L'Enseignement Secondaire et la Démocratie' (Paris: Armand Colin), knows just what his views are and how to give them clear expression. Clear minds, hearts filled with the spirit of justice, unanimity in high national and personal ideals, willingness to sacrifice the selfish interest of the present for the general good of the future—this is what must be cultivated in the masses of the French democracy to insure its success as a form of political and social organization. The masses must feel and act aright, and they must feel and act together. But their feelings and actions will inevitably be determined, in preponderating measure, by the character of the education which they receive. If they are to be at one in their feelings and actions, if there is to be a truly distinctive national spirit, they must be a unit in the educational influences to which they are subjected in the formative period. With the Utilitarian theory of education, however, unity is impossible. To be consistent with its fundamental principle, that theory must ever tend to greater and greater division. Egoism, intellectual and moral anarchy, a stolid indifference to the higher social and political interests and responsibilities, are its legitimate fruits. To the Liberal, and not the Utilitarian theory, then, France must look for the type of education which will satisfy the real needs of her democracy. And yet not to the Liberal teaching as it actually exists in the France of to-day. Liberal teaching itself has been caught in the flood of Utilitarianism and carried from its true foundations. It has gone from the general to the special, from principles to facts, adopting methods drawn from its enemies and foreign to its true character and aims. The author has the courage of his convictions sufficiently to take an actual programme of a course in the history of French literature, and set over against it such a programme as he would desire, in which the names of individual authors and other such narrowly specialized topics give way to the more general problems of literary evolution, with the understanding that the teacher is free to select the epochs, authors, and works best suited to throw light upon the problems under consideration. Neither the French democracy nor any other will guide its steps to any great degree in conscious deference to the reasonings of an educational philosopher; but M. Vial's book is none the less worth a careful reading, and may well have a deep influence on the inner circles of educational thought.

## ROYCE'S WORLD AND THE INDIVIDUAL.

*The World and the Individual.* Gifford Lectures [on Natural Religion], Delivered before the University of Aberdeen. Second Series: Nature, Man, and the Moral Order. By Josiah Royce. The Macmillan Co. 1901. 8vo, pp. 480.

Professor Royce's second and concluding volume discusses questions of intimate interest to everybody. It is more persuasive than the first, of which it enhances the significance. The design of the whole now comes out—to introduce into the Hegelian philosophy of religion such rectifications as must result from recognition of scientific conceptions worked out during the century now completing itself since that philosophy first appeared. Of these new conceptions, some are psychological, some logical; but the chief of them are the new mathematical ideas which cluster about that of an infinite multitude. Mathematicians, perhaps, still linger on the stage, who, in their best days, used to be quite positive that one cannot reason mathematically about infinity, and used to feel, like the old lady about her total depravity, that, this cherished inability being taken away, the bottom would fall out of the calculus. Such notions are obsolete. Various degrees of infinity are to-day conceived with perfect definiteness; and the utter misapprehension of the metaphysicians about it, above all of Hegel, glares. As a first serious attempt to apply to philosophical subjects the exactitude of thought that reigns in the mathematical sciences, and this, not on the part of some obscure recluse whose results do not become known to the public, but on that of an eminent professor in a great university, to whom the world is disposed to listen with attention, Royce's 'The World and the Individual' will stand a prominent milestone upon the highway of philosophy.

Our space will permit only the most salient features of Professor Royce's theory to be roughly sketched. "An Idea is any state of mind that has a conscious meaning." In reference to meaning, logicians have never failed to recognize "quod fere in omnium ore celebre est, aliud scilicet esse quod appellativa [*i. e.*, adjectives] *significant*, et aliud esse quod *nominant*. Nominantur singularia, sed universalia significantur." So John of Salisbury, Abelard's pupil, expresses the distinction. That for the most important signs the signification is intrinsic, the denotation (*quod nominant*) extrinsic, is generally recognized. Professor Royce marks the distinction by the terms Internal Meaning and External Meaning. He conceives of the internal meaning in a special way. Another writer, a quarter of a century ago, proposed this maxim: "Consider what effects that might conceivably have practical bearings we conceive the object of our conception to have. Then our conception of those effects is the *whole* of our conception of the object." Carrying this pragmatistic spirit a trifle further, Professor Royce holds that the internal meaning of an idea is a Purpose, instead of regarding it, with his predecessor, as a germinal purpose. This purpose—obscurely recognized, since not all to which it will lead is foreseen; partially fulfilled in being recognized, since a purpose strives first of all to understand itself; but mainly unfulfilled, since it would not remain a purpose after fulfilment—is

the internal meaning, or signification, or depth, of the idea. The purpose is vague—anything that refers to the future is more or less vague; and a sincere purpose to do a thing "right now" actually does it. The purpose is to do a thing under certain circumstances. Completely to define these circumstances, it would be necessary to give a biography of the purposer from birth, without any omission. The purpose is to do something in order to produce certain results. Completely to define the result accomplished must involve a complete representation of the agent's future life. In short, the complete fulfilment of any purpose, which alone is the external meaning of the idea, is no less than the entire life of the thinker. The reviewer will say, for clearness, that neither these nor the majority of the author's positions have been satisfactorily shown to be true (in the reviewer's opinion, but the author holds them to be perfectly demonstrated). The principal of them may rank as verifiable hypotheses possessed of the plausibility and other qualifications that render them eminently worthy of further examination, even if an engine of rare usefulness must be drawn away from other work for the purpose.

That the object of an idea, then, its external meaning, is of the nature of a sign could hardly be gainsaid. But Professor Royce finds it not only a sign but an idea; not only one idea but a "concrete" idea in the Hegelian sense, and that, not relatively, but perfectly, and so of the nature of life; and not only life, but an entire life. "The Being of the real object of which you now think, means a life that expresses the fulfilment of just your present plan."

But suppose the reader to ask, How can an idea, so microscopic a piece of a life, contain within its implication a distinct feature corresponding to every feature of the entire life of which it is only a part? This difficulty is happily removed by the author in a way which ought to be instructive to those metaphysicians whose horizon is limited by the walls of a theological seminary. He resorts to Gauss's conception of an *Abbild*, which has played a great rôle in mathematics. That is to say, he likens the idea representing the entire life to a map of a country lying upon the territory of that country. Imagine a map of England, absolutely perfect in its minutest details, to lie upon the soil of England, without covering the entire country it maps. Upon this map would be shown the very ground where the map lies, and the map itself, in all its minutest details. In this map of the map, the map will be shown again; and so on endlessly. Here, then, will be a part fully representing its whole, just as the implicit meaning of the idea is supposed to represent the entire life. It is to be noticed that, each successive map lying well inside the one which it immediately represents, unless there be a hole in the country which a ring-shaped map encloses, the endless series of maps will converge to a single point, which represents itself throughout each and every map of the series. In the case of the idea, that point would be the self-consciousness of the idea. An idea, being a state of mind with a conscious purpose, must evidently be self-conscious.

There, then, would seem to be a beautiful and a needed (though not a complete) confirmation of the aptness of the metaphor. Yet here the author recoils, and refuses to admit the continuity, or even the analytic continuity, of the map. He insists that no representation represents itself; a hard saying, which exact logic appears directly to refute. "The world of Self," he says, "whatever continuity of internal structure it may, in some aspects, possess, is, in its principal form of expression, embodied in a discrete series of . . . individual expression. . . . Experience at any moment shows how I am conscious of my . . . approaches to selfhood in any way in the form of a discrete series in which one stage . . . is followed by the next." The argument which supports this assertion is not assented to upon all hands. If it be true, there are but two alternatives: either, notwithstanding this, in the respects in which an idea represents an entire life there is continuity, or, at least, a higher infinity than that of the simple endless series; or else the doctrine that to an idea a reality must in some shape correspond must fall to the ground.

According to Professor Royce, an idea fails of being a Self only because it is general and not perfectly determined; which the reader may deem a dark saying unless the sword of Hegel is invoked to cut the knot. Its implicit or germinal inward meaning would, then, be a little Self, representing the entire life as its external meaning. In a similar way, the Self of the man is perhaps included within a larger Self of the community. On the other hand, the man's Self encloses intermediate selves—the domestic Self, the business Self, the better Self, the evil spirit that sometimes usurps his sovereignty. Of course, the system of delineation for the larger and for the enclosed selves will be different. Here the author draws support from the psychological doctrine of what he calls the "time-span," a doctrine which, so far as it has really been placed beyond important doubt, amounts to little more than that our image of the events of the few seconds last past is, or is very like, a direct perception, while our representation of what happened a minute or so ago is relatively of a far more mediate character. This phenomenon had already been seized upon by several idealistic writers as affording a refutation of dualism; but there is no better way of appreciating the large calibre of Royce's thought than by comparing their styles of putting this idea to the service of metaphysics with his. He imagines that the greater selves will naturally have vastly longer time-spans than the lesser selves. Now a consciousness whose time-span, or "specious present," or "empirical present," as it is variously called, was a thousandth of a second or a thousand years would not ordinarily be recognized as a consciousness at all by a human observer of its external manifestations. The time-span of the All-enclosing Self must cover all time; and this gives a sort of support to the imagination if we wish to reconcile foreknowledge and free will after the manner of Boëthius, St. Augustine, and others.

Every reality, then, is a Self, and the selves are intimately connected, as if they formed a continuum. Each one is, so to say, a delineation; with mathematical truth we may say, incongruous though the metaphor is, that each is a quasi-map of the entire field of all the selves, which organic aggregate is itself a Self, the Absolute Idea of Hegel. So far as a philosophical conception can be identified with God it is God.

All reasoning goes upon the assumption that there is a true answer to whatever question may be under discussion, which answer cannot be rendered false by anything that the disputants may say or think about it; and further, that the denial of that true answer is false. This makes an apparent difficulty for idealism. For if all reality is of the nature of an actual idea, there seems to be no room for possibility or any lower mode than actuality, among the categories of being. (Hegel includes modality only in his Subjective Logic.) But what, then, can be the mode of being of a representation or meaning unequivocally false? For Hegel, the false is the bad, that which is out of harmony with its own essence; and since, in his view, contradiction is the great form of activity of the world, he has no difficulty in admitting that an idea may be out of harmony with itself. Prof. Royce, however, seems almost to resent the idea that anybody could suppose that he denied the validity of the distinction of truth and falsehood. He is fairly outspoken in pronouncing sundry doctrines false (a word Hegel hardly uses), even if we do not quite hear his foot come down; and nothing does he hold more false than the usual form of stating the distinction now in question, namely, that a true proposition corresponds to a *real matter of fact*, by which is meant a state of things, definite and individual, which *does not consist merely in being represented (in any particular representation) to be as it is*. For example, if I dream that I find I can float in the air, this matter of dream is not matter of fact, for the reason that the only sense in which I can float in the air is that so my dream represented the matter. Now Prof. Royce offers to demonstrate by necessary reasoning that the statement—or, as he expresses it, that "to be real means to be independent of ideas which relate to that being"—is false. His argument to this effect will serve as a sufficiently characteristic, but rather favorable sample of his general style of argumentation.

Having given us to understand that he is going to disprove the proposition, he opens his argumentation by declaring that he does not know what the proposition means. Thereupon, he proceeds to propound a general maxim of procedure for all cases in which one has to refute a proposition without knowing what it means. It is to begin by assigning to it its "most extreme form." This certainly does not signify the most extremely defensible meaning, but rather the most extremely indefensible meaning that the language will bear. The proposition having been refuted in this extreme sense, it will only be necessary afterwards to argue that other interpretations make no essential difference. This maxim, one would suppose, would prove very serviceable to anybody who should have any large amount of that sort of refutation to perform. In accordance with this maxim, Prof. Royce begins by assuming that realists hold that no idea in the slightest degree determines the real object of it, whether causally or in any other manner. Whether this does not overstep the limits of admissible interpretation, seeing that a realist who

meant this would deny that any promise can really be kept, or that any purpose can influence the real result, the reader must say. At any rate, it would not seem to be a difficult position to refute.

Now in order that he may get the realist where he wants him, there are two acknowledgments which Professor Royce endeavors to extort from him. To bring him to the first, the author assumes the principle that all causal action is reciprocal, or of the nature of reaction. This is evidently contrary to popular opinion, which holds that while the past has exerted some efficient causality upon the future, the future cannot have any *effect*, in the strict sense of that word, upon the past; and that while the future may have influenced the past by final, or ideal, causation, the past cannot possibly influence the future as the aim of the future. The reader may judge whether a realist of so extreme a type as that which Professor Royce has set up would or would not admit that the real object of an idea cannot have influenced the idea, in the absence of any attempt on the part of Professor Royce to prove his general principle of reciprocity. If he would not, old-fashioned logic (which Hegelians, it is true, hold in high contempt) would pronounce the attempted demonstration to be a bald *petitio principii*.

In order to extract the second acknowledgment from the realist, Professor Royce produces an argument which would seem to have as much force for one kind of realist as for another. He supposes two objects, B and R, to be related to one another as the realist supposes the Being, or the real object of an idea, and the Representation, in the form of an idea of that object, to be related; and he undertakes to define the relation between them. "The definition in question," he says, "is, as a mere abstract statement, easy." One would think so. The realist simply says that B is not constituted by its being represented in R; that is, he says that the fact that B is as it is, would be logically consistent with R's representing it to be otherwise. But in place of this easily comprehensible relation, what fantastic attempt do we find at the definition that was pronounced to be so easy! Professor Royce will have it that the realist holds that the relation is such that no matter how R may be metamorphosed, it is logically possible for B to remain unchanged. In such a sense, what two things in the world are independent? Change the problematic madness of Hamlet into the pacification of the Philippines, and it will become logically inconsistent with the continuance of great disturbances there. But change the doubtful *representation* by Shakspere that the fictitious Hamlet was unhinged into the *representation* that the Philippines were pacificated in 1901, and it will not have the slightest logical consequence for the real state of things. The truth is, that Professor Royce is blind to a fact which all ordinary people will see plainly enough; that the essence of the realist's opinion is that it is one thing to *be* and another thing to *be represented;* and the cause of this cecity is that the Professor is completely immersed in his absolute idealism, which precisely consists in denying that distinction. It is his element, and there is total reflection at its surface. That, however, is what Professor Royce asks the realist to admit as a premise. The conclusion which he deduces from it is that if B is linked as cause to any determination of R, there must be a *tertium quid* by the mediation of which the causation takes place. Now the premise is absurd; and the formal rule is that from an absurd premise every conclusion must be allowed to be logical; that is to say, it is needless to dispute its logicality, the premise being false. The argument, therefore, cannot be called formally bad; nor can we object that a few lines below, in a restatement of the conclusion, B's being linked as cause gets changed into B's having any causal *or other* linkage.

Professor Royce, armed with his wrong definition of realism, goes on to a dilemma to show that, whether the realist says that real things are one or are many, he equally involves himself in contradiction. But, although the characteristics of his style of argumentation become even more prominent in that dilemma, the exigencies of space forbid our following him further. But we should like to say one word to this powerful and accurate thinker who has been so completely led astray in his argumentation by his Hegelian logic: Absolute idealism depends, as Hegel saw that it did, upon assuming that position at the outset. If your refutation of realism is addressed to students who are already absolute idealists at heart, we will not undertake to say whether it will be serviceable for the development of that doctrine, or not. But if it is addressed to realists themselves, it must conform to the logical principles recognized by realists, or be nugatory. Now you know very well that realists do not admit that matter of fact can be apodeictically demonstrated. You ought to know, and surely you do know, that if you drive them into a corner, they will simply modify their admissions so far as may be necessary to avoid self-contradiction, and that from the very nature of apodeictic proof it is absolutely impossible to close off such escape in arguing about matter of fact. The history of the doctrine of parallels illustrates what logic shows to be necessarily the state of the case. But the question of realism is a question of hard fact, if ever there was a hard fact; and therefore your method must be revolutionized if you are ever to convince any master of logic.

## SCHEIBERT'S SWORD AND PEN.

*Mit Schwert und Feder:* Erinnerungen aus meinem Leben. Von F. Scheibert, königlich-preussischem Major z. D. Berlin: Ernst Siegfried Mittler & Son; New York: Lemcke & Buechner. 1902.

Autobiographies are always interesting if written with candor and some literary skill, and if, in describing men, conditions, and events, they supply illustrative details not found in historical works. In what Major Scheibert presents to us he is candid enough, although his judgment and the accuracy of his information frequently appear very questionable. He went through the ordinary course of study in the Gymnasium, intending to devote himself to the study of architecture; but, discouraged by the poor prospects of advancement in that line, and by the "impressions made upon him by the commotions of the year 1848," he joined the military profession for the purpose of becoming an officer of engineers. He describes his career with some vivacity, and tells us of the clever things he did in peace and war, and of the credit he got for them from his superiors—some of them men of high rank and renown—with unconcealed satisfaction. But his success, so far as it consisted in official recognition of his merits, was far from being all he desired; for when he reached the dangerous "Major's Ecke" (the "major's corner")—that is, the rank in the military hierarchy from which the Prussian Government carefully selects those who are considered fit for the higher grades—he was dropped from active service and relegated to private station with a meagre pension not sufficient to support him and his family in comfort. According to his own account, he was a jolly companion among his fellow-officers, amusing them as well as himself with droll conceits and mirth-provoking pranks, which no doubt made his friends regret his unpropitious retirement. Pressed by poverty, he took to the writing of books, as he himself confesses, to keep the pot boiling; and, as a list appended to the present volume shows, he wrote twenty-five of them on all sorts of subjects connected with the military profession. To the necessity of writing so much may be owing the somewhat slipshod character of his literary style, and the abundant padding with matter of no consequence which is observable in the work before us.

Of special interest to American readers is that part of the autobiography which touches the author's experiences in our civil war. He was sent by his Government to America for the particular purpose of observing, on the occasion of the impending operations against Charleston, the utility of the new methods of protecting fortifications as well as ships with iron armor, and the effect produced by rifled cannon upon earthworks, masonry, and iron sheathings. It was the intention of his Government that to this end he should report himself at the headquarters of the Union forces; but as he believed he could observe things better from the inside of the attacked place, and as his sympathies were altogether on the side of the South, he was permitted at his own request to make his way to Charleston, not, indeed, as an emissary of the Government, but as a "private gentleman" and at his own risk. He succeeded in running the blockade on a British vessel, and put himself in communication with the military authorities of the Confederacy, who received him very kindly.

There being at the time nothing of great moment going on in or around Charleston, he betook himself to Virginia, where he was hospitably welcomed by Gen. J. E. B. Stuart, the famous cavalry leader, and subsequently by Gen. Lee himself. He was present at the battles of Chancellorsville and of Gettysburg, but the stories he tells add little, if anything, to the stock of our knowledge. His observations of men and events are of the most superficial kind, and he frankly confesses that his judgment is colored by his sympathies. He tells us that he began an address on our civil war which he delivered after his return home, with the words: "Gentlemen, if you expect to hear from me 'objective history,' you will be disappointed; I was heart and soul a Southerner. I can warm myself only for one cause." This characterizes all his stories as well as his reflections.

As he loses no opportunity in his book to present himself as an ultra-royalist and an extreme conservative, who regards everything that smacks of free government with scorn, so he is easily convinced by a Southern clergyman that negro slavery was a very good thing for the blacks as well as the whites. He saw in the Southern army an organization of exceptionally God-fearing and brave men commanded by heroes, while the Northern army was, in his eyes, only a cowardly rabble led by blockheads and braggarts. There was, to him, no limit to the inexpressible contempt in which the Southern soldier held the mean-spirited Yankees. He found in the Southern troops not only more earnestness and temperament, but also more intelligence. He speaks even of the "indefinable difference" existing between a "people's army" in the true sense —meaning the Southern—and "troops raised by conscription," mercenaries, meaning the Northern army; being apparently ignorant of the fact that the Union army was, even more than that of the Southern Confederacy, mainly an army of volunteers—a "people's army" in the truest sense. He mentions with especial satisfaction that he was "joyfully welcomed" as a "Prussian," while the "Germans" were held throughout the Union in low esteem—mainly, as our author thinks, because the revolutionary movements of 1848 were still sadly remembered, and the Forty-eighters, thoroughly despised at home, were admitted to this country because our Government was—as we must infer, much to its regret—*obliged* to admit them. And now some of those despised Forty-eighters were, "to the astonishment of all sensible people," elected by their countrymen as military leaders. His disgust at this fact is so great that he repeats with evident relish the report attributing the Union defeat at Chancellorsville to the alleged misconduct of the German regiments. "To convince the reader," he says, "that I am not exaggerating, I quote here the report of a Union paper about the battle"; and then he quotes a sensational newspaper tale, the gross and unjust exaggerations of which have long been exposed and set right by historical criticism.

The Confederate defeat at Gettysburg was to Major Scheibert not a real defeat, but merely a miscarriage of a bold attack, after which the Union army might have met with an equally disastrous repulse had it been reckless enough to follow up its success. And so he goes on throughout. Returning to Charleston, he observed the operations of Gen. Gillmore, and formed the opinion that ironclad vessels are in a fight much superior to wooden ships, and able to run unharmed by land batteries; and that rifled guns have a very destructive effect upon masonry, but not upon well-constructed earth-works. On the whole, it appears from his own account that the Major may have brought home with him very entertaining tales of the American war, but very little information of real value, historical or other, unless we call valuable a report he gives of a conversation he had before leaving Virginia with the President of the Confederacy. It is worth quoting verbatim:

"I paid my respects to President Jefferson Davis," he says, "and was so cordially greeted by the head of the Confederacy that I saw in what manner Gen. Lee had spoken of me. The President made upon me a very strong impression. The genuine gentleman and Christian appeared in everything he said, as well as his zealous endeavor to keep the war within the limits of humanity. Like Lee, he showed himself a nature in complete equipoise. Posterity will pass upon this eminent statesman a judgment different from that of his strongly prejudiced contemporaries. At the close of the evening reception he took me into a private room, and, after we had thoroughly discussed the chances of the war, he requested me, when passing through Paris, if my time permitted it, to seek an audience with the Emperor Napoleon, and, as a military man by profession and a member of an entirely disinterested state, to explain to him the situation of things and the staying power of the Confederate army. 'If the Emperor,' he said in substance, 'delivers me of the blockade—and that he can do by a mere stroke of the pen—I guarantee to him the possession of Mexico. In 1842 [*sic*], with an army of about 12,000 men, we forced that state to submit to our will, our soldiers being accustomed to the climate and the mode of fighting of the Mexicans. We can do the same thing again at any moment, since the advantage gained by the raising of the blockade, which saps our vitality, would enable us to detach a corps of 12,000 to 20,000 men without feeling it much.' I promised to do what I could; but in Paris I received a pressing order from Prince Radziwill to come home; the short period of my stay in Paris was therefore not sufficient for me to go through all the diplomatic formalities which, even for a private gentleman, are connected with such an audience. But who knows how Providential it was that I could not discharge the highly important mission which I should have been glad to carry into effect!"

Had our author had his audience with the Emperor, he would no doubt have found that Louis Napoleon, who at heart would greatly have liked to break up our blockade, had reasons for abstaining from the attempt which the eloquence of this private envoy would not have been able to shake. But it is interesting to know that Jefferson Davis was ready to throw to the winds all reverence for the Monroe Doctrine which he may once have cherished, and actually to invite, with an offer of military aid, a European monarch to possess himself of an important part of the American continent.

The second half of the volume is devoted to the author's experiences in the Schleswig-Holstein war, in the war of 1866 between Prussia and Austria, in the Franco-German war of 1870, and in various garrisons. It gives entertaining and in great part pleasant pictures of army life, and the reader cannot but regret to see the once so jovial officer of engineers in his old age reduced to eking out a precarious existence by resort to literary drudgery.

---

*An Onlooker's Note-Book.* By the Author of 'Collections and Recollections.' Harper & Brothers. 1902.

Every one who read Mr. Russell's former book will welcome a second instalment of his wit and wisdom. In this case, wisdom has come to predominate over wit. The author deliberately preaches on certain texts, and moralizes much throughout his writing. The book is composed of papers which appeared in the Manchester *Guardian* during the year 1901, and the number of subjects treated, to judge from the titles of the homilies, is very great. But, with the exception of some historical essays, which throw light on the interior of the British Constitution, the subject really examined is that part of the population known as "society." Of this heterogeneous body Mr. Russell is himself a member by birth and by education, and he speaks from his own knowledge and observation. He is not a cynic, nor a pessimist. He has a kindly nature, and bears with him a broad mantle of charity. His tone is rather that of Horace than of Juvenal or Swift. He feathers his shafts with humorous anecdotes, and does not point them with malice. All the more startling and painful is his arraignment of the vices of a decadent age.

The more obvious vices of fashionable society, Mr. Russell says, are "its utter irreligiousness, its worship of money, its frantic extravagance, its indifference to all moral issues, its cynical absorption in pleasure and self-indulgence and self-seeking, its impatience of restraint, privacy, and decorum." Lord Melbourne, after listening with indignation to a sermon on Christian duty, exclaimed: "Things have come to a pretty pass when religion is allowed to invade the sphere of private life." His opinion is carried out in the practice of the "smart set." "It keeps the sphere of its private life absolutely free from the invading forces of religion." Sunday is completely secularized. What part of it is not devoted to exercise and games of chance is given to eating and drinking. The account which Mr. Russell gives of the food consumed by men and women of social position in England recalls the stories of the gluttony of the Romans under the early emperors. Of course, such life breeds parasites as a decaying carcass breeds maggots, and the description of the arts by which they get a start in their career, and force and beg their way on, would be entertaining were not the subject so repulsive. Society, as Mr. Russell paints it, consists largely of ignorant, superstitious, unscrupulous, and selfish people, living, or desiring to live, beyond their incomes, and trying to make up the deficiency by any expedient, fair or foul; gambling, speculating, and betting being the most common.

In one respect there has been an improvement. In spite of the incessant drinking, in which women participate, there is little open drunkenness. The quantity of liquor consumed is not less, but it is not so strong. And Mr. Russell takes pains to point out some wholesome forces which he is confident will some day renovate society. But, as a whole, the society which he describes is repulsive. We may laugh at it, as he tells us stories of its follies and its sins; but we would rather be entertained with a pleasanter subject. The influence of Queen Victoria was conservative and refining. If society degenerated during her reign, what will it become under a successor whose private life has been far from pure? Decorum has gone, manners are disappearing, chivalry is a name of the past, we hear no more of the "chastity of honor," for both words are old-fashioned.

After all, has there been a decadence? Thackeray depicted 'Vanity Fair,' half a century or more ago, when Mr. Russell was beginning to open his eyes, and he told us much the same story. He did not draw comparisons with a golden age; but the golden age of Mr. Russell must have been about the time when Thackeray was writing the 'Book of Snobs.' The vices of society have become more prominent, because wealth,

and with it luxury, have so greatly increased. The change in the system of travel is enough to account for the diminution of privacy. Parasites have not changed their nature since the time of Persius; and they increase in periods of luxury, as weeds flourish when the soil is enriched. Mr. Russell has unwittingly made his picture too lurid; his colors are stronger than he thinks, or laid on without regard to the effect of contrast.

The most instructive, if not the most entertaining, part of this book is that in which the claims of the English peerage to antiquity are scrutinized, and those of the House of Lords to political equality with the Commons are exploded. If aristocracy means the rule of the best, Mr. Russell says, we may safely affirm that it never existed in any place or at any time. The most virtuous men do not dominate their fellows. If aristocracy means the rule of the best born, then there is little of it in England; and of the special virtues of the English aristocracy, Mr. Russell says: "My firm conviction is that the less said about them, the better." After the battle of Tewkesbury, Disraeli observes, a Norman baron was almost as rare a being in England as a wolf is now.

"When Henry VII. called his first Parliament, there were only twenty-nine temporal peers to be found. . . . Of those twenty-nine, not five remain, and they—as the Howards, for instance—are not Norman nobility. We owe the English peerage to three sources—the spoliation of the Church, the open and flagrant sale of honors by the elder Stuarts, and the boroughmongering of our own times."

Every one knows what sort of people Charles II. made peers; and there were 108 peers created by the Stuarts. There are dukes and earls descended from William III.'s Dutch valets; but what of that if a Howard is a "hog-ward"? William Pitt added no less than 141 names to the peerage, and the process goes steadily on.

"Lord Salisbury conferred a peerage on a political supporter who was said by his detractors to have begun life as a 'bus-conductor, and by his friends to have been largely interested in a carriers' business. But he was understood to have paid ten thousand pounds to the party chest, and his money was as good as another's."

It might be well enough to make peers for life; but the House of Lords has succeeded, without much to countenance them, in establishing the principle that the King's writ, summoning a man to Parliament as a baron, "ennobles the blood." Nevertheless—and Mr. Russell writes as a Liberal—he declares that the House of Lords is, next to the crown, the most popular institution in the country. In this judgment and in those on the monarchy, which we can but mention as valuable, we are content to follow him. It is books like this that explain influences, ignored by the ordinary historian, but without knowledge of which history is unintelligible.

---

*A Grand Duchess:* The Life of Anna Amalia, Duchess of Saxe-Weimar-Eisenach, and the Classical Circle of Weimar. By Frances Gerard. E. P. Dutton & Co. 1902. 2 vols., pp. 582. With 42 illustrations and portraits.

In view of the dearth of English works upon Weimar as a whole and apart from the single life of Goethe, Miss Gerard's attempt is certainly worthy of recognition. How far it has actually succeeded in reproducing the substance and spirit of classic Weimar is another question. Whoever would treat thoroughly such a subject must have two preliminary qualifications; the first is a general knowledge of the political condition of Germany after the Thirty Years' War; the second is a sympathetic familiarity with the tardy growth of modern German art and letters. In neither of these lines can Miss Gerard be said to be truly at home. At more than one point her ignorance of general principles has betrayed her into misconceptions and even into misstatements. For instance, who that knows his German history would contrast "time-honored Göttingen" with "the more mushroom University of Giessen" (p. 153)? What student of German literature would call "Götz" "the product of a somewhat unhealthy sentimentalism" (p. 117)? Why speak of Mme. de Staël (p. 285) as a German? At page 190 we read that the Duchess Louise "had been educated in a school of strict propriety, such as then prevailed all over Germany." Yet (p. 291) we read of "foreign courts, and especially those of Germany, possessing a very low standard of morals." Had our author used the term "ceremony" or "etiquette," she would have spared her readers some *Kopfzerbrechen.* To mangle the words of Goethe's "Egmont" (pp. 205-206) is almost lese-majesty. We read (p. 506): "Goethe, at this period of his life, was absorbed in scientific studies, thus leaving unemployed those higher mental gifts which had been given him to use, not to bury." This is exploded conventionalism of the worst sort; it ignores Goethe's expressed declaration of the signal value of scientific study in *his own spiritual growth.* To translate "Die Mitschuldiger" by "The Culprits" (p. 318) is another ancient error.

At times the author's method is perplexing. Thus, her account of the *Tiefurter Journal* (p. 378, *seqq.*) is anything but lucid. The author has a trick of anticipating events, so that we read on page 403 of the patent of nobility conferred on Goethe in 1781, while on page 404 we read of the Swiss trip of 1779. The most provoking feature of the author's manner is her inveterate disposition to indulge in asides and superfluous comments. For example (p. 276), after quoting Merck's letter, in which he thanks Fate for having bestowed upon a poor wretch like him four weeks of golden days, our author adds: "Very nicely put, friend Merck." One must be a De Quincey, to pat one's friends on the back thus. We have not had the leisure nor the patience for adding up the number of times "the deadly parallel" has been drawn between the Weimar dames and the Girton girl; indeed, we have not always been certain which party was intended to be favored. At any rate, our view of comparisons is that of Mrs. Malaprop.

The book is carelessly put together. The note to page 49 refers us to an Introduction which nowhere appears. A like fate has befallen the portrait of Karl August at the age of eighteen, mentioned on page 172. On the other hand, we have an Appendix on the Grand Ducal Library not announced in the table of contents to volume II. Misprints, both English and German, abound; some of them obscure the meaning—for instance, the inscription on the Goethe house, opposite page 418. Some of the illustrations seem to us superfluous in a work upon Weimar.

Nevertheless, in spite of its faults, the work offers much reading that is pleasant and profitable. The author knows her Germany of to-day, and has caught enough of the old-time spirit to awaken our sympathy. It is pleasant to wander through old Weimar and Tiefurt, to awaken the echoes of the illustrious dead. It is worth the while to study the growth and fortunes of that truly great Duchess Anna Amalia, her trials and successes, her never-flagging vitality. It is especially valuable to have this study of a great woman by a woman. No man, however learned, could have entered so spontaneously into the spirit of Anna Amalia and her court. If we get the men of those days somewhat in the pettiness of their domestic foibles, that is only inevitable in the tableau. We should not forget that the great Weimar poet himself concluded his *magnum opus* with the observation: "Das Ewigweibliche zieht uns hinan." Thusnelda comes to her own, and Frau von Stein is heavily discounted; with this we are well content.

*British Rule and Jurisdiction beyond the Seas.* By the late Sir Henry Jenkyns, K.C.B. With a preface by Sir Courtenay Ilbert, K.C.S.I. Oxford: Clarendon Press; New York: H. Frowde. 1902.

*Colonial Government:* An Introduction to the Study of Colonial Institutions. By Prof. Paul S. Reinsch. The Macmillan Co. 1902.

To students of questions of public administration the "preface" contributed by Sir Courtenay Ilbert to Sir Henry Jenkyns's treatise will be as significant as the book itself. It is a biographical sketch of a man whom it would scarcely be an exaggeration to call an ideal civil servant. After a distinguished course at Oxford, supplemented by a brief period of practice at the bar, Jenkyns was appointed in 1869 to the post of Assistant Parliamentary Counsel. In 1886, on Lord Thring's retirement, he was promoted to that of Parliamentary Counsel. In February, 1899, he retired, and in December of the same year he died. He helped to draft the legislative measures of British Governments for thirty years, including Forster's Education Act and Ballot Act, the Army Act, Gladstone's Irish Church Act, Irish Land Act, and Home Rule Bills, the Local Government Acts, and Sir William Harcourt's Finance Act. His work was by no means mechanical. When called upon to prepare a bill, he would first make himself a complete master of the subject in all its bearings, would embody the results of his researches in an exhaustive memorandum, would discuss the proposals that had previously been made for the solution of the problem, and would suggest practical conclusions, indicating the arguments for and against each alternative course. There are in existence over sixty volumes of confidential papers containing these memoranda. Sir Henry Jenkyns's criticism was constructive as well as destructive, for he possessed the imagination which could forecast the actual working of any particular scheme. His services were rendered to the ministry of the day irrespective of party. Mr. Bryce describes the author of this volume as the most powerful arguer he ever knew; Mr. Balfour calls him "a most acute critic of

other men's ideas, rich in suggestions of his own, with unrivalled experience and great legal knowledge"; Mr. Morley speaks of him as "a consummate master" of his work, and says that the only man in his experience at all comparable to Jenkyns in the difficult art of rapidly devising the right words for the bare rudiment and intention of a clause or an amendment was Herschell. But the possessor of these rare qualities was unknown, even by name, to the world at large. It was his conviction that a civil servant should keep in the background, and he therefore persistently refused to make any literary use, during his official career, of the vast mass of materials he had collected. The book now published was to have been the first fruits of his leisure. Its completion was arrested by his death, and his MSS. have been revised and supplemented by some of his friends.

The expectations induced by this introduction are not disappointed by a study of this treatise, unpretentious in form, but masterly in execution. The body of the work treats in turn of the various classes of territory under British jurisdiction, the relations between the home Government and colonial Governments, British possessions other than colonies, self-governing colonies, colonies not self-governing, colonial governors, extra-territorial jurisdiction, consular jurisdiction, jurisdiction in British protectorates, and the position of foreign subjects in them. There are eight appendices, mainly consisting of the full text of various important acts, commissions, etc. Every page bears traces of being the work of a lawyer, and in each discussion the author goes into many points of detail, with frequent footnotes; but the style is so clear that the lay reader need never be perplexed or bored. It carries the authority of full and accurate knowledge combined with wise judgment.

The chapters on "Self-governing Colonies" and "Colonial Governors" are of special value for the light they throw upon the processes of political development. Sir Henry Jenkyns lays great stress upon the distinction between representative and responsible government. From this point of view he disagrees with Professor Dicey's opinion that the Constitution of the Dominion of Canada is, in its essential features, modelled on our own, and maintains that, "even if we shut our eyes to the crucial distinction between parliamentary government and presidential government, the points of resemblance between Canada and the United States are not nearly so remarkable as the points of difference." In Canada the Ministers require the support and confidence of a majority of a popularly elected assembly, and are consequently responsible to it. Other differences lead to the conclusion that, "apart from the division of powers which is necessary in every federation, and the fixed proportion of the number of Senators from each province, it is difficult to specify any point of resemblance between the Government of Canada and that of the United States which is not also a point of resemblance between the former and the Government of the United Kingdom." The author thinks it especially necessary to emphasize Ministerial responsibility as a fundamental characteristic of the British self-governing colonies, because it is not to be discovered by an examination of their "instruments of Constitution," and is therefore likely to be overlooked by students who obtain their data mainly from Acts of Parliament or Orders in Council.

Professor Reinsch's book, as its title suggests, is of a more popular type than Sir Henry Jenkyns's, and covers the sphere of colonial government in general, though naturally the British colonies receive the principal share of attention. It is excellently adapted to its purpose, for it presents with admirable lucidity of style and arrangement a survey of the motives and methods of colonial expansion, an account of the general forms of colonial government, and an outline of administrative organization and legislative methods. While it does not avowedly appeal to specialists, they will do well not to neglect it, for the most familiar principles are freshly stated, with new illustrations from quite recent history, and it contains not a few suggestions that will be read with interest by persons already well acquainted with the literature of the subject. The bibliography appended to each chapter will be of service to all classes of readers. The present book bears closely upon practical politics, for its author, without therein ceasing to be scholarly, keeps present-day problems always in mind, and pays due attention to such modern questions as the commercial relations between mother country and colonies, the influence of capitalistic combinations upon colonial expansion, "spheres of influence," and the British agitation for imperial federation.

The corrections required are comparatively unimportant. The view taken of the position of a British Governor (p. 247) is too optimistic to suit present conditions. In the list of distinguished colonial governors (p. 249) a place should have been found for Sir George Grey, one of the greatest of them all. The statement that "the colonial governments are always consulted before any important step involving their interests is taken" (p. 242) conveys an erroneous impression. If the representations of the Ministries of Cape Colony and Natal in the summer and autumn of 1899 had not been ignored by the High Commissioner and the home Government, the Transvaal war would have been avoided. Lord Grenville (pp. 149 and 382) should be Lord Granville; S. W. Rusden (p. 275) should be G. W. Rusden; and Spriggs (p. 385) should be Sprigg. It is a mistake to say that most of the first-class clerks in the Colonial Office entered the service as second-class clerks (p. 289). In connection with the relation of the Judicial Committee of the Privy Council to questions of Indian law (pp. 350 and 373), it should have been mentioned that this Committee always includes at least one member who has had legal experience in India itself. Lord Hobhouse, for instance, was for five years a legal member of the Governor-General's Council, and Sir Richard Couch sat for nine years on the bench of the High Court, first at Bombay, and later at Calcutta.

---

*The Boer Fight for Freedom.* By Michael Davitt. Funk & Wagnalls Co. 1902.

At the outbreak of hostilities in the Transvaal, in October, 1899, Mr. Davitt resigned his seat in the House of Commons and repaired to the seat of war, there to spend the next six months in obtaining from the Boer leaders their representation of the occasion and conduct of the contest. After May, 1900, his material seems to be drawn from the sources of information which are accessible to the general reader of current newspaper and official discussions, and altogether derives such value as it possesses from the author's reports of conversations upon controverted subjects with the officers of the Boer armies. Mr. Davitt's well-known attitude, as an Irish patriot, towards the British Government should prepare the reader to expect a passionate criticism of the motives, humanity, and modes of fighting of the English, and an equally ardent vindication of the disinterested love of liberty and justice of the Dutch republics. The book is entitled to a place among the collections of fact and belief which have already constituted a voluminous basis for that impartial history which shall some day emerge from the contradictory mass of materials.

The military student will be interested in what is said of the relative numbers of combatants in battle, as well as in the attempt to compare the aggregate forces of the opposing nations. That the Boers, with a handful of troops, constantly thwarted the plans of veteran British generals, and repeatedly captured, from an easily bewildered marching column, prisoners exceeding in number the assailants, has been confessed with chagrin by historians from the English side. In our American civil war, Forrest and Wheeler were masters in the audacious tactics which impressed upon train escorts the belief that a few noisy assailants were an overwhelming host, and the Boer burgher was upon his native heath in the pursuit of armed Englishmen, as he had stalked wild men and beasts over the same ground. Paradoxical as it seems, the strength of the Boers lay in their ignorance of military traditions. New occasions teach new duties in warfare as in peace, and, these farmer folk being without time for drill, and, as compared with the resources of their opponents, poor in arms and the other implements of warfare, it behooved them to adapt themselves to the condition of attack and resistance which every man's own intelligence, long disciplined in much the same emergencies, showed to be most promising. In short, the Boer was called upon to act in precisely the manner in which the Americans at Lexington and Bunker Hill, or Jackson's men at New Orleans, held their own against masses of veteran troops. Hence the Boer was extremely individual in his performance of military duty, now and then to the discomfiture of his own superiors; very mobile and venturesome; and, as officer or private, used common sense to override, if need be, all precedents of military propriety and order.

Mr. Davitt enters into elaborate calculations to show the great disparity of the aggregates of the opposing armies. The British, he says, had above 388,000 men, while the Boers mustered at most 31,500, and of actual fighting men, but 27,500. But he allows that some 5,000 of the Boers died in service, and Lord Kitchener has declared that 17,000 men have laid down their arms since the treaty of peace; and, adding to these the captives already in camps of detention, the more likely figure will seem to be at least 50,000 Boers in arms. To be sure, the entire estimated population of the colonies drawn upon for this army is

only 220,000 or 230,000, but boy and graybeard, to the last male capable of firing a gun, appear to have swelled the ranks. An attempt was indeed made by the Boer Government to keep an accurate record of enlistments by the system of identification-cards to be carried each by a man with a corresponding number on file in the War Department; but in popular uprisings systems of registration are little to be depended upon.

---

*Lee at Appomattox*, and Other Papers. By Charles Francis Adams. Boston: Houghton, Mifflin & Co. 1902. Pp. 387.

Of the five pieces included in this collection, all have previously, in one shape or another, seen the light and been more or less widely commented upon, in our columns as elsewhere. The brief title-paper accords to Lee especial honor for perceiving that the cause for which the South had fought was lost, and for preventing, by honorable surrender, the prolongation of the struggle through resort to such methods as those which characterized the last year of the recent war in South Africa. The South African situation, indeed, has particular interest for Mr. Adams, and furnishes material for drawing a number of instructive historical parallels. The paper entitled "An Undeveloped Function," originally prepared as a presidential address for the American Historical Association, does not become more convincing on a second reading, but it is nevertheless a breezy, stimulating call to the historian to instruct and mould the public opinion of his generation, and contribute to the solution of present problems, rather than to content himself with adding to the store of information about the past. Taken as a whole, the volume before us is a good illustration of Mr. Adams's powers as a historian. He has command of his material, and is always readable. Principally, however, one notes the definiteness—at times, the aggressiveness—of his opinions, and the consequent freshness and vigor of much of his discussion. It is the downright expression of a well-equipped student, never obtrusive or brusque, and not always carrying conviction, but carefully fortified, interesting, and every way worthy of attention.

The longest and most important paper in the volume is that on the Treaty of Washington, being the substance of four lectures delivered in December, 1901, in the Lowell Institute course in Boston. Aside from the merits of the paper as a careful narrative of events, particularly those immediately preceding and those resulting from the treaty, Mr. Adams's account is notable because of the discussion which its estimate of Sumner, and especially its justification of the removal of Sumner from the chairmanship of the Senate Committee on Foreign Relations, has called out. In the paper, as now printed, Mr. Adams goes over again in an appendix the objections of his critics—particularly those of ex-Gov. D. H. Chamberlain—but without surrendering anything of his own position. In Mr. Adams's opinion, the San Domingo affair was only the remote, and not the immediate, cause of Sumner's displacement; the real occasion was Sumner's opposition to the policy of the Administration in the pending negotiations with Great Britain, and the personal hostility between him and the President and Secretary of State. Under such circumstances—and this is the main point of controversy—Mr. Adams is clear that the necessity of harmony between the Senate and the President in treaty matters justifies the latter in bringing about, if he can, a change in the head of the Senate Committee on Foreign Relations, as was done by Grant in the case of Sumner. The insistence upon this view, which is elaborated at some length, as the only working theory on which the President and the Senate could have proceeded, or could be expected to proceed again under similar circumstances, illustrates the essentially practical habit of Mr. Adams's historical and legal reasoning. The question is, of course, somewhat one of opinion, but the friends of Sumner are hardly likely to allow Mr. Adams the last word, or to fail to point out the striking consequences which would ensue if the precedent established in Sumner's case were given general application.

---

*Finland As It Is.* By Harry de Windt. E. P. Dutton & Co. 1902. 8vo, pp. xii., 316. Illustrated.

The author tells us that this book was written with the understanding that it might serve as a guide to tourists. With that in view, a brief vocabulary (in which such fundamental words as *good* and *fire* are not to be found) and a list of desirable hotels, physicians, and druggists in the chief towns, are added as appendices. We miss in the volume the business-like method of a guide-book, with its carefully classified information, and do not find anything which seems well adapted to take its place. Conditions have altered so, since the book was written, that even the few hints which are given may be less useful now. The only feature which one might rely on finding unaltered, except as intensified, is the resentment against Russia which the author frequently refers to, and which one would think the censor would be apt to blot out of volumes to be sold in St. Petersburg. Regarding the book as merely the narrative of a trip of a lively newspaper man to a country with which he was entirely unfamiliar, we have less to criticise. Little known as Finland is to the average reader, this journal gives a superficial but interesting account of how the country appears to a tourist, of the unexpected prosperity and even wealth of a people with relatively slender resources, but which furnishes England with the greater part of what sells as "Danish" butter and "Stockholm" tar; besides the less notable supplies of wood-pulp paper and fir timber.

The illustrations are numerous and exceptionally good, especially the photographic half-tones; and the book will serve a useful purpose in familiarizing English and American readers with the characteristics of that country which the natives call Suomi, and the rest of the world knows as the Grand Duchy of Finland.

## *Back Numbers of "The Nation."*

In response to frequent inquiries from subscribers:

*An incomplete set* of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but it will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

*Complete sets*, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

*Single numbers* not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to H. Williams, 114 Fifth Ave., J. W. Christopher, 47 Dey St., or A. S. Clark, 174 Fulton St., New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued. Vol. LXXIV. comprising the first half year of 1902.]

**School Trustees, Principals, Teachers,**

And others interested, are invited to consider the advantages offered by the *Nation* as an advertising medium. School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

The *Nation*, in its special field of political and literary criticism, is unlike any other periodical, American or foreign. About 10,000 copies are circulated weekly, but these figures do not accurately represent the number of its readers. It is taken by reading clubs and literary associations in a large number of places, and may be found on file in every library of importance in the country. There are probably few weekly periodicals whose columns offer so favorable an opportunity for reaching an audience interested in educational matters.

Advertising rates, 15 cents a line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12½ per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

THE NATION, 208 Broadway, N. Y.

*For Sale and to Let.*

**For Sale at Duluth, Minnesota.**

**One of the Finest School Properties in the Country.**

Building modern and convenient in all its appointments.

Surroundings ideal and beautiful.

A wide field for a preparatory school, and to the right party the price reasonable and terms of payment easy.

For information apply to

**L. MENDENHALL, Duluth, Minn.**

*The Most Important Whist Book in Many Years*

# THE PRINCIPLES AND PRACTICE OF WHIST

**By LENNARD LEIGH and ERNEST BERGHOLT.**

**With EXAMPLES ILLUSTRATIVE DEALS, CRITICAL ENDINGS, MATHEMATICAL CALCULATIONS, TABLES OF PROBABILITIES, etc., etc., including an Essay on PROBABILITIES, by WILLIAM H. WHITFIELD, M. A. Cantab.**

"The book is admirably planned for the student. It is a very important and valuable addition to whist literature."—FISHER AMES, author of "A Practical Guide for Whist."

"A better guide for the learner or book of reference for the expert could hardly be devised."—CHARLES E. COFFIN, author of "Gist of Whist."

"I believe it will be of great benefit to whist players and to the game of whist."—The late GEN. A. W. DRAYSON, author of "The Art of Practical Whist," after seeing MS.

"Precisely what was required by the whist world to bring the grand old game into thoroughly healthy grooves."—COLONEL B. LOWSLEY, author of "Whist of the Future."

"You have produced a work on whist which will prove serviceable both to the beginner and to the advanced player."—N. B. TRIST, author of "Whist."

"An exceedingly valuable addition to whist literature."—WILLIAM S. FENOLLOSA.

"It is the best work on the game ever issued in this country, and for completeness in giving everything a whist student could require is the most satisfactory and best gotten up work ever offered to the public."—ELLWOOD T. BAKER.

"I have no hesitation in pronouncing the book the soundest, most thorough and convincing exposition of basic whist principles that has ever been written."—W. A. POTTER, Whist editor of *Providence Journal*.

"No book on the game has ever been praised so generally and so highly. We strongly recommend it to all whist players; the poor players will be instructed, the good ones will profit by it, and the experts will find it a never ending source of enjoyment."—W. H. SAMSON in the Rochester *Post Express*.

**Crown 8vo. Cloth, extra gilt top. Net, $1.50; by mail, $1.68**

*"As dainty as finished, and as beautiful as a miniature."*

# THE WESTCOTES

**By A. T. QUILLER-COUCH**

**Illustrated by J. L. GEROME-FERRIS**

***12mo. Cloth. $1.00***

THE WESTCOTES has been running as a serial simultaneously in "The Era" in this country and "Blackwood's Magazine" in England. The London "Spectator" and "The Speaker" both give it high praise. It is a charming tale, with all Mr. Quiller-Couch's delicacy of touch and high literary quality.

"It is very rare to come across a book which so fully satisfies the demands of the fastidious reader."—London *Bookman*.

"Admirably written romance."—London *Spectator*.

"There is a charming old-world courtesy about this book, a faint and rare fragrance emanating from it, a mellow, a fine tone sounding through it."—*The Academy*, London.

"A delightful story, told in his usual felicitous style."—Chicago *Journal*.

"A sweet and tranquil idyll, fluttered, but not overwhelmed by genuine passion."—N. Y. *Tribune*.

"Treated with infinite delicacy."—London *Saturday Review*.

"It has quite as much literary distinction of manner as any of its author's books."—*The Outlook*, N. Y.

"The book shows that the author has progressed in his art to a position warranting a belief in his permanence."—N. Y. *Times Saturday Review*.

"A tale of rare delicacy and feeling."—Detroit *Free Press*.

## HENRY T. COATES & CO., Publishers, Philadelphia.

## LONGMANS, GREEN, & CO.'S NEW BOOKS

*PROFESSOR JAMES'S GIFFORD LECTURES*

### The Varieties of Religious Experience

**Being the Gifford Lectures on Natural Religion delivered in Edinburgh in 1901-1902**

By WILLIAM JAMES, LL.D., etc., Professor of Philosophy at Harvard University, Corresponding Member of the Institute of France and of the Royal Prussian Academy of Sciences. 8vo, pp. xii.-534, gilt top, $3.20 *net*. By mail $3.40.

"If a preacher, or any man whose function it is to study and appeal to humanity on its religious side, were to ask us which of this season's books it is most essential for him to possess, we should, without hesitation, point to this volume . . . This is not merely a clever and interesting work, it is a contribution of the highest value to a subject always pertinent, but never more so than at the present time"—*Christian World, London*.

"A volume which deserves the careful study of all who care for religion. Professor James has already enriched us with masterly books, but his latest volume will add greatly to his reputation. He has read widely, as the extraordinary variety of his extracts shows; he has thought deeply, as many fine, suggestive passages prove; and the result is a book which is full of lucid expression of a great teacher's ideas."—*Examiner, London*.

### The Path to Rome.

By HILAIRE BELLOC, Late Scholar of Balliol College, Oxford, Author of "The Life of Danton," "Paris," "Robespierre," etc. With 80 Illustrations from Drawings by the Author. Crown 8vo, 464 pages, gilt top, $2.00 *net*. By mail $2.20.

"The one certain thing about it is that it must be counted among the most charming pieces of literature that have appeared for a long while. Taken in conjunction with the author's monographs on Danton and Robespierre it marks the revelation of a new writer who is already of real distinction. Mr. Belloc has now gained the freedom of the Republic of Letters. Henceforth he may write of whatever he pleases, from child-study to the industrial system of Japan, and he will not lack an audience. . . . One may safely urge him to keep on writing and writing hard, while his youth still intoxicates him. Let him travel whithersoever he will—to Timbuctoo or Pittsburgh—if only he will give us more of this and plenty before the mood dies away. . . . The reader's pleasure is enhanced by a number of exquisite illustrations, sometimes scarcely larger than thumb-nail sketches."—*New York Times Saturday Review*.

### Memoirs of Sir Edward Blount, K.C.B., Etc.

Edited by STUART J. REID, Author of "The Life and Times of Sydney Smith," etc. With 3 Photogravure Plates. 8vo, pp. viii.-308, $4.00. [*Just ready*

*AMERICAN TEACHERS SERIES*

*New Volumes.*

### The Teaching of Chemistry and Phsyics in the Secondary School

By ALEXANDER SMITH, B. Sc., Ph. D., Associate Professor of Chemistry in the University of Chicago, and EDWIN H. HALL, Ph. D., Professor of Physics in Havard University. With 21 Diagrams, and References and Bibliographies. Crown 8vo, about 380 pages, $1.50. [*Immediately*

### The Teaching of History and Civics in the Elementary and the Secondary School.

By HENRY E. BOURNE, B.A., B.D, Professor in the College for Women, Western Reserve University. With Bibliographies and Index. Crown 8vo, pp x.-385, $1.50. [*Just ready*

### The Principles of English Constitutional History.

By LUCY DALE, late Scholar of Somerville College, Oxford. Crown 8vo, pp. xii. 509, $1.50.* [*Just ready*

"There was room in our historical literature for just such a book as Mrs. Dale has written. . . . She is an admirable interpreter, a most graceful, clever and interesting writer, a scholar with a fresh mind and a vivacious style, and her book is not merely instructive but illuminative. . . . It is a thoroughly scholarly work; but it aims at communicating the ripe and nourishing fruits of scholarship to those not able to garner them for themselves by their own labor."—*Scotsman*.

### Seven Roman Statesmen of the Later Republic

**The Gracchi, Sulla, Crassus, Cato, Pompey, Cæsar.** By CHARLES OMAN, M.A., Deputy Professor of Modern History at University of Oxford, Author of "A History of Greece," etc. With Portraits and Illustrations. Crown 8vo, pp. iv.-348. $1.60.* [*Just ready*

"We welcome Mr. Oman's eloquent and lively book, not merely for its own merits, but because it carries us back to the good old days when heroes still kept a place in history. . . . Every page of his brilliant book is worth reading, and we cannot wish a student better luck than to come across it before the austerity of the Germans has killed his interest in the history of Rome."—*Spectator*.

## LONGMANS, GREEN, & CO., 91-93 Fifth Avenue, New York

# The Nation.

*NEW YORK, THURSDAY, AUGUST 7, 1902.*

## The Week.

The *Evening Post's* staff correspondent in the coal regions undoubtedly gives us the real and secret motive of those who engineered the strike. They were putting their trust in politics. Their success two years ago in getting an advance in wages through playing upon the fears of politicians, led them to hazard a second attempt along the same lines. As before, they counted upon the good offices of Senator Hanna. He himself, in the remarks which he made to his employees in Cleveland on Monday night, admitted his peculiar relations with the anthracite strikers. Of course, he puts his interest in them now on the ground of his noble ambition to "bring capital and labor nearer together." Unfortunately, however, he does not clear away the suspicion that his activity this year, as in 1900, may have a political bearing. The way for him to dissipate all such doubts, if they are unworthy and unfounded, is plain. We would not ask him to live up to the Scriptural test of selling all that he has and giving to the poor, but he could at least make it certain that he is not yearning over laboring men for the sake of their votes. He could do it by saying unmistakably, as he has thus far failed to do, that he is not and will not be a candidate for the Presidency. He could also disavow any thought of making his philanthropy aid his political power, by resigning as National Chairman, and renouncing all idea of controlling the convention of 1904. Until Senator Hanna does in some such way leave himself free to work for the cause of labor, without any entangling alliance with politics, we fear that an incredulous world will hardly rank him with St. Francis or St. Dominic.

---

Judged by the published text of them, the West Virginia injunctions against labor leaders do but follow well-established and sound judicial precedent. They enjoin, that is, against interference with the management and operation of the mines, and also against attempts to deter employees from going to work "by menaces, threats, or intimidation." All the incitements to strike which the injunction forbids are specifically described as "unlawful"; and, of course, the statutes of all civilized countries prescribe penalties for any act that is tainted with violence. There is in all this, it will be observed, no denial of the right of labor to organize, or of trades-unions peaceably to persuade employees to strike. The right of persuasion has been upheld by leading decisions of the New York courts. Some of them are collected in a pamphlet recently published by Mr. G. W. Alger of the New York bar. He also points out that the Pennsylvania courts have taken a narrower view of the laborers' right to induce men to quit work. In one case, the highest court referred to the plea of the striker's counsel, namely, that the Union's committee had only exercised their "right to talk to new men to persuade them not to go to work," and roundly declared, "There was no such right." The court went on slightly to qualify this denial of the right of persuasion, by introducing the consideration of "an improper time," but the decision as it stands is certainly very stringent. It may yet play a part in the Pennsylvania mining troubles, should they be taken into court.

---

It is to be hoped that the managers of ex-Gov. Pattison's canvass in Pennsylvania will take their cue from the admirable address, devoted exclusively to State issues, with which Mr. Henry Budd opened the Democratic campaign in Philadelphia on Monday night. The "ills worth mentioning" which the speaker described, presented a formidable appearance, and it would be both interesting and instructive if some means could be devised to hold Judge Pennypacker and the Republican campaigners to the discussion of them. Such a course has always been peculiarly difficult in Pennsylvania. During the campaign of last year, when the principal issue in Philadelphia was the election of a District Attorney, the Republican speakers spent most of their time begging the people to "uphold the hands of President Roosevelt in his effort to carry out the plans and policies of President McKinley." Apparently the people were willing to tolerate talk of this sort, for the result was the usual Republican victory. Nevertheless, considerations of political expediency, as well as of political morality, urge the Democratic managers this year not to relax their efforts to force the Republicans to the discussion of the local issues. If they follow out the lines indicated by Mr. Budd's address, they must certainly accomplish something toward awakening the people of Pennsylvania to a realization of the political conditions which beset them.

---

A horrible scandal has developed at Philadelphia. It has been discovered there that when the City Council, about a year ago, gave away, without a penny of compensation for the municipality, franchises worth many millions of dollars, a clause was inserted by somebody with the evident purpose of safeguarding the people's rights in one particular. The details of this betrayal of the very private interests which "owned" the Council is shrouded in mystery, like most deeds of darkness. But there the clause is, in the ordinance granting the franchise. "Said motors," it says, "to be supplied from underground wires, or such other system as *shall not require overhead wires or poles*." Of course the first impulse of the Philadelphia officials and their intimates who are said to be "behind" the franchise deal, on learning of the existence of this restriction, was to find out the name of the miscreant who inserted it. Members of the Council who had previously borne untarnished reputations for "standing without hitching" fell under suspicion. But second thought is better than first impulse. It soon became clear that nothing, not even the enforcement of discipline, should be permitted to delay the undoing of the mischief. The City Council is to be asked at once to repeal the clause in question. Time enough to hunt the offender after this is accomplished!

---

"Devery, thou art translated," must be the secret comment of every Shaksperean in Tammany Hall, as he watches the antics of the ex-Chief of Police on the way to a district leadership. It is Devery's distinction to have thrown overboard all the niceties of the code under which he has been trained, to have so stripped off from "practical politics" the "human nature" that one may see the very bestial shape of cupidity which is the body of our political death. He has no time for the graces of district leadership, but imposes himself upon the people by the sheer glitter of money gotten in ways that he has never told, and which would not bear telling. It is Devery who pays the butcher bills of the poor, who yesterday settled the rent of several poor women—and told of it; who offers "pleasure" to the entire district; who, seeking a political office, makes not so much as a perfunctory appeal to political principles, being, in fact, profoundly ignorant of any political principle other than this, that the city is the politicians' cow, and that a place near the udder can be had only by purchase at a great price. What the answer of the plain people of the Ninth District will be to an ex-official with a malodorous record, who frankly offers to buy them up bodily with butcher's meat and picnics and the payment of their rent, we do not presume to predict. But we do not think so meanly of any portion of this city as not to feel that thousands of self-respecting citizens of the Ninth District must regard Devery with amazed contempt, and the rabble that he so easily gathers around him with unconcealed scorn. In any event, reform-

ers can cheerfully put up with any translation of Devery that does not involve his silence and obscurity. He is to-day at once the most diverting, most disgusting, and most profitable spectacle that the city affords.

---

A pending transaction between the Mayor of the city, the consulting architect of the Borough of Manhattan, and the Municipal Art Commission is worthy of note. The case in brief is this: The consulting architect, Mr. Aiken, who is planning certain alterations of the interior of the City Hall, requests the Municipal Art Commission to pass upon the plans. The Mayor expresses pleasure in communicating the request, and says: "This building is so fine a specimen of architecture that I am anxious that no changes should be made in it except such as have been well considered and are believed by the Municipal Art Commission to be proper." But, some one might say, "This is only as it ought to be. No change should be made in a beautiful, historic building without the most careful consideration." The real significance of a transaction which, according to the letter and spirit of the City Charter, is merely normal, can be grasped only when one imagines the alteration of the City Hall under, let us say, Mayor Van Wyck. For Mr. Aiken seeking advice from the Art Commission, substitute Horgan & Slattery standing on their dignity as "city architects"; replace Mayor Low, with his solicitude for the beautiful building in which he serves the city, by Mayor Van Wyck, with his chronic affectation of boorishness and ignorance; finally, imagine, instead of the Municipal Art Commission, working for the seemliness of the city, a horde of sub-contractors and vendors of building supplies hanging upon the edge of the contract.

---

The plan of exchanging fellowships between Columbia and the higher schools of Paris—two Americans to study in Paris, two Frenchmen in New York—is important rather for the spirit in which it is introduced than for any large practical effect it is likely to have. It would be a mutual recognition of the value of American and French university training, and it would in some degree tend to strengthen the academic relations of the two countries. It should not be forgotten that holders of French fellowships have already chosen to study in America rather than elsewhere, so that the present plan merely gives official form to relations that already exist. To establish two more travelling fellowships in Columbia will have no very great effect upon the practice, constantly increasing, of pursuing higher study in France. If the French Ministry, however, should provide for two travelling fellowships for America, it would constitute among French students a kind of sanction and advertisement of university study in America. This would tend to bring them regularly to our graduate schools, where now their presence is exceptional. Such a result would be heartily welcomed.

---

Detailed statements about the United States Realty and Construction Company show that the scheme is even more comprehensive than was at first supposed. For the management of a general realty and building business, indeed, the organization is singularly complete. By means of its close association with other large financial and industrial corporations, the new organization will be able to buy its own properties, search its own titles, put up its own buildings, and dispose of the finished product, either *en bloc* or in the shape of securities. By its connection with certain large lending institutions, it will have unusual advantages in securing loans; by its association with the Steel Trust, it will be able to obtain the most essential building material on especially favorable terms—giving the latter corporation a monopoly, by the way, of a very important market. In the development of great properties, indeed, it is difficult to see how the new corporation can have any possible rivals. There are certain conspicuous building sites in New York which have been hitherto neglected for the want of a great and resourceful corporation capable of undertaking the task, but a corporation which is capitalized at $66,000,000, allied with leading financial institutions, and managed by the most expert talent in the field, would be able to cope with an undertaking of any magnitude.

---

At first sight only the financial aspects of the United States Realty and Construction Company strike the mind. But those who have marked the considerable advance in handsome building under ordinary conditions will see in this great consolidation, and those which are undoubtedly to follow, an opportunity by which art-lovers should be quick to profit. It is not merely that these enormous companies will be free to undertake building operations of a magnitude too great for private enterprise, but that, like all large aggregations of capital, they will be freed from the necessity of seeking a quick profit at the expense of a permanent one. If their managers are wise enough to plan for a long future, their activities will incidentally do much to beautify the city. That it pays to build well and handsomely is already generally recognized. But these great corporations will have exceptional facilities for good building, which they should not fail to utilize. Nothing could better guarantee the public-spirited character of the company now forming than the appointment of an architectural board which should see to it that, within the limits of cost and usefulness, every building that it erects should be an ornament to the city. It may be hoped, too, that in some cases these companies will follow the example of the Astor estate and open streets through the longer blocks, thus relieving the congestion of the city while benefiting themselves. It would probably be practicable to redeem certain portions of the town for better residence purposes, by erecting great apartment buildings with a liberal provision of open courtyards and small gardens. Certain quiet and delightful parts of the Faubourg St. Germain in Paris would serve as a model; and while there might be a period of waiting for returns, a few years would amply justify so bold an innovation.

---

President Schurman is performing an invaluable public service in discussing on all proper occasions our national policy in the Philippine archipelago. His address last Saturday before the Chautauqua Assembly should be carefully read by those who carelessly believe that the Philippine problem is settled. President Schurman finds that the war has united the Christian Filipinos in a common sentiment of nationality. With this sentiment we must deal with the utmost respect. To ignore it would be as fatal as it was to ignore Aguinaldo's incipient republic in 1898. Meanwhile, as President Schurman points out, we must face this alternative for the future Philippine commonwealth—statehood or independence. No one can doubt towards which solution statesmanship will incline. Nothing forbids the Republican party to promise by resolution of Congress eventual independence for the Filipinos. It will become a duty to do so as soon as the Filipinos have, under the Government now forming, proved a capacity for self-rule—an event which may be confidently predicted for the near future. A choice still lies before this nation, and that choice must be a right one—this is the tenor of President Schurman's clarifying discussion.

---

In view of his proper attitude in the case of Gen. J. B. Smith, it is cause for regret that President Roosevelt did not see fit to rebuke the court-martial which tried Major Glenn. That tribunal let off this chief offender among the water-cure torturers with a petty fine of $50 and only one month's suspension, while Lieut. Gaujot escaped with a fine of $150 and three months' suspension. As we have already pointed out, the President has no power to increase the sentence of a court-martial, and disapproval in these cases would merely have let the guilty officers escape without any penalty. But it was in the President's power to rebuke a court-martial which so flagrantly failed to guard the honor of the service by imposing sentences commensurate with the of-

fence. In the case of Lieut. N. E. Cook of the Philippine Scouts, found not guilty, the President did withhold his approval of the findings. In other words, he believes Lieut. Cook to have committed the crime alleged. But here, too, the President was silent. It may well be that he considered his statement in the Smith case sufficient; nevertheless, he has let slip a rare opportunity for improving the spirit of the army. It is interesting to note in this connection that, of the six officers thus far tried, three have been found guilty by the court and three by the reviewing officers, despite confident assertions that there was no such thing as official wrongdoing in the Philippines.

---

A question of considerable interest, in relation to the proposed Cuban loan of $35,000,000, concerns the prospect of floating such securities. The situation is peculiar. If the information cabled from Havana is correct, the bond issue cannot bear a higher rate than 5 per cent., and cannot be sold for less than 90. Now, a 5 per cent. loan of a strong government, sold for less than par, would be a very inviting investment. It may be that the rate and the discount would attract investors in this case. If the loan is really necessary, and if the prospect for its redemption has been prudently calculated, it is to be hoped that it can be floated, and it probably can. But the matter is not simple. The loan would have to be raised in New York city. It is almost certain that it could not be placed abroad. London is finding trouble in placing securities of its own colonies. It has lately had to withdraw from a market a British Columbian loan, already offered. Of Government securities now outstanding, bonds of states in high credit sell, to be sure, at a level which yields not more than 3 per cent. on par. But the question of credit is closely scrutinized. Brazilian 5 per cent. funding bonds sell below par; Chilian 5s, for less than 90; Argentine 6s, below par. It is true that the currency question cuts a figure in some of these quotations; but it is clear enough that, without a United States guarantee, the Cuban borrowings would be judged abroad in the light of experience with other West Indian and South American republics.

---

The revenue-reduction law enacted last April contemplated, roughly, $75,000,000 curtailment in annual public income. As the surplus revenue for the fiscal year ended with June, 1901, was $92,000,000, the reduction seemed sufficiently conservative. It probably will turn out to be so, though results for the first month in the new fiscal year are somewhat curious. To begin with, internal revenue, in which last April's cuts were made, falls $6,700,000 under last July. This is about the monthly average expected. But as against this reduction, the month's customs revenue rises $3,100,000 over 1901, and $4,800,000 over 1900. This offset would be effectual but for a third change in the fiscal movement—an increase of $4,500,000 in the month's expenditure. The net result is an unexpectedly large deficit. The Treasury reports that most of this increased outlay comes from payment on old State war claims. If so, the normal expenditure would be only a trifle over 1901, and for future months the rise in customs receipts and fall of internal revenue would be left to score against one another. We are inclined to think, however, that the increase in public expenditure, under the larger appropriations of the last session of Congress, will go on.

---

When Mr. Pierpont Morgan, five months ago, was explaining in court the reasons for the Northern Securities "holding company," he remarked that its $400,000,000 stock was an important consideration. The company would control the Northern Pacific, the Great Northern, and the Burlington, and, Mr. Morgan added, "it is not within the range of human probabilities that any single interest will be able to buy the control of the Northern Securities Company away from its present owners." This was a logical proposition; its practical working out, moreover, involved merely the issue of new shares for old. The Burlington purchase at 200, to be sure, was extravagant, and the issue of bonds to pay for it was an exceedingly dangerous example. But, as to this, Mr. Morgan testified that the price was paid "because we could not get the control at any lower figure." The Rock Island project, now officially set forth, shows that the theories of our capitalists to-day have drifted as far from Mr. Morgan's position of last March as that position had moved from the original "community-of-interest" plan. Where Mr. Morgan's plan contemplated companies whose control would be so costly that no one could pay the price, the new idea looks to a company whose control will be so cheap that its present owners can keep it for a trifle. In the famous Northern Pacific contest, a majority of the company's $150,000,000 stock was actually purchased, costing some $78,000,000; but Mr. Morgan thought that half of the $400,000,000 Northern Securities would not easily be purchased. Control of Rock Island, as acquired by the present ruling party, is thought to have cost some $45,000,000; but, with the present fixing of virtual control in $54,000,000 new preferred shares, which will sell at a heavy discount, the same interests can probably keep control through the use of barely $16,000,000.

---

It is not so long ago that Mr. G. K. Chesterton, or some other commentator of British society, was writing on the lack of originality in millionaires, and the subject has been again treated in the "Contributors' Club" of the last *Atlantic*. Naturally, Mr. Carnegie and his perennial gifts of libraries were more or less in mind, and served as the butt of certain good-natured shafts. It was not wholly safe, even at the height of his library activities, to cite Mr. Carnegie as an awful example of a rich man in a rut, and it now appears that originality may be displayed even in the giving of libraries. Certainly it is a graceful thing to give the books which Lord Acton enriched by his marginalia to that man in England who is best fitted to use them to his own and the common profit; and when this vast collection in mediæval history finally passes into some public library, it will come with enhanced associations from the fact that, through Mr. Carnegie's courtesy, John Morley fell heir to the books and literary materials of Lord Acton. It is seldom given to be generous with this grace, and that year will be memorable in the annals of graceful giving which saw the timely purchase of the poet Carducci's books by the Queen Dowager of Italy and the transfer of Lord Acton's library to Mr. John Morley.

---

Another bye-election has gone against the English Government, and so unexpectedly and with such a staggering reversal of majorities as to amount to a political disaster. North Leeds has been Conservative since 1880. It was put down as the safest of safe seats, the Tory majority in the last general election being 2,500. Now the Liberals have won it by more than 700. Moreover, they fought their campaign on what the Imperialists would call the most miserable of parochial issues—the Education Bill (which the Government has given too much the appearance of class favoritism) and free trade. Lord Rosebery's saying that the victory should be a warning to the Liberals not to support Irish Home Rule, was a singularly ill-chosen comment on it. The fact was, that the Liberal candidate, Mr. Barran, had for some time avoided in his canvass all mention of the Irish question, but at last, under pressure from his constituency, had declared himself in favor of the historic Gladstonian policy. But for this, and the winning of the Irish vote, it was thought he could not possibly have been elected. It would be a queer thing, then, for Rosebery and his Imperial League to meet to congratulate the new member, and improve the occasion to denounce the programme on which he secured his triumph. For the rest, Lord Rosebery's speech seems to have been rather a darkening of Liberal counsels, and a quite unnecessary and ill-timed insistence upon the things that divide a party in great need of being united.

*IOWA AND TARIFF REFORM.*

The Republican State Convention held last week at Des Moines, Iowa, has excited a national interest by reason of the lively controversy which preceded and attended its meeting, as to the attitude which it should take toward the tariff question. Albert B. Cummins, a representative of the younger generation of politicians, as compared with Senator Allison and other veteran party leaders, was elected Governor, last year, upon a platform which recognized the necessity of tariff reform and demanded the requisite legislation. After declaring adherence to "the historic policy" of the party in giving protection to American industry, and "pointing with pride" to its vindication in the extraordinarily rapid development of our national resources ascribed to this policy, the resolutions of 1901 proceeded to affirm that "we favor such changes in the tariff from time to time as may become advisable through the progress of our industries and their changing relations to the commerce of the world." This was followed by an endorsement of reciprocity as "the natural complement of protection," and a call for its development as necessary to the realization of our highest commercial possibilities; and then came a plain-spoken demand for "any modification of the tariff schedules that may be required to prevent their affording shelter to monopoly."

Last year was an "off year" in our politics, only a very few States keeping Iowa company in the choice of a Governor, and no national officials being elected. This year the lower branch of Congress is to be elected, and a number of States will choose Legislatures which must in turn name members of the Senate. Moreover, the Congressional election which comes midway in a Presidential term is regarded by many politicians as "the opening gun" for the national campaign, two years later. In 1901, therefore, the question which was raised by the Iowa Republicans in their tariff deliverance was largely academic, while in 1902 it is a matter of practical importance how they stand on an issue that will surely be raised in the Congress to which the other forty-four States as well as Iowa elect Representatives. It is a long time since there has been a more vigorous contest in any commonwealth as to the position which the party should take on a question not only of concern to the nation, but having a bearing on the relations of the party in one State to the organization as a whole.

Practically, the issue came down to this, whether the Republicans of Iowa ought to declare themselves in favor of such a revision of the tariff as would remove its shelter to Trusts, or ought to ignore the whole question. The division was not strictly along lines of age, but, as a rule, the older leaders, like Senator Allison and Speaker Henderson, favored a policy of silence, while most of the younger generation, represented by Gov. Cummins and Mint Director Roberts, who now controls the leading party organ, advocated a reaffirmation of the resolutions adopted last year. It was urged, on the one side, that a State Convention ought not to attempt to make national platforms for the party, but an appeal to the records showed that, a quarter of a century ago, in 1877, when the financial issue was burning, Iowa Republicans expressly demanded the resumption of specie payments. It was also argued by the conservatives that the resolution in question was virtually a plea of guilty to the Democratic charge that the tariff is the parent of Trusts; but the progressives replied that the language expressed the exact views of a large majority of the party, that it had stood the test of one campaign, and that its elimination would make it an issue in this year's campaign, put the party on the defensive, and lead the people to believe that the party was changing front on the Trust question. The fight was waged with great vigor in the Committee on Resolutions, but, when the opponents of tariff reform had been beaten there, they concluded to surrender, and not a voice was raised in opposition to the platform when it was reported to the Convention.

It is interesting to note that in this action there is a reversion on the part of Iowa Republicanism, under new leadership, towards the position on the tariff which was occupied by the party in the same State twenty-five years ago. When the late John H. Gear (afterwards Senator) was first elected Governor in 1877, he stood upon a platform which declared that "we favor a wisely adjusted tariff for revenue"; and this resolution was adopted without change by the convention of 1878—a year of Congressional elections—as well as by that of 1879, when Mr. Gear was nominated for a second term. Mr. Allison, then in middle life, and serving the first of his five terms in the Senate, was in sympathy with this attitude, and nobody questioned the orthodoxy of any Republican who held such views. Gov. Cummins and his school may therefore claim that they are only following in the footsteps of their fathers.

The action of the Iowa convention would be significant and encouraging if the Des Moines platform stood by itself as an index of Republican sentiment in the Middle West. But there is abundant evidence that a host of Republicans throughout that section agree with their Iowa brethren in this matter. If the recent Wisconsin convention had been allowed by the party dictator to express its views on national questions, it would undoubtedly have shown its sympathy with the demand for tariff reform, but Gov. La Follette insisted that the campaign should be made on State issues. Even some Republican leaders of the older generation openly and earnestly favor such a declaration of principles as the Iowa convention has made. The veteran Senator Cullom of Illinois told the *Tribune* correspondent in Washington last week that he believed the Iowa expression "just about voices the sentiment of the Republican masses throughout the West," adding: "I know it is the way the Republicans of my State feel, and I am convinced that, the sooner we take this matter up and dispose of it, the better it will be for the country and the party."

The *Tribune*, to be sure, in its editorial columns attempts to minimize the importance of the Iowa plank by emphasizing the fact that it was only a repetition of a declaration which made no great stir a year ago; but its Washington correspondent is more candid in admitting that this circumstance "does not detract from the importance of the action from the point of view of party leaders here." The same authority represents the movement as of vital importance in at least three Congressional districts of Iowa, which are now represented by Republicans who opposed "reaffirming" last year's deliverances at Des Moines, and who say they will not make their own campaigns on any tariff-revision platform. It does not need the evidence which other newspapers furnish from all parts of the country to show that shrewd politicians recognize the action just taken in Iowa as highly important.

*MR. BABCOCK RECANTS.*

Seldom can a public man have more unblushingly advertised his own inconsistency and insincerity than has Congressman Babcock, in the statement which, as Chairman of the Republican Congressional Committee, he gave to the press in Washington on July 30. He not only swallowed his own words and spit upon his own acts, but went out of his way to do it, and gloried in trampling upon his own record. "There is only one thing worse than the cant of politics," said Lord John Russell on a certain occasion, "and that is the recant." Mr. Babcock has recanted, and has added to that humiliation by appearing to be unconscious of his own shame. It is not every prominent man who can thus cheerfully give the world the option of believing him either knave or fool.

The melancholy details of Mr. Babcock's moral suicide can be briefly given. He comes out, like a master of jeers and flouts, with ridicule of the Democratic contention that tariff protection should be removed from manufactured goods which are sold cheaper abroad than at home. What if they are? asks Congressman Babcock airily. It is only "a rule of the trade," he says, that surplus products must go cheaper to the foreigner. The Democrats can make nothing of that issue. "We are not afraid to ask the

country to continue the Republican party in power in order that those policies [the present tariff] may be continued in effect." But if he was not afraid of that, did he not dread that his own previous attitude and language would be thrown in his teeth? Who was it that was making all the row last winter about removing needless and abused protective duties? Congressman Babcock. Who made himself so offensive on this subject to the party leaders that Speaker Henderson was urged to keep him off the Committee on Ways and Means? Mr. Babcock. Who introduced a bill to take off the tariff from iron and steel products, spoke for it, voted for it, divided the Ways and Means Committee on it, boasted of it, swore he would never abandon it, vowed that the party would be defeated if it rejected the measure? Why, this same Joseph W. Babcock!

Almost exactly a year ago he was expounding his unalterable convictions to the editor of the *Southwestern Wisconsin* which published his letter. "I maintain," declared the then valiant Babcock, "that it is a part of the policy of protection to protect the consumer." He explained precisely what he meant: "We can to-day produce and undersell the world. Shall we continue a tariff on articles that are, in fact, articles of export? If Congress maintains a tariff on such articles, the whole theory of protection falls to the ground, and it simply inures to the benefit of those who may secure the control of any such commodity, *since by its aid they can fix exorbitant prices in the domestic market.*" Then, with a swell of indignant virtue in his voice, Mr. Babcock asked, "How can such a policy be defended?" Well, he has answered his own question. Get yourself elected chairman of the campaign committee, show how beautifully "holler" you are fashioned in order to "swaller" with ease your own principles, and you can defend with moral vehemence this or any other policy which you have previously denounced as infamous. D'Azeglio explained the process in the case of the Carbonaro who was asked to break his oath: "Eccellenza, I cannot; it is impossible. . . . You understand, I have taken an oath—give me at least another ducat!"

Mr. Babcock's sad case is worth dwelling upon because he illustrates, in his not very important personality, the too common recklessness of American politicians in pitching their character out of the window. They seem to think that stability and unshaken honesty are of absolutely no value in politics. To acquire a reputation for sobriety and courage and independence seems to be often their aim for a time, as it was apparently Mr. Babcock's; but when the crucial day comes, they throw it away, as he has done, with incredible indifference, and the most coolly insolent assumption that the public will not perceive anything amiss, or will not care if it does. But this is really an insult to the people which they have never been slow to resent. They will not fail to do so, we believe, whenever the occasion fairly offers. Unless the whole American nation is to become a mere weather-cock like the frivolous Babcock, it will remain in its old choice of solidity and consistency and clear honesty in the men whom it delights to honor.

The affair runs beyond the mere person of the unfortunate Babcock in another particular. It shows the bottomless hypocrisy of the pretence of the Republican party that it will, all in good time, and if only let alone, reform the tariff itself. All its talk in that vein has been uniformly and historically hollow. Not one of its party platforms has, in this matter, been able to sustain the weight of a single campaign. Always, as we see again to-day, the stirrings of Democratic opposition, or mutterings within the ranks of the Republican party itself, only lead the protectionist Old Man of the Sea to grip the Republican neck with a more strangling clutch. We shall never see tariff abuses made an end of until an impulse comes from those who suffer from tariff corruption, not from those who profit by it in both pocket and politics. Congressman Babcock's indecent retreat from his own position shows that there will have to be an exterior force, a *vis a tergo*, applied, before Americans may hope to have the monstrosities of their tariff shorn away.

---

*THE HANDICAP OF MILITARISM.*

That the Czar has not abandoned his hope of bringing about partial disarmament in Europe, is asserted in a recent dispatch from Rome. It explains that the late visit of the King of Italy to St. Petersburg led to an exchange of views on the possibility of an international agreement for reducing European armaments. The same subject, it is further stated, will be discussed by the Emperor William and King Victor when the latter makes his approaching journey to Berlin. What the European Powers are said to be more and more clearly perceiving is that the modern world is an industrial world, not a fighting world; that the race is to the nation which, other things being equal, carries the lightest burden of taxation; and that the risk of a war on the Continent is now so slight that the crushing military expenditures of the several countries may be cut down in a way to enable them to face with more composure "the American peril"—that is, a trade invasion by the United States.

We do not accept these reports for gospel truth. There is doubtless in them much drawing the bow at a venture. Europe will not disarm to-morrow, nor the day after. But if her rulers are not openly saying that their peoples are staggering under too great a weight of militarism, in the struggle for commercial supremacy, they are saying it privately; if they are not thinking about this evil as one which threatens public peace and content, they ought to be. King Victor is said to be a monarch of clear eyes and progressive ideas; how, then, can he fail to reflect often on the ruinous taxes which drive so many of Italy's sons over-seas every year to escape the misery that overwhelms them at home? With the military budget cut down one-half or more, the forced exile of Italians would not be what we see it. And if the autocratic rulers of Russia did not feel themselves compelled by military necessity to wring taxes from the wretched peasantry who spend their lives but one step from starvation, no one can doubt that they would find the task of government made immensely easier.

The thing that comes home to an American with sardonic force, in all this talk of Europe's shaking her toilers free of the traditional soldier strapped on the back of each of them, is that we are preparing to load ourselves down with the same burden, at the very moment that our industrial rivals over the ocean are planning to get rid of it. But a few days ago we had a long and half-official account from Washington of the scheme to use the "war game," about to be played by army and navy near this city, and especially the great concentration of the fleet in West Indian waters next winter, as a means of whipping Congress into granting "big appropriations." We must have a much stronger navy, is the cry of the War College; and to make the matter precise, we are informed that our leading "scholar" in strategics is convinced that we shall have a war with Germany in 1907—that is, unless we make our navy so powerful that Germany will not dare to attack us. This "thoughtful officer" observes that the maximum of the German shipbuilding programme will be attained five years from now; it has been revealed to him that Germany will about that time make a dash for the Dutch islands in the Caribbean; and accordingly he declares it our immediate duty to get ready a navy able to frighten off the Kaiser's strongest.

This particular bit of naval metaphysics has its amusing side. Nothing shows the officer in question to be more truly "thoughtful" than the care with which he singled out his antagonist. Does the thoughtless reader suppose he had any special enmity against Germany? Not the least in the world. It simply happens that the German navy, as planned, is the next above ours in strength. It is, therefore, the one we must first surpass. Hence this transcendental speculation about the coming war with Germany. Why did not the prophetic soul of the "thoughtful officer,"

brooding on wars to come, predict one with France, or even Great Britain? We make few pretensions ourselves to alarmist "thought" of this kind, but we would undertake to point out an even greater likelihood of a clash with the French or British navy than with the German. But, don't you see? if we were to call upon Congress at once for as many battleships as France or England has, the people would take alarm, and the whole game would be given away. So we must restrict our gaze for the present to merely the next strongest naval Power, and get up a scare about the others later.

The whole question of the connection between heavy military expenditure and heavy taxation, and between heavy taxation and a handicapped trade and discontent and revolution, had its classic discussion and its correct settlement in England between 1845 and 1860. It was not only the free lance, Cobden, but the responsible Minister, Sir Robert Peel, who laid down the true principles in this business. He bluntly repudiated the lying old maxim, "If you wish peace, prepare for war." His reasons were two: If a Government were to listen to the advice and warnings of military experts, even the most overwhelming taxation would not produce money enough, and the people would be driven to desperation. More than that, Sir Robert boldly said, it is "impossible to secure a country against all conceivable risks." Risk must be run. Peaceful nations cannot go about armed to the teeth because it is possible some mad aggressor may wickedly attack them, any more than the average citizen is in duty bound to carry sword and revolver to repel a barely possible assault by a highwayman. We have to be guided by reason and probability; and reason and probability are dead against overburdening an industrial nation with taxes that may be unnecessary, and that are certain to disable it in competition for the world market.

It was this practical consideration, mainly, that made Cobden a lover of peace. To free industry from the shackles of militarism was his dream and aim. This was why he said that he should "die happy" if he could feel "the satisfaction of having in some degree contributed to the partial disarmament of the world." Now, is it not a perverse thing, a very irony of fate, that free America, just emerging into the sight of the world as the greatest manufacturing and exporting nation, should voluntarily handicap herself in this way? Already we spend $78,000,000 a year on our navy—more than three times its annual cost ten years ago. Must this vast sum be doubled? To guard ourselves against remote and speculative dangers, must we throw away our great opportunity for the present industrial conquest of the world? If we do, under the persuasion of our military theorists, we shall be guilty of an act of national folly unparalleled in history.

### *THE TEACHING OF ART IN UNIVERSITIES.*

The announcement of the proposed formation of a Department of Fine Arts by Columbia University, and the highly interesting comments thereon of Mr. Russell Sturgis, in an open letter to President Butler, dated June 10, bring up for discussion by others the whole question of the teaching of art in universities. How much and what kind of instruction in the arts of design should be attempted by the university? That some such instruction should be attempted, we may take for granted all agree. It has been one of the greatest weaknesses of education in the past that it has been too exclusively literary, so that the most highly educated have often been men for whom the arts of design scarcely existed; men who, if they troubled themselves at all about such arts, entirely and profoundly misunderstood them, and misconceived their purpose and methods. The self-made millionaire has, at least in English-speaking countries, been much more likely to have an interest in and an eye for art than the college president. This is lamentable, but it is true, and the result is a literary narrowness that has marked some of our greatest scholars, our deepest thinkers, and even our highest poets. They have understood the poetry of Greece but not its sculpture, the history of the Middle Ages but not their architecture, the thought of the Renaissance but not its painting; and in each case they have failed to understand what is precisely the most characteristic manifestation of the race and of the age. Some teaching of art, then, is admittedly necessary to a broad general culture. What shall it be?

Mr. Sturgis's answer is this: It "should be limited to history, theory, critical examination of ancient and modern works of art, and of the schools and large groups into which we divide them for the sake of convenience; and, . . . in connection with this theoretical study, such arts as are not manual arts may may be taught "more or less well" by a is that "university education has to do with all that can be taught in words, and all that is expressible in the language of words," while "a manual art has nothing to do with the thoughts which are expressible in words; by it thoughts are expressed wholly otherwise." He would allow that architecture may be taught "more or less well" by a university, because architecture is hardly so much an art to-day as a science: sculpture and painting are distinctly "manual arts" in his view—"they are the result of the skilled hand of man inspired directly by the mind which has, by nature and by training, a peculiar ability not noticeable in the ordinary pursuits of mankind." Such training cannot be given by words or by any conceivable course of lectures; it must be given "by what used to be called apprenticeship, by the actual touch of the matured artist, watched, imitated, analyzed insensibly, studied continually by the pupil." Moreover, this apprenticeship, whether, as preferably, in the master's own workshop or, as is most likely under modern conditions, in the "art-school," should begin early in life. Fifteen is, according to Mr. Sturgis, and he is right, none too early an age for its beginning. In modern times a few artists have achieved greatness in spite of late beginnings; but they have seldom been technical masters; and in the days when men really knew how to paint, they were put to the trade in their earliest youth.

This reasoning we take to be perfectly sound and conclusive, as far as it goes. The university can never make painters and sculptors as it makes doctors and lawyers, and attempts to make musicians and architects. Does it follow that it should not try to teach some drawing and modelling? In the first place it may be pointed out that in painting, for instance, there is an art, a science, and a handicraft. The art cannot be taught at all and never has been; the craft cannot be successfully taught by a university; the science, that of visual aspects, is as much a scientific study as any other; and if all science is the province of the university, this science also should be taught there. It cannot be taught by words alone, without actual practice in drawing and painting; therefore, some practical instruction in such work should be a part of the scientific equipment of a university. We do not attempt to teach chemistry without a laboratory, or anatomy without dissection, so that, in a sense, manual training is already a part of university education.

After all, why should university education have to do *only* with "all that can be taught in words and all that is expressible in the language of words"? Is it not the ideal of the university to produce the highest human efficiency as well as the broadest culture, and is not athletics to-day really a part of every university curriculum? The Greeks would have thought little of an education that trained the brain without training the senses. To-day we seem all agreed, on utilitarian grounds, that drawing should be taught in the public schools; why should that teaching cease when university training begins? Drawing is a language and a science, and every human being would be more efficient in any department of life if he had as much of that language and that science as he was capable of mastering.

Suppose, however, that we scorn utility, and that our idea of a university is, like Lowell's, that it should be a place where nothing useful is taught. We allow that the history and theory of art, that archæology and æsthetics, are proper subjects of instruction. But it is pre-

cisely because these things have been taught by men with an exclusively literary education that they have been taught wrongly. No man without some practical training in art ever at all understood the art he theorized about; and those who have thought that education should deal only with what is expressible in words have spun words endlessly and darkened counsel. Goethe knew better, and, when he wished to saturate himself with the Greek spirit, he drew from the antique. It is not probable that he drew very well, but it *is* probable that he learned more than if he had spent the time reading Winckelmann. The few books on art that are worth reading have been written by practising artists; and more insight into what painting really is and what painters try to do is to be got from an hour of Fromentin or La Farge than from a year's study of æsthetics.

To conclude: The university will not succeed in training practical artists. Art is, however, one of the most important activities of humanity, and the works of art left us by the past are the most permanent record of the feelings and ideals of mankind. Some knowledge of and feeling for art, especially the arts of design, is requisite to any true and high culture, and the university should endeavor to give such knowledge and to cultivate such feeling. This has never been done, and can never be done to any purpose without some practical training in drawing and modelling, or both. Therefore the university, besides courses of lectures on art history and theory, illustrated by such collections of works of art or of reproductions of them as it can attain to, should give practical instruction, by the best masters, in the arts of design.

---

### *EDUCATION FOR WOMEN IN GERMANY.*

The recent death in Leipzig of Fräulein Augusta Schmidt, for years one of the ablest leaders of the German movement for larger social and educational opportunities for women, has called forth respectful tributes to her ability and her high ideals from many German newspapers. Like Frau Louisa Otto-Peters, who died in 1895, Frl. Schmidt was a pioneer in this field of activity, entering it when the slightest connection with the woman's-rights movement entailed unlimited abuse and ridicule. Their opponents were quick to say that it was not more schools and industrial openings for women at which these agitators really aimed, but the upsetting of the entire social order and the unsexing of women. They were, therefore, ranked with anarchists, socialists, and Social-Democrats, even when Augusta Schmidt declined to let Social-Democratic women's clubs enter the national association of women's clubs, which she had founded after an American model. That Frl. Schmidt should have lived long enough to see old prejudices overthrown in many directions, and to have won respectful obituaries even from her severest critics, is proof positive of the marked change in the status of women which has taken place in Germany within the last thirty, or even twenty years.

Herself a teacher, it was her knowledge of the difficulties besetting young women who desired to become really qualified instructors that first led Augusta Schmidt into movements designed to benefit her countrywomen as a whole. With Frau Otto-Peters she founded, in 1865, the Leipzig society for the education of women. By 1890 she was able to take part in the establishment of a national women teachers' association, and in 1895 she became the first president of the League of German Women's Clubs, already referred to. In 1865 she was one of two or three German women to dare to speak in public. In 1902 she not only saw her cause warmly championed by the political party numerically strongest in the Empire, but even heard the Minister of the Interior declare in the Reichstag that much must be done to widen the present industrial opportunities for women. Any one familiar with the ordinary German attitude towards women, and the intense feeling existing, ten or fifteen years ago, against those engaged in industrial pursuits, must admit that Augusta Schmidt and her fellow-laborers expressed from the beginning a tendency and a movement of the times which can no more be stayed by German conservatism than by French prejudice or American indifference.

In her exhaustive study of the woman question recently published in Leipzig Frau Lily Braun has traced the growth of the movement of which Augusta Schmidt died the leader. The organization of her countrywomen in clubs she finds as significant as the similar movement in the United States has proved to be. Since the state would not help in educating women, some of these women's clubs undertook the task. The *Letteverein* began this work in Berlin in 1866, with the aid of and under the direction of men. "We demand only that the arena of work be opened to women," was the motto of Augusta Schmidt's Leipzig society. It had among its members many, like Fanny Lewald-Stahr, who worked secretly to keep body and soul together "because it was not proper for women of her class to earn money." They were not daunted by many indignant rebuffs when they applied for Government help in establishing advanced schools for women teachers, or by the general condemnation of the learned classes. Their example was rapidly followed in other parts of the empire, but it was not until well along in the eighties than an Englishwoman was able to establish the first high school for women in Berlin, by the aid of the *Letteverein* and private generosity, together with the encouragement of the late Empress Frederick.

By the end of the eighties the agitation for improved educational facilities was better organized, and became so insistent that from that time forward substantial victories were won. The universities soon began to receive German women, but only as "guests." In 1893, women were allowed to take the final examinations at the Government boys' schools called gymnasia. In many cities courses corresponding to those taught in the gymnasia were established by private associations or by the municipal authorities. In two of the smaller cities girls were admitted to the boys' schools. Munich and Breslau then attempted to establish gymnasia for women, but this was too much for the Minister of Public Instruction. He declared that he must "put out this spark before it became a devastating flame," and Governmental sanction for the undertaking was promptly withheld. It mattered not that Russia had already had such schools for thirty years, and that China was about to establish one; in this instance the forward movement met with a distinct check.

But it was only for a moment, since in 1899 women were admitted to the state examinations in medicine and pharmacy. Since then the German Cabinet has been working diligently to remove every obstacle in the path of women doctors, despite the fact that, when the first petition bearing on this matter was presented to the Reichstag in 1891, it was deemed a revolutionary document, full of pestilential American teaching about the rights of women, and not even a hearing was granted. State examinations for women seeking places as Oberlehrerinnen (advanced teachers) were established at the Victoria Lyceum and the Humboldt Academy in Berlin, and at the University of Göttingen. Most gratifying of all, however was the action of the Universities of Heidelberg and Freiburg in Baden in admitting women to all the rights and privileges pertaining to men. Even in Germany the world has moved—in this case with surprising suddenness, considering the conservativism of centuries to be overcome.

But the advocates of equal educational privileges for women are by no means content with these advances. Contrasting them with what has been accomplished elsewhere, Frau Braun finds the progress slow and hesitating, however it may seem to an outsider, and she states that in the industrial world there are few victories to rejoice over. There is, none the less, a great change in public sentiment to record. No one would have dreamed, twenty years ago, that an imperial minister would dare to ask great industrial openings for women, who outnumber the men in Germany by no less

than a million souls. Nor would any German professor have ventured in the eighties to declare publicly, as Professor Harnack did last May, that the woman's educational movement is in every sense praiseworthy, and that the woman without a profession or occupation is a dead weight in the community. He confidently expects an improvement in the morals of men and women, and better relations between the sexes, as a result of the changes now taking place. It must not be forgotten that the presence of hundreds, if not thousands, of cultured and attractive American women has helped to instil into German minds a higher ideal for womankind than that typified by the Hausfrau—too often a mere upper servant, whose ignorance renders mental companionship with husbands or sons an impossibility.

## A FRENCHMAN'S DIARY IN OUR CIVIL-WAR TIME.—IV.

January 14, 1865.—With Commodore Drayton, visited the Navy-yard. In the evening, dined with Senator Sprague: Chase, Sumner, Agassiz, Dana, M. de Gerolt.

Off for City Point, armed with a pass from Mr. Lincoln written wholly in his own hand. Arrived at the wharf of embarkation, in military occupation, I show my pass and go aboard the steamboat with numerous officers and some civilians—paymasters, army contractors. No civilian is allowed to take his baggage to his state-room—a precaution adopted against incendiaries, who might introduce combustibles. All the baggage is collected in a room guarded by a special officer. The boat puts out amid river ice. We have a view of the huge buildings of the Arsenal, the hay magazine, the hills crowned with forts. At every moment boats cross our course. Everything with an engine has been requisitioned, even to old ferry-boats.

We stop at Alexandria to take on convalescent soldiers returning to the army; on the wharf, quite a population of black stevedores. Proceeding, we perceive the white walls of Mt. Vernon, behind the trees of the promontory. State-rooms were allotted after leaving Alexandria. A young colonel of the 130th New York obligingly procures one for me. He belongs in Trobriand's brigade and praises his chief highly. The morale of the army is excellent. Since Grant interdicted whiskey, there has been no more drunkenness, and few punishments are necessary. I scrape acquaintance with a big, square-headed German with gray moustaches, a revolutionary Forty-eighter from Hesse-Darmstadt. He is an officer of engineers, and kindly sketches for me the lines before Richmond—three front lines protected by forts, a rear line likewise protected. The army is camped in this gigantic gut. In the evening the pilot perceives a great fire which is for a moment taken to be a burning steamer, but turns out to be a house.

In the morning I woke not far from Fortress Monroe, the most important on the coast. On the tiny island, the Rip-Raps, facing it, a large stone fort is in process of construction to command the entrance to Chesapeake Bay. We enter the vast Hampton Roads. At Newport News is visible on the beach the skeleton of the *Congress*, sunk by the *Merrimac* in its contest with the *Monitor;* further on, some remains of the *Cumberland*, which went down in the same fight. We pass near the *Florida*, a Confederate pirate, whose two canting masts are almost wholly out of water. The air is very mild. The broad and lazy river James flows between wooded banks. We cross the bar, meeting some transport constantly. Curious types of officers—a few foreign veterans; youngsters silent and thoughtful; old heads, bronzed, fagged, gaunt, with shaggy beards and hair; no apparent hierarchy. For a detail of costume: each officer wears the characteristic badge of his corps d'armée.—Fort Powhatan, dominating the plain reached by Grant's army after his bloody campaign across Virginia. From there the army threw itself upon Petersburg.—Deserted plantations of the Wilcoxes, the Seldons (whose house was built two centuries ago of English brick), the Harrisons. At Harrison's Landing one may still see traces of the camps in which the Army of the Potomac was shut up for two months.—At last, City Point, announced by a forest of masts. We draw near amid a fleet of schooners, transports, and tugboats. Improvised wooden structures line the levee. A railroad built on the muddy slope of the stream appears.

I exhibit my pass and am directed to headquarters, which overlooks the harbor and is indicated by a large stars-and-stripes. I am taken to the Office, a log cabin consisting of but a single room. Lt. Col. Bowers reads Charles Sumner's letter to Grant brought by me, and examines my pass in Lincoln's handwriting. He tells me the General is ill, but he himself is entirely at my disposal. As there is no empty tent to-day for night occupation, I must sleep at the hotel, a big wooden affair run up in several days.

Walked about the camp and came upon a black regiment. Dined with the officers of the General Staff; a short and silent meal. At the Office in the evening.

The next day I set off by rail, Col. Bowers giving me a young officer named Porter to accompany me to Meade's headquarters. We traverse great woods, at this moment given over to remorseless choppers. Meade Station—Hancock Station—Parke Station; before us is Meade's flag, at the top of a small knoll. I seek Gen. Hunt, chief of artillery, who breakfasts me and takes me to the lines. Visit Fort Wadsworth, Fort Wilcox, situated on the extreme left, whence we perceive the line of Federal pickets marked by smoke; beyond, the line of Confederate pickets; and still beyond, a Confederate fort. Visited the Federal pickets. At present there is a tacit truce. We see distinctly the Confederate sentinels pacing deliberately, gun under arm. We examine them at our leisure with a field-glass; we might talk with them if we raised our voices slightly. During such truces the pickets of the two camps communicate with one another, in spite of their officers' orders. They exchange coffee for tobacco, New York papers for Richmond. I chat a moment with a group of German pickets, who tell me, laughing, that a moment before our arrival some Confederates had gone for wood to a thicket where the Federals were cutting, and had retired without being molested. The Johnnies and the Yankees are almost friends at this extreme limit where the armies are closest together. The General is disturbed only by the new Confederate fort, which is going up in a good position, and intends to mount guns of heavier calibre in Fort Walsh.

I bid adieu in German to the soldiers with whom I have been talking, and we return to headquarters. Smoke hangs over the camp and fills the aisles of the pine forest. Distant drums, military brass, galloping steeds, braying mules, lowing cattle in their pens, fill the air with strange sounds. Night falls. The tent-lights, the sparkling smoke, spot here and there the illimitable pitchy background. We dine in the tent. After a modest repast, Gen. Hunt conducts me to Gen. Meade's wooden house. I see a tall, lean-faced man, with gray beard, retreating and bald forehead, large nose suggesting a bird of prey, a face without much character. The General himself accompanies me back to the station through the quagmire. In default of passenger-coaches, I return to headquarters in a baggage-car in company with a German officer of the topographic service.

I spend some time at headquarters. The General Staff is very small, and its work enormous, yet done methodically and without fuss. An Indian colonel, with the copper color of the Redskins, is one of the workers. On the eve of my departure, Grant, hitherto silent, asks me to walk with him after dinner. He talks of Sumner, who had given me a letter to him, and expresses his sympathy for him, his policy, and his character. He speaks of Lincoln with equal respect and sympathy. He hopes the war will end with the capture of Richmond. Slavery will not survive the war. His language is simple, frank, decided, stripped of all ornament and artifice. I was infinitely touched by this confidence.

In Washington once more. Dined at Senator Morgan's with Mr. Seward, his daughter-in-law, Secretary Welles and his wife, Postmaster-General Denison, Charles Sumner, Admiral and Mrs. Farragut. A very sumptuous dinner; Seward very lively, very chatty, as usual. It would be difficult to say against which he is most incensed for their attitude towards the United States, England or Napoleon III.

January 25.—From Washington to New York. Called on General Scott; fine and imposing face, and a very grand air. He has just published memoirs. In the evening saw Booth as Hamlet, the best acting of the part I have ever seen: a Dantesque, poetic face, no little grace of movement. He represents a simulated madness, and very happily accentuates the incoherences, oddities, the distraught and unconscious side of the rôle.

Went with Bancroft to Bierstadt's studio (he is the landscape painter of the Rocky Mountains and the Yosemite Valley), and to that of Church, more poetic, very much of a colorist, an imitator of Turner. American landscape painters seek the grand rather than the humble, the fantastic rather than the simple.

January 30.—Weymouth. Extracts from a letter of this date to the Duc d'Aumale.

"Monseigneur—I send you a little drawing which will explain to you better than many words the result of my visit to the Army of the James. . . .

"Neither shall I undertake to describe

camp life to one who knows it better than anybody. The little I saw of it left only agreeable impressions. I am grieved to say that I found in all grades of the Army (I except Grant and Meade, who are not very communicative) great irritation against England. Perhaps as great exists against France, but out of politeness was concealed from me. I recall among others a young officer from Vermont, who returned with me from City Point to Washington, saying, 'I have served my time out: I have been three years in the army, and been in fifty-eight engagements or battles. I believe I have done my duty, but I do not like war. What I have done, I have done because my country needs soldiers. I am glad to return to my family and business, and I hope never again to draw the sword. But, sir, if war were declared against England, were it ten years hence, or twenty, I would not wait a day to enter a regiment, as a private if need be.'

"Such is the feeling. I do not discuss it, I simply relate. It is this that renders very difficult the work of Sumner and Seward, who are truly friends of peace. Nevertheless, I have not much faith in the breaking out of war between America and England. The latter country can retrace her steps in time; but every day I grow more apprehensive lest the Mexican affair should drag ourselves into war with the United States. I believe that the American question and the Mexican question are destined to become one of the principal battle-grounds of the French Opposition. It would truly be too unfortunate if some day, through the Emperor's fault, it should be our lot to bear the cost of a war with the United States, after having lost the opportunity of conquering, without drawing the sword and by a few simple words of sympathy, a precious alliance. The grand policy which governs us and whose profound combinations are so much admired, is quite capable eventually of converting traditional sympathy, already chilled by its fault, into sentiments of genuine hostility. Who is to profit by this policy inspired by the simple necessity of doing something different from what old France did? Russia, who alone had the sense to declare her friendship for the United States without making the least sacrifice; and England, who will be charmed to see America's flood of wrath and bitterness diverted from herself, and to whom, in case of war between the United States and France, will fall the world's commerce and the decision of all the great questions relating to the law of nations.

"Unfortunately there is nobody in France to say all this. No one there has yet comprehended the immense scope of the war and of the revolution in the United States. We Parisians prefer the geography of Schleswig-Holstein to that of a vast continent in which Schleswig-Holstein would be but a fly-speck. A great minister like Richelieu or Cavour would have done everything to assure the friendship of the United States. Old World affairs have found lodgment in those of the New World, and will never be absolutely detached from them. America has felt her strength, and will want to make use of it like the bird that feels its wings. We ought to have held ourselves in readiness to profit by this new force, material as well as moral."

February 4.—Boston. Meeting at Music Hall, in which Garrison proclaims his confidence in Lincoln. He will not, like Wendell Phillips, make the question of negro suffrage a weapon against the Government. The right of suffrage is not a natural right. The black man once liberated, the task of the abolitionists is at an end; the social place of the freedmen in the United States will be determined by manifold considerations over which the abolitionists have no control. Gen. Butler, who succeeded Garrison, pleaded at length in favor of the political equality of the two races. His delivery was pompous and vulgar. Butler was relieved from command of the Army of the James. He is almost traitorous in his attacks on Grant and Sherman.

Weymouth.—The Universalist Church of this town has for pastor a woman, the Rev. Olympia Brown, who studied theology at Oberlin College (Ohio). The church edifice is small and of wood, and looks like a lecture-room. Miss Brown occupies a platform at the far end of the hall. Her dress is black and she has no ornament in her hair. Pale and thin, her face has distinction. After the singing of a hymn, she offered prayer, followed by another hymn. She then read her discourse, her one theme being the amendment of the Constitution. This great change has been due not to the war, for war has no liberal action, but to God, to the action of immutable laws. All this was very well phrased, in a firm voice and refined manner. The audience were serious; some of the women wept when the speaker referred to the victims of the war. What especially pleased me in the sermon was that it had a genuine religious accent, and did not appear to have been patterned upon newspaper articles.

After the closing hymn, Miss Brown announced to her congregation a temperance meeting to be held shortly. Then, to my great surprise, she remarked that, one of the members of the congregation having asked for some particulars about a French philosopher, Diderot, of whom she had recently spoken, she would put at his disposal a book from her library. Finally, she gave notice that, at the afternoon service, she would, by the request of several persons, preach on the belief in hell.

February 14.—James Russell Lowell came to spend the day with us at Weymouth. He is witty, and not stingy of his wit. He spoke much of England; he loves her, for is she not "the old country"? Politically, he is a decided partisan of the present Administration. He considers Lincoln to be a superior man, whose glory will equal Washington's. He began to appreciate him after the speech at Gettysburg. Lowell is greatly attached to the memory of Clough, a dreamy spirit, disquieted and poetic, who passed a year at Cambridge, Mass.

I met Lowell again at the *Atlantic* Club, where we dined with Longfellow, Holmes, Agassiz, Governor Andrew, E. P. Whipple. It was very diverting. Holmes related his impressions as a lecturer:

"When I go from place to place, I seem to be constantly meeting the same public everywhere. It is a sort of multivertebrate animal, a serpent that comes every evening to uncoil itself at my feet, looks at me and listens, ready to devour me. The hardest moments for lecturers are those spent in waiting for belated trains. Often, in some out-of-the-way station, in bitter cold, we wait and listen; the slightest noises become perceptible—not only the far-off snapping of a branch under the weight of snow, but the subjective sounds of the human organs. Sight undergoes exaltation as well as hearing; the stars seem to grow bigger. At last the locomotive draws near, the train arrives; we jump on the car platform—the vividest image of salvation."

George William Curtis, one of the most popular lecturers, once went to a village in the State of New York. In view of party differences they begged him not to talk on politics. He had nothing in readiness except a lecture on Thackeray. Nobody in the audience had read one of his novels. Curtis's allusions and criticism fell upon the void. At the close of the lecture, the chief personages came to greet him. "Mr. Curtis," said the schoolmaster, "you must bring about an agreement among us on one point. For a week here we have been disputing over Longfellow, whether he is dead or isn't dead." "I dined with him," answered Curtis, "a fortnight ago." "Ah," said the schoolmaster, visibly disappointed; then, presently: "Anyhow, I'm sure somebody is dead."

Farewell supper at Norton's in Cambridge, with Longfellow, Lowell, and Child.

Attended a philosophical soirée at the house of William R. Alger, a Unitarian clergyman. Mrs. Howe read an essay entitled, "Limitations," second in a series she is about to publish. The next day I dined with her and her oldest daughter, a charming young person.

AUGUSTE LAUGEL.

## THE STATUS OF HISTORY IN SOUTHERN EDUCATION.

RANDOLPH-MACON COLLEGE, VA.,
July, 1902.

One would naturally expect a keen appreciation of historical studies on the part of Southerners. Nowhere in the Union is there such tenacious reverence for the past and its traditions, nowhere else does each individual so readily make the history of his State or section a personal matter. Yet there is no section of the country in which both local and national history is so little studied and so imperfectly understood. To be sure, there are Southern writers and strictly Southern text-books, but the writers are in the main special pleaders, and the text-books are dependent on books written at the North, not on investigation of the sources at hand. I propose to inquire briefly into the causes of this backwardness.

The ruling classes of society are usually responsible for the kind of training the young receive, and this applies particularly to collegiate training. Education is directed from above, since the teachers in general take into the lower schools the ideas prevalent at the higher. For this reason the status of history in colleges will receive my principal attention. The Southern college is modelled after the University of Virginia; and Thomas Jefferson was the oracle of that institution. His idea of education was favorable to versatility rather than mastery; so the curriculum of his great high-school was arranged according to the humanist ideals of the sixteenth century, *i. e.*, with Latin, Greek, mathe-

matics, and philosophy as the four foundation-pillars of learning. The sciences, both natural and social, were made adjunct to these, or at least secondary. The subjects of study for a Roman youth of the early Imperial period were made the principal subjects of study in Virginia eighteen hundred years later. All that the world had learned during the long interval of time, all it had experienced, was of but secondary importance. As this university grew, the idea of a universal knowledge for the young student gained constantly in the minds of Jefferson's successors. The Master's degree soon came to mean the completion of all the studies offered there, and not special excellence in a single group.

As Jefferson anticipated, the youth of the land, more particularly Southerners, "flocked to the Virginia fountain." They returned home feeling that education meant the ability to scan a line of Latin and render into fair English a Greek play. And the class of men who went to the Virginia University were those who built up other schools, who controlled the politics of the South. But, parallel to this influence in education, another had grown up and was quite powerful during the fourth and fifth decades of the last century, when the two coalesced, so far as educational policy was concerned. It was the party of Christian education, reinforced by the success of similar teaching at the North, especially in New England. The Presbyterians, the Baptists, and Methodists all agreed before 1830 on the policy of an educated clergy. And so (in Virginia) Randolph-Macon, Richmond, Emory and Henry, (in North Carolina) Wake Forest and Davidson Colleges, were established during the years 1830-40. A little later (in South Carolina and Georgia) Furman and Mercer Universities were opened. All these schools adopted outright the policy of the University of Virginia, with the exception that philosophy was modified so as to serve the ends of Christian education. As history had only a secondary place at the University of Virginia, it likewise received little attention at the younger institutions. In a few instances there were older institutions which had acquired considerable influence before Jefferson's university was established. The College of Charleston, South Carolina; Hampden-Sydney and William and Mary, in Virginia; the University of North Carolina, and Franklin College, in Georgia, were the most important. None of these had ever given any systematic courses of instruction in history, and there was little change necessary when, about 1830, they readjusted their curricula, owing to the success of the great institution at Charlottesville, Va.

It was not until after the civil war that any break in the ranks of the college quadrivium was made; and this was done by Prof. Thomas R. Price, now of Columbia University, New York. He succeeded in getting the first chair of English in the South established in Randolph-Macon College, and from this high-grade denominational school the University of Virginia secured its first professor of English. Gradually the other Southern schools followed suit. This gave the college five culture (or disciplinary) courses, and these compose to-day almost the entire work of the Southern college student. The conservative forces of nearly all our educational institutions deny positively that any other subject has anything like the culture value of one of these. It will be asked, Did not history form any part of the training given by the colleges? It did. The University of Virginia required its language professors to teach the history of the people whose language was being studied. Hence arose the custom of associating the history of Greece with the Greek language, the history of Rome with Latin, and so on with France and Germany. And, as has been seen, what "Virginia" did, the other colleges imitated.

About 1880, Johns-Hopkins University established the department of historical and political science, with Herbert B. Adams at its head. In a few years graduates of this institution began to clamor for the creation of chairs of history; and in 1892 Trinity College, North Carolina, then under the control of an able Northern man, President Crowell, yielded to the demand, and the first independent department of history in the South was established. This new department immediately showed signs of great vitality, and history soon commanded a place beside Latin as an educative subject. From the beginning Trinity College has led in the scientific study of history in North Carolina, and in some respects in the whole South. The department has never been wanting in students.

Such an object-lesson could not long remain without influence, especially since the Johns Hopkins continued to send out many well-equipped students ready, like missionaries, to undertake and push forward the study of their chosen subject. The State universities, the denominational and technical colleges—the most important of them—have established chairs of history, though in most instances combining with history some other subject, such as economics or sociology. But even now, in nearly all first-rate colleges, history is not accorded full rank as a culture subject. It is given to a teacher who as often as otherwise makes some other subject his specialty, which, of course, practically destroys the so-called less important course. Again, the college president who has some spare time from administrative duties is often given the department of history. To illustrate the insignificance of the subject as viewed by some college trustees, one of the largest denominational schools in the South has just given its professor of Latin the new department of history, and, in order the better to advertise their indifference, the Trustees elected a specialist in history to the chair of English! But this is not general. A spirit of advance is to be found in the most progressive institutions.

Yet the status of these departments, relative to others—such, for example, as Latin or Greek—is not satisfactory. For the A. B. degree the humanities have the right of way. History, as shown by the catalogues of a large number of Southern colleges, is required for this course (1) in the universities, three hours a week for one collegiate year—a course which gives only the outlines of general history, beginning with the early Greeks and closing with the year 1789; (2) in the high-grade denominational colleges, three to five hours a week, the same sort of instruction. In the technical schools, neither in Virginia nor in North Carolina, is any knowledge of history, either European or American, required. Georgia and the States further south generally require from three to five hours a week in American and English history for the B. S. degree. In the largest universities, in the courses looking to the Master's degree, three additional hours are required if history is one of the *elected* subjects; and the same holds for the denominational colleges. In the technical schools there is seldom any demand for other than the primary work done in the same schools for the B. S. As for highly specialized study in particular fields of history, the University of Texas alone makes any creditable showing.

As to the number of men teaching history, only two universities employ more than one man; and some institutions having from six to eleven hundred students enrolled, and enjoying incomes of from seventy-five to one hundred thousand dollars a year, have no need for more than one man! The number of students who take history even in preparing for the law is amazingly small, which indicates the nature of the work done; and as for becoming specialists, one seldom finds a young man so visionary.

Why the study has found such tardy recognition, and why it is even now opposed most persistently, is a question which naturally arises. I shall attempt to give two or three answers in explanation:

(1.) It was the influence of the humanist teachers in the early part of the last century, when Southern life was being fixed in certain grooves. Southerners are the most conservative people in the United States; and when a certain kind of training has come, whether reasonably or not, to be recognized as part of a gentleman's education, any change at all is the same as an attack on the existing order of things. It is this sheer conservatism in favor of the classics in the first instance that causes Southerners to neglect the study of history, even of their own section.

(2.) Another cause is the complete change of all economic conditions in the South since 1865, which has revolutionized society in general, and which has turned backward the tide of intellectual advance. In 1850 the percentage of illiterate whites in the South was not so great as it is to-day! So there is no great demand for development in intellectual matters. Few teachers of history are required in the secondary and high schools. A large number of those who attend colleges everywhere expect to devote their lives to teaching. They study what must be taught again—that is, the more conservative subjects. And, again, as a result of the upheaval of 1865, the wealth of the country has changed hands, and it is too soon for the owners of this wealth to be so cultured as to care for a liberal education for their sons—and history must always be more or less of a culture study, a study for people who have leisure.

(3.) The last explanation is the condition of public opinion. Notwithstanding the radical changes which have taken place, public sentiment has been and is still controlled by men who were either participants in the great Civil War or whose fathers were. This public opinion positively demands that teachers of history, both in the colleges and in the high schools, shall subscribe unreservedly to two trite oaths: (1) that the South was altogether right in seceding from the Union in 1861; and (2) that the war was not waged about the negro. No investigation,

no honest unbiassed work can ever be hoped for when such a confession of faith is made a *sine qua non* of fitness for teaching or writing history. To illustrate this, I have but to cite the case of a fine old gentleman of ante-bellum antecedents, a member of a good family, whose knowledge of history consists in having memorized the standard texts of some twenty years ago. This gentleman is professor of history in one of the largest State universities in the South. On a vacation ramble about a year ago the writer happened into his lecture-room, and learned from a well-worn copy of Oman's 'History of England,' and from some students who still lingered about the classic walls, that this single text constituted the whole work of the senior history class in that college! On the margins of the pages were recorded in very small characters the stock stories and jokes doled out to patient students from year to year. The text was repeatedly marked, "Tell joke No. 1, or No. 2, at this point."

What is it that keeps scores of such good old gentlemen at the heads of the most important departments of study in Southern schools? Clearly, a public sentiment which taboos the most vital subject in American history, a sentiment which demands from every one a full justification of the South in all its past history. Behind these men is the individual influence of the Confederate veterans, who, having once had a share in making history, now demand that their views of its teaching and writing shall be everywhere accepted. They meet together in great assemblies, and, without critical knowledge or even careful examination of the books used in schools and colleges, make out a list of authors whose works may be used. It is not difficult to say what class of writers are commended.

Next to the Confederate soldier's influence in retarding the advance of true historical studies is that of the Southern publisher, who makes capital of the so-called patriotic sentiment. He feels the pulse of the Confederate veteran and takes the measure of the reviewer, who is usually of the accepted type, and then publishes his *Southern* text-books. The representative of the largest publishing-house in the South recently refused so much as to read the manuscript of a piece of investigation in Southern history, though posing all the while as the champion of Southern history-writing, its very Mæcenas.

It will be seen that, under such conditions, no healthy criticism can exist. The results of investigation are fixed for an author before his work begins. The sentence of the reviewer is likewise dictated by an uncompromising public dogmatism. These, then, are some of the conditions which check the development of scholarship, which prevent the higher institutions of learning from taking their rightful stand, and which seriously retard the educational and intellectual advance of the South. They are natural conditions, to be sure—conditions which, until recent years, prevailed at the North, but which, as is indicated by the discussion of the recent proposition of Charles Francis Adams to erect a monument in Washington to R. E. Lee, are fast disappearing, and it is to be hoped they are also passing away in our section.

In truth, healthy beginnings are being made at many points. In every Southern State there are honest and able young students who are beginning to address themselves to the task of writing in true characters the history of their sections—students who are becoming authors of books which require no recommendation, and which find publishers in any part of the country. In South Carolina a great scholar is giving to the public a history of that State in the Revolution which compares favorably with any similar work ever produced by an American writer; in Alabama there has arisen a small coterie of competent critics who, by the aid which the State is freely giving, promise much for that part of the country; in Texas, at its great University, in North Carolina and Tennessee, magazines of history and biography are doing pioneer, almost missionary, work in their fields. So it is not altogether an unpromising future which we face. And there are at present two movements of quite recent origin which brighten still more the promise of the future. These are the educational revolution of which the Ogden Association is a part, and the campaign, best illustrated in North Carolina, for the establishment of rural and town libraries. In North Carolina alone about five hundred small libraries were established last year. An educated public may be influenced and a reading public may be convinced. May not these beginnings be the harbingers of intellectual emancipation, of independent literary production?

## THE ATLANTIC FISHERY AND PROTECTION.

TO THE EDITOR OF THE NATION:

SIR: It is one of the most remarkable anomalies of the twentieth century that the two leading republics of the world, France and the United States, the two countries that boast the loudest of their freedom, should be each distinguished for their adhesion to an absurd antiquated system of protection, which utterly disregards the true interests of the people, and is dictated solely by a ring of monopolists for their own selfish ends. Take, for instance, the question of a drawback on Cuban sugar. Every motive of national honor and sound policy demanded liberal treatment for the southern island by her great republican neighbor and protector, yet, as we have seen, notwithstanding President Roosevelt's stirring words, American good faith, the reputation and character of a great country, was to be trampled in the dust and brought into contempt before the whole world simply to protect the beet-sugar monopolists.

When we come to look into the workings of protection in both France and the United States, the plain man finds absurdities and monstrosities worthy of the grotesque politics of Laputa. France easily leads the van. Here in North America the national Government, in order to keep up a fishery in Newfoundland, gives (1) a bounty exceeding the intrinsic value of the fish; (2) a drawback quite equal to the bounty; (3) 50 francs a head for every one engaged in the transatlantic fishery, plus 50 francs more per fisherman given by the Municipal Council of St. Pierre for every Frenchman engaged on the Newfoundland coast; (4) a bounty of 4,000 francs distributed among her shore fishermen. Outside the cost of three expensive war-ships, France pays $240 per man for every one of her subjects engaged in this trade.

The follies and utter absurdities of protection could hardly go further. But when we come to examine the American policy of excluding foreign fish, and preventing the public from obtaining this most necessary and valuable food at reasonable rates, we can perceive that their system is just as illogical, as absurd, and as mischievous to the nation as the ridiculous methods of France. A high tax on a necessary article of food which amounts to an actual prohibition of its free consumption by the public, is a burden which no free people should suffer. The English people would not bear it for a moment. The Americans are a patient people; they suffer the monopolists gladly who plunder them on fuel and light. Only the odious Meat Trust seems to have stirred them up. This outrageous attempt to raise the price of food touched their stomachs, a tender point with the great republic. Has it ever occurred to the citizens of this great nation that, for a century, they have been burdened with a tyrannical monopoly in their food supply as grievous as the attempted Meat Trust? There is not a shred of an argument of any kind in favor of the fish monopoly. It used to be claimed that it manned the national navy. The official naval experts have completely exploded this idea. The men protected are not even Americans; by far the greater portion of the deep-sea fishermen are provincials and foreigners. To aid this motley alien crew and the fish rings, all Americans have to eat dear fish.

The toiling millions of Europe could not exist without eating cheap fish food. Take such a common product of the sea as the herring; all over England and the Continent its cost is two cents, or three for five cents. In the States a single herring costs five cents, or three times the price at which the English workman enjoys his bloater. What makes all this so monstrous and absurd is the ridiculously small number of people, a few hundred, who benefit by this protection to their petty trade, in comparison with the seventy millions who have to pay for the monopoly. The American deep-sea fishery to-day is a poor decaying industry. It is not even American, and a considerable portion of its product is not even caught by Americans. It does not furnish one-fourth of the supply of sea fish which should be consumed in the same proportion as in Europe..

The policy of the American Government in dealing with this vital question of the Atlantic fishery, for a great nation, has been contemptible in the extreme. They ask in the meanest way every favor from their smaller British neighbors, but they will give nothing in return. It is thoroughly well known that, without free access to the Newfoundland bait, the Bank fishery could not be carried on by the American fishermen. It is also officially reported to the revenue officers that the so-called "American industry," the winter frozen-herring business, is a gigantic fraud. Brought in free as "American products," there is not one thing American about the whole business except the Yankee gold that pays for the fish. All are caught and frozen by the English residents. What I have pointed out in former papers on this

subject is not only the cruel absurdity of a tax on food in the twentieth century; in this special case the monopoly acts as an actual barrier to the public supply of most valuable sustenance. If these barriers were thrown down, British North America could furnish the States with an abundance and variety of cheap fish, as full and ample as England now enjoys.

Sir John A. McDonald always maintained that there was nothing to expect from the liberality or enlightenment of the American Government. Their dealings with British America were always a compound of arrogance and selfish meanness, as short-sighted as contemptible. It is now certain that this peddling policy in regard to the fisheries will be checkmated in a thoroughly effective way. The union of Canada with Newfoundland is a foregone conclusion. The island colony is even now making the American fishermen pay a fixed price for his bait, besides a big fee for his license. When the Dominion obtains control of all the British fisheries, the Americans will be simply at their mercy. The Newfoundland bait supply, on which they depend, will either be prohibited altogether, or else made too dear to be purchased. Gloucester has already sounded the note of alarm, and sees a reciprocity treaty looming in the distance. What will the American Government do in these circumstances? Will it wait until free trade is forced upon them, or gracefully accept the inevitable?

D. W. PROWSE.

ST. JOHNS, NEWFOUNDLAND, July 28, 1902.

## CONGRESSIONAL ENCOUNTERS, NEW AND OLD.

TO THE EDITOR OF THE NATION:

SIR: In looking through some old numbers of Charles Dickens's magazine, *Household Words*, I chanced upon a paragraph or two that might well be republished—without comment—to-day. In No. 330, under the title, "The Congressional Prize Ring," comment is made upon the then recent assault of Preston S. Brooks of South Carolina upon Charles Sumner of Massachusetts in the Senate on the 22d of May, 1856. As certain events and casualties of the session of 1902 are fresh in interest, it may be edifying to print the following quotation:

"The forcible mode in which debates are conducted in the parliament of the United States, and the personal encounters which sometimes follow them, are believed by the present generation to be novelties and only recently brought to a culminating point by the Hon. Preston S. Brooks's life-preserver upon the head, face, eyes, and body of Senator Charles Sumner. This is a mistake. Fifty years ago, exciting debates often ended in a regular stand-up fight in the lobby of the House of Representatives. The combatants stripped, a ring was formed, bottle-holders appointed, and the latter fought and reported quite in the style of Moulsey Hurst and Bell's *Life in London*.

"In corroboration of this statement, we present to our readers the following paragraph copied from the New York *Evening Post* of December the thirteenth, eighteen hundred and five, into the Annual Register for eighteen hundred and six:

" 'On Friday last, the well-known Leib, one of the Representatives of Pennsylvania and leader of the Duane party, and Joseph H. Nicholson, one of the Representatives of Maryland, met in the Congress lobby about one o'clock, when Leib immediately called Nicholson a liar; and thereupon commenced one of the best-fought battles recorded in the annals of Congressional pugilism. The fight continued till the sixty-fourth round, when Leib had received such blows as deterred him from again facing his man. He protracted the fight, falling after making a feeble hit. In the round which ended the fight, those who backed him advised him to resign; which he did after a combat of one hour and seventeen minutes. The combatants were both very much beaten.' "

ALBERT C. PHELPS.

NEW ORLEANS, July 22, 1902.

## NICE DISTINCTIONS.

TO THE EDITOR OF THE NATION:

SIR: The War Department acknowledges receipt of a report relative to the action taken by Gen. Chaffee in the case of Lieut. Lytle Brown of the Engineer Corps, U. S. A., who was recently tried for assault and battery on Charles O. Ziegenfuss, a citizen of Manila. It appears from the testimony that Lieut. Brown took offence at an article in the paper conducted by Ziegenfuss, and, in consequence thereof, proceeded to the latter's house one night, and "did then and there unlawfully, wilfully, and maliciously assault said Ziegenfuss by striking him with his, the said Brown's, clinched fist, and the said Brown did then and there otherwise beat, bruise, wound, and illtreat the said Ziegenfuss, knocking out two teeth of him the said Ziegenfuss. Said Brown did kick and jump upon the said Ziegenfuss with the feet of him, the said Brown, and did cause him, the said Ziegenfuss, to suffer great bodily pain and anguish." So the charges and specifications read.

That which seems incomprehensible, to the ordinary mind, at this distance, is the principle upon which army officers base their code of honor. Lieut. Brown was found guilty of the charge of assault and battery and sentenced to be "reprimanded." Of the second charge, of "conduct unbecoming an officer and a gentleman," in connection with the same offence, he was found not guilty. It is presumed from the finding of the court that nothing less than the killing of the said citizen would be regarded by it as unbecoming an officer, and such killing, in truth, would not—in the section of the country south of here from which Lieut. Brown undoubtedly hails—be regarded as unbecoming a gentleman.

On the other hand, suppose it had been a private soldier who, smarting under adverse criticism, had at night entered the house of a citizen and comported himself in the same manner as that of his superior officer, would the court-martial have been satisfied with imposing the farce of a "reprimand"? We are of the opinion that, under the circumstances narrated, the law-breaker would have been turned over to the civil authorities and would have had to expiate his offence by a goodly number of months in jail, suffer the loss of pay and emoluments, and thereafter dishonorably be discharged the service.

Privileges and distinctions of this nature can hardly be regarded as conducive to good order and military discipline. VETERAN.

## THE WASHINGTON-JEFFERSON LETTERS.

TO THE EDITOR OF THE NATION:

SIR: It has been known that, after Washington's death, Tobias Lear permitted Alexander Hamilton to withdraw from his papers certain letters and documents. It was also rumored that Jefferson enjoyed the same privilege and used it to destroy all evidence of an interchange of caustic letters between Washington and himself. At intervals this rumor reappears, with variations and embroideries, and has almost attained the dignity of an historical fact. It is always difficult to treat such elusive matter, for the evidence supporting it is, as a rule, mere hearsay evidence, and yet is attributed to such sources as give it every semblance of truth. It was with pleasure that I found what is perhaps the earliest evidence in writing upon this Jefferson-Washington correspondence. Whatever Custis may have been, he was not a reliable witness on any question concerning his guardian. Weak of will, and possessed of an inordinate vanity, without real ability in any one line, and depending for his position and reputation on his connection with Washington, he babbled and romanced to any one who would listen to him. The solemn assertions in this letter, written to a kinsman, are ludicrous when examined according to the simplest rules of evidence. His promise of a more definite account in his volume on Washington was not kept, for that work is even less full and satisfactory on this point than the letter. In 1854, the chapter as it appears in the memoirs was printed in the *National Intelligencer*. The editor published a short note from Custis, in which he said:

"The story of the Lost Letters of the Rawlins Book I have put off to the last. It is a painful subject to me, but it was a bounden duty upon me, as Washington's Biographer and the last of his domestic family, to place this matter in the only light in which it can ever appear to the world."

The famous letter of Jefferson to Mazzei was first published in Italy, at Florence; a translation into French appeared in the *Moniteur*, and from that paper it was translated into English for the *Minerva*, the Federalist paper at New York, in which it was printed May 14, 1797. So far as is known, no letter passed between Washington and Jefferson after that date. There was too much to be explained on Jefferson's side, and too great sensitiveness and dignity on the part of Washington to make even an inquiry or explanation likely. I was unable to find any evidence in Washington's letter-books of mutilation, and am quite familiar with the books in Rawlins's writing. Now that we have what is intended to be the solemn testimony of one who always claimed to be in possession of the facts of the matter, it is safe to reject the whole story. The narrative of Custis is almost childish in its simplicity, but that is the least of its many weaknesses. He believed his own story, but his own evidence is against him.

WORTHINGTON C. FORD.

BOSTON, July 24, 1902.

---

Arlington House, Oct$^{r}$ 8$^{th}$ 1832.

My D$^{r}$ Sir

Your very interesting Letter of the 25th ult$^{o}$ came duly to hand. Cholera among my people, and myself much indisposed, must plead my excuse for the too long delayed answer.

I have a most vivid recollection of all that happened at Mount Vernon, touching certain Letters supposed to have passed between General Washington, & Mr. Jefferson, subsequent to the famed *Letter to Mazzei*. All the details

you have given of the conversations in the sitting Room, &c., are correct. As relates to myself, over & above my share in the general conversation, I have to observe that Colo. Lear called me into the Hall, and pressing my hand affectionately, remarked with emphasis—The gentlemen are mistaken, I tell you my Dear Washington. THERE WERE LETTERS. He then retired, without entering into explanations respecting the character or tendency of the letters he had thus solemnly declared to have passed between the parties.

Some time afterwards Colo. Lear visited me at Arlington House, previous to his journey to Boston, for embarkation to Algiers. I renewed the subject of the Letters, and pressed the Colo. to enter into the necessary explanations as a mean of healing the breach which had occurred between himself, Dr. Craik, & other of the friends & relatives of Washington. He complained sorely of the coolness, which he had experienced from those with whom he had been in long years of friendship & intimacy, prior to the conversation at Mt. Vernon; declined saying further on the subject of the Letters, but promised that he would write to me on his arrival at Boston. He wrote, but it was simply a most kind & affectionate adieu, and thus the character of the Letters, so far as Colo. Lear was concerned in developing the same, partake of the silence of his untimely grave.

To one who feels the devotional enthusiasm that I do for both men & things of the Revolution, it is with painfull regret that I disturb the ashes of the author of the Declaration of Independence, or of my old Master and early friend, who whatever may have been his faults (if any he had) towards others, was ever most kind to me. But truth my Dear Sir, "is mighty," and should allways prevail. The Lives & actions of distinguished men belong to their countries, and to History. No action in the long & meritorious life of the Great Washington, shuns the light, and the light and truth of History shall still beam upon the long hidden & mysterious affair of *The Letters* if I can dispel the darkness, so help me God, amen.

I am happy that you are about to anticipate my *Private Memoirs of the Life & Character of Washington*. The Public should be put in possession of the facts touching the *Letters*, & no one can doubt that *there were* Letters after the repeated & solemn declarations of Colo. Lear to that effect, to whose sole care was entrusted all the precious deposits of the Cheif, for History. The volumes of his public & private correspondence. Of the character of the Letters we have the evidence of Rawlins, who copied the same under the orders of the Cheif, and here it may be proper to be known, that Albin Rawlins was of respectable birth & connections, in the County of Caroline, State of Virginia, an intelligent, & amiable young man, whose correct moral deportment, pleasing manners, and attention to business, won for him the esteem of the whole Family of Mount Vernon, where he resided several years. Rawlins when questioned, declared that there were *three Letters* on the part of Washington, the first courteous, & a mere letter of enquiry. To this was returned an answer in the usually elegant style of Mr. Jefferson, who was assuredly the most finished epistolary writer of the age in which he flourished. In the second, the old Cheif pressed the Philosopher home, bringing him to the point of guilty or not guilty. The answer was said to be couched in terms of conciliation, spoke *much* of antient friendship, and of the long and happy intercourse & kindly reminiscences of by gone days. The last letter of Washington, to use the words of Rawlins, was awfull, so that R declared, my hand trembled as I wrote it down.

The subject of the Letters will be found at large & treated from facts only, in my *Recollections & Private Memoirs*, of the Life & Character of Washington, a work too long delayed from the American public, which has most kindly received various extracts from it, as published in the papers. My "poverty not my will" has heretofore prevented my visiting Europe, a mission indispensable to the completion of the work, & which I hope at no distant period to be able to accomplish. Enough is now elicited my Dr Sir, to convince the American Public, & the World, that *Letters did pass between Gen'l Washington & Mr Jefferson subsequent to the Letter to Mazzei.* And that the said *Letters of Washington were of no friendly character.*

Ever yrs

George W. P. Custis

P. S. Copy this badly written scrawl.

Addressed: Majr Lawrence Lewis, Audley, near Battle Town, Frederic County, Virginia.

Endorsed: "1832. G. W. P. Custis respecting correspondence between Genl Washington & Thos. Jefferson, confirming what I have stated on several occasions."

# Notes.

A uniform series of reprints of standard historical novels is to be undertaken by Henry Holt & Co., and, "so far as practicable, the series will present a somewhat systematic general view of history"; always with regard to "high literary quality" as well as interest and (the most dubious item of the three) "trustworthiness." Some account of the author and his work will be given.

Houghton, Mifflin & Co. promise for the coming autumn an *édition de luxe* of John Fiske's works; two compilations of Masterpieces of Greek and Latin Literature, respectively, chosen from the most famous English translations; a "Cambridge Edition" of the late Professor Child's 'English and Scotch Popular Ballads,' edited by his daughter, Miss Helen Child, with an introduction by Prof. George L. Kittredge; and 'A Study of Prose Fiction,' by Bliss Perry, editor of the *Atlantic Monthly.*

The late W. E. Channing's 'Thoreau, the Poet-Naturalist,' published by Roberts Brothers in 1873, and long since out of print, is to appear in a new and enlarged edition, edited by his literary exector, Mr. F. B. Sanborn. It will be brought out handsomely in October by Charles E. Goodspeed, Park Street, Boston, in two editions—the more expensive with extra illustrations.

'The Career and Conversation of John Swinton,' a sketch by his friend Robert Waters, will be published next month by the author in West Hoboken, N. J. (Chicago: Charles H. Kerr & Co.).

'De la Formation des Maîtres de l'Enseignement Secondaire à l'Étranger et en France,' par M. Dugard (Paris: Armand Colin), is one of the numerous publications which show how widespread, in all civilized countries, is the feeling of a need of better secondary schools. The author states the problem clearly and treats it in a systematic way. The book may be consulted with interest and profit.

The decline of Spain as a political Power and the loss of its prestige among modern nations in art and literature are now leading many thoughtful and patriotic Spaniards to inquire into the causes of this lamentable decay, and to suggest means of resuscitation and regeneration. Such is the purpose of a work of 207 pages, entitled 'Psicologia del Pueblo Español,' by Professor Altamira, the second volume of the "Biblioteca Moderna de Ciencias Sociales," a series of treatises on sociology now being published in Madrid. The author maintains that this national degeneracy is due not to any defects or incapacities inherent in the race, but to the imperfect development and systematic suppression of the superior qualities with which it is naturally endowed, and that a remedy must be sought in a more careful and general cultivation of the intellectual faculties. The state, under the influence of the Church, has grossly neglected popular education, and in many provinces, in which the public money is lavishly expended for bull-fights, the school-teachers are not paid even their meagre salaries, and are thus reduced to the ignominious choice between starvation and beggary.

The first volume of Dr. Ernst Steinmann's 'Die Sixtinische Kapelle,' just published by Bruckmann in Munich, describes the construction and decoration of this unique specimen of ecclesiastical architecture under Sixtus IV., and is an exceedingly valuable contribution to the history of the Renaissance in the latter half of the fifteenth century from a political as well as from an artistic point of view. The author is a German scholar residing in Rome, who has made a thorough study of the subject, and presents the results of his researches with remarkable completeness and (what is rare in German works of this kind) in a very attractive style. The text is profusely illustrated with excellent reproductions of the architectural details of the edifice and of the paintings of Perugino, Pinturicchio, Botticelli, Ghirlandajo, and other artists. The second and concluding volume will be devoted chiefly to Michelangelo.

"Municipal Socialism," the first title of the Consular Reports for July, is an interesting array of facts relating to the ownership by municipalities in England of public or semi-public enterprises, as street-railways, waterworks, etc., and to the housing of the poor who are dispossessed for sanitary reasons. This is the absorbing problem in Liverpool, which, "it is said, owns more revenue-producing real estate than any other municipality in the world; its income from this source being about half a million dollars a year." The report closes with two observations: "Speaking generally, municipal government in Great Britain is honest, intelligent, and energetic; and, as a rule, politics has but little to do with the engagement or retention of civic employees." The Antwerp Labor Exchange, whose recent opening is chronicled, is an outcome of the great dock strike two years ago. At that time a federation of employers and workmen was formed to protect and develop the interests of the shipping trade. The members, numbering now over 5,000, are "guaranteed an indemnity in case of lack of work, and mutual-benefit associations among the dockers are encouraged. . . . Never has there existed a more complete understanding between masters and men than under these conditions. Day work has now proved so efficacious that the necessity for overtime work has greatly diminished." The Exchange, a workman's club in fact, with lavatories and a dispensary, "furnishes at cost excellent beer, coffee, and tea, but no gin." The lack of forests in China leads our consul at Niuchwang to believe that there will be a permanent and extensive demand in that country for our Pacific Coast lumber. He states

that "probably more wood is used for coffins than for any other purpose."

*East of Asia* is the title of a handsomely printed eighty-page magazine, 11x7 inches in dimensions, issued at Shanghai at the *North China Herald* office, and richly illustrated with reproductions from photographs showing how the Russian, German, and British occupation of parts of China is influencing architecture, the landscape, and the old landmarks. Dr. Arthur H. Smith writes on The New Peking, describing the fortified area of the legation district. Mr. C. F. Voskamp pictures brightly "the story-teller and his methods in China," where every common object grows myth and legend as a moist stone collects moss. Mr. L. Odontins's readable digest in German of the remarkable pamphlet of the reforming Viceroy or governor-general of the two Hu provinces is here put into English from the German. Mrs. Timothy Richards treats with woman's insight of Chinese social customs. There are articles, by competent hands, with reproductions of photographs taken this year, on the German Kiao-chau territory, on Port Arthur, the Russian place of occupation, and on Wei Hai Wei, the British portion; and between text and picture one gets a good idea of contemporaneous northeastern China. The plot of a Chinese play entitled "The Cattle Butcher's Retribution," and a spirited full-page colored print, make up a very attractive magazine interpreting modern China. Most striking of all the numerous illustrations is that of the cutting of the double eagle, with appropriate inscriptions (in both German and Chinese), deep into the face of the natural rock at Tsingtao, on the spot where the first German troop, under the command of Admiral von Diederichs, took possession in 1897.

Strikingly illustrative of the methods and spirit of the rival political parties and leaders in Japan that are to measure their strength at the polls during August, 1902, is the literary magazine the *Waseda Bungaku*. About twenty years ago Count Okuma—incorrigible optimist and "martyr to the cause of the foreigner in Japan," ex-Premier and cabinet officer, who founded and has been for years the leader and oracle of the Progressive party—established the School of Literature, Politics and Law at Waseda, in Tokio. He has made it by his ability and energy a worthy rival, in some respects at least, of the Imperial University. Everything is taught in Japanese by native professors, except English and Chinese. The object is to educate Japanese young men and women thoroughly in the three literatures and languages most needed in this generation. In coöperation with the school is a translation and publishing department—long conducted at a loss, but now more than paying its expenses—which puts the substantial modern literature of many countries (chiefly English, French, and German) into excellent Japanese. Of the several hundred copies of the *Waseda* monthly magazine that have passed under our review, that for June, 1902, is typical. In the list of works noted in this literary digest we find the names of Dicey, Barton ('Semitic Origins'), Dunning ('Political Theories'), Hanna ('The Scotch-Irish'), Brandes, De Nolhac, Helmholt ('Weltgeschichte'), Jacquemot, Kröger, and others, whose works are translated in part or commented upon, besides those by Chinese and Japanese authors. Some of the numbers contain critical articles on Japanese topics—political (but non-partisan), legal, economic, and literary—which are invaluable to the scholar in Japanese. Twenty thousand copies of this literary magazine are distributed monthly.

"Kikuyu," by Major R. Crawshay, the most noteworthy article in the *Geographical Journal* for July, is an account of a district on the Uganda Railway. He draws a most attractive picture of the little villages "with their toy-house-like granaries with tiny conical roofs," surrounded by herds of cattle and flocks of sheep and goats, the men and women at work in the plantations, the boys herding the live stock, the innumerable fires lighted for no other purpose than the companionship of their smoke. The people, an unusually manly and intelligent race, differ from the neighboring tribes in having a patriarchal form of government with graded punishments for various crimes, in their morality, their industry, their trustworthiness, and their splendid physique. They also are exceptional in that "they have none of that wild-beast-like craving for meat for which the majority of African tribes are so famous. . . . They eat no other flesh than that of domestic cattle, sheep, and goats." Their vice is drunkenness. In an account of the recent eruptions in the West Indies, Mr. H. N. Dickson infers, from the reports of earthquakes in April and May in both hemispheres, "probably one of the most profound and widespread disturbances which have affected the earth's crust within historic times." Mr. E. André gives the results of his observations of St. Vincent, in the course of which he says "the whole country looks as if millions of barrels of cement had been emptied over it." Referring to Dr. Sven Hedin's return from "one of the most remarkable and successful expeditions ever undertaken in Central Asia," Sir Clements Markham says that "his maps alone, if spread out, would cover nearly a quarter of a mile." The principal maps, accompanied by notes, are of the glaciers of Kangchenjunga and of Lake Nyasa.

It is nearly a century and a half since Voltaire wrote to Rousseau the letter in which he acknowledges the receipt of the 'Discours sur l'Inégalité' and so wittily defends letters and science against Rousseau's attack. Those who imagine that no such defence is called for in our own day would be surprised at the seriousness and ability with which the German teachers, at their recent meeting in Chemnitz, discussed the subject of "The Importance of Popular Education to the Morality of the People." The proceedings of the meeting of this largest of all teachers' associations—its membership amounts to 85,000—are published in recent numbers of the *Paedagogische Zeitung*, and show that it is still important for the friends of popular education to meet the arguments of its enemies, new and old. The stenographic reports are full of interesting historical facts and well-taken points. We can here mention only the statement of an old prison teacher, who said that, during his twenty-five years of service, he had found that, of all the criminals under his instruction, only one-fourth were in possession of what might be called a satisfactory education.

In Germany even novelists are obliged to be savants. At any rate, one gets that impression on reading about the examination which Paul Heyse passed at the University of Berlin, fifty years ago. Becker questioned him about Romance literature and language, Trendelenburg about Spinoza, Boeckh about Greek literature, conversing with him in Latin, Ranke on the history of Spain and the Crusades, Von Hagen on the history of German poetry. The result of the examination was a "multa cum laude" for Heyse. His dissertation was entitled 'Studia Romanensia,' and the special theses he had to maintain orally related to Goethe's 'Wilhelm Meister,' to Spinoza, and to Michelangelo. What would happen to our American novelists under similar circumstances?

In a recent academical address, Professor Hjelt, Rector of the University of Helsingfors in Finland, gave an interesting account of the education of women in that institution. The first female student was a young girl, who passed the required examination and was matriculated in 1870. A serious obstacle to the movement was a decision made by the Russian Government in 1882 that no woman should be admitted without special permission, in each individual case, from the authorities in St. Petersburg. The result of this bureaucratic regulation was that only seventeen women entered the University during the next eight years. In 1890, men and women were placed on an equal footing in this respect, in consequence of which the number of women applicants rapidly increased, so that till now 749 have pursued their studies at Helsingfors; at present they number 120, and form nearly a fourth of the whole body of students. Professor Hjelt regards coeducation in Helsingfors as a success. The presence of young women in the lecture-rooms has exerted a wholesome influence and promoted the proficiency of the young men in learning. Only two women have studied theology; 7 per cent. have devoted themselves to jurisprudence, 65 per cent. to history and philology, and 28 per cent. to physics and mathematics. The women excel in modern languages, æsthetics, literature, and history; but their average standing in philosophy is not as high as that of the young men. The instances of superiority in mathematics are striking, but exceptional.

A twofold service was rendered to literature by the late Mr. C. Kegan Paul, who will be remembered both as an author and as a publisher. His best-known books were biographical—the 'Life of Godwin,' 'Biographical Sketches,' and 'Memories.' The second of these consisted of a series of valuable critical memoirs of Edward Irving, Keble, Maria Hare, Rowland Williams, Kingsley, George Eliot, and Newman, of most of whom Mr. Kegan Paul had personal knowledge. When the development of his Positivist views—to be succeeded later by submission to the Church of Rome—resulted in the resignation of his position as an Anglican clergyman, he became literary adviser of Mr. Henry S. King, in which capacity he had much to do with the production of the International Scientific Series. Later he associated himself with a son of Archbishop Trench in the purchase of Mr. King's business, and remained the managing director when it was transformed into a company under the name of Kegan Paul, Trench, Trübner & Co. His 'Memories' contains many interesting particu-

lars of his relations with Tennyson, Bagehot, and many other prominent men of letters, as well as some lively recollections of the perils to which a publisher is exposed. On the business, as a whole, however, he pronounces the judgment that, "supposing any one to have the capital and the literary skill, I can imagine no more interesting work."

—The August *Century* has some fifty pages of interesting matter on earthquakes and volcanoes in general, and the Martinique and St. Vincent disasters in particular. The opening paper of the group is by Professor Kemp of Columbia University, who goes extensively into the causes of seismic and volcanic action. This is followed by a vivid description of the Martinique catastrophe in the form of a detailed report to the Bishop of Martinique, absent in Paris at the time, by the Vicar-General of the island, the Very Rev. G. Parel, whose sense of duty to the people under his care freed him of all fear and kept him alert to all that was going on. Another valuable addition to the record was secured for the *Century* by the chaplain of the *Dixie*, in the form of a file of the leading newspaper of St. Pierre, *Les Colonies*, for the week immediately preceding the disaster. Several pages of extracts from this paper are printed, and they warrant the conviction that it was for a time the policy of the editor to belittle the real danger. The St. Vincent disaster is described by two eye-witnesses, Capt. Calder, Chief of Police of St. Vincent, and T. McGregor McDonald, owner of one of the most famous plantations of the island. The group fitly closes with a translation of the two famous letters in which the younger Pliny describes to Tacitus the great eruption of Vesuvius in the year 79. Still further papers are to be added in the September issue. Aside from this collection, the most important feature of the number is "The Tragedy of the Range," Mr. Baker's continuation of his series of papers on the Southwest. It is a story of almost incredible mismanagement and waste of great natural resources, due no more to the folly and ignorance of the immediate agents than to the lack of concern manifested by the legislative and executive departments of the United States Government.

—Martha Baker Dunn, in the August *Atlantic*, writes helpfully of "The Browning Tonic," but the logic of her argument is spoiled in the end by a mistaken application. Courage and endurance are good qualities, and the soldiers in the Cuban war doubtless displayed them in as great a measure as was possible when fighting for a dubious cause; but it does no honor to these qualities to invoke them in behalf of an attitude of silence towards suffering produced, not by the real necessities of warfare, but by the incompetence and dishonesty of officers employed to provide the men in the field with such food, clothing, medical attendance, etc., as will make them most efficient in the work they are set to do. An article on the poetry of Edward Rowland Sill, signed "W. B. P.," might easily be understood as distinctly unfavorable, but is better considered as showing the solid worth of the poet by calling attention to the disadvantages against which his fame is steadily making its way. Verner Z. Reed contributes some entertaining moral and sentimental reflections on the Desert, a subject which has taken a strong hold on the imagination of magazine writers, assisted, no doubt, by the recent volume of Prof. John C. Van Dyke. While Mr. Reed draws from the desert solitude the thought that "whatever is is right," it is the temper of the age to draw from its material unproductiveness the idea that the desert itself is all wrong, and to proceed *vi et armis* to reduce it to cultivation.

—It may seem quixotic to recommend to the "summer reader" any rival to the "superb vitality" of Dorothy Vernon of Haddon Hall; yet if the summer reader has not parted with all his good sense and good taste and his intelligent curiosity as to the human comedy, he may well be allured by a modest and charming volume which has no fault except that it is instructive as well as amusing and entertaining. The title of this, we hardly dare to say, is 'Translations from Lucian,' by Miss Augusta M. Campbell Davidson, M.A. (Longmans, Green & Co.). If Lucian's vogue is on the wane, as Miss Davidson observes, it may be partly because he has been superseded, in a way, by Voltaire; but the Attic sauce with which his dissertations are served up might pique the appetite of the most jaded and indolent mind. The reader who glances into this ancient mirror of a decadent age—if he has a grain of sense and seriousness in his composition—will see in it the reflection of our own times—our fashionable fads and crazes, our scepticism dashed and mingled with the grossest superstition; he will recognize that his own generation consists largely of Lucian's "dead people warmed over," as Dr. Holmes used to say; only the clothes and the scenery are just a little different. We need hardly go back to the memoirs of Mme. Roland to parallel the sycophancy and snobbery and bad manners that are pictured in the sketch of the sorrows and trials of "Paid Companions," nor to a Cagliostro to match the magnificent impudence and world-wide success of that juggler and impostor, Alexander of Abonoteichus, whose astounding career is described in one of these excerpts. As to his dupes, are they not the same people as our neighbors on the next street, if not our own friends and intimates? Besides these lively sketches, Miss Davidson has included "The Sale of Philosophers," "The Orator's Guide," "Hermotimus," the delightful bit of satire and burlesque entitled "Zeus the Tragedian," and also "The True History," a witty and fanciful extravaganza, the precursor of Munchausen, which possibly suggested some ideas for Swift's Gulliver.

—As to the quality of Miss Davidson's translation, there can hardly be two opinions. It is the work, so to speak, of a lady and a scholar—a rather remarkable specimen of well-bred, racy English, which recalls the letters of Dorothy Osborne. It is characterized by ease, urbanity, sprightliness, and an unfailing fluency of idiom without the slightest taint of slang. It reveals great skill and ingenuity in turning the phrases of a highly idiomatic writer so successfully that it reads like an original, not constrained by any foreign mould. It is naturally somewhat free, and occasionally becomes a discreet paraphrase; but it is entirely adequate for the purposes of the public for whom it was designed. We regret that we cannot illustrate these virtues at length; but, as literature, we can commend Miss Davidson's workmanship to the attention of our own Ph.D.'s, masculine and feminine, who are too apt to scorn culture in their wooing of science, and, while learning foreign languages, to forget how to write their own.

—In the *Annales* of the Paris International Congress of 1900 that discussed Comparative History, the report of the fifth section, concerned with the History of Science, contains nothing of greater consequence than one might expect as the printed residuum of such a meeting, after the separate publication of several contributions. The leading spirit of the section was evidently M. Paul Tannery. Heiberg prints for the first time the Greek text of Anatolius on the first ten numbers, a Pythagorean Christian tract by an Alexandrian Peripatetic of the third century. It contains an otherwise unknown fragment of Heraclitus, and has a certain interest as probably representing a lost book of Nicomachus. Several of the longer papers of the volume relate to mediæval medicine and surgery; and there is one by Nicaise on the state of anatomy and physiology at the time of Vesalius and Harvey. Tannery prints nine letters addressed to the celebrated Père Mersenne, who, at the time of Descartes, acted as a medium of scientific intelligence. Sigismund Günther gives an interesting account of the different compromises between Ptolemy and Copernicus that were proposed in the sixteenth and later centuries. In a paper by André Lalande, the pendulum of opinion about Francis Bacon swings to so wide a deflection that Descartes is almost represented to have borrowed from him the idea of explaining all physics on mechanical principles. It is the 'Valerius Terminus' to which appeal is made for support of this. Galitzyne communicates letters and pictorial sketches sent to Catharine II. in 1783 by the Russian Minister in Paris, to inform her about the ballooning exploits of Montgolfier and Charles. There are some interesting papers about Comtism; for the rest, not very much to attract other readers than minute students in special departments of the history of science.

—In the Historical section of the *Annales* the Abbé Pierling investigates a curious incident in the career of the False Dmitri, who, in 1605, after the death of Boris Godunoff, succeeded in imposing himself on Russia as the son of Ivan the Terrible, who had died in 1584. At Cracow, in 1604, the Pretender, in the hands of the Jesuit Sawicki, had professed Catholicism, and abjured the Orthodox faith; he had promised to render Russia Catholic and to lead a crusade against the Turks. To insure the success of his enterprise, however, his apostasy had to be kept secret, and he hoped to procure a papal dispensation to enable him to take, from the Orthodox Patriarch, the communion which was an essential feature of his coronation. Rome delayed, however, and Sawicki was distracted with doubt, both as to this and the complications that would inevitably follow. He consulted the nuncio at Cracow, and the latter referred the question to the Roman Holy Office. Dmitri was crowned July 31, and must have taken the Eucharist from the hand of a heretic (which was unpardonable), while the Inquisition dallied, and it was not until November 5 that it evaded

decision by telling Sawicki that he must consult the canons and act according to his conscience. Then the question presented itself anew, for Dmitri had promised to marry Marina, daughter of George Mniszek, Palatin of Sendomir, a powerful Polish magnate, who had aided his enterprise. She, of course, was a Catholic, and at her coronation she too would be expected to take the sacrament. Mniszek assembled a trio of theologians, who concluded that Dmitri should be urged to omit the communion in the ceremony, and that Rome should be asked to grant a dispensation in view of the enormous advantages anticipated for the Church. On the one hand, Dmitri succeeded in suppressing the communion at the coronation of his bride; on the other, as evasion would no longer serve, the Inquisition again examined the question thoroughly, and in a solemn session held March 2, 1606, under the presidency of Paul V., it decided adversely with but one dissenting vote. In this it proved to be wise, for prolonged dissimulation would have been useless, seeing that Dmitri was put to death on May 17, and with him vanished the dreams of subjecting Russia to the Holy See.

## ROSE'S NAPOLEON I.

*The Life of Napoleon I.* Including new material from the British Official Records. By John Holland Rose, M.A. The Macmillan Co. 1902. 2 vols., pp. 471, 547.

Now that impartiality is looked upon as a prime virtue of the historian, a new field is thrown open to the English biographer. It becomes legitimate for him to write about Napoleon in any one of several forms. If learned, he may prepare a work of erudition for specialists; if well informed, he may dispel many prejudices which still haunt the mind of the general reader; and even if he be a mere bookmaker, he will deserve to escape the reproaches of the reviewer so long as he approaches the subject with a mind unwarped by patriotic prejudice. In the moments which immediately followed his first abdication, Napoleon spoke thus of England. To Caulaincourt he said: "She has done me much harm, doubtless, but I have left in her flanks a poisoned dart. It is I who have made this debt, that will ever burden, if not crush, future generations." A century after the Peace of Amiens that debt has not been paid, and perhaps there will be a survival of rancor in the English heart until the distant day when the nation shall have cleared off the last account which can be laid to the charge of the "Corsican usurper." In the meantime it would be unreasonable to expect from the generality of Englishmen any outburst of hero-worship. Under existing circumstances, the historical spirit wins a notable victory whenever an isolated scholar in Great Britain comes forward to treat the career and character of Napoleon with fairness.

As a mere academic statement, this may sound trite, but it is necessary that some such comment should precede any detailed review of Mr. Rose's work. From a great variety of passages, some general and some minute, one can see how carefully the author has sought to guard against prepossessions of whatever kind. Mr. Fyffe, by the degree of his antagonism to Napoleon, recalls the days of Scott and Alison. Freeman, going farther still, recalls the suggestion which the *Times* made when the *Bellerophon* arrived at Torbay: "The first procedure, we trust, will be a special Commission, or the appointment of a court-martial, to try him for the murder of Capt. Wright." Dr. Fitchett, whose volumes circulate widely, informs us that "Napoleon's amazing success is not explained by his intellectual gifts. His epoch explains his career. An exhausted Revolution needed a military dictator and was certain to crystallize into one. If Napoleon had not played that part, Moreau [*sic*] would, or Hoche, or Bernadotte." Such is the attitude of recent well-known writers in England.

On the contrary, Mr. Rose holds his balance with a firm and even hand. We have mentioned Fyffe, Freeman, and Fitchett. There remain the late Sir John Seeley and Mr. Goldwin Smith, from both of whom Mr. Rose dissociates himself. With a fuller knowledge of Napoleonic literature than has yet been shown by any Englishman, he has a graver sense of the inherent difficulties and a clearer determination to face the thousand problems of fact and motive. While on the one hand he escapes from the bias of inherited antipathy, he succeeds, more conspicuously than Lord Rosebery has done, in keeping his mind free from the overmastery of Napoleon's genius. If Mr. Rose's views have been deeply affected by those of any contemporary, we should venture to conjecture that he has felt the touch of the late Lord Acton, who receives the dedication, and whose article on Napoleon in the second volume of the *English Historical Review* discloses much of the same spirit.

We dilate upon this aspect of the work because, where it is a question of the Reformation, the French Revolution, or Napoleon, everything depends upon the animus, the point of view. Mr. Rose confronts as delicate and hazardous a subject as Dr. Creighton did when he set out to write the history of the Papacy during the period of the Reformation. They are alike, also, in learning and openness of mind. It is therefore interesting to see that Mr. Rose concludes his preface with the following words: "That I have escaped altogether the pitfalls with which the subject abounds is not to be imagined; but I can honestly say, in the words of the late Bishop of London, that 'I have tried to write true history.'"

Napoleon and his age are so important, while among all the books which have been written about them so few are really good, that it is a duty to single out and praise the rare work of merit when it appears. Mr. Rose has won high honor where most fail lamentably or absurdly. Though his special researches may have been less arduous than those of Chuquet and Vandal, of Houssaye and Lumbroso, he has made his original contribution to knowledge of fact, and, by gathering up the results of a thousand monographs into a connected biography, he takes his place beside Fournier. Thus, while he helps to redeem his countrymen from the reproach of having studied Napoleon casually and in a wrong spirit, he has produced a book that will be of great value to all who speak English. It deserves moreover, to be translated into the languages of Continental Europs. We shall not overpraise Mr. Rose by saying that he has produced a Thucydidean classic, or that his view of Napoleon will convert the world. He has written, in the narrative form, at which, he says, history ought always to aim, a learned and thoughtful, a compact yet animated, account of Napoleon's life.

Having thus referred to Mr. Rose's outlook and attainment, we may now pass to the subject of his own independent research. He says in the preface: "I should not have ventured on this great undertaking, had I not been able to contribute something new to Napoleonic literature. During a study of this period for an earlier work ['The Revolutionary and Napoleonic Era'], published in the 'Cambridge Historical Series,' I ascertained the great value of the British Records for the years 1795-1815." Drawing from the War Office and Admiralty Records and from the Foreign-Office Archives, he has carried out an investigation which has already been pursued in the case of Russia, Austria, and Prussia. The importance of this quest for Napoleonic material in British instructions, dispatches, and reports is supported by a passage taken from M. Lévy's 'Napoléon Intime': "The documentary history of the wars of the Empire has not yet been written. To write it accurately, it will be more important thoroughly to know foreign archives than those of France." Mr. Rose's comment upon this quotation runs: "I think that I may claim to have searched all the important parts of our Foreign Office Archives for the years in question, as well as for part of the St. Helena period."

Here no allusion is made to what Mr. Rose has discovered in British state papers regarding the period of the Consulate. Yet, like Mr. Bowman, he has examined the Peace of Amiens in the light of information gained from this source, and he has found something new about the part of British officials in the Royalist Plot of 1804. As the conspiracy of Pichegru and Georges Cadoudal was the immediate means of raising Napoleon to the purple, the incident has some significance of its own, while it illustrates forcibly the First Consul's methods of meeting his enemies, and the mental feebleness of the Addington administration. Mr. Rose calls it "the most famous plot of the century," and the fresh facts which he has established deserve to be selected as an example of his diligence.

During 1803-04 two plots were in progress at the same time. The Comte d'Artois and other leaders of the *émigrés*, with certain allies in France, were seeking to effect the assassination of Napoleon; and he, watching their stupid manœuvres, with all the confidence of superior skill, was trying to enlarge the circle of the conspirators until it should include some of his most formidable opponents. By the help of Mehée de la Touche, a skilful *agent provocateur*, Fouché kept the First Consul informed, "while he also wove his meshes round plotting *émigrés*, English officials, and French generals." What has repeatedly been alleged, on the authority of memoirs and other evidence of varying quality, Mr. Rose now proves from British archives, namely, that British officials were guilty of helping forward Pichegru's scheme. Among the Foreign Office Records there is a letter (August 30, 1803) from the Baron de Roll, a Bourbon emissary, to Mr. Hammond, Permanent Under Secretary of the Foreign Office, asking him to call on the Comte d'Artois

at his residence, No. 46 Baker Street. During October of the same year, a secret memorandum follows, in which the Comte d'Artois reviews Bonaparte's career, showing how, at the present moment, all the leading generals and politicians of France are against him. Active complicity is proved by a document of November 18, wherein is noted the payment made by the British Government to royalist officers "who had set out or were ready to set out." "Another 'most secret' Admiralty letter, of January 9, 1804, orders a frigate or large sloop to be got ready to convey secretly 'an officer of rank and consideration' (probably Pichegru) to the French coast. Wright carried over the conspirators in several parties, until chance threw him into Napoleon's power and consigned him to an ignominious death, probably suicide." Finally, Mr. Arbuthnot, Parliamentary Secretary at the Foreign Office, wrote to Sir Arthur Paget (March 12, 1804) about the "sad result of all our fine projects for the reëstablishment of the Bourbons: . . . we are, of course, greatly apprehensive for poor Moreau's safety."

In view of these facts, Mr. Rose brushes away all ministerial denials. Perhaps it was a plot which embraced young and hot-headed officials rather than the respectable chiefs. Perhaps it may be slightly condoned by a French plot of the same kind against George III. "But," Mr. Rose concludes, "when all is said, the British Government must stand accused of one of the most heinous of crimes. The whole truth was not known at Paris, but it was surmised; and the surmise was sufficient to envenom the whole course of the struggle between England and Napoleon."

When he comes to the wars of the Empire, Mr. Rose is likewise able to increase previous knowledge by details that he has drawn from the British records. These are especially interesting for the war of the Third Coalition, during the course of which Napoleon won such brilliant victories over Continental troops supported by English subsidies. We can hardly say that the new evidence thus gathered will cause many verdicts of history to be reversed, but it is always interesting and often valuable. Napoleon is the subject of the book, not British diplomacy; yet few of the incidental topics are so important as the latter. In the end, after ridiculous inconsistencies, the British Foreign Office came to have a settled policy.

"Nevertheless," says Mr. Rose, "the splendor of the finale must not blind us to the flaccid eccentricities that made British statesmanship the laughing-stock of Europe in 1801-3, 1806-7, and 1809. Indeed, it is questionable whether the renewal of the war between England and Napoleon in 1803 was due more to his innate forcefulness or to the contempt which he felt for the Addington Cabinet. When one also remembers our extraordinary blunders in the War of the Third Coalition, it seems a miracle that the British Empire survived that life-and-death struggle against a man of superhuman genius who was determined to effect its overthrow."

We would not have it inferred from what has been said that Mr. Rose exalts Napoleon's relations with Great Britain above everything else in his career. The duel between the Emperor and England is but one feature, however striking, in an experience of unparalleled activity and diversity. Mr. Rose has studied a particular aspect of the subject more thoroughly than any of his predecessors, and this fact we have sought to bring out. At the same time he writes a remarkably well-modelled biography, in which the English element is given no more than its due share. The first volume closes with the collapse of the Boulogne flotilla; the second extends from the campaign of Ulm and Austerlitz to the last hour at St. Helena. If any period has, of conscious purpose, been treated briefly, it is that which comes between 1809 and 1811, when imperial prestige reached its height. Everything essential has been discussed—origin and training, personal and family relations, wars, political aptitudes, the creation of institutions, contact with the Revolution, effect upon European statecraft, character and genius. These things have been taken up by Mr. Rose, not in a loose and nebulous way, or as affording themes for phrases, but with a sure grasp of fact and in stern subordination to a well-wrought plan. If necessary, he can stop to tell a story, even though the telling occupies a whole page—as in the case where he relates how Joseph and Lucien tried to dissuade Napoleon from parting with Louisiana. The story is a good one, but it is not told merely because it is an amusing anecdote.

In any life of Napoleon war must fill a large share of the space, and for this reason the author is sure to feel at a great disadvantage unless he has received special training in military history. Mr. Rose cannot claim to have the grasp of strategy and tactics which the late Mr. Ropes possessed, and we imagine that he would be the last to suggest such a comparison. He writes of war like the intelligent amateur who, after comparing the judgments of the best experts, has used common sense in reaching a conclusion of his own. The campaigns are fully described and with admirable clearness. Even where a moot point arises, like the share of Augereau in the credit for Castiglione, or the reconstruction of what actually took place at Marengo, or Napoleon's mistake in the disposition of his forces just before the battles of Jena and Auerstädt, Mr. Rose is not afraid to state his opinion, since it has been formed after a careful scrutiny of the evidence.

We shall not try to state in a single word what Mr. Rose's attitude is towards either the genius or the character of Napoleon. These are complex questions which cannot be disposed of with a plain yes or no. But there is one manifest disposition of the writer that can be briefly indicated. Mr. Rose is fond of analysis and the investigation of motives, yet at times he reaches the point where he stops short in a mood of pious agnosticism. For example, he will not decide definitely whether in 1805 Napoleon planned his expedition for Ireland seriously, or whether he simply meant it for a feint while he dealt the chief blow at London.

"Both Nelson and Collingwood believed him to be aiming at Ireland. But Napoleon is often unfathomable. Herein lies much of the charm of Napoleonic studies. He is at once the Achilles, the Mercury, and the Proteus of the modern world. The ease with which his mind grasped all new problems and suddenly concentrated its force on some new plan, may well perplex posterity as it dazed his contemporaries."

And again, after describing the wonderful battles of February, 1814, he says:

"Whatever the mistakes of these leaders, and they were great, there is something that defies analysis in Napoleon's sudden transformation of his beaten, dispirited band into a triumphant array before which four times their numbers sought refuge in retreat. But it is just this transcendent equality that adds a charm to the character and career of Napoleon. Where analysis fails, there genius begins."

Finally, Mr. Rose does not blink the Emperor's shortcomings, but he grows eloquent over his achievements. It is in the following strain that this thorough and mature work closes:

"The man who bridled the Revolution and remoulded the life of France, who laid broad and deep the foundations of a new life in Italy, Switzerland, and Germany, who rolled the West in on the East in the greatest movement known since the crusades, and finally drew the yearning thoughts of myriads to that solitary rock in the South Atlantic, must ever stand in the very forefront of the immortals of human story."

---

*The Service.* By Henry David Thoreau. Edited by F. B. Sanborn. Boston: Charles E. Goodspeed. 1902.

The brief article which Mr. Sanborn has had so handsomely printed (500 copies on French hand-made paper and 20 on Japan), has had a curious and interesting history. It was sent by Thoreau to the *Dial*, bearing the date July, 1840, the same as that of the first number of the *Dial*, in which he made a double appearance, in poetry and in prose. Margaret Fuller, then one of the editors of the *Dial*, turned it over to Emerson, one of her two associates, with a comment intended for Thoreau, which probably he never saw. She found it full of thoughts, but these so out of their natural order that she could not read it without pain.

"It is true," she continued, "as Mr. Emerson says, that essays not to be compared with this have found their way into the *Dial*. But then these were more unassuming in their tone, and have an air of quiet good-breeding which induces us to permit their presence. Yours is so rugged that it ought to be commanding."

Whence it appears that Emerson desired its publication, but, on becoming sole editor of the *Dial*, the courage of his opinion was not equal to the act he had advised. After Emerson's death, the manuscript found its way somehow into Mr. Sanborn's hands, and now the stone which the lapidaries rejected has been set in a manner equal to, if not beyond, its just deserts.

It will add nothing to Thoreau's reputation, but it will furnish the critics of Transcendentalism with one of their most striking illustrations of its occasional extravagance. Here is a kind of writing which makes the most unintelligible passages of the earlier Emerson seem miracles of clarity. Jeremiah Mason would have been twice confounded by it, and hardly could his "gals" have understood it. Here are colors floated off from Emerson's palette, and here are the stiffness and the involution of English prose before Dryden took it in hand. As for the militant rhetoric, Mr. Sanborn considers this a counterblast to the peace sermons that were getting written in 1840 and about that time. One of the most notable of Channing's had appeared in 1839.

The article has a triple division, the first part being headed "Qualities of the Recruit," the second, "What Music Shall We Have?" the third, "Not How Many, but

Where the Enemy Are." There is evidence on every page of Thoreau's familiarity with natural things and with classic literature. But the natural things seem to exist for him only as symbols of spiritual realities, their frank concreteness affording him no such relish as it did further on. That playing upon words and that delight in paradox which were ever his besetting sins, have here some of their grossest exhibitions, and these sins are mingled strangely with some of the rarest virtues of his thought and style. For example:

"They who are alarmed lest virtue should so far demean herself as to be extremely good, have not yet wholly embraced her, but described only a slight arc of a few seconds about her, and from so small and ill-defined a curvature you can calculate no centre whatever; but their mean is no better than meanness, nor their medium than mediocrity."

And this for paradox:

"What shame, then, that our lives, which might so well be the source of planetary motion, and sanction the order of the spheres, should be full of abruptness and angularity so as not to roll nor move majestically!"

There are sentences and passages of singular beauty, and some of great nobility and splendor, while others jostle them that are absurd either in their expression or in their thought, as where Thoreau finds that "the grand and majestic have always somewhat of the undulatoriness of the sphere," and declares that this is "the secret of majesty in the rolling gait of the elephant, and of all grace in action and in art." He instances the great Tippecanoe and Tyler ball which the grave citizens of Concord rolled from the Concord battle-ground to Bunker Hill. "I seem," he says, "to discover each striving to imitate its gait and keep step with it, if possible to swell to its own diameter." Doubtless Van Buren Democrats, witnessing the same phenomena, gave them a different interpretation, fancying an excessive use of the hard cider of that silliest of all political campaigns. But the main intent is admirable—a variant of Emerson's self-reliance and Channing's greatness of the soul—and there is much striking illustration.

"A man's life," we read, "should be a stately march to an unheard music; and when to its fellows it may seem irregular and inharmonious, he will be stepping to a livelier measure which only his nicer ear can detect. There will be no halt, ever, but at most a marching on his post, or such a pause as is richer than any sounds, when the deeper melody is no longer heard, but implicitly consented to with the whole life and being. He will never take a false step, even in the most arduous circumstances; for then the music will not fail to swell into greater volume, and rule the movement it inspired."

---

*With the Wild Geese.* By Emily Lawless. With an Introduction by Stopford A. Brooke, M.A. London: Isbister & Co. Pp. xxvi, 95.

Miss Lawless is rightly esteemed one of the best authors of modern Irish fiction, if not the best. She here appears as a poet. The contents of this volume have, it appears, already been handed around in privately printed form. It is due to Mr. Brooke's persuasion that they are now given to the public, upon condition that he "would write a preface to them which should explain certain matters—among the rest the title of the book—to those English readers to whom Irish history is an unknown wilderness." The preface is not only an explanation necessary for such readers, but a warm appreciation of the work.

"Wild Geese" is the name given to those Irish exiles who, "like the wild birds and with their wailing cry, migrated to the Continent before and after the battle of Aughrim and the surrender of Limerick in 1691." Between that date and 1745, 150,000 Irishmen are said to have died in the service of France alone. Others fought for Spain and Austria.

"No words that I have read," says Mr. Brooke, "have realized with more insight and sympathy the temper of these daring, high-bred, honorable, reckless, and sorrowful men than those with which Miss Lawless has clothed the bitterness of their exile, their passion for fighting, and their longing for their native land."

Besides a fine prefatory address to the Atlantic, laving the shores from which most of the "wild geese" took flight, we are given eight poems on the author's main theme, two dirges on the Desmond War, six themes suggested by life in the Aran Islands, and five miscellaneous pieces. The intensity of feeling and passion in many of these will, at least to those who have felt deeply about Ireland, suggest the spirit running through 'Childe Harold.' The collection opens with a poem of seven stanzas entitled "After Aughrim," in which Ireland is supposed to speak:

"She said, 'They gave me of their best,
They lived, they gave their lives for me;
I tossed them to the howling waste,
And flung them to the foaming sea.'
. . . . . .
"She said, 'Ten times they fought for me,
Ten times they strove with might and main,
Ten times I saw them beaten down,
Ten times they rose, and fought again.'
. . . . . .
"She said, 'God knows they owe me nought,
I tossed them to the foaming sea,
I tossed them to the howling waste,
*Yet still their love comes home to me.*'"

Two poems are entitled "Fontenoy"—one describing the joy of the weary Irish soldiers at the prospect of engaging their English foes; the other the weird return to Ireland of the spirit of the victorious dead:

"*Jesus save you gently! why are ye so white*
*Sitting all so straight and still in this misty light?*"
"Nothing ails us, brother; joyous souls are we,
Sailing home together on the morning sea."

A lovely address, "To a Tuft of White Bog-Cotton, Growing in the Tyrol," is in a different strain from most of the other pieces. We quote the first of the seven stanzas:

"And is it *thou*, small playmate of the fens,
Child of damp haunts and pallid sea-borne fogs,
Light flutterer over dank and oozy glens,
White-tufted, starry friend of Irish bogs!
What dost *thou*, tossed upon this mountain here,
Flaunting thy white crest in this alien air?
Thy little pennon swelled by this loud breeze
Far out of reach of every low compeer;
Far from thy barren moor lands, waste and bare,
And distant moan of sullen Celtic seas."

The last piece closes with the hope of Ireland's future:

"I see her in those coming days,
Still young, still gay; her unbound hair
Crowned with a crown of starlike rays,
Serenely fair.
I see an envied haunt of peace,
Calm and untouched; remote from roar,
Where wearied men may from their burdens cease
On a still shore."

We are mistaken if this volume, attractive in its typography as in its contents, be not destined to take a permanent place on the bookshelves of lovers of Ireland.

---

*Forest Neighbors.* By William Davenport Hulbert. McClure, Phillips & Co.

Biographies of a beaver, a brook trout, a lynx, a porcupine, a loon, and a deer make up this book. Though the author vouches for some of the incidents, he does not say that he has drawn his material from the life of any particular animal which he has known, or that he has made a composite sketch of several such lives; he appears, rather, to have combined experiences common or possible to the kind in a bit of clever fiction that does not contradict scientific truth. The book gives evidence of reading and observation joined with marked perception of the conditions of an animal's life, and considerable skill in portraying them. Even the seasoned reader of nature stories gets here a fresh realization of the animal's struggle for existence, in which it must hold out against hunger, accident, disease, the rivalry of its own species, and the violence of predatory animals and hostile man. The pain and fear of the trapped creature come home to one sharply in the stories of the beaver and the lynx. Without sermonizing, the book quickens sympathy and makes cruelty hateful. "The King of the Trout Stream" contains good work in embryology, and is perhaps the best illustration of the author's knowledge of natural history and his ability to show the interesting side of even an unpromising subject. "The Making of a Glimmerglass Buck" is the most dramatic of the stories. It ends with an unusual incident:

"As he [the buck] neared the spring, treading noiselessly on the soft moss, he heard two little clicks, and stopped short to see what they meant. Both were quick and sharp, and both had come exactly at the same instant; yet they were not quite alike, for one had come from the shutter of a camera, and one from the lock of a rifle. Across the salt lick a photographer and a hunter were facing each other in the darkness, and each saw the gleam of the other's eyes and took him for a deer. . . .

"The buck stood and watched, and suddenly there came two bursts of flame—one of them so big and bright that it lit the woods like sheet-lightning. . . . The flash-light printed on the sensitive plate a picture of a hunter in the act of firing, and the rifle sent a bullet straight through the photographer's forehead. The buck saw it all as in a dream—the white flame of the magnesium powder; the rifle belching out its fire and smoke; the camera, silent and harmless, but working just as surely; the two men, each straining his eyes for a sight of the game; the water gleaming in the fierce light, and the dark ranks of cedars all around."

---

*Topical Architecture:* A Library of Classified Architectural Motives and Details. Edited by William Rotch Ware, Fellow of the Boston Society of Architects. Boston: American Architect and Building News Company. Renaissance Doorways: Italian, I. (1901). Door and Window Grilles in Bronze and Iron, I. (1902).

Two parts have reached us of the above work, but there is no statement as to whether these are Parts I. and II. of the whole work, or whether others have appeared already. We are therefore unable to inform the reader how far this work may be expected to go. Each volume before us is a collection of plates without text, and with legends merely sufficient to give locality, name of building, and sometimes date or approximate date. Thus, we have, "Doorway leading to the Sacristy, Badia di Fiesole. [1462.] Brunelleschi, Architect," and, in another case, "Doorway to the

Palazzo Brignole, Genoa. Galeazzo Alessi, Architect"; the first of the plates so named being a half-tone print, the second a reproduction from a print in line and credited to the *Revue Générale de l'Architecture*. Some of the doorways are shown in full front—that is, in photographs taken exactly opposite the axis of the design, or by reproduction from elevation drawings; others, though probably the minority, are very picturesque drawings made in the artistic way, or, if wholly photographic, then from a point of view which gives more interesting results. It is, however, with deliberate purpose, no doubt, that the more formal way of presentation is chosen. The chief utility of such books as these is to draughtsmen in offices, nor can there be any doubt that those gentlemen prefer the front view, upon which they can apply their dividers without the trouble of making mental calculations as to the true significance of the details before them.

In what we have said, we have dealt only with the book on doorways. The metal gratings show a more diversified scheme, for some of them are modern and some are ancient; some are on a large scale, and occasionally there are two or even five in a plate; some are in pure photography, and others are photographic copies from outline prints. It need hardly be explained that some of the pieces are very commonplace indeed. Fortunately, it is also true that some there are which have a peculiar charm, and even the great merit of being well and originally designed light metal work.

It is right to say of the books that, although there is no text, there is a two-fold table of contents; the one part managed as an index by location (as Berlin, Prussia, with two specimens; London, England, with four; New York, with perhaps thirty), and the other an index by authorship—that is to say, by the names of the architects who are the designers (as Clinton & Russell with five plates; McKim, Mead & White with five plates; the majority with one plate each). We have tried to describe exactly these books for the benefit of possible purchasers, and the description of a folio of miscellaneous examples hardly allows of much enthusiastic praise. It is quite evident that the books will be of great value for those to whose use they are especially devoted.

---

*Les Syndicats Industriels de Producteurs en France et à l'Etranger.* Par Paul de Rousiers. Paris: Armand Colin. 1901. Pp. viii, 290.

The author of this volume is well known in France as a student of American and English industrial conditions, for he has already published several trustworthy works in that field. The present one is a comparative study of industrial combinations, and is divided into three roughly equal parts, dealing respectively with the United States, Germany, and France. M. de Rousiers investigated our own Trusts during a visit to this country in 1896. During 1899 and 1900, he examined German combinations, and, in 1901, studied the French selling-pools. In discussing industrial development outside his own country, he is probably better informed than most foreigners who have taken up the subject, and his work is entitled to respect, although every one who reads it is likely to feel that it is more instructive upon foreign conditions than upon those prevailing in the reader's own country. We think that this is particularly true of the sections relating to the United States. M. de Rousiers has availed himself of most of the recent sources of information, like the work of the Industrial Commission, and has read all the recent books on the subject—such as those of Jenks, Ely, and others. Despite this careful study, he sometimes strays rather far away from his material. The discussions of French and German conditions give the same impression. As a whole, the volume is distinctly sketchy.

M. de Rousiers analyzes the nature and organization of the principal combinations in the three countries of which he treats. He finds that the chief differences between them lie in the extent to which industries have been concentrated, and in the degree of ruthlessness with which consolidation has been brought about. The United States is regarded as the extreme type of concentration in industry. Its Trusts have been formed for the sake of industrial domination; their managers have not hesitated to trample rivals under foot, and the private ownership of railways has enabled large producers to get illegitimate advantage in the shape of discriminating freight rates. Conditions in Germany have been less trying for the small producer. While it is true that the principle of monopoly has been recognized by the Government, some Trusts being directly supported by it, there has been far less effort to exclude the small manufacturer from the market. The consolidations have been unions of producers at the expense of the consuming class, and their main end has been to limit output and so maintain prices at a point that may be profitable for all. In France, most combinations have aimed simply at certain economies of production and distribution and at an equitable division of business. In all three countries, however, M. de Rousiers recognizes the existence of certain tariff Trusts which control special lines of production through Government favor, without any of the reasons for existence that prevail in other industries.

The author is weakest when he deals with the combinations from a theoretical standpoint. The only explanation of the existence of the Trust that he gives is that "industrial and commercial concentration, necessitated by modern economic evolution, compels those who are engaged in industry to draw closer and to unite their efforts in order to rise superior to new tendencies." As Gen. Walker once said, "Some evolutionists ought to be hanged." What is needed in the discussion of the Trust problem is not a mere reference to evolution as the "cause" of the Trust, but some clear indication of the industrial result to be expected from the combinations and of the changes they are likely to introduce into economic theory. About all that M. de Rousiers has to offer on this aspect of the question is the well-worn observation that the combinations do no harm so long as they confine themselves to industrial affairs and hold aloof from political activity.

---

*Prisoners of Russia.* By Benjamin Howard, M.A., M.D., etc. D. Appleton & Co. 1902.

Those who, some five or six years ago, in this city, heard the late Dr. Howard lecture on his "personal study of convict life in Sakhalin and Siberia," or have read the lecture in the Proceedings of the American Geographical Society, are already acquainted with the admirable spirit of fairness, sympathy, and common sense which distinguishes this volume from many others on allied subjects. Dr. Howard's long familiarity with prison problems in other countries also rendered him eminently qualified to pronounce with authority on the merits and demerits of the Russian exile system, which is seen in its worst representatives in Sakhalin, to which this work is mainly devoted. He, in common with some of Great Britain's Fenian ex-prisoners (whose comments on this subject we printed a number of years ago), regards the Russian system, with its principle of making use of the criminal for the good of the State, allowing him comparative freedom and exercise, with the ultimate prospect of a free life, as infinitely superior to any system in vogue in other lands. He makes a strong argument from the conditions formerly prevailing in Australia, and the effect upon the moral character of prisoners in somewhat similar circumstances. There is some repetition on this point and a few others, indicating that his chapters originally figured as separate lectures or articles.

Revision in this respect, and in regard to the Russian quoted, would have improved the volume as to literary quality and accuracy. The author also falls into errors when he makes statements about the rites of the Eastern Catholic Church, such as, that the children receive the Holy Communion in advance of the priests; that little white loaves, with spear-shaped incisions, are purchased after the morning service by the congregation at will; that it is a rare and unusual thing (so much so that he had never met a foreigner who had had the experience) to see the various services connected with baptism, chrismation, and ablution on the eighth day, "all, and in their proper order of succession, on a single occasion," together with the "Prayers for a Woman on the Fortieth Day after the Birth of a Child" (corresponding to the "Thanksgiving of Women after Child-birth" in the Anglican-Episcopal Church); and, most astounding of all, that the "Athanasian Creed, according exactly to the English version," is recited during one of these services. As to these statements, it may be said that the Athanasian Creed is absolutely unknown, in any form whatever, to the Eastern Catholic Church, the sole one in use being that of Nicea-Constantinople; that the priests invariably communicate first, although in some places (chiefly in the Greek branch) children under seven years of age are given the bread and wine before consecration, which is probably what Dr. Howard saw; and that the first three rites above mentioned, originally separate, are now performed in immediate succession, and can be seen almost any Sunday in the year, even in the Russian churches in various American cities; while the last is equally frequent, though not generally performed at the conclusion of the others. The little loaves, moreover, have been purchased before the service (not at the end), and spear-shaped particles

have been removed by the priest in the sanctuary, accompanied by prayers for the health of the living or the repose of the dead persons indicated by the purchasers, who merely receive back their loaves at the end of the service. Hence, Dr. Howard here misses the import of the custom as well.

Dr. Howard is under the impression that no work exists, in any language, on the subject of Sakhalin, by any person who has ever actually lived there. In this he is mistaken; a fine one does exist, by a "political," who lived there for years, and who even sets forth, in plain language, the affair at Onor to which Dr. Howard alludes by a quotation from an English newspaper of 1892. He is also mistaken—obviously so, in the light of this last fact cited—in his remark: "As the result of my inquiries, not only in Sakhalin itself, but in various parts of Russia as well, I came to think that it is rather the policy of the Russian Government to discourage any definite information about Sakhalin from reaching the Russian people"—and so forth. Yet the ex-political's book above mentioned was licensed, pictures and all, by the censor!

On the whole, however, Dr. Howard's book should be read by every person who is interested in Russia, or in prison problems (and he makes valuable suggestions on other points as well). It is delightful in style, and inspires one with a high and affectionate regard for the man who could write such an impartial, eminently practical work.

---

*Tetraeuangelium sanctum juxta simplicem Syrorum versionem ad fidem codicum, massoræ, editionum denuo recognitum.* Oxford: Clarendon Press; New York: H. Frowde. Pp. xvi, 608.

The *editio princeps* of the New Testament in Syriac appeared at Vienna in 1555. Less than forty years had passed since the *editio princeps* of the Greek text had seen the light; now this new venture came to add its element to the breaking up of old things which Erasmus had wrought. The unmatched authority of the Vulgate had been blown down the wind; was the Greek original in its turn to yield to something still more original? That Widmanstadt, the editor of the Syriac, had any clear idea on this may not be certain; it is certain from his rambling preface, full of strange learning mixed with personal history, that he felt himself launching out on an unknown sea of vague possibilities. He did not belong to the first fresh dawn of humanism, either Latin or Greek, but to that later time when the world was opening east and west, and the Orient was beginning again to pour its treasures on Europe. The place of Greek fugitives as teachers of new lore was taken for him by Syrian Christians in the schools at Rome. Names on his lips are those of Magellan, Reuchlin, Ximenes, Pico de Mirandola, Leo Africanus—above all, Theseus Ambrosius, the first of Syriac scholars in Europe. Of his meeting with the last and the inspiration gained from him for this edition, he gives a vivid account. It was the Oriental renaissance. And thus it is not strange that the conception of Syriac as the native tongue of Jesus should have haunted him; so he had learned to think of it from his Maronite teachers. He had clearly grasped the modern position that a sound exegesis and understanding of the Gospels must be based on an appreciation of the fact that their ultimate sources, written or oral, were Aramaic; that the life in them had been lived in an Aramaic atmosphere.

The *editio princeps* was followed by others in rapid succession; there were at least seven more in the sixteenth century. But neither then nor until now was there one which could claim to present a new and critical text. The sources of the editions of Urmia and Mosul, which came closest to this, were unknown, and these editions could rank only as single and probably good MSS. To all appearance, the Widmanstadt text had come to be regarded as a sufficiently faithful reproduction of the original Peshita, the accepted version of the ancient Syriac Church.

It took the great critical controversy over the Greek text itself, which culminated in the edition of Westcott and Hort, to shake this trust. The Syriac accepted text agreed most closely with the "received" Greek text, and disagreed most strikingly with the now reconstructed critical text. Did, then, this Syriac text actually represent the text received by the Syriac Church in the fourth century and earlier, or had it been corrupted in process of time as was alleged to have befallen the Greek text? So stood the problem. The defenders of the *textus receptus*, notably Dean Burgon, buttressed themselves with the Syriac, and branded the Westcott and Hort text as the most corrupt ever printed. To maintain this position and to resolve the question, an elaborate critical edition of the Gospels was planned by the late Philip Edward Pusey. He had collated many MSS. and collected much material when, in 1880, his lamented death intervened. Thereafter the work was taken up by the present editor, George Henry Gwilliam. He has made use of forty-one MSS., ranging from copies of the fifth century down, of the Urmia edition and of the Nestorian Massoretic MSS. His result, which can hardly be impugned, may be given in his own words: "We can demonstrate that the Peshitto version of the Gospels has not been corrupted in later times; but, on the contrary, that whatsoever variations it exhibits from the Greek, date from a most remote antiquity. Our authorities are products of both the great schools of Syriac Christianity, while our most ancient copies connect our readings with those of the undivided Syriac Church." The fixed fact, then, appears to be that the Syriac version crystallized much earlier than did the Greek text, and, since that crystallization, has been handed on with a unity of recension which reminds most of all of the Massoretic text of the Old Testament; further, that this crystallized form, existing certainly in the fifth century, was in close agreement with the Greek *textus receptus*. Mr. Gwilliam would be inclined to go much further, but so far there can be no disputing his results.

Yet this simply raises new problems. We have now got the ecclesiastical text of the ancient Syriac Church. What relation does it bear to the Curetonian MS., to the Sinaitic MS., to the version used by Aphraates, to the old Latin version, and to the Codex Bezæ? Here be questions! The fountains of the great deep, which were thought effectively and finally sealed by Westcott and Hort, are broken up again, and those who followed in the forlorn hope of Dean Burgon are meeting with their reward. It may not turn out to be precisely what they expect or want, but it was no mare's-nest which they found.

Of Mr. Gwilliam's present edition it is hard to speak in other terms than of the most absolute praise. He has executed his task admirably, and it is in the hope that he is now at work on the remainder of the New Testament that we would venture the following criticisms. The Latin version—added for the benefit of theologians who do not know Syriac, and of these there should be none—is too literal. It will often mislead the non-Syriac reader as to what the Syriac really means. Next, the chapters should be indicated on each page; at present, only luck or patience enables the reader to find his place. Again, the proof-reading of the Syriac could be more careful. But that is a thorny subject; in proof-reading the heart knoweth its own bitterness. The annotations, too, contain an excellent *apparatus criticus*, but there is also in them a number of notes, grammatical and otherwise, which would perhaps be better away. The user of this edition may be presumed to know his Syriac grammar and such matters as differences of spelling between Jacobites and Nestorians. But all these are little things, and we leave this edition with an expression of renewed hope that it may soon be completed.

# The Nation

VOL. LXXV—NO. 1937. THURSDAY, AUGUST 14, 1902. PRICE TEN CENTS.

**Oddest among all odd books is THE STORY OF A STRANGE CAREER. Being the Autobiography of a Convict. It is an authentic document, edited by Stanley Waterloo. The author was a criminal, serving a term in a Western penitentiary. Although of good family and education, he was nevertheless a degenerate, swerving naturally into the downward path. He gives many graphic and interesting descriptions of his adventures on a whaler in South America; on a British man-of-war; in the American navy; at Fort Fisher; in Confederate prisons during the civil war; and in the New York draft riots. It is a strong and rugged picture of the life of a "Soldier of Fortune." (12mo, Cloth, $1.20 net; postage, 12 cents additional.)**

**London critics have agreed that Gilbert Parker's place among living novelists is in the front rank; King Edward has recognized his genius by investing him with the honors of knighthood; the American press declares his popularity permanent; therefore his forthcoming work DONOVAN PASHA and Some People of Egypt, is the work of a master and bears the impress of a master's hand. Ready in September. (12mo, Cloth. Colored Frontispiece, $1.50.)**

**The *Boston Transcript* says "the TOWN AND COUNTRY LIBRARY has come to be the hall mark of good reading, insomuch that any book which bears the now familiar label can be opened with a certainty of satisfaction." Nor need anything more than this unsolicited statement be said of the new volume (No. 315) entitled TALES ABOUT TEMPERAMENTS, by John Oliver Hobbes. Both the author and the publication are a guaranty of superior work. (Cloth, $1.00; paper, 50 cents.)**

By GERTRUDE ATHERTON

**Cloth, $1.50**

Dr. Nicoll, the eminent English critic, said: "Gertrude Atherton is the ablest woman writer of fiction now living." Shortly before his death Harold Frederic declared her to be the only woman in contemporary literature who knew how to write a novel. "Certainly this country has produced no woman writer who approaches Mrs. Atherton," writes a Boston critic, while in San Francisco another calls it "One of the most fascinating and in some respects the most unusual book ever written by a woman."

## OLDFIELD

A KENTUCKY TALE OF THE LAST CENTURY

By NANCY HUSTON BANKS

Cloth. $1.50

"A picture which will rank with some of the best done by James Lane Allen."
—*Republic*, St. Louis.

"American literature has nothing else quite like this exquisite village idyl, . . . 'Cranford' defines the book's atmosphere, but this is a Kentucky Cranford."
—*Boston Budget.*

## THE LATE RETURNING

By MARGERY WILLIAMS

**Cloth, $1.25**

"Its scenes and incidents are sketched with as firm and true a touch as Richard Harding Davis has given to some of his best work."—*Milwaukee Sentinel.*

## DOROTHY VERNON OF HADDON HALL

*In its second hundred thousand.* By CHARLES MAJOR Illustrated by HOWARD C. CHRISTY

"The most spirited, dashing and entertaining romance written in some time."—*Albany Argus.*

*Each in decorated cloth covers, 12mo,* **$1.50.**

# *Important Miscellaneous Books*

## THE STORY OF THE MORMONS

By WILLIAM ALEXANDER LINN

*Sometime Editor of The Evening Post, New York.*

Cloth, 12mo, **$4.00** *net* (postage, 21 cts.).

"The one comprehensive history of the Mormons which can be accepted as unbiassed and accurate."—*Baltimore Sun.*

"Mr. Linn's history is likely to be the standard for years to come."—*The New York Sun.*

## DEVELOPMENT AND EVOLUTION

INCLUDING PSYCHO-PHYSICAL EVOLUTION, EVOLUTION BY ORTHOPHASY, AND THE THEORY OF GENETIC MODES.

By JAMES MARK BALDWIN, Ph.D.

*Stuart Professor, Princeton Univers ty.*

Cloth, 8vo, **$2.60** *net* (postage 15c).

By the author of the well-known volumes on **Mental Development, Methods and Processes** and **Social and Ethical Interpretations.**

## THE PHILOSOPHY OF THE CHRISTIAN RELIGION

By ANDREW MARTIN FAIRBAIRN, M.A., D. D.

*Principal of Mansfield College, Oxford, Author of "Studies in the Philosophy of Religion," "Christ in Modern Theology," etc.*

Cloth, 8vo, 583 pp., gilt tops, **$3.50** *net*
(Postage 25 cts.)

# *The American Sportsman's Library*

Edited by CASPAR WHITNEY.
Gilt tops, crown 8vo.
**$2.00 net, each.**

## THE DEER FAMILY

By the Hon. THEODORE ROOSEVELT, T. S. VAN DYKE, D. G. ELLIOT, and A. J. STONE. Illustrated by CARL RUNGIUS. With Maps by Dr. C. HART MERRIAM.

## UPLAND GAME BIRDS

By EDWIN SANDYS and T. S. VAN DYKE. Illustrated by LOUIS AGASSIZ FUERTES, A. B. FROST, J. O. NUGENT, and others.

## SALMON AND TROUT

By DEAN SAGE, WILLIAM C. HARRIS, and C. H. TOWNSEND. Illustrated by A. B. FROST and others.

*Limited edition, half levant, 8vo, Van Gelder hand-made paper,* **$7.50** *net per vol. (sets only).*

*Books published at* NET *prices are sold by booksellers everywhere at the advertised* NET *prices. When delivered from the publishers, carriage, either postage or expressage, is an extra charge.*

**THE MACMILLAN COMPANY** 66 FIFTH AVENUE NEW YORK

# The Nation.

*NEW YORK, THURSDAY, AUGUST* 14, 1902.

## The Week.

Mr. Bryan's explicit declaration, at last, that he will not be a candidate for the Presidency in 1904, should be worth thousands of votes for Democratic Congressmen next November. Many who are desirous of recording at the polls a verdict against the Republican party, have been hesitating through fear lest they might seem to be endorsing Bryanism. They are anxious to express their disgust and resentment at the betrayal of Cuba, at the refusal to amend an iniquitous tariff, and at the other misdemeanors of the Republicans, but have been debating whether, after all, a vote which might be construed as in favor of Bryan would not be the chief of political sins. But now he has definitely taken himself out of the running. He has not done it voluntarily or gracefully, nor do we doubt that he would proclaim his ambition again if he saw any hope that it might be gratified. It has, however, been demonstrated to him that he is in a hopeless minority. With State after State turning against him, it is evident that he would cut a most pitiable figure in a contest for the nomination. Se he withdraws betimes; and the disappearance of no candidate could mean so great and immediate an advantage to his party.

---

It is encouraging that the first Democratic Congressional convention to meet in New Jersey this year should have cut loose from Bryanism and adopted a platform which concerns the issues of the present day. It is the district which, under the new apportionment, is composed of Warren, Morris, and Union Counties, and the candidate is De Witt C. Flanagan. The platform "reaffirms," not the Kansas City, free-silver deliverance, but allegiance to the "true principles of the Democratic party as enunciated by Jefferson." It condemns the gerrymander of Congressional districts by the Republican Legislature; calls for a reform in the rules of the national House, so that it may become a representative body; and pledges resistance to the Ship-Subsidy Bill. The Philippine question is treated as not a sharp issue between parties at present, the resolutions affirming only that the situation "demands radical remedy," and pledging the nominee to "support such legislation as will bring about the betterment of these poor people," without any specification of what such legislation ought to be. Chief stress is laid upon the tariff question, and, among the declarations on this subject, we read: "The tariff law that enables special industries to control both production and output of necessities of life, should be removed so as to enable open and fair competition; and it is overwhelmingly agreed by the American people that the reduction of the duty upon articles the manufacture and production of which is effectually monopolized, should be made." From first to last, the whole disastrous history of Democracy since 1896 is ignored, and the unspoken demand is for a new national leadership of the party.

---

One of the beneficial results of leadership by such men as ex-Gov. Pattison of Pennsylvania is shown in the efforts now making by the Democratic organization in Philadelphia to purge the voting lists of names illegally placed there. Before the ex-Governor became active in the local organization work at Philadelphia, the men who called themselves Democratic leaders in many of the districts were in fact Quay men in disguise. They were in many cases publicly known as "Quay Democrats." Mr. Pattison's first efforts to break up this system caused a great commotion, and he was finally obliged to resign the chairmanship of the City Committee, which he had assumed in order to reorganize the party machinery, if possible. But his interest did not end with his resignation, and, with the aid of a reorganization committee, he was able to begin the work of remodelling the organization. All this happened a year ago. Now, although a candidate for Governor, Mr. Pattison's powerful influence is still being used to break up the Democratic alliance with Quay in Philadelphia. The chief object of this alliance is the perpetuation of election frauds, by which thousands of illegal votes may be counted for the Republican candidates. If these frauds can be checked this year, one great obstacle to reform in Pennsylvania's political condition will have been removed.

---

Perhaps Judge Pennypacker of Pennsylvania counted the cost, and thoroughly understood what he was doing, when he consented to represent Virtue on the Quay ticket, but if not, his present experiences are likely to prove more or less uncomfortable. His latest trouble is the threat of the organization leaders of Allegheny County to drop his name from the head of the regular ticket there if he accepts the nomination which has been tendered him by the citizens' organization. This was formed for the purpose of destroying the rule in Pittsburgh of the State-house ring. The purpose of the citizens' movement is purely local. It is participated in by both Republicans and Democrats, and is much the same combination which won a notable victory in the local election last February. It has been decided, for purposes of expediency, to place the Republican nominees for State offices at the head of the fusion anti-machine ticket, and the consent of Judge Pennypacker has therefore been sought. Just how the Republican candidate can refuse this endorsement it is difficult to see. In view of his relations with Quay, and Quay's present agreement with the Harrisburg leaders, it is also difficult to see how Judge Pennypacker can justify to his new intimates an acceptance which he can scarcely avoid.

---

Senator Hanna explains that it was all a joke. It was also the stupid reporters again. They have small sense of humor, and they are compelled to "condense" so much that it is no wonder they gave the country the impression that he said at Urbana, on August 6, he was going to resign from the Senate in order to wreak himself upon the labor movement. To remove all misunderstandings of that sort, the Senator now declares explicitly that he has "never given a thought" to leaving the Senate. He also takes occasion to contradict the rumor that he means to give up the chairmanship of the National Committee. All that he has he intends to hold, and he again strangely omits to state that he has no ambition for the Presidency. His friends are saying to him, as Rufus Choate said to Sumner when the latter was elected Senator from Massachusetts, "Glamis thou art, and Cawdor, and shalt be——?" And Macbeth Hanna smiles and does not say them nay, and turns with renewed ardor to his beloved workingmen.

---

Michigan is one of the States where there is a growing sentiment in favor of trying the experiment of a primary election law, which impresses many people at first thought as promising entire relief from the evils of the caucus and convention system, and the Democrats are doubtless shrewd in making this one of their issues. Local self-government is another important plank, the Republicans of late years having been great offenders in ruling cities from the State capital. There is an earnest demand for equal taxation and equal assessments, and a vigorous condemnation of legislative extravagance, with an endorsement of the initiative and referendum, as well as of municipal ownership of public utilities. Barring these last two planks, which it considers "a harmless concession to the newer school of political faddists," the Detroit *Free Press*, the independent Democratic newspaper of Michigan, ventures the opinion that the platform expresses the sentiments of 90 per

cent. of the voters of the State, whether they are Democrats or Republicans, although it does not claim that the platform and ticket will command the support at the polls of even 50 per cent. of the voters. Whatever the result on election day, however, it will do the commonwealth a deal of good to have such vital questions talked over and thought about.

---

Whatever may be the final result of the agitation in the Northern States for the direct primary, it is almost certain that the primary system which has long been in vogue in some of the Southern States, will soon be the rule everywhere below the Potomac and the Ohio. This system is quite different from that known in the North as the direct primary. The candidates go about together, conducting joint debates at every stopping-place; and when the primary voting takes place, it has most of the characteristics of an actual election. As almost all of the white voters belong to the one party, there is little danger of manipulation across party lines. The formal election which comes later is an affair of much less importance than the primary. Louisiana is now in the midst of an agitation to secure the establishment of this system. Florida adopted it two years ago, and of the result Gov. Jennings said recently: "We would not go back to the convention system for anything. It does not cost any more to be a candidate for office under the primary plan than under the convention system. We have found that the primary, instead of closing the doors to the nomination of poor men, opens them the wider, and the poor men in Florida are the very people who proposed the primary and who carried on the campaign which resulted in its adoption." This answers one objection which has frequently been urged, so far as Florida's first trial of the experiment is concerned; but there are other States in that section where it has been longer in vogue, and where the complaint is that it is unduly expensive to candidates.

---

Mr. Roosevelt seems likely to make over the Supreme Court largely—especially if he should be given a second term. Justice Gray, who has just resigned, was the oldest member of that bench—seventy-four, last March; but Justice Shiras was seventy last January, Chief Justice Fuller will reach the same age next February, and Justice Harlan next June. Under the law allowing retirement upon a full-pay pension at seventy, after ten years of service, all three may withdraw within the next twelvemonth. Of the other five, Brown is sixty-six; Brewer, sixty-five; Peckham, sixty-three; McKenna, fifty-nine; and White, fifty-six. Justice Oliver Wendell Holmes, the present Chief Justice of Massachusetts, will not reduce the average age so much as is desirable when a new man comes—indeed, he violates the rule which it has been sought to establish, that no man should be appointed who was past sixty; but heredity gives him promise of a vigorous old age. The substitution of one Massachusetts man for another does not disturb the balance of the court from the point of view of locality. New England still has one of the nine places; New York and Pennsylvania, one apiece—Peckham and Shiras; the Middle West, three—Fuller of Illinois, Brown of Michigan, and Brewer of Kansas; the upper and lower South, one apiece—Harlan of Kentucky and White of Louisiana; and the Pacific Coast, one—McKenna of California. Three are Democrats—Fuller, Peckham, and White; and no change in this division is made by putting one Republican in place of another. Fortunately, it has been long since the suggestion was heard that either section or party had any influence in the decisions of this court.

---

The news that in many instances the titles to the friars' lands in the Philippines have been transferred to secular companies, has reached the Vatican tardily, for the facts had been fully brought out in Gov. Taft's testimony before the Senate committee. It remains only to say that the Insular Government finds itself confronted by a state of things which arises whenever expropriation of the religious orders is attempted. Today, in Italy, and in other countries which have suppressed the convents and monasteries, the title to historic establishments is vested in private and ostensibly secular companies, while the monks remain in full occupation and control. Many of the religious schools in France have taken this means of evading the Associations Act. Of course this interposition of a company between the monastic chapter and the Government does not essentially affect the problem of suppression or expropriation. In fact, it often gives the Government a discretion, in applying the law, of which it is very glad to avail itself. Some delay is involved when it is necessary to prove in each separate case the equivocal nature of the ownership; but a body of nuns or monks cannot be concealed, and their presence is sufficient evidence against any establishment that the Government desires to close. Furthermore, it is often an advantage to be unable to apply wholesale and harshly a law which dispossesses an entire population of friars and sisters. In short, the evasion of proscriptive laws by the religious orders has seldom hampered a resolute government in taking any necessary measure of self-protection, while it has often relieved a radical government from something of religious odium. Such will unquestionably be the case in the Philippines.

---

The provincial press of Cuba is filled with details of the increasing distress in the island. In Matanzas work is suspended on so many plantations that twenty-five thousand laborers are out of employment. From Pinar del Rio comes the report of dozens of the best and largest mills closed. In Las Villas the peasants are killing their cattle for food. So it goes. To add to the prevailing misery, the Cuban Company is laying off hands. In some towns the funds for public works are exhausted, and even street-cleaning is abandoned. Beggars are multiplied in field and village, and the people are everywhere giving their first and most anxious thought to the question, not how to make their new government work well, but how to escape starvation. This is the actual picture which we have to look upon in Cuba itself, at the same time that our bureau chiefs at Washington are putting out their smug report on "What We Have Done for Cuba." The beet-sugar Congressmen sniffed at the talk about threatened Cuban misery. Where was the evidence? Now they may see signs enough of suffering, but it is too late. They have done their work. They have saved their beets, but they have plunged Cuba into distress and despair.

---

The crop estimates issued on Monday by the Department of Agriculture, bring few surprises, confirming unofficial forecasts of a generally satisfactory harvest. Only the figures of the probable corn crop, which reach the enormous total of 2,561,490,000 bushels, call for comment. The partial failure of last year's crop naturally led to an increase in the acreage sown with this cereal of not less than 12,000,000 (approximately one-eighth), while an average condition of 86.5, as against 54 on August 1 a year ago, fully justifies an extraordinary forecast, which would be still larger but for a decline of 10.7 per cent. for the month of July in the fourteen Southern States. The wheat crop, at 646,611,000 bushels, is well above the average for several years past, though 74,600,000 below the record yield of 1901. Rye, barley, and oats are reported as in better condition than at this time last year. Further than to recall the general fallibility of prophecy, there is little occasion to question these optimistic estimates. We note that the figures for oats are withheld, because the crop is now being dealt in in the exchanges of the country. It seems to us that in this suppression the department shows a not wholly justifiable scruple. Surely even speculators are entitled to information from the Government experts, while unquestionably the publication of official estimates tends to reduce the speculative element in grain operations.

Mr. Chamberlain's Colonial Conference has ended, with failure written all over it. So abortive have the proceedings been that they are not even to be published. All that Parliament and the public are to get is the very Platonic resolutions adopted, which amount to little more than the expression of a pious regret that it is not possible to do anything. Mr. Chamberlain had begun to forecast these meagre results in his speeches. In his address to the London Grocers the other day, he gravely put the "educative influence" of the Conference above its "substantial results." He is quite right; and one of the persons to profit most by the education is the Colonial Secretary. He has learned that the great English colonies are self-governing democracies, which will stand up for their own interests and their own peaceful development, in the face of all Imperial blandishments. The existence of laws of trade, also, and the calm strength of the teachings of political economy, which he had sneered at as "pedantry," have been taught him in this Colonial school. Mr. Chamberlain's sobering and chastening, through all this process, have been, in fact, so marked that we should be quite willing, for our part, to class them among the "substantial results" of the Conference.

---

It would seem highly probable that one result of the colonial negotiations in London will be the establishment of a Canadian line of fast steamers. The positive announcements already made on this subject are doubtless premature; but, with the two Governments so deeply interested, and with the Parliamentary committee likely to recommend action, it appears almost certain that something will be done. No general system of shipping subsidies is in contemplation. That was condemned, at the Parliamentary hearing, by both commercial and military experts. Mr. Pirrie of Harland & Wolff forcibly argued that an indiscriminate subsidy led to inefficiency, and that unless the builders and owners of ships made the needs of trade the chief consideration, failure was destined. Admiral Beresford, for the navy, said that it would be tactical folly for England to enter upon a subsidizing policy, since it would be certain to involve Great Britain in a war of tariffs and bounties with the United States and Germany and France and Russia. Such a course, said the bluff sailor, "would be madness." Yet he was perfectly willing to endorse the plan of giving extra postal pay to a few 22-knot steamers from Canada, which might be used as auxiliary cruisers in case of war, as may the White Star boats which Mr. Morgan has bought, but which he has offered to put in the same way at the disposal of the Admiralty.

---

Canada's contribution to the plan must be, of course, in the nature of a direct subsidy, or guarantee. Her motives are different from those of the English Admiralty. It is not the exigency of war that she has in mind so much as the needs of peace. Her rich farming lands of the Northwest she wishes to develop. The Canadian Pacific is as keen as the managers of the American steamship and railway combination to see the advantage of through rates under a single control from the Manitoba grain fields to the Liverpool docks. Accordingly, the Canadian railroad authorities are hot for a Government grant in aid. An offer of $750,000 a year has been, in fact, already made by the Canadian Government, but the shipping people say it is too small. They assert that $2,000,000 a year is necessary, though, as Senator Drummond of Montreal told the Committee of the House of Commons, if it were now proposed to give him $1,750,000 a year, "I might be tempted." With such plans advocated and such motives operating in Canada and England, it is apparent that the chances of the ultimate establishment of such a fast service are very good.

---

It was fully expected that Mr. Balfour would put the Education Bill over to the fall, after having secured the passage of the more vital clauses—those which lodge control in the county and municipal councils, and those which assure to the denominational schools now to be supported by the rates a two-thirds majority of denominational managers. Although the Liberal opposition bears most heavily upon the non-popular and non-elective character of the educational authority, the real grievance against the bill is a religious one. Under the law as it now stands, there will be 8,000 parishes in England and Wales in which the only school is that of the Church of England. These so-called "voluntary" *(Anglicè,* private) schools remain largely under their old management, and, in the case of the 8,000 mentioned, will be the only public primary schools in their neighborhood. Naturally, Nonconformists are reluctant to send their children to a "Church" school which by a scratch of the pen has become a public school; quite as naturally, these "chapel people" object to paying taxes for what was and is the parson's school. Various suggestions for compromise have been made. That of allowing all the religious denominations to give instruction at stated times is in the line of our own Faribault system and the Manitoba plan, but it is evidently easier to apply such a method in a school which admits all comers without prejudice than in one which is committed to a particular form of faith. This arrangement is urged by so prominent an Anglican as Bishop Hereford. To one who does not know the rural conditions of England, the whole quarrel looks pettier than it is. Denominationalism is deeply intrenched in the life of the people. All English education bills are likely to be bad as long as public education must adjust itself to denominational convictions.

---

King Edward's coronation on Saturday had something of the air of a narrowly escaped tragedy; yet the personal congratulations which he received were surely all the heartier for that. Meanwhile, the real rulers of England appear in the Cabinet, whose partial reconstruction is now announced. The new names are very much what was expected, and represent rather the humdrum order of statesmanship. The appointment of Mr. Ritchie to the Exchequer is that of a safe man whose name, if it connotes nothing brilliant, at least arouses no apprehensions. His task will be a thankless one, as the budget is unpopular even with his own party; but then, the Liberals will tell him, he may not need to remain long in an onerous office. The promotion of Mr. Chamberlain's son is a testimony to the dominant influence of the Colonial Secretary, and lends point to the fling of that unreconciled Tory, Mr. Bowles, that, whereas the old Cabinet was a single family, the new one is to illustrate the principle of the double family.

---

The gift of the Dutuit collection to the city of Paris is an example of personal benefaction which will recall to New Yorkers the gathering of the Marquand collection for the Metropolitan Museum, and the piety with which the descendants of Peter Cooper have fostered and enlarged the ideals which presided over his foundation of Cooper Union. For years the entire Dutuit family gave themselves to the collecting of the rarest objects of art, keeping ever before themselves the fact that they were purchasing for exhibition in perpetuity, and so must admit no object of questionable or merely ephemeral value. To this end the brothers Dutuit and their only sister gave unsparingly of their fortune and of their time. The idea grew, it is said, out of the disappointment of Auguste Dutuit's ambition as a painter. Soon recognizing, in Couture's atelier, that he lacked original talent, he persuaded his brother and sister to join him in permanently associating the family name with the great art of the past. They gladly seconded his enthusiasm, and the children of the Marseilles docker gradually built up a collection worthy of the city of Paris. Between the generosity which merely leaves great sums for good works, and that which gives also the labor of a lifetime to framing its benefaction solidly and well, there is no comparison. There is no more pleasing symptom of the times than the disposition signally illustrated in the case of the Dutuit family—to execute as well as to endow works of beneficence.

*THE TARIFF WILL NOT DOWN.*

Secretary Shaw's opening speech of the Vermont campaign on August 5 reads, in those parts of it which touched upon the tariff, as if he thought his Green Mountain hearers were green indeed. Such a medley of inaccurate history, bad logic, and short-sighted policy can be defended only on the plea which Luther irreverently used in connection with what he thought an unsound argument in one of St. Paul's epistles. It was "good enough for the Galatians," said the audacious Reformer; and it is "good enough for the Vermonters," Secretary Shaw may be imagined saying of his tariff address. Certainly, we should not advise him to try it on the Republicans of Iowa or Minnesota, who have got far beyond such a futile prophesying of smooth things about trusting the party to be "wise," and do what is "best" for the country.

To begin with Mr. Shaw's rather surprising history, he tells us that in 1882 the Republican party appointed a commission to consider the tariff question, and that, "in obedience to its suggestions," the tariff was revised in 1883. Yet, he says, the people were not satisfied, and incontinently turned to and elected a Democratic President in 1884. This quite takes away one's breath; the truth being, of course, that the commission recommended a general reduction of protective duties, but that Congress displayed its "obedience" by increasing them! This fact would help the Secretary to understand what is apparently a mystery to him—namely, why "this revision did not satisfy the people."

What he is most positive about, however, is that nothing the Republican party could do in the way of tariff revision would "satisfy our opponents." But we thought the great object of political parties was to satisfy the people and their own members. Mr. Shaw is very strong on the folly of making any "concession to Democratic clamor." But the country has been hearing a good deal of Republican clamor from the Secretary's own State. Does he propose to concede nothing to that? Will he tell the Republicans of Minnesota and Wisconsin and Michigan, as he did those of Vermont, that this is no time to talk of revising the tariff?

The Secretary's attitude seems to be that of admitting the evil while refusing the remedy. He does not deny that there are "inaccuracies and inequalities" in the present tariff. Valiantly he affirms that the Republican party "never attempts to defend" a demonstrably unfair tariff schedule. No, it does not defend it, but simply maintains it. It falls back on the impotent position taken by Secretary Shaw. He says, in effect, and almost in words: "I confess that many of the existing duties ought to be modified. But if we should succeed in changing or repealing some of the worst ones, there would remain countless others nearly as bad. And if we pull out one unjust schedule, its beneficiaries threaten to tumble the whole edifice down about our ears. So I ask you, is it wise to talk about doing anything at this time?" Surely, no enemy of the Republican party ever accused it of being more imbecile, more helplessly tied hand and foot and delivered over to a combination of plunderers, than Mr. Shaw does, by fair implication, when he acknowledges that it has put wicked tariff laws on the statute-book, but is powerless to remove them.

Let such timid souls as the Secretary deprecate the agitation for tariff reform as they may, the movement is afoot, the Republicans of the Northwest are up, the Democrats will force the fighting, the people are thinking and talking of little else than the flagrant injustices of the tariff and its inexcusable sheltering of monopoly; so that the conflict is irrepressible. The complaint is precise. The remedy demanded is definite. It is not one of those questions of vague discontent or social unrest which are the nightmare of statesmen because it is so difficult to deal with them. Specific allegations are made. "Your tariff on cattle and beef products," declared the National Association of Retail Butchers in Chicago the other day, "aids the odious Beef Trust, and we want you to reform that duty altogether." So in those Western States where the tariff question is most aflame, it is not indefinite outcry that we hear, but clear-cut and exact descriptions of what is wrong and what should be done to set it right. The Western Republicans strike their hands upon the tariff and boldly say, "Thou ailest here and here." In Minnesota, for example, the chief demand is for the reduction of the lumber duties. The Republicans of that State know what hurts them. So unmistakably have they made their wishes known that Congressman Tawney, seeking renomination in the First District, has been forced to pledge himself to "work for a reduction of duties, including the duty on lumber." He even went so far as to promise flatly that, "if the Republicans control the Fifty-eighth Congress, there will be a revision of the tariff." Certainly there will be, if the Democrats control it. Tariff reform, therefore, must be put down as one of the certainties of the near future.

In the growing demand for it, the Republican managers will see, if they are wise, not, as Secretary Shaw seems to, a thing to pooh-pooh or take fright at, but a great opportunity to be embraced. "Political skill," said Frederick the Great, "consists rather in taking advantage of favorable circumstances than in preparing them in advance." The occasion is propitious for the formulation of a definite tariff policy by the Republicans. To remove every needless duty, to cut off every schedule which shelters a Trust—that is a programme reduced to its simplest terms. With less than that the American people will not be satisfied. Is there enough courage, enough true statesmanship, in the Republican party to take up this burning question, and settle it on grounds of justice? If not, the people will throw away so useless an instrument, and select or create another that is capable of executing the popular will.

*NEW CUBAN QUESTIONS.*

We see no occasion for rash jumping to conclusions in connection with the proposed Cuban loan of $35,000,000. It is not yet authorized. When it is, and if it is, there will be still six months to wait before it is floated (if it can be floated at all on the terms proposed), and still further delay before it can be ascertained whether the loan is, in fact, in violation of that one of the Platt amendments which forbids the Cuban Government to incur a debt too heavy for the island revenues to carry. It seems to us, therefore, that the newspaper jurists who have already decided that the Cubans are caught in the act of trampling upon their Constitution, and that we shall have to intervene, are running before they are sent.

Nor can we accept, much as we should like to, the theory of a dark conspiracy behind the project of a Cuban loan. It is thrilling, of course, to hear of secret plotters and mysterious syndicates and disguised agents, all engaged in a subtle complot to force Cuban annexation; but when a simple and natural explanation lies in plain sight, we are prosaically compelled to prefer it to the fairy stories. There seems to be, after all, no great mystery about this loan proposed by the Cubans. They need the money. We hope no American will question that first principle of human conduct. Cuban agriculture is prostrate, thanks to we know whom, and the Government asks for $4,000,000 to loan to the planters, to help them tide over their evil day. It has always been expected that funds would have to be found to pay the Cuban army, to take up the Cuban bonds that have been recognized as lawfully issued for value received, and to cover some other expenses of the struggle for independence. Here is reason enough for a loan, without invoking conspirators and fellows in the cellarage. We may be all wrong about this, and certainly it is an awful pity not to be able to credit this engaging and complicated romance about an annexationist conspiracy; but we are bound to say that the explanation of the matter given in the Cuban Congress and the Cuban press seems to account for everything, without any of these cloaked schemers in the background saying "Hist!" and "Aha!"

One question that our glib journalistic legists do not appear to have considered

at all is, how the United States is to intervene in this affair of the loan. Why, it is hastily said, the loan is in violation of the Platt amendment, and the Platt amendment is now an integral part of the Cuban Constitution; of course it is our right to step in and prevent the Cubans from violating their own Constitution. But we have an obstinate doubt or two. Who is to decide whether the Cuban Constitution is violated? It seems to be thought that any newspaper correspondent in Havana can settle the thing by telegraph. If not, then Minister Squires appears to be counted upon to inform us, or Secretary Shaw, or Assistant-Secretary Hill, or any stray Congressman that turns up in Washington, or the man in the street, or the inner consciousness—everybody or anybody. Unfortunately for all these ready reasoners, however, the Cuban Constitution itself explicitly lays down the method of deciding the matter in question. In the section treating of the "Judicial Power," it is expressly stated that the Cuban Supreme Court shall have power, among other things, "to decide upon the Constitutionality of laws, decrees, and rules, when a controversy may arise upon such points" (Title X, Art. 83). This, it is clear, is copied from American practice. Under it, we can easily see, it would be just as impertinent for Minister Squires, or any outsider, to say that a given Cuban law was unconstitutional, as for the English Ambassador to notify his Government that the Oleomargarine Bill was in violation of the Constitution of the United States. There are courts in Cuba. Legal controversies must go before their judges, who may conceivably differ from or even overrule their brethren of the American press.

That we have a perfectly legitimate interest in all that is going on in Cuba, as well as a direct responsibility for it, we do not dream of disputing. If there is commercial distress in the island, we know at whose door the guilt must be laid. If the embarrassed Government of the young republic finds itself in thickening difficulties, and scarcely knows which way to turn, that fact is but one reproach more to this country. Had we hearkened to our own President, these troubles had not befallen our wards in Cuba. And what we say now is that our own grievous faults in this whole business should make us exceedingly wary and patient in all our future dealings with the island. We regret to observe an assumption, in some quarters, of a high moral tone in lecturing Cuba as to her duty to keep all her pledges, and not to do anything so wicked as to levy high tariff taxes on our exports. Satan rebuking sin would be a miracle of consistency compared with Americans who should turn upon the Cubans in such a way. We are unquestionably under a serious and continuing obligation as regards Cuba; but in view of our own shortcomings, our first duty is to be tolerant and hopeful, instead of exacting and distrustful, and to go out of our way to aid the struggling Government of our own creation, instead of picking a quarrel with it.

### *THE MICHIGAN CAMPAIGN.*

Senator James McMillan of Michigan, who died suddenly on Sunday, belonged to that class of rich men in public life whom it is fashionable to sneer at. Until the death of his colleague, Francis B. Stockbridge, in 1894, both of his State's seats in the upper branch of Congress were filled for a number of years by men of great wealth. Their opponents used to ridicule them as men who would have cut no figure in politics except for their money. Mr. McMillan was undoubtedly much helped in the attainment of his political ambitions by his money, but he appears to have been the sort of man who would have forced his way to the front if he had devoted himself to law instead of business, when he was a young man, and become a leader at the bar instead of on the exchange. He was not an orator, but he was a man of excellent sense, and his public spirit was attested by a long list of notable gifts to the city of Detroit, the State University, and other institutions. He became chairman of the Senate Committee on the District of Columbia, and the national capital profited greatly by his business acumen and breadth of view. He deserves great credit for having lent all the weight of his powerful influence to the development of that elaborate and far-sighted scheme for the improvement of Washington which now seems certain ultimately to be carried out. For the help which he gave to this monumental work the Senator will long be remembered by public-spirited residents of the city.

His death emphasizes the misfortune of the system under which the choice of a United States Senator must be made by the Legislature. His third term began in March, 1901. The term of his colleague, Burrows, runs until March, 1905. Under ordinary conditions, no member of the Legislature to be chosen in November would have anything to do with questions of national politics. Meanwhile there are great questions of State policy which press for settlement. The recent Democratic convention devoted its platform entirely to these issues, and the Republicans were just beginning to find that they must meet their opponents on this field. Last Saturday it looked as though Michigan might present the long-sought spectacle of a people choosing their Governor and members of the Legislature primarily with reference to their attitude towards questions concerning the commonwealth with which they would have to deal. All this is changed by Mr. McMillan's death. The Governor will appoint a temporary successor, but his tenure will last only until the new Legislature which will meet early in January makes its choice. The most important question as to every candidate of the Legislature therefore becomes—not how he stands about one or another reform which is needed in the government of the State, but whether he will support a Republican or a Democrat for the United States Senate. The Republican who may have been inclined to vote for a Democratic member on local issues will now feel that he must stand by the nominee of his own party in order that it may control the Senatorship for more than four years. The interests of the State and the district, the personal characters of the rival candidates for the Legislature—all those considerations which ought to govern the choice of a member—instantly disappear as elements in the contest, and voters are constrained to vote for State legislators solely according to their views on national politics.

The agitation for the election of Senators by popular vote should profit by this striking illustration of how the old system operates to the disadvantage of the State. Elections are generally held biennially, which means that two Legislatures out of every three must be chosen primarily with reference to the choice of a United States Senator. The present incident in Michigan shows the constant possibility that even the one chance in three to consider the interests of the State may be lost by the accident of death or resignation. Moreover, the politicians are always seeking to control the nomination of legislators in an "off year" with a view to the Senatorial election, because men chosen at that time may be reëlected for the session when the Federal office is to be disposed of. The influence of the Senatorship is thus always present, in greater or less degree.

The election of Senators by popular vote might or might not give us better Senators, but one thing it would certainly do: it would enable us to choose members of the Legislature solely with reference to their fitness to discharge the duties properly attaching to their office. That is one argument for the change which the defenders of the existing system cannot answer.

### *COST OF THE NEW YORK STATE GOVERNMENT.*

Discussion of the State finances by the politicians is apt to proceed with some embarrassments, owing to the necessity felt by adherents of each party of proving that their organization is the only one possessing the will and the ability to conduct the Government skilfully and economically. These embarrassments have been evident on both

sides in the partisan discussion this year about the financial condition of the State. Thus, the Democratic managers, in their zeal to show that the present Republican Administration is spending the people's money too lavishly, permitted themselves to make charges which a moment's examination proved to be absurd—as, for instance, the wholly unwarranted assertion that a way had been prepared by which $6,000,000 could be borrowed to meet an expected deficit.

The Republican managers, also, have not been free from overstatement and the vice of biassed selection in the use of statistics. Dwelling upon the practical abolition of the direct State tax, for example, is no answer at all to the charge of extravagance, since there is no more excuse for squandering the State's money when it comes from indirect sources than there would be if it were the result of direct taxation. Indeed, it ought not to be forgotten that, not many years ago, it was the fashion among Republicans to ascribe the increase in the State expenditures, beginning in the early eighties and continuing steadily until the high-water mark was reached in 1897, to the introduction of a system of indirect taxation.

Nor was the selection of the year 1893 as the basis for Republican comparisons a proceeding which could be regarded as wholly disinterested. To be sure, 1893 was the last year in which the Democrats controlled both the Legislature and the Governorship, but it was also the year when the tax rate was higher than in any previous year of Democratic administration—a condition due principally to the fact that the first considerable appropriation, $1,300,000, was then made for the State care of the insane. Fortunately, it is not necessary to follow partisan leading-strings in this discussion.

A glance at the totals of the appropriations for the last twenty years shows that the State expenditures have more than doubled since 1882, and that over two-thirds of this increase has taken place within the last decade. The total appropriations, less refunds, in 1882 were $10,625,129; in 1892, $13,540,897; and in 1902, $21,231,682. In 1897 the total appropriations were $26,962,705, the highest in the history of the State. This increase was only partly accounted for by an expenditure of $6,884,436 on the canals. Since 1897 there has been a tendency to diminish expenditures, broken only by the year 1900, when there was a slight increase over the previous year. The population of the State in practically the same period increased from 5,082,871 in 1880 to 7,268,894 in 1900. The expenditures in 1882 were approximately $2.09 per capita; in 1892, $2.41; and in 1897, $3.94; while in 1902 the per capita expenditure is about $2.81.

These are the bald facts, but crude appearances are never so misleading as in discussions involving finance. The question is, of course, whether or not the State has run into useless expenditures, and whether or not it has undertaken to do more than it can afford to do. To answer this question it is necessary to examine the various causes of the increases shown in the yearly figures of appropriations. First and foremost of these is the adoption of the system of State care of the insane. This was enacted into law in 1890, but the first large appropriation from State funds was not made until 1893. A steady increase in this item of expenditure followed, from $1,346,019 in 1893 to $5,544,891 in 1900, when the highest point was reached. The amount for 1901 was more than a million dollars less, $4,345,382, and the appropriations for this purpose for the current year show a continued decrease, being only $4,175,573. In considering this addition to the State's expenses it must be remembered that the care of the insane was a charge on the taxpayers as completely before as after the adoption of State care. The unfortunates were scattered about in county poorhouses and asylums, and it is wellnigh impossible to estimate what it cost to support them, though it is certain that their condition in some counties was a disgrace to the State. No one now questions the wisdom of the change to State care. Undoubtedly there were some extravagances at first. In 1897 the per capita cost of maintenance in the State asylums was $195. In 1901 this had been cut down to $167. Whether the changes in the government of the institutions brought about by the legislation of this year will still further reduce the per-capita cost is, of course, for the future to say. In the opinion of the Charities Aid Association, these rates "cannot be continued without serious injury to the interests of the insane, much less should there be a reduction."

Another source of increase has been the improvement in our common-school system, and the new expenditures for higher education through free academies and training-schools. In 1892 the State's common-school bill was $3,934,700; this year it is $4,436,150, an increase partly due to a more liberal treatment of the rural districts. In the year 1897, when expenditures were at their highest, the common-school appropriation was but $4,090,500. In 1892, less than $200,000 was spent in aid of academies, high schools, etc.; this year $553,402 has been appropriated for such purposes. All this has added to the total of the State's expenses, but has in many cases lifted a burden from the shoulders of local taxpayers, as well as increased the scope and availability of our educational facilities.

Other items of increased expenditure with which no fault can be found have been alluded to. Thus, the expenses of the Legislature, which were $521,148 in 1892, and $608,711 this year, were increased by the provisions of the new Constitution, which added fifty members, whose salaries aggregate $75,000, exclusive of mileage. The amount for this year, by the way, shows a saving of about $20,000, as compared with 1901, due to the shortness of the last session. So, in the matter of roads, for which nothing was spent in 1892 and no State system adopted in 1897, there is an appropriation of $897,568 this year. The increased cost of the judiciary, which was $530,800 in 1892 and is $1,074,132 in 1902, is due also to Constitutional provisions.

Meanwhile there have been considerable savings since 1897 in the administrative departments of the State Government. In his report for 1897 Comptroller Roberts showed that thirty-six new departments and commissions had been established since 1880, and that these were costing the State $6,884,713 per year. Many of these commissions have now been abolished and some others consolidated, so that in 1901 the expenditures for the State departments and commissions were under $3,000,000—a most satisfactory showing. There were further consolidations by the Legislature this year, which will materially reduce the cost for this and subsequent years.

Altogether, it seems fair to conclude from these figures that, while the State's expenditures have largely increased—in fact, more rapidly than its population—its proper and praiseworthy activities have increased in a corresponding measure. If the first years of these expanding interests were marked by a tendency toward extravagance, that tendency seems to have been checked, in a measure at least, though it is far from certain that further economies in the administration of bureaus and commissions may not prove possible and wise. The centralizing of power and responsibility in the State Government has been clearly in the trend of recent events. The cost of administering functions previously left to the counties has not necessarily increased with State control, but it has become more evident. And it must be added that more businesslike methods and better results have certainly followed.

---

### *THE CHARTERS OF CITIES.*

Within a few days the Legislature of Ohio, convened in extraordinary session by the Governor, will enter upon a most interesting and important task, that of preparing a code for the government of Ohio cities. The preparation of the code is made immediately necessary by a decision of the State Supreme Court, practically declaring invalid the city charters throughout the State. The court, in effect, decided that the classification under which the city govern-

ments are operating is contrary to the Constitution, which requires that "the Legislature shall pass general laws" for the government of cities. The classification in question was general in form, but so expressed that particular cities were indicated, and this the Supreme Court finally refuses longer to sanction.

The task which the Legislature has before it is, of course, of the utmost importance to Ohio, but it possesses also an extreme interest for students of the municipal problem elsewhere. The eyes of municipal reformers will turn toward Columbus with a good deal of eagerness, and perhaps with some anxiety, during the weeks which follow the assembling of the lawmakers. They well know that the attention which has been given to municipal problems during the last decade has not all been in vain. Principles of municipal administration have been evolved which are no longer mere theories; they are established. In framing the fundamental law for the cities of Ohio, will the Legislature take these principles into account, or will it disregard them? Will the Legislature so act that the municipal code which it produces may register the advance which has been made in the direction of good government for cities, or must "politics" play the chief part during the session, and the result be some municipal hodge-podge through which the "control" of the cities will be kept by the party in power in the State, without reference to the wishes of local taxpayers and voters?

One of the principles which may be described as established is the principle of home rule. It is fair to describe it as established because, though it is violated perhaps as often as it is observed, no party dares to oppose it as a principle, and all, in fact, proclaim their adherence to it. The Ohio Legislature has a chance to institute real home rule in the cities of that State. A charter ought to be to a city, somewhat at least, as a Constitution is to a State or a nation. It ought to contain the fundamental law, and it ought not to be subject to constant change at the whim of some party or individual. This is the modern idea of a city charter, and it is the right one. The Legislature cannot, of course, of itself prevent the amendment or repeal of its work by subsequent legislatures; but, if it succeeds in drawing up a municipal code based upon modern principles, the Legislature may with much force appeal to the people to prevent unwarranted changes without due process. The people of California are about to vote on a Constitutional amendment providing that amendments to home-rule charters must be submitted to a popular vote in the localities affected, if such submission is petitioned for by 15 per cent. of the qualified voters of such localities.

Another principle of municipal administration which can be said to bear the sanction of common acceptance, is that of responsibility concentrated in the municipal head, the Mayor. This principle is pretty clearly outlined in the present charter of Cleveland, which for other reasons has been declared invalid. The Cleveland system is one of bureau heads appointed and removable by the Mayor, and constituting his "cabinet," as it is called. This feature, by the way, gave the Cleveland system the name of "Federal plan," by which it is commonly known. These bureau heads are directly responsible to the Mayor, and he is responsible for them to the people. In this particular the Cleveland charter has been regarded as particularly well drawn and modern, and it would be a source of great regret if a less enlightened system should now be adopted.

Prodded by Mayor Tom L. Johnson of Cleveland and some others, the Ohio Legislature may be expected to give close heed to the rules incorporated in the municipal code relating to the granting of franchises. Here, too, a certain standard has been set which the legislators cannot avoid without confessing a disregard of the best and most enlightened thought on the subject. Formerly, cities were empowered to give away franchises as they chose. A charter which does not now place a restriction on the granting of franchises, requiring a fixed compensation and naming a term of years at the expiration of which the franchise must terminate, be renewed, or be readjusted, would be an anachronism. This is a matter about which the people have shown that they feel most strongly, and in many cities it has furnished the chief interest through which good citizens have been aroused to the performance of their civic duties. In Chicago, for instance, an attempt to renew expiring street-railway and other franchises in 1897 by vote of the Legislature awakened the citizens to such an extent that, under the lead of the Voters' Municipal League, they have practically assured protection of the people's rights in public franchises, as a result of long and hard endeavor, culminating in the election of a reform City Council at the last election. Even to this day, men who, as members of the Legislature, voted for the obnoxious franchise grabs of 1897, are practically excluded from public office in Illinois.

These are some of the standards which have been set, and which the Ohio Legislature will disregard at its peril. Probably the greatest of them is the principle of home rule, for this could hardly exist without bringing the others into active being. If the Legislature can produce a fundamental law for cities in keeping with modern standards, and then, by Constitutional amendment or otherwise, provide a sure protection against "ripper" legislation in the future, it will be of the greatest benefit to the cause of municipal reform throughout the country.

### *MR. LAWSON AND THE AMERICA'S CUP.*

Mr. Thomas W. Lawson's personal grievance against the New York Yacht Club, as set forth in his book, 'The Lawson History of the *America's* Cup,' would hardly concern us, much less his clumsy and violent satire, were it not that the whole matter of the custody of the *America's* Cup is involved in this controversy, and that the publication of Mr. Lawson's manifesto gives the New York Yacht Club a chance at once to rebuke indirectly an antagonist who is unworthy of direct attention, and to recede from an untenable and unsportsmanlike position.

It will be recalled that, when Mr. Lawson wished to enter the *Independence* for the trial races, the appropriate committee of the New York Yacht Club suggested that he go through the form of chartering his boat to a member of the club, and refused to accept her entry upon any other terms. The club took the plausible ground that, since it was solely responsible for the conduct of the Cup races, it would admit only yachts over which its authority was complete—that is, those which flew its flag. Unquestionably, this decision was arrived at rather as a means of getting rid of Mr. Lawson's application than as a precedent for the future policy of the club; but, for whatever cause, the club unluckily took the position that only its own members might defend the *America's* Cup. This was very like bailing out the Lower Bay to drown Mr. Lawson—an unwarrantable disturbance of historic hydrography, however laudable the end in view.

How indefensible this requirement of membership in a particular club is, will appear when one examines the cases which may well arise. Suppose that a member of the Eastern, the Larchmont, or the Atlantic Yacht Club should offer, for the defence of the *America's* Cup, a boat faster than any in the New York squadron. Suppose that his standing as a gentleman and a sportsman were unexceptionable; what would be the position of the New York Yacht Club, either in refusing his entry, or in stipulating that he seek its membership or charter his boat to a member? Sailing under its auspices, such a yachtsman would, as a matter of courtesy, naturally wish to be in close relations with the club; but, on the other hand, it might be equally well maintained that the club was under every obligation to show so good a yachtsman every possible hospitality. Suppose, again, the great unlikelihood that Sir Thomas Lipton or some more fortunate challenger "lifts the cup." In a moment the New York Yacht Club would have no better standing as a challenger than the smallest American, Belgian, French, or Italian yacht club. It is absurd to guard the defence with this jealousy when the right

to challenge is free to all clubs which have an ocean course. It is even more unfortunate to appear to regard membership in the New York Yacht Club and good standing among American yachtsmen as identical. It is impossible that any such snobbishness can have been intended; mere suspicion of it cannot now too scrupulously be avoided.

Under the deed of gift of the *America's* cup, we believe that the New York Yacht Club has absolutely no warrant for restricting the defence of the cup to its own members. Under the rules of common sense and the unwritten laws of sportsmanship, it has undoubtedly every right to pass on the personal qualifications of a defender of the cup. While the question of qualification should seldom arise—one may generally assume that the possessor of a famous racing yacht will turn out to be a gentleman—yet the ability to build and maintain a ninety-footer by no means guarantees her owner from infirmities of temper and deficiencies in breeding which make it out of the question for him to take part in a great international event. The English have been unlucky enough to send us Lord Dunraven. Now imagine what the scandal would have been if the author of 'The Lawson History of the *America's* Cup' had been the defender in that ill-omened year. To exercise such a right of exclusion is individious, but it is a plain duty on the part of those who keep not only an ugly bit of plate, but the honor of American yachting. If the club had squarely refused Mr. Lawson on these grounds, public opinion would have borne it out. On quite impersonal grounds, too, he hastened to prove his ineligibility. The man who will race a waterlogged and almost foundering boat, rather than withdraw and ask for postponement, evinces pertinacity, but hardly sportsmanship. At any rate, he shows himself fatally lacking in the qualities of judgment which a defender of the cup must possess.

But it is to the future that we must look. Nothing in the deed of gift prevents the club from exercising absolute authority in passing upon the qualifications of all who would defend the cup. It must assume, as do all organizations which hold open races, that the contestants are gentlemen, and it should require no further guarantee of good conduct than the right to place on board of the defender—as it does on board of the challenger—a member to represent its interests and authority. If the club should, by resolution or otherwise, simply assert this right of scrutiny, it would remove from Mr. Lawson's case the last vestige of undue importance; it would set right the oldest and most prominent of our yacht clubs before a number of newer organizations which, doing less for yachting as a luxury, possibly do more for it as a sport. Most important of all, it would show to the public generally that the New York Yacht Club does not reserve all its fair play for foreigners, but regards its own recognized leadership as an argument for generous recognition and encouragement of good yachtsmen, whatever burgee they fly.

## A RAND IN LUSITANIA.

OPORTO, June, 1902.

Among the several interesting towns to be visited in the small kingdom of Portugal is Thomar, about ninety miles north of Lisbon, on the main line of the railway to Coimbra. All the guide-books, as well as works of travel or books on Lusitanian art, dwell very properly on the exceptional opportunity afforded in its splendid Convento de Christo for examining some of the leading phases of Portuguese architecture comparatively. Few contrasts, indeed, are more significant and suggestive than may be seen in the immediate juxtaposition of the polygonal Chapel of the Templars with the gorgeous "Manoelino" edifice which, in spite of French vandalism, still preserves the memory of Prince Henry the Navigator and the golden days of the Order of Christ, when both Africa and South America seemed secured to the possession of Portugal. It is not, however, with these splendors, or with historical impressions, that I wish to deal; my present purpose is to tell, as briefly and simply as possible, what may introduce into this quiet town an element of modern activity greater still than that of its staring red-tiled cotton-mill, whose chimneys and smoke combine to disfigure the olive-dotted valley below.

After four charming days in Coimbra, chiefly divided between the university library and the society of professors who cling to their academic tradition of greeting a foreign confrère, a short railway journey landed me at the station of Payalvo some hours after the departure of the last omnibus to the town, about six miles distant. Promptly encircled by a small cohort of ragged young savages, I was half-articulately striving to reduce the extortionate charge for a country-cart, when a pleasant voice said behind me, "You speak English, don't you, sir?" The speaker at once helped to clear the situation by sharing the expense of the vehicle, and informed me that he was one of the group of Boer prisoners temporarily domiciled in Thomar, and only recently freed from strict military supervision by the declaration of peace. I am certain that Mr. Philip Pienaar, author of 'With Steyn and De Wet,' will permit me to unite with my appreciation of his excellent English an equally sincere expression of thanks for the courtesies shown me by himself and his companions in exile. It seemed strange to find one's self discussing Imperialism, South Africa, and the conduct of the war, as the rickety cart jolted us along the ribbon-like road, white in the intense moonlight of that hard Peninsular sky, and past

> "The hills over-smoked behind by the faint-gray olive-trees."

My companion for the time also proved an accomplished and friendly guide to the antiquities of Thomar on the following day. Through his means I was likewise introduced to several members of the staff of Gen. Pienaar, to whom quarters were appointed in the secularized Convento de Christo by the Portuguese Government after the transportation of these refugees from Lourenço Marquez. Their treatment appears to have been without reproach. A few days later, in Alcobaça, I visited, with some reluctance, the lodgings of about three hundred of the rank and file, concerning whom a different tale might perhaps be told, for these less notable personages were necessarily submitted to the huddling promiscuity of the *chambrée*.

Mr. P. S. Naudé, an ex-field cornet of the staff, then proffered me an invitation to join himself and his friends on an expedition to a recently reopened gold mine, to which their attention had been drawn by the gossip of the countryside, and the exploration of which had proved a welcome relief during many weeks of exiled inactivity. It must be said that the events of the last few years have turned many Boers into potential or actual gold-finders; and the possibilities of great treasures, ignored by the easy-going Portuguese, have thus been rediscovered by a small band of exiles, whose own original riches have now passed into other and more powerful hands. The deposits in question, to which access is easy by means of a fine carriage-road running to within a few hundred yards of the old shaft, have indeed long been known. Local tradition declares them to have been operated in turn by the Romans, the Moors, and the Portuguese themselves, some two hundred years ago.

The distance from the town of Thomar is, roughly speaking, six miles. It was a gloriously sunny day, the 18th of June, when we drove out through the admirably cultivated country, and, shortly after getting out of the carriage, stopped to examine the outcrop of auriferous reef which had first convinced my companions, even before they had seen the old mine, that gold is probably lying here in amazingly paying quantities. The recognition of this of course demands a practised eye. The first visible outcrop, however, which is some eight inches thick, and is unquestionably gold-bearing quartz, is at least four hundred yards distant from the mine, while the inclination and other marks indicate to the expert that the deposit is continuous. Nay, more; according to the Transvaalers, further indications would tend to show that here, as in South Africa, corresponding conditions may very probably imply other parallel reefs equally productive.

A few steps more, and we come, after passing the first shallow diggings which verify the continuity of the reef, to the mouth of the old mine, where a few laborers, with a very primitive apparatus, are busy clearing out the accumulated rubble of centuries in preparation for the genuine working to follow. A roughish sort of capstan, hand-worked, winds up the wire rope to which is attached the small truck that is filled below; and the sides of the primitive shaft-ladder, being shod with metal, serve as an ascending or descending track. Near by, I was interested in seeing the familiar "well-sweep," used for shallower operations. Up to the time of my writing, little has been done beyond opening up the old works in readiness for the exploitation which is to begin as soon as the company is formed. Let us go down the old shaft and see for ourselves whether the miners of an ancient day have exhausted all or left us something to discover.

Down the steep ladder we climb, clinging to its sides, which are slippery with greasy clay, and at a depth of about twenty metres are standing at the mouth of the first *couloir*, extending laterally to about an equal distance, and terminating in a sort of cavern, whose dimensions are a puzzle unless we assume that the old workers used it as a centre of operations. Here, as well as down the sides of the old shaft, the reef is plainly visible; it is, so to speak, "gouged out" at various points where the old gold-seekers' primitive methods of working led them to make their best findings. The floor of the above-mentioned cavern or grotto is pierced by another shaft, of which the depth is still unknown. Shorter tunnels here and there reveal not only the comparatively superficial character of all earlier exploitation, but also remains of "shoring-timbers," not ill preserved. In the opinion of the experienced prospector whose flickering candle I follow, all this work may be not inaptly described as little more than mere scraping. The reason is not far to seek: all the deposits lying nearest to the surface are comparatively friable, and thus render what gold they contain without requiring much more elaborate processes than the extremely simple one of "panning." Nowadays the lower strata, of which the hardness increases with their depth, are subjected to a treatment which secures not only the coarser grains revealed by panning, but a large proportion of the "fine gold" to which the connoisseur attaches still more importance.

The plant here being as yet too imperfect to permit the application of complete crushing, let us content ourselves with noting the yield of the first pan, clarified in my presence, as a test of what may be expected in the future. As every one knows, this process consists in triturating, or pulverizing, in a sort of kitchen pan, an indefinite quantity—a shovelful, let us say—of the ore; after repeated washings, the native gold, sinking to the bottom by its own weight, serves as a rough approximation of the average potential yield. Now, in the course of that afternoon, the test was tried three times without failing to render abundant support to the expectations of the gold-seekers, as the first yield, now in my possession, will show; this amounts to little more than a clearly perceptible quantity—perhaps as much as might fill a small cavity in a very slightly decayed tooth. But the unlearned in these matters have to rid themselves of a number of illusions; among others, for instance, of the belief that these rich gold strata contain nuggets as a pod does peas. It is extraordinary, when one comes face to face with the real facts, how many false notions have clung in one's mind from the silly literature of one's boyhood. I remember, in particular, a well-known tale of adventure, popular even to-day among boys, in which two enterprising youths were represented as turning out nuggets of native gold as large as turnips "by the spadeful" from a mere ditch not deeper than their own height. The truth is, that when a gold-reef gives such result as I noted above, one is justified in expecting at least an ounce and a half (thirty pennyweights was the expression used) to the ton of rough ore; and, in view of the fact that South African miners commonly feel rewarded by a steady average of eighteen pennyweights, the enthusiasm of my companions will not be put down to their very modest indulgence in the juices that ripen under Lusitanian summers. Their previous pannings had, it seems, never proved quite so rich.

But this day, eventful enough already in the eyes of a novelty-seeking tourist, was destined not to end without rounding off in singularly appropriate finish; it received, in other words, its *panache*. Our attention was suddenly drawn to the creaking wheels of a heavy Portuguese ox-wagon, the outside of which had been covered with an improvised canopy of gayly colored cotton print, as a protection to the bevy of beauties that skipped daintily out from the interior. Two carriage-loads of mature parents and dueñas that followed stood as sponsors for the situation. All these visitors were among the notabilities of Thomar, and, having long heard of the gold find, had selected this day for an outing and picnic near the mouth of the shaft. Having come by an upper and longer road, they had approached us unawares. For their benefit, experiments and tests were again applied, and a few of the more venturesome consented to sully their immaculate boots with the mire of the shaft and galleries. The men of the party, evidently with an eye to business, followed the inductions with shrewd interest, putting now and again leading questions that proved the expedition to be, on their part at least, not altogether a *passeio de recreo*. But I must add that when it came to examining the bottom of the pan for gold, the daughters of Portugal clustered alertly about, and showed in their great dark eyes all the eagerness that a miner could wish.

Portuguese hospitality is apt to be as ready as it is lavish. In these southern countries the ancient custom still prevails of offering food and drink of the best to those for whom one has a human kindly feeling. After the ostensible business of the day was over, the members of our party were consequently bidden to the *jantar* (for dinner it really was) for which these generous people had made provision, including in expectation the four foreign guests. The usual picnic supply in excess of demand might have reminded one not only of the fictitious "noces de Gamache" of the neighboring country, but of the sumptuous tables spread a century ago by the monks of Alcobaça for the author of 'Vathek.' On the long table quickly improvised by the workmen of the mining cottage, hot soup, made dishes of many sorts, sweets and cakes, varieties of fruit, coffee accompanied by cigars not usually found in the Government shop, came in leisurely procession, while the attendants in linen undress livery discreetly saw to it that no glass remained empty either of the delicately flavored wine of the district or of the more famous vintages of the upper Douro. There appear to be two very pretty customs practised by the Portuguese on such occasions as this. The first consists in drinking mutual healths without formal speeches, beginning with that of the two principal ladies who are, as it were, the leaders of the feminine part of the enterprise and guarantee its gastronomic success. Social habits having decreed that the two sexes shall occupy opposite sides of the table, nothing was easier than to discern, through the looks of conscious modesty, in whose honor the few simple words were spoken. The other custom consists in a general handshaking and kissing after the conclusion of the festivities—a ceremony, however, not indiscriminately extended to even the most guileless or undesigning foreigner.

Our drive back to the hotel, in the late evening, broken by a short call at the Villa Arbello—whose owner, a local poet of merit, speaks English like a native, and who preserves, through his descent, the appearance of an English country gentleman—was for the rest of the time mainly silent. My entertainers were doubtless thinking of the hopes which this discovery in foreign soil appears to justify. My own reflections revolved rather about the singular irony of destiny which has turned these now homeless exiles out of the rich extremity of one continent in order to make them the forerunners of hitherto unsuspected possibilities of development in another. The obscured, perhaps extinguished, aspirations of these unyielding Afrikanders it is quite impossible for a sincere British subject to share; but the pathos of a lost cause, which in our historical studies we are exhorted to feel for wrangling Poland, should at all events not be denied in the case of men who, capable of self-government and amity according to their own conceptions, have shrunk from no sacrifice in the defence of what appeared to them the indefeasible right to a national autonomy. What they now look forward to will be in every sense their own, secured as it already is by careful legal concessions. But for this last fact, I should not have felt warranted in publishing what their own frankness urged me to make known. P. T. L.

# Correspondence.

## M. LAUGEL'S AMERICAN DIARY.

To the Editor of The Nation:

Sir: The extracts from the diary of M. Auguste Laugel, now appearing in the *Nation*, pleasantly recall the contemporary articles, based on the same visit, which appeared in the *Revue des Deux Mondes*. The articles began in the number for December 15, 1864, and continued at intervals through the next year. Respectfully yours,

James J. Dow.

Faribault, Minn., August 2, 1902.

# Notes.

Little, Brown & Co. will issue in the autumn a volume of short critical articles, entitled 'Retrospect and Prospect,' by Capt. A. T. Mahan.

Another volume of Timothy Cole's wood-engravings, 'Old English Masters,' with text from his own notes and by Prof. John C. Van Dyke, is to be brought out by the Century Company.

Two volumes of 'Essays, Historical and Literary,' by the late John Fiske, made ready for the press before he died, will shortly be published by Macmillan Co. The themes are largely American, but Milton, Tyndall, and Huxley, as well as Evolution, are also treated.

J. B. Lippincott Co. have in preparation a volume on the late volcanic disturbances in

the West Indies, by Prof. Angelo Heilprin. They announce further: 'Delhi,' from the diary and letters of Col. Keith Young, edited by Sir Henry Norman; 'Home Life of the Borneo Head-hunters,' by Dr. W. H. Furness; and a revised edition of his father's New Variorum edition of "Macbeth," by Horace Howard Furness, jr.

'Paris, 1789-1794,' by John Goldworth Alger, will have James Pott & Co. for its American publishers.

Henry Vignaud's 'Letter and Chart of Toscanelli on the Route to the Indies by Way of the West' will be issued directly by E. P. Dutton & Co.

Mr. Carl Fischer-Hansen of this city has agreed with the publishing-house of Gyldendal in Copenhagen to publish his work on 'America,' in twelve chapters, among which we cite those dealing with the Legal Profession, Trusts, Religious Institutions, Schools, the Universities, the Army, American Literature.

Henry Frowde will soon publish the first instalment of the "Tebtunis Papyri" found by Grenfell and Hunt in the south of the Fayûm, and edited by them, with the assistance of Mr. J. Gilbart Smyly. The excavations were conducted at the expense of Mrs. Hearst on behalf of the University of California, and the volume will usher in a series of publications on Egyptian archæology by that institution. The paypri were derived from the wrappings of mummied crocodiles, and date from the division between the first and second centuries B. C. The contents are often official.

Twenty-five years have brought Mr. Hubert Hall's 'Society in the Elizabethan Age' to a third edition (London: Swan Sonnenschein; New York: Dutton). What is new here is a supplementary appendix abstracting "Wild Darrell's" letters written in the Fleet prison in 1579, and making Darrell still more the chief figure on this stage, and still more the object of persecution by his enemies. The book maintains its popularity by its learning rather than by its literary quality.

The most interesting thing in Mr. T. W. H. Crosland's 'Unspeakable Scot' (Putnams) is that the book has real feeling and was not simply written to sell. It mirrors an actual situation. Outside of England that situation is unknown and hardly intelligible, but in England there can be no question that the Scotch are regarded with dislike, contempt, and a curious fear. With a difference, it is the Continental attitude toward the Jew. With another difference, it is the attitude of the English to all foreigners, the attitude which has earned such hatred for England on the Continent. Only, the Scotch are close at hand, which is the difference and the sting. That a mere handful of people in a country which rightly should be nothing but a playground and a purveyor of Scotch whiskey for the South, should so dominate that South, is—to the South—a thing (and the humor is that only by a Scotch word can they express it) uncanny. Stevenson, who was no very ardent Scotchman, has admirably analyzed this English attitude, and now Mr. Crosland writes a book which illustrates Stevenson's analysis from point to point. Of other value, the book has little. That it pricks the pseudo-pathos of the kail-yard school is its one literary redeeming feature. Otherwise, it is personally spiteful and elaborately insolent. But it is an excellent human document.

The spirit of the old Persian rule "to learn to ride, to draw the bow, to speak the truth," supplemented by such learning as befits the soldier of to-day, is that of the United States Military Academy, the most democratic of all our institutions. We know no school where so much individual instruction, physical and mental, is supplied and absorbed, and none whose impress remains longer. Those who can stand the pace are carried through in great style, and those who cannot are relentlessly dropped. The place has its limitations, but its advantages far exceed its defects. H. Irving Hancock's 'Life at West Point' (Putnams) admirably describes the equipment a candidate must possess, and the rigorous and vigorous treatment that he undergoes from the hour he reports until, by graduation or less happily, he doffs the gray. It is neither fiction nor a guide-book, but in it the aspirant and the aspirant's father can trace in advance or contemporaneously the winding way among the scholastic and disciplinary obstacles, as well as some of the available pleasures. The only notable omission we observe is the curious one of failure to explain in detail the cadet organization and the responsibilities resting upon the neophytes themselves, from the negative one of immediate and unquestioning obedience by the nameless newly arrived and homesick wretch, to those of the glorious adjutant and first captain who, in the eyes of the battalion, outrank commissioned officers.

When we find an intelligent man asserting that "to produce strong teeth is almost as simple a matter as to produce strong arms," one's interest is immediately aroused, and careful reading shows Dr. Samuel A. Hopkins's little book on 'The Care of the Teeth' (D. Appleton & Co.) to be full of shrewd observation and intelligent advice in readable form. It is a most encouraging essay for adults to follow for themselves as well as with children, and the reasoning commends itself.

Deserving of mention among the multitude of like contributions is Roger Raoul-Duval's 'Au Transvaal, et dans le Sud-Africain avec les Attachés Militaires' (Paris: Ch. Delagrave). The author had the advantage of being in London during the preparations for the war, and afterwards of accompanying the Boer forces in several campaigns. He asserts that the War Office was well informed of all that was going on in South Africa, and knew accurately all the military preparations of the Boers, the extent of their armaments, and the character of their fortifications. Nevertheless, it was generally believed that the Boers would not fight, and that they would be easily overcome if they did. How this delusion was ended, the author relates. His tone is singularly impartial; he speaks of the Boers with esteem and even affection, but criticises severely their discipline and their aggressive tactics. Col. Villebois-Mareuil, he says, would have taken Ladysmith could he have obtained support; but the Boer generals, although they esteemed him, would not adopt any of his suggestions. There is not much in the book that is new, but the narrative of the author's adventures is entertaining, and his style is noticeably clear and smooth, even for a Frenchman. There are many illustrations, most of them commonplace; but some, printed in several tones, are striking.

One often hesitates for a moment in turning the leaves of the second volume of Thackeray and Stone's 'Florilegium Latinum' (John Lane), containing two hundred Latin verse translations from the Victorian poets, whether to admire most the English original on the left or the Latin replica on the right-hand page. Inspiration must, of course, soon win the day, but such a mastery over the niceties of the Latin idiom and the dignity or daintiness of Latin metres have some English scholars attained that, were the originals absent, it might be thought that the copies were fresh creations. Long may the gentle art flourish—*gratæ Musæ grata umbra.*

The July issue of that laudable series called *Masters in Art* (Boston: Bates & Guild Co.) contains for its ten regulation plates as many excellent specimens, from orthographic negatives, of Paul Potter's work. The letter-press, as usual, includes a sketch of the painter's life, descriptions of the paintings reproduced, selected estimates of his art, and a bibliography regarding him. A portrait of Potter, by Van der Helst, is thrown in.

The August *Scribner's* is almost exclusively a "fiction number," the exceptions being four short poems and the usual departments at the end. F. Hopkinson Smith's "Fortunes of Oliver Horn" is concluded, and the conclusion of "Capt. Macklin," by Richard Harding Davis, is announced for the next number. Kipling, J. M. Barrie, A. T. Quiller-Couch, Sewell Ford, Arthur Ruhl, Edith Wharton, and Mary R. S. Andrews furnish the shorter pieces. A hitherto unpublished portrait of Frank R. Stockton, by Mrs. Dora Wheeler Keith, is reproduced, together with a group of sketches of his former home and grounds at Convent, N. J., by A. B. Frost.

The Boston Society of Natural History has recently issued as one of its Memoirs an account, by Prof. E. S. Morse, of observations on living Brachiopoda, comprising 73 pages of text and 23 quarto plates exquisitely drawn by the author. Japan is the most prolific country in recent Brachiopoda, and Professor Morse was admirably qualified by previous studies to take advantage of his opportunities there. Though study by means of sections, stained and hardened, has become indispensable in the anatomy of the lower forms of life, the tissues are inevitably more or less withered and distorted by the chemicals used, so that, without the corrections afforded by living or fresh material, the method is not unlike the study of fish anatomy by dissecting smoked herring. It is this essential element in the comprehension of an interesting group of animals which is supplied by Professor Morse in the present memoir, for which other students of the Brachiopoda will be under lasting obligations to him.

A writer in *Notes and Queries* for July 19 announces his having made a "list of all the words in Bacon that strike a reader familiar with Shakspere." He expects to prove that, "excluding words common to all writers of that period," Shakspere and Bacon "have not 2 per cent. of their vocabulary in common."

The European 'Continental literature' of the past twelve months, according to the chroniclers in the midyear number of the

London *Athenæum*, has been marked by a dearth of important works. The attempt to cater for all tastes has brought about what some writers term a "literary anarchy," while others hold that the great number of magazines and reviews has much to do with existing conditions. A large part of the twenty-eight pages is taken up with works of fiction, most of which, apparently, would be excluded from our public libraries. Of poetry there is little worthy of note—"our age is by no means favorable to its production," says one of the reviewers; but in the drama some strength is shown. Possibly what is said of one country may be true of the others: "All branches of French literature are passing through a period of expectancy."

The chief feature of the annual report of the State Geologist of New Jersey for the past year is his own discussion, in collaboration with Mr. Stuart Weller, of the rocks of the Green Pond Mountain region, one of the most interesting and picturesque tracts in the entire State. This paper, very scrupulous in its acknowledgment of previous investigations, but displaying independent critical judgment, is accompanied by some striking photographic plates, and by a colored folding map of the formations under review.

The thirteenth annual report of the Missouri Botanical Garden of St. Louis is remarkable for a paper on the Yucceæ, by the Director, Mr. William Trelease, accompanied by numerous beautiful illustrations and maps of distribution by species in the United States according to present information.

A movement is on foot at Oxford with a view to bringing before Congregation (one of the legislative bodies of the University) a proposal substituting the requirement of either Greek or Latin for the present requirement of both Greek and Latin in "Responsions"—the examination most nearly corresponding to an admission examination like those held by American institutions. The proposal in question is likely to come up for discussion next October, but is not believed in many quarters to have much chance of success. A vigorous committee has been organized to oppose it, and is composed of twenty-seven members of Congregation; all of them, with one exception, being active teachers or administrators in the University. One striking fact is, that teachers of Greek and Latin at Oxford have not the prominence in this opposing movement which they have always had in similar efforts as organized at various American universities where the "Greek Question" has been on the tapis. Four of them are Heads of "Houses" (Colleges and Halls), five are University Professors and Readers, three of them are lecturers in natural science, eight are specialists in historical study, two are notable students of Dante, and one is a distinguished political economist. This seems to promise unbiassed discussion of the claims of compulsory Greek when the time comes, and may easily win attention from the American academic world to the conclusions arrived at in Oxford next October upon this very fundamental topic.

The unveiling of the Robert Owen Memorial in the old churchyard of Newtown, England, on July 12 was the occasion of a remarkable testimonial by Mr. George J. Holyoake, the last of the Social Missionaries appointed in 1841 to advocate Owen's "New Views" of society, and the only survivor of his disciples. He described Owen as a man who contributed "more original ideas for the conduct of public affairs than any other thinker of his generation," or, in Southey's words, as "one of the three great moral forces" of his day. The coöperative store, the Factory Acts, the eight-hours day, the national infants' schools, Mr. Holyoake claimed, were due to Owen's advocacy of them. "By buying and working up the first bale of cotton imported into this country, he practically founded the foreign cotton trade." His greatest work, however, was teaching the great truth that "environment was the maker of men, . . . that there were material means, largely unused, conducive to human improvement." Through him, therefore, we had been brought nearer to that state of society which he strove to create, "in which it should be impossible for men to be depraved or poor." Huxley has said: "I think that every one who is compelled to look closely into the problem of popular education, must be led to Owen's conclusions, that the infants' school is, so to speak, the key of the position. Robert Owen discerned this great fact, and had the patience and courage to work out his theory into a practical reality. That is his claim—if he had no other—to the enduring gratitude of the people."

The awakening of an African people to the dangers of ignorance is shown by the *sale* of 65,393 educational and religious books in the native language in Uganda last year. Two-thirds of these were "first readers," a fair indication of the number of people beginning to read. There were also sold 25,556 exercise books, pens, and pencils, and 6,032 quires of note-paper. The boys' school at Mengo, the capital, has more than five hundred regular attendants, the numbers enrolled exceeding 650. Some of their exercises were sent to Sir Henry M. Stanley, who, in acknowledging them, writes: "The handwriting of your pupils compares very favorably with that of English boys, and the sums quoted betray a remarkable aptitude for figures."

A regular service of steamers has been established between Khartum and the Uganda frontier. The opening of the Upper Nile to navigation by the removal of the sudd is of great importance in the development of the Anglo-Egyptian Sudan, and, for the present, will make the construction of this section of the Cape to Cairo Railway a mere waste of money. The great need, says Sir Rudolf von Slatin, is a railway from Berber on the Nile to Suakin on the Red Sea, "not merely for the purpose of carrying export and import goods, but for the purpose of supplying us with fuel." This completed, he advocates the introduction of "heavy freight-carrying motors," the nature of the country being adapted to their use. He reports general tranquillity prevailing, and in some parts rapid progress. With regard to the Senussi, a Mohammedan sect which it was feared would renew the attempt of the Mahdi to exterminate the foreigner, he says that the leader "is a peaceful man, whose only anxiety is that Moslems should lead a strict life. There is nothing to induce the belief that he will cause trouble to the Government."

A peculiarly annoying blunder occurred in the article on page 106 of our last issue, "The Teaching of Art in Universities." The twenty-first line from the bottom of the middle column should read: 'may be taught more or less well." His reason is.' In the eighth line from the end of the same article, page 107, 'drawing and modelling' should read 'drawing *or* modelling.'

—Mr. John T. Hassam, who has, with a particularity of research worthy of Sibley in his 'Harvard Graduates,' already traced the lives of the Recorders, Clerks, and Registers of Deeds for the County of Suffolk, Mass. (*i. e.*, Boston), has applied the same method to the Suffolk Registers of Probate from 1639 to 1799. This paper may be found in the current Proceedings of the Massachusetts Historical Society, and it has been separately printed. Incidentally an account is given of the extraordinary fate of the probate records from their transportation to Halifax with the Loyalists after the siege of Boston, down to their present (but very recent) model arrangement. The Register whose term was longest (1759-1799) was William Cooper, grandson of Judge Samuel Sewall, and his public services are most minutely recorded by Mr. Hassam. He was also town clerk through all party changes, yet he failed to record his original election, and, though he was the father of seventeen children, the births of none of them are entered in the Town Records, not even the six which occurred during his own incumbency. He it was who made a motion in town meeting on March 5, 1783, by which the annual celebration of the Boston Massacre was relinquished in favor of the 4th of July, on the ground that "the immediate Motives which induced the commemoration of that day [March 5, 1770], do *now* no longer exist in their primitive force." As we have, in the third decade of the second century of the Declaration, "burnt" that instrument, is it not time to exchange the 4th of July for some other memorable date —say, that on which Funston captured Aguinaldo?

—A chapter from the report of the Commissioner of Education for 1900-1901, dealing with "German Instruction in American Schools," has reached us in the form of a pamphlet of advance sheets. It reminds one of the "Circulars of Information" formerly sent out by the Bureau of Education, but discontinued several years ago. This form of publication has its advantages, and the present pamphlet of somewhat less than 200 pages is likely to receive the attention of more readers than it will when buried in the mass of the two bulky regulation volumes. The subject is one of immediate concern to many parents and students. The study of German in this country has rapidly grown in favor during the last three decades, and the quality of instruction in the higher institutions has improved in nearly the same proportion as the number of students in the department. In the majority of secondary schools, however, the teaching is still far from satisfactory, from causes connected with the general management of our public schools, and therefore difficult to remove. A change for the better must, in the main, depend upon an enlightened public judgment to which such publications as this treatise

sent out by Commissioner Harris may contribute. Though historical and statistical in its contents, it shows clearly the importance attached to the study of German by the greatest American educators for a century past, and suggests ways toward the realization of better results. The strong German-American bias of the writer, Mr. L. Viereck, does not detract from the interest and utility of the information which he has industriously compiled from sources familiar, presumably, only to investigators in the same line. It would seem, however, that in a public document, especially in one issuing from the Bureau of Education, the English language ought to be handled with greater respect for purity and style than has been shown it in the present case.

—Milan is the chief operatic market of Italy. Official figures show that, some years ago, 1,745 families in that city derived employment and a regular income from the theatrical industry, and it is estimated that, if we include the Italian opera companies engaged in Milan for Spanish, Portuguese, and South American cities, about $7,000,000 has been turned over in one year in operatic business. W. Johnson Galloway, M. P., mentions these facts in his little book, 'The Operatic Problem' (John Lane), as one of his arguments for the establishment of a National Opera-house in England. Why should not London emulate Milan, nay, surpass it, as a pound surpasses a lira? There was a time when Italy supplied the whole world with singers. In those days the opera-houses were in receipt of regular subventions from the municipalities. Then the cry arose that if the wealthy and the nobles wanted their opera, they could pay for it themselves. Cavour opposed this idea. "I do not understand a note of music," he said, "and could not distinguish between a drum and a violin, but I understand very well that, for the Italian nation, the art of music is not only a source of glory, but also the primary cause of an enormous commerce, which has ramifications in the whole world. I believe, therefore, that it is the duty of the Government to help so important an industry." But the municipalities withdrew their subsidies, and, as Mr. Galloway remarks, "the start of their short-sighted policy coincided with the gradual decadence of Italian opera, until this form of entertainment lost prestige and custom with the best of its former clients, England, Russia, and France."

—What Mr. Galloway advocates for England is state intervention and the establishment of a subsidized national opera-house. He discusses the plans for aiding the opera followed in France, Italy, and Germany, and concludes that the German is, on the whole, the best. He gives copious figures to show "the colossal benefit princely patronage and subvention bestow on the theatre-goer, in putting a favorite entertainment within the reach of the masses"; and he seems convinced that opera would flourish as much in England as it does in Germany if Londoners, for instance, could enjoy the privilege of the Berliner—of hearing 280 performances, in one year, of 52 different operas at prices for seats ranging from about $2 down to 50 cents. From years of personal experience, he thinks, he can vouch for "a feeling akin to yearning in the great masses of the music-loving public after operatic music, even when stripped of theatrical paraphernalia, such, for example, as one gets at purely orchestral concerts." Whatever one may think about these diverse arguments, one cannot but agree with Mr. Galloway that the failure of the attempt made some years ago to establish a national opera by trying to run Sullivan's "Ivanhoe" a hundred nights does not prove anything. The theatre chosen was too small for grand opera; the libretto was overloaded and clumsily constructed; and Sullivan failed in his attempt to write grand opera. "The music kept trying to soar, but was all the time chained by the leg." The climax of the folly lay in running "Ivanhoe" every night. Not even "Lohengrin," "Faust," or "Carmen" could have stood such a test.

—Mr. Edward Jenks has added to the "Heroes of the Nations" series (Putnams) a volume on Edward I., which is styled 'Edward Plantagenet, the English Justinian, or the Making of the Common Law.' The second title is particularly important because the author, feeling himself to be a lawyer more than a historian, concentrates much of his attention upon the legal aspects of the reign. "Perhaps," he says, "it is necessary that I should offer a word of apology for the intrusion of a mere lawyer upon a scene so dominated by great historians. My explanation is, that I have long been unable to understand how any one but a lawyer can possibly appreciate the true inwardness of Edward's reign. The Common Law which came into existence during his lifetime was, and is, the very picture of English national life, the concrete form into which the national spirit crystallizes with the moving centuries." The most valuable parts of the book are Chapter IX., which is entitled, "The English Justinian," and Chapter XIII., which is entitled, "The King and his Work." Had Mr. Jenks expanded these portions of his work it would have been better still, and he might readily have done so, for his opening section is very much *ab ovo*. Why the writer of such a monograph should begin with page after page on the study of history, the battle of Tours, the Empire of Charles the Great, Benedict of Nursia, the *Scriptorium*, Gregory VIII., Zenghis Khan, Ogodai, Venetians and Genoese, we find it difficult to imagine. Even when England is reached in the third chapter, and Edward in the fourth, the treatment of subsidiary matters is far too diffuse. From being a lawyer who is at the same time a student of history, Mr. Jenks has just and solid reasons for writing of Edward I. When he is on purely historical ground, he not only is diffuse at the wrong time, but displays no special aptitude for this species of composition. The part devoted to the Common Law is much more satisfactory, and, for the reason already mentioned, we wish that it were longer. According to Mr. Jenks's view, "some of Edward's most brilliant achievements in legislation and statecraft are wholly missed by lay historians, simply because these achievements are expressed in highly technical language." To clear up technical matters for the general reader is therefore one of his aims, but he has another which is broader still. "I should hardly have ventured the task, had I not been encouraged by those whose opinions were entitled to greater weight than my own, to hope that I might in some degree succeed in persuading my readers that law is a dull subject only to those who do not understand it." Though he has not done much for political or military history, Mr. Jenks has succeeded in accomplishing his main purpose. His account of those remarkable years, 1283-1285, is all that could be asked for in a volume of this scope. Where the constitutional historians are usually content to take it for granted that their most technical statements will be understood, he is patient and explanatory, and we may even believe that he will make law seem less formidable to some than it has been hitherto. Better subjects for the illustrations might easily have been chosen.

—Lowell, in his address before the Modern Language Association in 1889, expressed his surprise at having lived to see an old French text edited by an American scholar. It is difficult to estimate the astonishment with which he would have picked up the latest of the Yale bicentennial publications, a collection of all the extant Galician poems of the Gallego-Castilian lyric school, 'Cancioneiro Gallego-Castelhano' (Scribner), by Prof. Henry R. Lang, whose reputation as a Romance scholar was firmly established by the publication of his 'Liederbuch des Königs Denis von Portugal' some seven or eight years ago. Professor Lang's first volume was devoted to the earliest school of Portuguese poetry, which flourished at the Court of King Dionysius, himself the most representative poet of the school; and the book contained a careful text of the lyrics of the poet-king. After the death of Dionysius, in 1325, the chivalric lyric ceased to find favor at court until, after more than a century, there came a revival of the Iberian inspiration in the Castilian-Portuguese school which flourished from 1449 to 1521. The transition period between these two schools of Peninsular poetry furnishes the subject of Professor Lang's latest work, which is appropriately dedicated to King Charles of Portugal. The lyrics, for the most part written in a transitional Galician dialect, and ranging in theme from the courtly love verse of Gonzales de Mendoza to the jolly burlesques of the Archdeacon of Toro, are preserved in various Castilian song-books, and, with the aid of the list prepared by Carolina Michaelis de Vasconcellos, they have been disinterred and brought together in a volume of dignified appearance, collated, emended, and furnished with a glossary and a very complete and careful critical apparatus, which has all the authority of the most advanced German philological science. A second volume, dealing with the literary and linguistic study of this poetry, and with the historical problems of the period in which it flourished, is promised by the author, and, when completed, the work will doubtless be a valuable contribution to an important though restricted field of literary history.

—'L'Avenir Colonial de la France,' by E. Fallot (Paris: Ch. Delagrave), is the best general work on French colonization that has come under our notice. It is the work of a practical man, and is designed above all else for the instruction

of Frenchmen who are or should be interested in colonial matters. Aside from the conventional political fireworks of the introduction (by another hand), the whole volume exhibits sound sense and business-like impartiality. The author calculates the value of France's colonial assets and prospects as a merchant reckons up his stock and scrutinizes his ventures. He is evidently of the opinion that the best way to assure a colonial future is to recognize and correct the blunders of a melancholy colonial past. He is also willing, as some Frenchmen are not, to square the national system with that of more successful colonizing peoples, and to accept any suggestions which the comparison affords. Of the more mechanical portion of the book it is enough to say that it is full, detailed, and up to date; it teems with facts, explains local terms, and is illustrated with excellent detail maps and with compact and well-chosen statistics. All this is of the highest utility; but one hastens from the facts to the deductions. Can the French, then, hold and develop this second world-empire, fallen so fortuitously into their hands? "Aptitude for colonization" is, according to the author's experience, an illusion—or, rather, it is a combination of qualities of a very practical and often, to lofty souls, uninteresting nature. He hopes and believes that the traditional French fondness for the grand style and for the sweeping and supposedly labor-saving synthesis is passing away. The author's economic and political studies issue in recommendations of the following lines of policy, among others scarcely less significant: expansion of credit in the colonies (even to the extent of founding land-banks and advancing funds on the security of unsown crops); unlimited development of transportation facilities, especially of railroads; renunciation of state enterprise, particularly in the matter of land-assignments, in the case of which the system of gratuitous concessions should give place to the Wakefield system; the limitation of military regulation as far as practicable; and the return, regarded by the author as inevitable, to coolie labor. Especially does M. Fallot insist upon the definitive abandonment of antiquated protectionist measures, whose evil effects in the past and present he convincingly demonstrates. The organization of Tunis, the newest great colony, and the scene of the author's own official activity, has profited best by the lessons of the past, and forms a pleasing exception to most of the old mistaken lines of policy. The volume is provided with a full index, but next to no references to authorities are to be found.

## MONUMENTS OF THE EARLY CHURCH.

*Monuments of the Early Church.* By Walter Lowrie. Illustrated. The Macmillan Co. 1901.

A truly scientific treatment of Christian archæology, presented in the English language, written from the point of view of a scholar, and dissociated from religious and theological questions, has long been needed. To supply this want has naturally been a very difficult problem. Scholars fitted for the task because of their opportunities of coming in contact with the remains of Christian antiquity, have been men whose training was primarily theological and whose standpoint has been determined by that fact. They have been theologians and not archæologists. Scholars of other countries, like Wilpert of Germany and Marucchi of Italy, have, however, handled the subject with commendable independence, although Marucchi has sometimes "nodded" because of his desire to confirm some point of ecclesiastical history.

The present work, prepared by Mr. Walter Lowrie, late Fellow of the American School of Classical Studies at Rome, evidently comes very close to the ideal just referred to. Although the author is a clergyman, there is nothing in the book which would indicate any theological or religious bias, and the impression conveyed is that of a calm, unprejudiced discussion. This satisfactory result is due, in part at least, to the opportunities which the author enjoyed while holding the Fellowship in the School at Rome. It was also a distinct advantage for him to prepare a book for an archæological series of text-books rather than for a theological library. The author distinctly states that he has "confined himself scrupulously to the well-defined and soundly assured results of this study, and has endeavored to eliminate questions of a controversial character." The purpose of his volume is declared to be "to give a general view of the monuments of the early Church"; hence, it deals expressly with the "monumental remains of Christian antiquity, and only incidentally with the early literature which illustrates the period."

In an introduction which forms the first chapter and covers twenty-two pages, our author treats of a number of topics which enter into the general framework of his subject, such as the debt which Christian art and archæology owe to classic art and archæology, so that the former, adapting to itself the latter, was "full grown when it was born, and its decline dates from its beginning." The early Church did not object to the religious use of art, which may therefore be regarded as beginning at the close of the first century, and any increased artistic activity in the third and fourth centuries is an evidence of this spirit and not a proof of corruption incident to imperial favor. A survey of the various classes of monuments and their location indicates that, for painting, we must look to the catacombs; for sculpture, to the sarcophagi of the fourth and fifth centuries; for architecture, to the churches built in the fifth and sixth centuries. Monuments illustrating Christian archæology, though found in the East, occur in greater number in the West, and pre-eminently at Rome. The last pages of the introduction contain a brief reference to literature closely related to archæological study, the martyrologies, the itineraries, *liber pontificalis*, the poetic *tituli*, and, finally, an historical survey of the study of Christian archæology.

The author's style in the introduction is, unfortunately, not such as to lead a student to press on to the main portion of the book. It is condensed and at times ambiguous, and imposes upon the reader the double task of understanding both the meaning of the author and the subject of which he treats. A few typographical errors occur here, as the omission of "to" on page 4, and "monument" for "monuments" on page 21. There is also inconsistency in the use of capitals—a fault which mars other pages of the book.

Christian cemeteries are considered in the second chapter, of sixty pages. Of these, twenty are assigned to the catacombs. Then follow brief discussions on surface burial, the agape, legal tenure of cemeteries, burial societies, and, finally, inscriptions. The opening sentence of the chapter is unintelligible. "The word 'catacomb' has a curious history and a very doubtful etymology; De Rossi takes it to be a hybrid word, half Greek and half Latin, meaning 'next the sepulchres'—*accubitorium* is a late Latin word for 'tomb.'" The fact is that De Rossi compared *cata cumbas* with *cata accubitoria* or *ad coemeteria, i. e.*, 'by the resting places.' It may be added that Mr. Lowrie's suggestion as to the origin of the word is only one of many and not by any means the most satisfactory.

The explanation of the difficult subject of the titles and their relation to the catacombs, as given on page 39, is very obscure, and again demands a struggle to discover the meaning of the author, whose ambiguity suggests the possibility of uncertainty in his own mind. As regards the inconsistency of legal property rights appertaining to the Church, an institution whose existence was prohibited, Mr. Lowrie gives the hypothesis of De Rossi, that the Church became a legalized burial society, and thus obtained protection, and also states the theory of Duchesne, who holds that certain emperors tolerated the Church to such a degree as to allow it to hold property. Christian inscriptions are given fifteen pages, and are classified for the author's purpose as original titles and epitaphs, and later metrical inscriptions used by Damasus to adorn tombs. The first class is subdivided so as to recognize inscriptions giving data as to life and death, and again those which throw light on dogma. The appearance of three names in an inscription is said to denote a very high antiquity, but there is no mention of the fact that they might also indicate rank and a formality which did not belong to the early Christians, who would use the simple cognomen when addressing their fellows. The following paragraph (on page 69) is unsatisfactory, as it leaves the reader in doubt as to what variation in orthography distinguished the two classes.

"In point of orthography De Rossi distinguishes two classes of the primitive Roman inscriptions: those painted in red (in Pompeian fashion), which are characteristic of S. Priscilla; and those cut in the stone, which are elsewhere almost universal. The orthography is for the most part careless, and after the second century there begin to appear frequent mistakes which reflect the popular pronunciation and the popular idiom."

The chapter concludes with a history of the catacombs after the fourth century.

The third chapter, extending over one hundred pages, is entitled Christian Architecture, and here the author has relied upon Dr. Holtzinger for general knowledge, upon Professor Dehio for a study of the Christian basilica, and upon M. Choisy for an analysis of Byzantine architecture. As an explanation of the origin of the basilica, Mr. Lowrie accepts without limitation the German theory of its development from the Roman house, particularly that form in which the peristyle is part of the atrium, or,

as Mau would say, the house with a Corinthian atrium. This is illustrated by the house of Epidius Rufus, at Pompeii. This theory is very attractive, but it must be remembered that the form of house Mr. Lowrie mentions is very rare, so that it is more satisfactory, perhaps, to follow Schultze, who derives the basilica from what is regularly known as the peristyle; or Dehio, who derives it from the atrium. The alæ form the later transept, the tablinum the apse, the final form of which undoubtedly imitates the civil basilica. The identity of name led to the old theory that the Christian building was the copy of the civil basilica, and that a number of civil buildings became churches—an occurrence of which there is no known record. The type of buildings constructed about a central perpendicular axis is next described. These may be classified as round like the Pantheon, of the composite plan like S. Vitale at Ravenna, and with dome on square base (either in cross-shaped plan or oblong) like S. Sophia. Church furniture and the location and surroundings of the buildings form the subject of discussion in the last pages of this chapter. It is interesting to note that, for the orientation of churches, the rule that the apse should be towards the east is not regularly followed until the Middle Ages; other influences (such as the direction of a street) prevailing in certain instances.

Christian Art is treated in chapter 4, in one hundred and forty-five pages, under the subdivisions pictorial art, sculpture, mosaics, and miniatures. In his interpretation of early art, Mr. Lowrie wisely takes the middle ground recognizing the symbolic character of the pictures of the catacombs, but disavowing any sympathy with those who are fanciful in their views. It will perhaps astonish the reader to learn that "an undisguised representation of the cross is rarely found in early Christian art, and De Rossi could point to only one instance before Constantine." This arose from the dislike felt by the early Christians to represent the then familiar instrument of punishment as the means of the death of their Lord. It is interesting also to know that angels were not represented with wings during the first three centuries, and that winged figures did not become popular until the Lombard art of the early Middle Ages appeared. The section on Mosaics brings us back again to the basilica, for they form almost exclusively the decoration of these buildings. In those in S. Apollinare Nuovo at Ravenna, erected in 500 A. D., occurs the first instance of the type of the face of Christ in oval form and with pointed beard, so familiar to us now. Several statements in this chapter cannot be accepted, as the declarations that Christmas originated in "the principal festival of Mithras," and that the Constantinian symbol is formed in a "horse-shoe" instead of in the letter Ω, or again that the manuscripts copied and illuminated in the school of Charlemagne were directly derived from Syrian originals, whereas palæographers think the Irish schools were responsible for the ornamentation and decoration of manuscripts of the Charlemagne monasteries. The "minor arts" is the subject of the fifth chapter, and here the eucharistic vessels, lamps, textile stuffs, etc., are described, while articles of civil and ecclesiastical dress, such as the tunic, dalmatic, pænula, chlamys, chasuble, stole, and maniple, are discussed in the concluding chapter.

The book closes with a select bibliography, accompanied by explanatory statements, and with an excellent index. There are 182 illustrations, which are indispensable for a book of this character, and which should be placed on the pages they are intended to illustrate and not scattered in all parts of the book. A list of illustrations follows the table of contents.

## RECENT NOVELS.

*Myra of the Pines.* By Herman Knickerbocker Vielé. McClure, Phillips & Co.

*The Red Anvil.* By Charles Reginald Sherlock. Frederick A. Stokes Co.

*John Kenadie.* By Ripley D. Saunders. Houghton, Mifflin & Co.

*A Pasteboard Crown.* By Clara Morris. Charles Scribner's Sons.

*Ranson's Folly.* By Richard Harding Davis. Charles Scribner's Sons.

The salient point in all Mr. Vielé's work is its originality. He tells either a new tale, or an old one in a new way, and sometimes both. Yet there is a refreshing absence of any striving and tugging after originality. The light airiness of his touch is as removed from affectation as it is from dulness. His work is a pleasurable addition to light fiction, and merits a shelf apart from the reading which is light and leaves the head light as well. It is no new thing to meet in stories attractive young women in sunbonnets, with half-cynical, wholly cheerful views of life, and of the coming (or come) hero. The literary mother with "copy," the astrologizing father, the shrewd land agent, may all be found in the dictionary of fiction, but certainly in 'Myra of the Pines' they wear their being with a difference. The Pine Barrens, too, have been freely, not to say overflowingly, painted in story, but have we ever personally lived there as we do under Mr. Vielé's conduct? The glimpse of the degraded Pinelanders is hideous, yet it serves to shade rather than to taint. And the forest fire is superbly described. We find in this little novel a note of its own, bright, silvery, unusual.

'The Red Anvil' tells a story of the days of the Fugitive Slave Law and the Underground Railroad. The scene lies in a New York town, which served as one of the so-called stations for forwarding the fugitives to the shores of Lake Ontario, and so to Canada. To those of older memories its pages will prove reminiscences and more—wayside chapels of thanksgiving. And a younger generation might with advantage absent them from colonial and mythical adventures awhile, and learn in what a harsh world and with what pain the breath was drawn in the early fifties by friends of the negro race, by lovers of the Union. As a story, 'The Red Anvil' is full of crudities and fatigues, but its history lesson is timely. There are many Americans who need to be reminded of the existence and conduct of the U. G. R. R., a road with neither engines nor rails nor cars, "unsurveyed, unmapped, unrouted," "a cryptic railroad whose only code was one of danger signals." Even the "cock-and-pye" "God-wot" hero of novelized eighteenth-century history employs no more romantic messenger than floating logs of a "certain timber and notched in a certain way for the purpose of identification," swifter than horse or foot, and known to the initiate as "Mr. Wood." Indeed, the appendix alone, containing the provisions of the Fugitive Slave Law as enacted in 1793, and supplemented in 1850, will furnish matter startling to a younger America that cannot remember slavery days, if only for the clause setting forth that "in no trial or hearing shall the testimony of the alleged fugitive be admitted in evidence."

There is very little quality or significance in 'John Kenadie.' The motive—the unconscious inheritance of a Kentucky feud—is not amiss, but the development and execution of the story lack lustre. We are told that John Kenadie was a poet, but are not made to feel it, even though his verses were accepted by a magazine and subsequently published in book form. No, not even though John and his preceptor always "talked of the gentle things of letters and the bookish life." The avowed theme, however, the transmitted antagonism between John and Hugh, is better treated than the characterization, which is much like that of the domestic farmyard drama.

The most interesting parts of Miss Morris's story are those which relate to the technique of the stage; the most valuable those which point out to girl aspirants to the stage what pitfalls await them. Opportunity, opportunity, cries the preacher, is the enemy that lies in wait for the inexperienced and confiding, be they guarded as carefully as they may. There is solemn warning in these pages for the stage-struck. For lighter interest we see the stage from the expert's point of view—a satisfaction always; while criticisms on the book of the play by a player have a freshness and piquancy all their own and Miss Morris's.

Mr. Harding Davis's stories are in his best vein. The two novelettes are improbable enough not to stimulate the argumentative reader to disprove them. He is left free to cheerful, unchallenging enjoyment, while yet they are not so artificial as to neutralize interest. "La Lettre d'Amour" is a sketch of pretty and poetic suggestion. We might suggest in passing that, since the name of Ysaye is an important point in the story, the spelling of it ought to go to the proofreader before the next edition. The *would* and *should* editor, too, might profitably be consulted. The story of "The Derelict" conveys a graphic impression of the battle days in Cuba—"an empire wiped off the map in twenty minutes"—and of their lurid reflection in the fevered eye and brain of a war correspondent. The great sacrifice made by the poor old derelict to save Keating's departed honor is splendid, but annoying. We believe in Casabianca, we cordially hate his modern traducers; but we think Charlie Channing made a mistake when he signed his superior's inferior name to his own superior story. "The Bar Sinister," a dog story, is entirely delightful as a story and a dog, whatever it may be as Dog in the technical sense.

## MICHEL COLOMBE.

*Michel Colombe et la Sculpture Française de son Temps.* Par Paul Vitry. Paris: Librairie Centrale des Beaux-Arts. 1901. Pp. xxiii, 531.

This is a work of mediæval archæology

into which have gone all the patience and sound and wholesome unbelief which recent students of classical archæology have shown. There is in it, too, that enthusiasm which the long-continued study of the later Middle Ages, at least in their artistic development, has the power of exciting—an enthusiasm the greater because confined to a small body of students. It is in no way surprising that interest is more readily excited among persons interested in antiquity by Greek pre-Christian than by French fifteenth-century relics of the past. The former are associated with the loftiest literature and with all the study and tradition of our universities; the latter has to stand or fall with the respect of the student for constructional and creative work in form and color. There are a thousand students of the language of words and the literature that belongs to it for one who investigates the past history of the language of form and color and what belongs to that language; and all the more are those few students interested and excited in behalf of their own reserved field of investigation.

An ideal example of such enthusiastic work is the book before us, from a man new in the field, though not unknown in it, and confirming his right to the position of a leading archæologist by the completion and publication of this one volume. It is of the accepted large octavo or narrow quarto form, familiar to the users of French books on fine art; it has sixteen plates, and perhaps three hundred illustrations in the text. These are all from half-tone blocks, and are not attractive. So far as they are concerned, the book is a disappointment; one expects more beautiful things from the Parisian house which publishes them. It is, of course, true that only at very heavy cost could they have been made much better. Nearly all the subjects are in-doors; the picture itself in nearly every case shows how bad and how troublesome was the light; and then there is that unfortunate tradition among the French photographers which abhors a sharp negative, and insists on putting artistic vagueness of outline even into the documents most necessary for study. Accordingly, it is not as a parlor-table book that this one is to be commended; it is a thoroughgoing piece of investigation, representing years of toil, and requiring days of reading and reference. As yet we have in the land only one or two great collections of photographs accessible to students, else the word would be passed, Go to the photograph-library and look up every one of the references to these works of art afresh, and with better pictures than M. Vitry has been able to supply.

Michel Colombe was certainly a sculptor of the last half of the fifteenth century. The old and the new authorities agree in this, and his birth may be set down as of about 1430; his death of 1512 or 1513. The Hoefer biography avoids mention of the dates of birth and death, and states positively that nothing was known about this artist, not even his name, until a certain famous tomb in Nantes, in Brittany, was opened in 1727. That conservative statement marks the amount of knowledge which the world had down to the middle of the nineteenth century of one of its great sculptors. Since that time the study of mediæval archæology has been carried so far as to identify scores of important artists of the later Gothic epoch, and at the same time to reject a crowd of fantastical ascriptions which had passed current before. And this brings us to the essential peculiarity of the present work, that it is composed in the main of destructive criticism. It was necessary to state plainly that only this and that still existing work of sculpture was known to be by Michel; that only this and that now destroyed work was known to be by him; and, finally, that there are only such and such other works that can with any propriety be classed as of his school. It seems, therefore, at first thought, to diminish the interest of the study that each of the classes just indicated must, of course, be small. Thus, there are only three still existing works of art which are certainly by this artist. There are less than half a score of existing sculptures or groups of sculpture which are assuredly of the Colombe school. There are, perhaps, six works that have perished, but of which we know something, and that they were altogether or largely of Colombe's creation. Accordingly, as this complete "œuvre" is so very limited, the study of the art and of the epoch of Michel Colombe is very largely a matter of rejection, and is almost wholly a matter of minute and careful classification.

First, M. Vitry has shown his sense of what was needed by beginning his study at a point far away from the artist himself. He notes that it may prove erroneous to call Colombe a sculptor of the Renaissance. He devotes his Part One, 106 pages, to describing the late Gothic art in France, its constructional and decorative qualities, its essential difference from the Gothic of the thirteenth century, its still greater differentiation from anything that can properly be called Renaissance art—that is to say, art influenced by the classical revival of Italy—and also the French sculpture influenced by the Burgundian school, and that which was not so influenced. The most earnest plea is entered for the independence and for the artistic importance of the late French Gothic school of art. Nothing can exceed the boldness and energy with which this new man in the field has announced his defiance of the accepted doctrine that there is only one good Gothic, namely, of the years from 1180 to 1250. Nothing can exceed the earnestness with which the case is argued, the sympathy of the reader invoked, and his conviction invited as to the essential importance of that style which is exemplified for us, in architecture, by S. Maclou of Rouen, S. Wulfran of Abbeville, and a hundred mansions, of which the Hôtel de Cluny may be taken as a not too favorable example. As for the sculpture of the period, we are reminded pleasantly of the time when even Ruskin, that high priest of purity and simplicity in art, had careful photographs made of the statues of Abbeville, because he feared the threatened restoration of the cathedral. There is no sculpture more valuable for its decorative quality, and the free use of polychromy in connection with it is an added grace. This "flamboyant" style passed gradually into the non-constructional pseudo-Gothic of the sixteenth century; there is no denying that. So did the most original of all English styles, the perpendicular, lead up to what was at once its greatest artistic glory and a complete denial of its constructive quality, the fantraceried vaults of King's College Chapel and its congeners. That the French style was great and splendid from 1420 to 1510, and that it deserves profound study and enthusiastic admiration, is M. Vitry's contention; a theory which needs certainly not more nor more well-marshalled advocacy than he has here arrayed in its behalf.

Next, from page 107 to page 269 (Part Two), is developed the long account of the invasion of France by foreign artistic influences, the Flemish and the Italian influences especially, and those divided into what is noticeable before the pivotal year 1495, when Charles VIII. returned to France from his Italian campaign, and the time following. Before 1495 our author finds Italian as well as Flemish influences at work. After 1495 he finds Flemish as well as Italian influences at work. In other words, he thinks that, in the east of France, at least, Italy and Flanders struggled for a century for the perpetuation of mediæval taste on the one hand; on the other hand for the new classicality of sentiment, strong in the south of Europe since 1420. The second was, of course, the increasingly powerful influence; it is that which becomes more and more noticeable with time. There is mention of the plunder brought back by Charles VIII. from Italy, and the importations, of less reprehensible origin, of the later years. There is the moral weight of the gardeners, painters, and sculptors, invited by king and princes and nobles to come to France, and teach and work there; there is the commencement, here and there, of tomb building, shrine building, sculpture and the like in an attempted Italo-classical taste. And if the Flemish influence struggled with this for a time successfully, its flank was turned by the Italian influence which reached Flanders, too, so that it was half-heartedly that the French builders and sculptors could contend against the invasion from beyond the Alps. Nevertheless, it was with a whole-hearted and perfect energy and success that they worked in their own traditional ways, modified only as traditions are always in the way of being modified, by the new order of tastes and ambitions which were "in the air" around them; so that the sculpture of the years following 1495, like that of the preceding epoch, always abounded in force and significance.

Thus we are brought to the Third Part, and to the question of those sculptures of the time of Michel Colombe which are either his, or of his school, or so akin to his known work that they must be considered in close connection with it. Such is the famous sepulchre of Solesmes, a marvellous collection of sculptures in the little transept of an abbey church between Le Mans and Angers, and therefore in the heart of old Anjou. Such is the group of sculpture in the Abbey of Souvigny, between Nevers and Moulins, and therefore on the boundary of the old Duchy of Bourbon. Such are certain sculptures of Moulins itself, and others in Touraine, especially sculptures at Beaulieu-lès-Loches, Limeray, and several other little places lost to view except for those students who love the slow journeying about France, living with a simple and pleasant luxury at little inns, and spending the most blessed days of slow

observation in churches and desolated châteaux where no tourist comes. Within this same Part Three is included Chapter IX., devoted to the life and career of Michel Colombe, with an attempt to recover all that is recoverable of his known labors; but quite separate from that is Chapter X., in which the existing sculptures known to be by him are described, three only in number, one of which is a small medal, but another a large and elaborate composition containing many figures. Following this comes a paper on the school founded by the artist, and a final chapter on the extended influence of his art in Burgundy, in Normandy, in the Île-de-France. And so, with a crowd of tables and a long bibliography to follow, the book is completed; certainly the most thoroughgoing piece of patient and sagacious archæology which has come our way these many months. If the reader likes to see old ascriptions proved unfounded and scores of old statements proved false, while there is to console him for his lost illusions only a great certainty, and the noble enthusiasm for that which remains, then this book is to be commended to his notice.

---

*Tiberius the Tyrant.* By J. C. Tarver. Westminster: Archibald Constable & Co.; New York: E. P. Dutton & Co. 1902.

Never have the attractions of alliteration led to a more misleading title than in the case of this book. From the title we should expect to find the author warring against those writers who, during the last thirty or forty years, have been endeavoring to clear the personal and political character of Tiberius from the obloquy that was spread over it by the "yellow journalism" of Suetonius and by the more dangerous, because morally attired, insinuations of Tacitus, so grand in his style, so small and narrow in his conception of the history of an empire. But, on the contrary, Mr. Tarver seems to think that he is doing something that has never been done before in his careful examination of our sources of knowledge about the Emperor, and that this vindication of him is a novelty. He is, to be sure, acquainted with Mommsen's characterization of Tiberius as "the ablest of the Roman Emperors," but he has apparently never heard (at least, he never makes mention) of the views of Sievers, Stahr, Freytag, Beesly, Furneaux, Huidekoper, and Allen. None of these writers accepted the Tiberius of table-talk, and all gave good reasons for their rejection of that after-dinner figure. It is true that few of them made use of a space of four hundred-odd pages in which to set forth their doubts, and that no one of them whitewashed the Emperor quite so clean as Mr. Tarver leaves him; still, we have not observed in this volume anything to the credit of Tiberius, whether fact or argument, which has not been adduced before.

But, although Mr. Tarver has to offer on this point nothing which is absolutely new to scholars, and although, whether from lack of information or ingratitude, he not seldom goes out of his way to accuse them of pedantry and (perhaps confusing students in general with some pedagogues of his own school days) of over-devotion to the gerund-grinding mill, yet it is probably true that, to the ordinary man of education, Tiberius is still the accepted type of a bloodthirsty ruler and foul-minded, cruel-hearted man. It is true, also, that the books in which a wholly different picture of him is drawn are not of the sort which prove attractive to the general reader, for whom, indeed, they are not intended. Mr. Tarver's work was therefore worth doing, and he has done it excellently. Without making any show of learning (there is no preface, no bibliography, and only one footnote in the book), he has evidently mastered the ancient materials; in his study of them he has not been deceived by the fascinations of the style of Tacitus, "in whose pages nobody is good except men unconnected with the Administration, the Germans, and the historian's father-in-law"; and we are glad to observe that he gives due credit to the statements of the eye-witness Velleius Paterculus, who has been abused, we suspect, by many more critics than have read the old fellow's book. Working the materials over into a clear, straightforward (though sometimes too colloquial) narrative, he has accomplished his purpose by showing once again, and more conclusively, perhaps, than any other writer, that the Emperor Tiberius was a far-sighted, just-minded, and patriotic statesman, and that, as regards his character as a man, we have no reason to believe, but many reasons to disbelieve, the foul aspersions with which it has been besmirched.

The real value of this book, however, lies not in the pages about Tiberius himself, but rather in the long introduction and the many cursory paragraphs, in which the author shows a remarkable appreciation of the difficulties that beset the makers of the Roman empire. In his chapters on the expansion of Rome, with the resulting requirements and possibilities of which poets like Virgil and Homer had a higher realization than had the historians; on the extraordinary conglomeration which the Roman people had come to be, ruling "under conditions which were simply authorized anarchy, so that the deeply lamented fall of the Republic with which school histories are apt to close was the restoration of order"; and on the Senate, which had become all but an hereditary peerage, whose members, many of them, saw in the Empire only a curtailment of their sacred right to loot in the provinces and to bring about miscarriages of justice at home by the use of influence; and in his chapter on slavery, in which he reaches the conclusion that the institution was in ancient times beneficial to the advance of civilization—in all these and on other political topics he displays a sympathy with the imperial reformers (for such Augustus, with his ministers, and later Tiberius, certainly were), of a kind that is to be found in perhaps no other historian, and his picture of the early Empire and its policy is illuminated by means of many comparisons, brilliantly drawn, between those days and our own.

Thus the book is one of manifold interest, fitted to attract and instruct the general reader as well as students of government, of economics, and of the classics. It is excellently printed and has a good index. In bulk it is large, but, being printed in England, its paper is so light in weight that the book is no burden to hold. When will American publishers make up their minds to give their patrons relief from the heavily loaded fabric which wearies the hand and taxes the patience of both reviewer and ordinary reader?

---

*Dante Gabriel Rossetti.* By F. M. Hueffer. London: Duckworth & Co.; New York: E. P. Dutton & Co.

*Rembrandt.* By Auguste Bréal. Same publishers.

"The Popular Library of Art" seems, so far as it may be judged by the two numbers that have reached us, to be conducted on other lines than those of the many similar series of small books on art which the times bring forth so plentifully. Here we have very little biography and no apparatus of lists of works, etc.; but, in each case, a "critical essay" which contains real criticism. Mr. Ford Madox Hueffer tries to analyze the art of Rossetti, and M. Auguste Bréal to appreciate that of Rembrandt, and each meets with considerable success in his effort and has produced an interesting and stimulating book.

Mr. Hueffer's main contention is that, in spite of the brilliancy, the ardor, and the gift of language that made him seem a leader, Rossetti was really more influenced than influencing. His pre-Raphaelism, which was brief, proceeded from Hunt and Madox Brown; his Florentine manner was made to suit Ruskin; his decorative bias was caught from Burne-Jones and Morris; his limited and intensely literary choice of subjects was largely due to intercourse with Swinburne and others. By nature he was a painter, with a dramatic gift—a clear eye for expression and gesture—a knack of seeing—which was overlaid, in his early work, by a factitious love for detailed realism, in his middle period by bric-à-brac-ery; and, often, in his later work, by a morbid love of symbolism and literary expression; so that he was seldom entirely himself. In his later days, when he could sell whatever he chose to do, he more nearly expressed his true individuality as it had come to be, not as it might have been. He was at his best when he was occupied only with beauty, when, "having recorded a type of feminine beauty, . . . he afterwards found a name for it; stood back in fact from his canvas, and only then discovered the moral of what he had been painting." He had practically no training and was always an amateur, never a master, yet he had genius, and while "to-morrow there will be a reaction," it is probable that there is in his work that which will make a re-reaction certain, and that the best of it will survive.

The most interesting part of M. Bréal's sympathetic account of Rembrandt is his discussion of that artist's toleration for, not to say love of, ugliness, particularly in the nude female figure. He has no patience with those who regret or apologize for Rembrandt's coarseness, and would take from him his "broad subjects" merely because they are "unworthy of his genius." Rembrandt's work was all of a piece. " 'Classic' beauty is not his province. Life is what he seeks, the life that he knows and understands."

"Do the coats of the Syndics, or their conical hats . . . remind you of the harmonious draperies in the friezes of the Parthenon? And if you admit that Rem-

brandt has been able to find and make you feel a new beauty . . . in the lines, colors, and reflections of his fellow-townsmen's clothed bodies, why do you refuse to see the delicate tones, the palpitating flesh, the marvellous suppleness of line and modelling, the comprehension of certain harmonies of the human body shown by Rembrandt in his nudes? Accustomed to see the representatives of an academic tradition exhibit their carefully cleaned, smoothed, and polished dolls, . . . the sight of something real shocks and disgusts you. . . . If any one of our contemporaries, worn out by the driving life of towns, or any townswoman of the twentieth century, deformed by stays, grown heavy by overfeeding, or exhausted by a life in which little attention is given to 'eurythmy,' should be tempted to reproach Rembrandt with a realism that seems at first sight excessive, they should reflect that Rembrandt is perhaps the only one of the old masters who would have been capable of feeling, expressing, and making us understand and love the living charm and grace hidden in these bodies of ours, bodies on which we heap our mendacious dresses, and of which we fear the nakedness because we do not know how to see the beauty."

All this is good and healthy criticism as far as it goes, but it does not quite satisfy. Let any painter who has spent thirty years studying the human body without its "mendacious dresses" say whether Rembrandt's women are not vastly uglier than life. Let him who has seen how supremely lovely can be the body of a young girl, how much harmonious line and beauty of structure is to be found, by him who has eyes for it, in the forms of the commonest models, say whether the one word "realism" adequately explains the hideousness of these "Dianas" and "Bathshebas." Michelangelo did not make "smooth and polished dolls," but he would have seen wonders of beautiful form and line in any human body because form and line were what he was looking for. Rembrandt did not see them because he had no care for form and line. His one love was character, his one aim expression, his one means light and shade. M. Bréal has pointed out that Rembrandt never drew a single figure, there being always some suggestion, however slight, of the surroundings in which it is placed. It may be as truly said that he never drew an outline. When he seems working in pure line it is not the contour he is drawing—his line follows the mass, suggests the direction of folds or the bagging of muscles, breaks, and continues again. The line itself is suggested (or potential) light and shade. Beauty of form, as such, was nothing to him, and he cared for form at all only as it gave surfaces for light to fall on and shadows to catch in. He drew a woman as he did a pig, from the picturesque point of view; and the creased and flabby shapes of his ugly women were *better*, for his purposes, than would have been the rounded limbs of a Greek nymph. So he expressed the soul of a poet through forms of an astounding vulgarity, and conveyed a depth of sentiment almost unique in art, though the figures he drew are often almost inconceivably grotesque.

It was a good thought, instead of small and inadequate reproductions of Rembrandt's famous pictures, to give, in the illustrations of this volume, reproductions of etchings and drawings which suffer less by reduction, and some of which are comparatively little known. The translation seems to be excellent.

*Lenox and the Berkshire Highlands.* By R. De Witt Mallary. G. P. Putnam's Sons. 1902.

A well-known resident of Berkshire has here brought together a number of essays and addresses, some of which have been read before various literary and historical societies, setting forth particularly, in many varied aspects, the natural charms of Lenox and its surrounding neighborhood. While his aim is not that of an historian, his book will be found by many no less interesting for what it records of past conditions than for what it says of the existing state of things.

Old-time Lenox, inhabited since 1750 and incorporated in 1767, became the shire town twenty years later, and so remained for more than eighty years, or until 1868, when Pittsfield was made the county seat. During many years of this period Lenox was the most influential centre of western Massachusetts in political, religious, educational, and social matters. It became famous as the resort and dwelling-place of many men and women, celebrated in art and literature, whose names passed into history more than half a century ago. Modern Lenox, no less widely known, has achieved far greater fame within the last twenty years through the creation of beautiful estates and palatial villas, the magnificent country seats of wealthy summer residents, whose advent has wholly changed the character of the place and of its people.

Prehistoric and primitive Stockbridge seems likewise no less interesting for what it formerly was in the days of the Indian mission and the Established Church of Berkshire, under the spiritual guidance and theological teaching of Jonathan Edwards, than for what it now is under modern influence and conditions, one of the loveliest villages of America, a beautiful realization of the high ideals of the founders of the Laurel Hill Association, the parent of more than a thousand similar organizations in the form of village-improvement societies, scattered throughout the United States.

Great changes have come to pass in Berkshire since the days of the Established Congregational Church, when a certain person holding Episcopal preferences, having applied for a certificate of exemption from payment of taxes for the support of the Congregational Church, obtained one reading as follows: "This is to certify that A. B. has renounced the Christian religion and joined the Episcopal Church!" Nowadays, the burning questions of Jonathan Edwards's day are no longer thought of, and the good people of Lenox and Stockbridge are largely only "'piscopal pious." Among the summer residents of both places there are many strictly warm-weather Episcopalians, who, at the low temperatures of their winter homes, are good Presbyterians or even frigid Unitarians. The latter abound in Stockbridge especially; and the summer congregations of the Episcopal Church there are notably made up of thawed-out Unitarians.

Lenox and Stockbridge are adjoining towns whose respective centres are about six miles apart. Their geographical and social boundaries or dividing-lines are not precisely coincident, and some residents whose houses are in one township are socially at home in the other. From its superior height and more magnificent establishments, Lenox looks proudly down upon the humbler, but no less well-contented village, while the modest cottager of Stockbridge finds little occasion to violate the tenth commandment in coveting his neighbor's house or anything that is his in Lenox. The two communities dwell together harmoniously, each thinking well of its neighbor, and both still more highly of themselves; and it has been fitly said, by way of social comparison of the two places, that in Stockbridge the neighbors esteem, while in Lenox they estimate, each other.

Mr. Mallary's volume is substantial and very attractive in appearance.

---

*The Story of the Art of Music.* By Frederick J. Crowest. Appleton & Co.

Real courage is a trait which everybody admires, and genuine originality is so rare that its sporadic occurrence always delights the jaded reviewer. It is, therefore, a pleasure to sit in judgment on a book like Mr. Crowest's, which is brimful of noble courage and almost unparalleled originality. He has no mercy on those foolish musicians and music-lovers who believe that the second half of the nineteenth century marks the climax of their art, but informs them undauntedly that Schumann (who died in 1856) "is the last, for the present, of the great masters of music." "Wagner, Raff, Dvorák, Rubinstein, Liszt, Tschaikówsky [*sic*]," and all the other modern composers, with the exception of Brahms, have "nothing genuinely new in them. They only say merely the old things over again." Such charlatans as Franz, Grieg, Bizet, Saint-Saëns, Goldmark, Humperdinck, Jensen, Johann and Richard Strauss, MacDowell, Paderewski, etc., Mr. Crowest does not even mention, and rightly so; for to refer to them in a history of music would only encourage them.

Mr. Crowest's opinions, it will be conceded, are peculiarly and exclusively his own. His originality is further revealed in the reasons he gives for them. For instance, it is universally believed that Wagner reformed the opera by abolishing the arias and other unconnected numbers, and making it a work of art connected in all its parts. Mr. Crowest knows better; he informs us that "Beethoven, in one of his moods of discontent, wrote: 'If I were to write an opera after my own mind, these people would run away, for they would find in it none of the arias, duets, terzets, and all the stuff with which the ordinary operatic patch-work is made up.'" "Here," our author adds triumphantly, "was the fundamental principle of all Wagner's art-theories."

The only objection—a slight one, to be sure—to this grand historic discovery is that Beethoven never said anything of the kind. He wrote only one opera, which is absolutely conventional in its use of arias and other operatic patchwork. The words quoted by our author were arbitrarily put into Beethoven's mouth by Richard Wagner himself when, at the age of twenty-seven, he wrote his fanciful novelette, entitled, 'A Pilgrimage to Beethoven.'

It must not be inferred that such a model historian as Mr. Crowest could be capable of such a thing as prejudice. He shows the

same courageous disregard of facts and universally accepted opinions in his treatment of some older composers. Concerning Schubert, we are told that he composed nine symphonies, leaving the ninth unfinished. Inasmuch as all biographers and historians are agreed that it was the eighth symphony that remained unfinished, this item of news may be regarded as what journalists call a "scoop." Almost superhuman critical acumen is, moreover, shown by our author when he writes, regarding the songs of Schubert: "Like most German songs, they are mainly written for almost any voice, and consequently belong to none—so that for legitimate singing they are almost a sealed book. . . . Such leaps as repeated sevenths and ninths are scarcely agreeable baits for vocalists." Poor Schubert! a victim to his own repeated sevenths and ninths! Any composer of vaudeville tunes could have taught him to avoid such fatal blunders.

Mr. Crowest's book is dated 1902. On page 177 he informs us that "Tschaikŏwsky [*sic*] still lives." There is a current belief that Tchaikovsky died at St. Petersburg on the 6th of November in the year 1893. Mr. Crowest cannot possibly have been unaware of this fact; he probably ignored it deliberately for the sake of originality and to obviate the necessity of saying pleasant things about a dead man who was a mere modern composer. No reasonable objection can, of course, be made to this, but the reviewer may perhaps timidly hint that in always putting two dots over the *o* in Tchaikovsky's name, the author allowed his genius for originality somewhat too free a swing. His changing the sex of the Flying Dutchman—"Die Fliegende Holländer"—is doubtless a mere ebullition of his sense of humor, as are his remarks that Chopin belongs to the French school and that Beethoven "opened a path for Schopenhauer's spirit and reasoning."

After the harsh treatment to which Mr. Crowest subjects other modern composers, it is pleasant to find him saying some nice things about Liszt. He tells us that Liszt's compositions "quickly attracted the attention of the musical world." Liszt himself, it is true, fancied that his works received very little notice, and to the end of his life he used to say, "I can wait." Obviously, in a conflict of this sort, credence must be given to Mr. Crowest. This erudite Englishman also shows a rare insight into the aspirations of genius when he says, regarding Liszt, that "he posed—rather than composed," and adds that "this statement is made not slightingly, but to explain that he was an interpreter rather than a creator." There is nothing more to be said about Mr. Crowest's masterwork except that it belongs to a series of books called "The Library of Useful Stories."

---

*Bookbinding and the Care of Books:* A Handbook for Amateurs, Bookbinders, and Librarians. By Douglas Cockerell. With drawings by Noel Rooke and other illustrations. (Volume I. of the Artistic Crafts Series of Technical Handbooks; edited by W. R. Lethaby.) D. Appleton & Co. 1902. Pp. 342.

This book is sure to please the student at first glance, for its appearance is altogether in its favor. Printing and paper are what they should be for a good working book, and the illustrations—broad-line drawings without elaboration of shade—are perfectly descriptive and utilitarian, and still most pleasant to the eye. In addition to the text illustrations, a dozen photographic plates representing fine old bindings are inserted at the end. Examination of the text shows no important exception to the rule that books of handicraft are not to be found well and pleasantly written. The meaning is obvious if one seeks for it, but it cannot be said that the subject is perfectly well presented. Still, all that is needed is intelligibly put before the reader, who should not expect to grasp the complicated business of preparing and binding a book at one reading of a manual. The outsider will learn all that he need know from this volume; and even the practised binder will, we should think, find much in the way of valuable hints, and still more in the way of encouraging insistence upon points which he is much too apt to neglect. Finally, beginning with page 291, there is something for the book-owner, namely, the most explicit instructions as to avoiding or putting by the dangers which threaten the bound book, and as to the repairs it may need.

Any one concerned with work upon books, or prints, or photographs—in fact, any working student or any owner of books who handles them himself—will find abundant reason to thank the author for the explicit directions given; such as those about mounting photographs (page 180), about scrap-books, about inlaying, about the composition of preservative liquids to rub upon leather bindings, and also for much good advice with regard to the lettering, the leather, the "end papers" or linings, and the bothering transparent tissue papers facing the plates, or the stiffer and more opaque sheets, still greater hindrances to the workman. A workmanlike good taste governs the advice in every instance. A private or a public library kept up according to the standard established here would be an excellent thing to frequent and an admirable thing to see.

A word must be said about the promise given by the series of which this is the first book. A volume is announced on gold and silversmith's work, and one on cabinet-making and designing, and it is stated that they will be "richly illustrated"—let us hope, rather, intelligently illustrated, as is this one. The editor, Mr. Lethaby, who opens the series with a brief editor's preface in the present volume, and who is announced on the wrapper as "a Director of the London City Council Central School of Arts and the Crafts, and Professor of Design at South Kensington," is more than that. It is, indeed, true that Mr. Lethaby has not published much. He is one of the two authors of that admirable book, 'The Church of Sancta Sophia, Constantinople,' and the sole author of the interesting essay, 'Architecture, Mysticism, and Myth,' and of an excellent little book on architectural leadwork, ancient and modern. His services to the theoretical student of art have, however, been greater than this, he being a writer in periodicals and the whole effect of his teaching being of the loftiest kind, involving the complete recognition of a high ideal, and working always for the discrimination of truly artistic work from that which is controlled and inspired by commercialism. This is the spirit which inspires his article Design in the recently issued 'Dictionary of Architecture and Building.'

---

*Nature Study and Life.* By Dr. Clifton F. Hodge of Clark University. Boston: Ginn & Co.

In this teachers' manual, Dr. Hodge aims to bring the children into immediate contact with nature, giving them an active and creative part in the study, binding home and school closer together by the practical values of their work, and helping to prepare them for social life by teaching them, as Ruskin says, "with respect to things to enforce tidiness and fruitfulness," that with respect to men they may "enforce justice." Most other plans of nature-study emphasize the scientific or the æsthetic side of the subject; Dr. Hodge's plan takes large account of the economic side. In explanation of this fact, he says:

"Nothing can be farther from my thought [than to recognize merely economic values], . . . but I would include all human values in about the relations that they bear to life. . . . I have made economic values prominent because . . . money is the common, universal expression of value that every one understands and respects; and, while we realize that there are many things that money cannot buy, no other measure of value is so fundamental to the ordinary affairs of life. Money value is, moreover, the trunk that supports many of the higher values."

The book possesses a unity of purpose such as public-school nature-teaching too often lacks. It leaves room, also, for the æsthetic values of the subject, gaining, perhaps, by not insisting too strongly upon them. It treats of plants and animals that have economic value, and, as far as possible, considers them in their relations to the child's home life. It prefers, as Dr. Stanley Hall says, in his introduction, "instead of elaborate methods applied to a few species," "the essential and salient points about many." The author takes up the domestic animals, beginning with children's pets; he treats of certain ornamental and agricultural plants, giving valuable lessons in gardening, horticulture, and arboriculture, which, as far as may be, the children are to put into practice; he discusses the insects, birds, and other animals that benefit or injure such plants, and suggests ways of encouraging the beneficial species and destroying the noxious ones; he also discusses the insects of the household, and the best methods of combating them; he gives an adequate and clever treatment of flowerless plants, enlarging upon such as directly affect man's interests, including as much bacteriology as will give children an idea of the causes of disease and its prevention by proper sanitation. The systematic, anatomical, mechanical, and œcological aspects of biology are intentionally omitted from the plan. A disproportionate amount of space is given to insects, birds, and batrachians, while little attention is paid to fish and other food-producing animals.

The book concludes with suggestions for a full course in nature study, running through the nine grades of primary and grammar-school work. If all the other subjects that must find a place in these nine years should be studied in courses suitably proportionate to this, there is reason to fear either that the teaching would lack

thoroughness, or that many children would be overtrained.

---

*The Strange Adventures of Andrew Battell of Leigh in Angola and the Adjoining Region.* Reprinted from 'Purchas his Pilgrimes.' Edited, with notes and a concise history of Kongo and Angola, by E. G. Ravenstein. London: Hakluyt Society. 1901. 8vo, pp. xx, 210. Maps.

Andrew Battell was a good representative of the earliest builders of the British Empire—not a leader, but one of the sturdy rank and file to whose adventurous spirit and manly qualities the success of the leaders was mainly due. He was one of the crew of a pinnace of fifty tons, which sailed from England in 1589 on a privateering cruise to the coast of South America. Taken prisoner in Brazil, he was deported by the "Portugalls" to their convict colony of Angola. Here he was employed in trading expeditions, and, with his fellow-convicts, "Egyptians and Moriscoes," in raiding the neighboring tribes to procure the slaves who were the principal commercial product of the colony. A considerable time was spent in prison, the result of repeated attempts to escape. Eighteen years passed before Battell regained his liberty and returned to his home in Leigh, accompanied by a negro boy. Among those who heard him tell of his "strange adventures" was the vicar of the next parish, and it does not seem impossible that his interviews with the sailor may have led the Rev. Samuel Purchas to undertake the great work with which his name associated. However this may be, when 'His Pilgrimage' appeared three or four years later, it contained "the report of Andrew Battell, my near neighbor," on the "religion and the customs of the peoples of Angola, Congo, and Loango." The personal narrative, compiled from papers found after Battell's death, was incorporated in Purchas's 'Hakluytus Posthumus,' published in 1625, "the earliest record of travels in the *interior* of this part of Africa."

The chief impression made by these quaint travellers' tales, now published separately by the Hakluyt Society, is that the condition of the natives of this region was far better in the sixteenth century than it is now, after four hundred years of contact with whites. The laziness of the West African is proverbial. But Battell says, "The men in this kingdom [Loango] make good store of palm-cloth of sundry sorts, very fine and curious. They are never idle; for they make fine caps of needlework as they go in the streets." From references to the various food products, manufactured goods, and ivory sold in the daily markets, it is evident that the people were generally industrious and prosperous. An attractive picture is drawn of the capital town, "full of palm and plaintain-trees," whose "streets are wide and long and always clean swept." The court customs, minutely described, were also marked with a certain dignity and decorum, indicating a condition above the barbarism that now generally prevails. But the narrative shows plainly that the deterioration had already begun. Raids by the interior tribes, attracted by the wealth of the coast people, were frequent. Battell spent sixteen months with some roving man-eating warriors, many thousand strong, having a remarkable military organization resembling that of the Zulus and Sudan Dervishes. These Jagas had overrun a large section, cutting down palms, robbing harvests, neither sowing nor planting, not even bringing up their own children. Their numbers were recruited from the children of their victims.

The export slave-trade was a greater curse than the most devastating raids. At this time, according to Portuguese writers, eight to ten thousand slaves were carried annually to Brazil and the West Indies from this colony; but one of Purchas's informants says that "eight and twenty thousand slaves (a number almost incredible, yet such as the Portugals told him) were yearly shipped from Angola and Congo, at the Haven of Loanda." Slave-hunting expeditions were the main, though not the only, source of supply. Battell gives an interesting account of the ceremonies attending the submission of a chief. Before he is admitted to the Governor's presence, he gives two slaves to the page, and then thirty or forty to the Governor himself, who, at the end of the interview, "calleth a soldier, which hath deserved a reward, and giveth the Lord [chief] to him. . . . So that there is no Portugal soldier of any account, but hath his negro *sova*, or Lord." It should be added that Roman Catholic missionaries of that time "never raised a protest against this traffic, although it was against the tenets of their Church, for they profited by it." For a marriage fee, for instance, "a slave was expected." "The only thing which they did for the wretched slaves was to endeavor to secure, as far as possible, that they should not fall into the hands of heretics; so that at least their souls might be saved, whatever became of their bodies."

Our seaman seems to have been an unusually observant man, and interested in the people among whom a strange fate had thrown him. Purchas naturally noted down most fully his accounts of their religious customs and fetishes, but he gives some information on a great variety of subjects. There is a tantalizing reference to "a kind of little people called Matimbas, which are no bigger than boys of twelve years old, but are very thick, and live only upon flesh, which they kill in the woods with their bows and darts." Like the pygmies of Stanley's great forest, they shunned all intercourse with their fellows, not entering their houses, and if by chance any "pass where they dwell, they will forsake that place and go to another." His strangest tale, next to that of a crocodile "so huge and greedy that he devoured a chained company of eight or nine slaves," is that of the *Pongo* or gorilla who "took a negro boy of his, which lived a month with them, for they hurt not those which they surprise at unawares, except they look on them, which he [the boy] avoided." Purchas adds, "I saw the negro boy."

The editor, Mr. E. G. Ravenstein, has contributed a large number of valuable explanatory notes to the narrative, and, in an appendix, a concise history of Kongo and Angola from the time of their discovery to the end of the seventeenth century. These show a vast amount of painstaking labor, as do also the two maps which illustrate the volume.

---

*General Forrest.* By Capt. J. Harvey Mathes. With illustrations and maps. Great Commanders. D. Appleton & Co. 1902.

"And who is Nathan Bedford Forrest that he fills so large a book?" was the exclamation of a friend of the reviewer, not unfamiliar with history, but belonging to a generation to whom only the notable figures of the War for the Union were famous, as he saw the name in large letters upon the cover of an earlier and more voluminous account of the career of the Confederate cavalryman than that which Capt. Mathes has given us. The wonder thus uttered illustrates a doubt which may occur even to those who were contemporaries of that war, in application to the present volume, whether the achievements and abilities of Forrest, brilliant though they were, with possibly a genius for certain phases of military activity, entitle an officer whose operations were in a subordinate position and with comparatively small bodies of troops to be classed among the great commanders. For Forrest was, at the utmost, a highly efficient and picturesque partisan officer. It was only near the end of the war that his services in thwarting many a nicely laid scheme of the Union generals to carry the war into the fertile heart of the Confederacy, and his audacity in capturing or alarming widely scattered outposts of his adversaries, earned for him the rank of Major-General. The Confederate Government showed no disposition to call him to any high command, and it is questionable whether his temperament would have permitted him to work harmoniously in the independent command of a large force as the superior of men of nearly equal ability and ambition, such as was the average corps general.

What Forrest liked, and where he showed himself at his best, was the head of a charge, to be in the thick of assault with vigorous use of his own sabre and pistol; to ride far and long for the purpose of capturing some valuable store of supplies; to cut a line of communication, or to carry panic into the headquarters of some careless Union general snug housed in a city. In such enterprises he was inexhaustibly fertile of resource, skilful to the utmost in extricating his men from perilous plights, and not only an unceasing annoyance to department commanders and even to the Washington authorities, but a good deal of a terror to lesser personages having pretensions to military ability.

The tardiness with which recognition of his merit came from Richmond is explicable upon more probable grounds than the jealousy of his immediate superiors or the prejudice of the Confederate rulers in favor of West Point generals. Forrest belonged, socially and intellectually, to that class upon whom the rulers of the South looked with traditional contempt. He was an uneducated poor white, before the war a slave-dealer; and through his life, especially during the war and sometimes in his relations with men above him in rank with whom he had differences, he showed the manners of a state of society in which personal combat and the impulsive resort to fire-arms to avenge injuries, real or fancied, were the habitual substitute for the tedious processes of the law courts. In respect of his education, tradition, whose legend Capt. Mathes has preserved in a note, reports that, notwithstanding the intellectual discipline of participation in great affairs upon great native force of mind, his attempts at writing remained ludicrously phonetic.

Capt. Mathes has written in a spirit of which there can be no criticism unless it be that which is apt to lie against most biography, that he undertakes rather a vindication and eulogy of his hero than an impartial estimate of his place among soldiers. The story is interesting, and in no respect more profitable for the future student of the evolution of the country than in the incidental pictures of the state of society in the South, its fightings, wooings, and rude pleasures, which flourished especially in the atmosphere of negro slavery.

---

*Eléments d'une Psychologie Politique du Peuple Américain.* Par Émile Boutmy. New York: Lemcke & Buechner.

We cannot say that M. Boutmy has been happy in his choice of a title. He begins by showing what a mongrel horde inhabits our country, and thus demonstrates that, even if we can speak of the American people as an entity, it is impossible that it should have a distinctive political psychology. The case was different when Tocqueville wrote, and he did in fact construct a psychology, either of the American people or of some imaginary democracy. Mr. Bryce, also, without pretending to elaborate a psychology, furnished us with a number of acute and instructive generalizations, which, perhaps, constitute as much of a political philosophy as is attainable. M. Boutmy, it is true, tells us that our patriotism, or public spirit, has "une psychologie très particulière"; there is nothing like it in France. Our motive is not the "prestige d'imagination," which forms the substance of French patriotism, but "un esprit public vigoureux, clairvoyant, tout entier dans le présent et dans les faits." But we cannot say that our knowledge is much increased by generalities of this kind. It is easy to write them; it would be hard to prove them; and they would be of very moderate scientific value even if they were established.

Not the least interesting part of M. Boutmy's essay is his criticism of the works of Tocqueville and Bryce. In his estimate of the former he agrees substantially, and sometimes almost literally, with Mr. Bryce; but it is satisfactory to get the French point of view. Of the 'American Commonwealth' M. Boutmy speaks with the greatest admiration; but at the same time he points out certain limitations. No doubt Mr. Bryce's book is not distinguished by unity; it is far from systematic. There are many gaps in it, if it be regarded as meant to cover the field completely. M. Boutmy tells us how he would have written the book had he possessed Mr. Bryce's equipment. He would have begun with the individual man, exhibiting him as he appeared at successive periods of immigration, and as influenced by various impulses. Then he would have described the environment, with its effect on the individual; and finally, the general result as it appears in various institutions. Religion, philosophy, poetry, art, and science should have been explained; the family and its members, property, corporations, State governments, and the Federal Government, should have had their development traced.

We cannot deny that a work of this description would be entertaining, but we fear that the temptation to round out theories might impair its historical value. At all events, M. Boutmy has given us nothing of the kind. His statistical and historical information is derived from sources within our reach, the trustworthiness of which we can estimate, perhaps, better than he. His long disquisition on "Religion and the Ideal," and his short one on "Imperialism and the Constitution," appear to us uninstructive, if not superficial. The really valuable part of the book is that which explains the difference in the attitude toward their rulers of the French and the American citizens. To the Frenchman, the Government is a higher organism, on which he depends for protection against invasion from abroad and molestation at home. He regards it with awe, and submits to it without question. But the first settlers in America brought with them little reverence for rulers, and took care of themselves without the aid of Government. The tradition that rulers are merely servants of the people, chosen to carry out certain specific purposes, and possessed of no more wisdom than their fellow-citizens, has affected the whole framework of our Government, and is still potent. There is no tradition of the kind in France, because there is no historical basis for it. The political history of that country is little but a record of the development of despotic power, the nature of which is the same, whether the Government be called kingdom, empire, or republic.

In the development of the contrasts arising from these differences in political forces, M. Boutmy is at his best. If we do not understand ourselves much better than before, we get clearer views of the French system. He justly criticises our municipal governments; but here he falls into an inconsistency. If these governments are regulated by the State, how is it in France? How much can the people of a commune accomplish if the Prefect opposes them? M. Boutmy is amazed at the restrictions placed on our legislators, but the explanation is to be found in the existence of local self-government. The people of a New England town do not want to have their management of their own affairs interfered with by the Legislature; hence the restraints of our constitutions. In France the people of a commune are not allowed, and never have been allowed, to govern themselves, and they are consequently ignorant of the elementary principles of government. The subject is interesting, and we should be grateful if M. Boutmy would pursue it further. But we think that he can teach us more of his country than of ours.

GORDY'S POLITICAL HISTORY OF THE UNITED STATES.

*Vol. II., 1809-1828.*

581 pp. 12mo, $1.75 *net* (postage 14c.)

Vol. I., 1783-1809, is a well-rounded history of the Federal period. In Vol. II. much attention is paid to the financial side of the War of 1812, and to the curiously similar attitudes of the North and the South towards the negro in those early years. Vol. III., 1829-60, and Vol. IV., from 1860 to the election of Cleveland, are in active preparation.

"May be read not only by beginners but by almost anybody with profit. It is written in a clear and simple style, and is entirely non-partisan."—*Nation* on Vol. I.

A BOOK ABOUT CALIFORNIA.

It is Easy and Inexpensive to Go There Now that the Railroads Have Reduced their Ticket Fares.

During the winter months, while those in most parts of the country are suffering from extreme cold and disagreeable weather, California, the land of sunshine, is radiant with fruits and flowers and everything that is green and beautiful.

Formerly a trip to California was an expensive luxury, but now that the railroads have very greatly reduced the price of tickets, and particularly since we have introduced the "Personally Conducted Excursion" idea, you can go to California in a comfortable through car by the choicest route and for a very moderate sum.

Is it worth while to fight through the winter at home when you can so easily go where the perfect climate will keep you strong and vigorous? The saving in doctor's bills likely will pay for a California trip. Send six cents in postage for our handsome little book about California. It is intensely interesting, and is beautifully illustrated. Address P. S. Eustis, Passenger Traffic Manager, Chicago, Burlington & Quincy Ry. Co., Chicago.

***Reading Case for the Nation,***
To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

# An Educational Directory.

I.—The Nation stands alone in its field. It has the largest circulation of any literary and political journal published in this country, going to all the principal libraries and reading-rooms, and into thousands of families.

II.—The circulation is chiefly among the thinking and well-to-do classes—lawyers, physicians, bankers, and other professional men—and in the homes of cultivated people, where the education of children is a matter of careful consideration.

III.—The School List in The Nation has been a representative one for many years. It includes cards of most of the prominent educational institutions everywhere, during the season of school advertising, and a considerable number are inserted in the paper throughout the year.

IV.—The rate is reasonable, and discounts are made on continuous insertions, of which most of the school advertisers avail themselves.

School advertisements are printed in a uniform typography, with the address in the first line, classification being made by States, alphabetically, unless especially ordered displayed on other pages.

Advertising rates, 15 cents an agate line each insertion, with the following discounts: 5 per cent. on 4 insertions, 10 per cent. on 8 insertions, 12 1-2 per cent. on 13 insertions, 15 per cent. on 26 insertions, 20 per cent. on 39 insertions, 25 per cent. on 52 insertions.

The *Nation* is sent free while advertisement continues.

Orders may be forwarded through any responsible advertising agency, or directly to

The Nation, 206 to 210 Broadway, N. Y.

*The Two Summer Educational Numbers of*

# The Nation

*Will be published this year on August 28th and September 4th.*

They will be of special value to advertisers from the fact that 4,000 extra copies of each issue will be sent to a carefully selected list of college professors, school trustees, librarians, etc., in addition to those already on our regular subscription list.

The list will contain fully 8,000 names, and each issue will therefore have a largely increased circulation among those most actively engaged in educational matters. It is hardly necessary to dwell on the advantages to advertisers of reaching so large and discriminating a constituency of readers and buyers.

Copy for advertisements should reach us not later than August 20th for the first, and August 27th for the second issue. If proofs are desired due allowance should be made.

## *SOME OPINIONS:*

"I always feel safe in buying a book recommended by THE NATION, because I know that its reviews are written by specialists and well-informed critics, and because it seldom, if ever, errs on the side of leniency. In my personal copy I mark all notices of books that I think desirable for purchase, selecting brief but comprehensive extracts, descriptive or appreciative. The markings include also the advertising columns. These are all cut out by the office clerk and pasted on cards for presentation to the Book Committee."—FREDERICK M. CRUNDEN, Librarian, St. Louis Public Library, in *The Library Journal.*

"THE NATION still maintains its undisputed supremacy among the literary journals of the world."—*The Bookman, London.*

"Unapproached and unapproachable."—*Hartford Evening Post.*

"I have been a reader of THE NATION for many years, and I take pleasure in acknowledging my indebtedness to it, especially for its valuable Correspondence and its Literary Notes and its Book Notices. I am very far from agreeing with it at all times, either in opinion or in spirit, but I should be very sorry to be deprived of its visits to my table."—*President Angell, of the University of Michigan.*

"THE NATION—a newspaper which I read regularly and with profit. A newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best anywhere."—*Matthew Arnold in "A Word About America."*

"One of the greatest creations of American journalism. The first American weekly of a high character; independent in politics, strong and incisive in discussion, bright and illuminative in its current comments."—*Springfield Republican.*

# The Nation.

*NEW YORK, THURSDAY, AUGUST 21, 1902.*

## The Week.

It is apparently a choice of rumors, as regards the President's determination to call the Senate in extra session for the purpose of ratifying a treaty of reciprocity with Cuba. It is said that Mr. Roosevelt hopes to get a popular mandate in the November elections which will bring his Republican opponents to their senses. But how can clear instructions come out of a campaign which is essentially muddled and at cross-purposes on this subject? The Republican campaign book is absolutely silent about Cuba. In different districts, different views are taken by Republican candidates. If an unexpectedly sweeping Democratic victory should occur, it would, indeed, emphasize the general disgust with Republican shortcomings, in the Cuban matter and otherwise; but the President cannot be hoping for that! Short of it, however, we do not see how the elections can be of much aid to his Cuban policy. If he has assurances that a good treaty could be put through the Senate, it might expedite the business to have an extra session in November; though, of course, the House would have to act later. The only certain thing in connection with all these conflicting reports is, that they will renew the hopes of the Cubans. It would, therefore, be a peculiarly heartless proceeding to put them in circulation unless there is a firm intention to do justly by Cuba in the end.

---

The Detroit *Free Press*, the leading Democratic newspaper of Michigan, an opponent of Expansion and Imperialism from the start, regards this whole matter as eliminated from the present Congressional campaign by reason of Mr. Roosevelt's course during the last few months. So far as the question of cruelty toward the natives on the part of our troops is concerned, the *Free Press* holds that the President "has taken it out of the field of political controversy by his unqualified condemnation of acts of savagery on the part of the comparatively few offenders in the army, and particularly by his stinging reproof of Gen. Smith"; while on the larger issue of the permanent retention of the islands, "again the President spiked the guns of the enemy by leaving this an open question and displaying an admirable conservatism." The result of all this, in the opinion of this Anti-Imperialist Democratic journal, is that there is "no such living issue as militarism or Imperialism" in the present campaign; and this change from the situation of a few months ago it ascribes chiefly to the line of action adopted by the Republican President. Of course the *Free Press* does not regard the Philippine question as permanently settled, but only as temporarily removed from the field of partisan controversy during the present Congressional campaign by Mr. Roosevelt's course. This is an impressive tribute to the influence which the Executive may wield as the leader of his party.

---

The same thing is illustrated at the same time in the current discussion of another question—that of Cuban reciprocity. Nobody can have studied the course of Republican State and Congressional conventions in the Middle West, the past few weeks, without becoming convinced that it is the personal attitude of Mr. Roosevelt toward this matter which is largely responsible for the general endorsement of the policy. It is equally noticeable that the "insurgent" Representatives and Senators, who stood out against it, like Mr. Tawney of Minnesota, are now most anxious to make their constituents believe that they really approve the President's position. The feeling of many Republicans about this matter appears to be well expressed by a Minnesota member of the party, who says: "We don't know anything about this Cuban question ourselves, nor care anything about it, but the President says we ought to give the Cubans reciprocity, and that's enough for us."

---

Senator Henry Cabot Lodge, whose versatility inevitably suggests comparison with the "lightning-change" artists of stageland, appears in a new rôle. For the current *National Magazine* he has written an article in which he sets forth just how much liberty the new Philippines Civil Government Law confers upon our Asiatic subjects. Aside from the intrinsic literary merit of the article, its especial value arises from the fact that, while this law was in process of construction, Senator Lodge advocated a number of extremely obnoxious provisions, which even the House would not stand for. As a result, it forced the present measure upon the Senator and the Senate. The appropriateness of the Senator's now setting forth the beneficent character of the law must therefore be plain to all. The best that can be said about the law by any one is that it contains a step towards Filipino self-government, and does away with government by military men. The proposed Philippine Assembly is, however, vaguely set for an indefinite future, and might even be permanently held up. As for the rest, the law will be no serious obstacle to syndicates which wish to get land, by hook or by crook, or to the hungry promoters and advance agents who have sat longingly in Manila these several years with their eyes on the mines and land which rightfully belong to the Filipinos alone.

---

It is only necessary to observe the temper of the campaign in Vermont, where the three-cornered contest for the Governorship is blazing daily and nightly, to understand why Secretary Shaw's attempt to discuss national issues there failed to find attentive listeners. The Montpelier *Journal*, which is supporting Gen. McCullough, the regular Republican nominee, thus describes Mr. Clement, the independent candidate: "Riding in a private car, surrounded by every luxury the heart can ask for, backed by wealth untold, a snob, an aristocrat, Percival W. Clement deludes himself with the impression that his charming personality, associated with his erratic characteristics, will win the votes of the majority of the workingmen of Vermont." To this the Rutland *Herald*, which upholds Mr. Clement's side of the argument, cheerfully retorts that the *Journal* is urging the election of a candidate "from whom you could not draw a plea of 'not guilty' to charges of political bribing, even if you used a log chain and a yoke of stags." Another newspaper, the *Vermont Watchman*, a McCullough organ, alleges that Mr. Clement discharged men employed on railroad construction because they would not work for a dollar a day. It calls upon Mr. Clement to answer this charge, but declares that he cannot, because "in his own soul he knows that the truth will punch another big hole in his balloon, which will collapse like the soap bubble it is." Altogether it seems clear that from now until September 2 it will be difficult to get the voters of the Green Mountain State to take interest in the details of the tariff or the need of Cuban reciprocity.

---

Editors and judges in some Southern States continue to do their duty by speaking out plainly whenever a case of lynching occurs. A few days ago, a mob took from the jail at Leesburg, Va., and hanged a negro who had killed a prominent white citizen and was awaiting trial for the crime, with every prospect of prompt conviction and execution. The worst feature of the affair was the fact that the mob consisted largely of men of standing and education, and that they acted with deliberation after refusing to heed earnest appeals from preachers and laymen to let the law take its course. Judge Tebbs has charged the grand jury to investigate what he pronounces "a crime of unexampled magnitude, at least in this community, and of far-reaching consequence, a reproach to our people and a foul blot on the hitherto unstained

escutcheon of Loudoun." The Judge properly scored those most to blame—"men whom we should expect to find upholding and maintaining, ready to fight for, even to die for, the laws and rights and government so dear to their ancestors; and these men were the leaders in needless violence, in rank lawlessness." The Richmond *Times* heartily applauds the action of Judge Tebbs, and asks if Virginians can contemplate such a lynching without a shudder. "It all comes back to this," concludes the *Times:* "Either the law must be supreme or the mob will rule. The mob was in full control of Leesburg on the day that Charles Craven was lynched, and the law was trampled under foot. The flag of Old Virginia went down in the dust, and the black flag of the mob was held high."

---

There appeared in the July number of the *Atlantic Monthly* an article entitled "The Negro: Another View," which has attracted no little attention North and South, and which has had very serious consequences for the author, Prof. Andrew Sledd of Emory College, Georgia. In itself the article cannot be said to be strikingly original. It is merely a very able restatement of certain fundamental facts in regard to the rights of the negro as a human being which have often been brought out before, generally by Northern students of the negro problem. But Professor Sledd is a Southerner, born and bred, and a teacher of Southern youth. Hence his opinions, since they are in a large measure severely critical of the Southern white man in his relation to the negro, have created a sensation throughout the South, and Professor Sledd has resigned in order that Emory College may not suffer by the odium which he has incurred. The intense feeling against him is all the more noticeable because he begins his paper by laying down the Southern doctrine of the hopeless inferiority of the negro. It is radical and inherent, he declares, and "cannot be erased without the lapse of indefinite time." The doctrine of the amalgamation of the races, which he thinks some Northerners have advanced, fills him with horror. Speaking of the general question, he declares that Northern writers have theorized about conditions which they did not understand "with a bitter and undiscriminating zeal." These hardly read like the words of a Northerner or one taking a partisan Northern view of the situation. But they have not prevented his being denounced as a "Boston nigger-equality citizen." This class of vermin "shan't live in the South," declares a letter from Georgia received by the editor of the *Atlantic*, who is likewise told that he had "better keep this class of Boston citizens in Boston."

---

The present Governor of Arkansas, who is running for reëlection, and a Republican candidate for the same office, have been holding a series of "joint debates," in which they called each other such names as "pie-hunter," "renegade," "liar," "thief," and "murderer." At last they grew so angry that at Siloam Springs, the other day, they started for each other on the speakers' stand, and only the prompt interference of the town marshal prevented a fist fight in public between the Chief Executive of the State and the man who aspires to succeed him. In South Carolina the Democratic candidates for the United States Senate are canvassing the State, presenting their own claims and exposing the weakness of their rivals. John J. Hemphill, formerly a Representative in Congress, and Asbury C. Latimer, now a Representative, appeared together in Gaffney last week, and soon drifted into a controversy which ended in Latimer's striking Hemphill a hard blow in the face, and Hemphill's attempt to hit back, when the crowd rushed between them. A few weeks ago, Senator Bailey of Texas made a physical assault upon Senator Beveridge of Indiana while the latter was sitting in his chair, for a remark in debate which was entirely warranted. A few weeks before that, Senators Tillman and McLaurin of South Carolina had a fight on the floor of the Senate. This sort of thing demands the serious attention of the Southern people, and particularly of editors, clergymen, and other leaders of public opinion.

---

It was, of course, certain that, sooner or later, the Tammany squabbles would break out into charges and countercharges of manipulation and fraud. "Set a thief to catch a thief" is a good maxim, not only because he knows the tricks of the trade, but also because he is not in danger of placing too much confidence in anybody. Doubtless enrolment frauds have been practised in many of the districts; it would be astonishing if it were not so wherever the sordid strife between the Tammany factions is going on. And where illegal practices are discovered, they should be punished with the utmost severity, for the value of our primary system depends on its provisions being enforced with the same rigor and strictness as the laws governing the actual election. It must be remembered, however, that there is a certain amount of so-called colonization, both for primary and for election purposes, which the law is powerless to prevent in any great city where there is a large floating population but lightly attached to any particular district or vicinity. The law permits persons who enrolled in one district in the fall to move to another district and transfer their enrolment up to a certain date in the early summer. Similarly the election law, while requiring a residence of four months in the county, requires but thirty days' residence in the election district, and in both cases it is not illegal for a party to move its less settled element about into districts where it is "needed." All that can be done is to see that the legal requirements are fully complied with. It seems unfortunate that this should be true, but it is open to question whether or not any remedy which could be proposed would not be worse than the disease. The arguments which were advanced last spring against the bill abolishing the spring enrolment, and which caused the Governor to veto it, were certainly very strong. A primary law is at its best when it permits and encourages a large enrolment, and, despite the present Tammany recriminations, the addition of 35,000 names last spring was a distinct gain. Nothing which has thus far been brought out indicates that more than an insignificant part of this large total was even tainted with fraud.

---

Evidence of the superior morality and healthfulness of the Jews is furnished almost simultaneously in New York city and in Manchester, England. At the recent meeting of the British Medical Association, Dr. J. M. Rhodes read a paper on infant mortality, which drew a shocking picture of the situation in Lancashire generally, and in Manchester particularly. Infant mortality in that city reaches the appalling proportions of 198 per thousand, which means that one child in every five born dies before it is one year old, whereas even in London the proportion is only 154. But there is one district, Cheetham, which is largely occupied by Jews, and here the death rate is but 124—less than two-thirds of the average for all the districts. Dr. Maurice Fishberg, an East Side physician, has recently studied the mortality statistics for New York city with reference to races, and finds that the densely populated wards which are largely inhabited by Russian Jews — the Seventh, Tenth, Eleventh, and Thirteenth—had an average death-rate of only 15.92 when that for the whole city was 18.53; while in two where the population is almost exclusively Jewish, the figures sank to 14.52 and 14.23. Dr. Rhodes lays stress upon the general freedom from drunkenness among the Jews of Manchester as an important element in the case, and Dr. Fishberg reports that they are generally temperate here, although he finds that alcoholism is increasing among the younger generation, "who are adopting the habits and customs of life of their Gentile neighbors."

---

President Cantor's recommendation of a commission to plan for the artistic development of the Borough of Manhattan is worthy of the most favorable consideration. Such a commission, working in harmony with all the municipal departments, would, first of all, take

a survey of the present condition of the island, and then would prepare a plan to which public improvements for many years to come would adapt themselves. The Municipal Art Commission, which already serves the city admirably in an advisory capacity, has no authority except to pass upon individual improvements, so that it could not well undertake this large task. We need not say that such a commission should be carefully chosen from the most enlightened citizens, should be large enough to represent the various elements of the city, and should include laymen as well as artists. Certain immediate needs of the situation, and opportunities for a general commission, President Cantor points out in his quarterly report. There is the problem of housing the executive department about City Hall Park; here President Cantor advocates the costly, but, we believe, the only satisfactory plan of razing everything upon the square except the City Hall, and building on Chambers Street from the Hall of Records to Broadway. Another problem which offers peculiar opportunities for an architect is the relocation and rearrangement of the city markets. In general, President Cantor's position that no such change should be made without regard to the attractiveness and convenience of the city as a whole, is a sound one. We hope that he will get his commission, and that it will have sufficient authority to enforce the principle of foresight against that of haphazard improvement.

---

A change in the Presidency of the United States Steel Corporation may easily be given more importance by the public, and even in financial quarters, than it really deserves. As head merely of the Carnegie plant, Mr. Schwab may well have seemed almost indispensable. But the work of minute management and control becomes impossible for any single man when so many and such vast properties are consolidated as we see now united in the Steel Trust, and Mr. Schwab must have long since turned over the larger part of this to competent subordinates. His real duties have been those of what has been called a "financial statesman"; and as such the general verdict is probably not far wrong in considering him not highly successful. Not merely his Monte Carlo imprudence, but a somewhat marked tendency to indulge in glitter, has given to his public appearances an air of not exactly that staid sobriety and poise which the figure-head of a $1,400,000,000 corporation should exemplify. If, therefore, he should now be forced by ill health or for any other reason to resign his office, he would but create a vacancy which could be filled by another man without any shock or injury to the interests of the Steel Trust.

---

After the evidence brought out on Friday in regard to the Northern Securities suits, there can be no doubt that dummy stockholders were shamefully used to bring an action purely for stock-jobbing purposes. This fact is now well established, to the serious smirching of the reputation of those who lent their names to the affair. But other facts remain just what they were. One is, that the Attorney-General of the United States has moved in the Federal courts to test the legality of the Northern Securities merger. There can be no question of interested motives, in that instance. Only grave considerations of law and of public policy could have actuated the Department of Justice to take so serious a step. The other thing to remember is, that such "strike" suits as have now been exposed would not have been hatched had not it been thought an open question whether the Northern Securities Company were not proceeding in violation of at least the spirit of the law.

---

No American can hear the names of De Wet and Botha and Delarey without in some fashion reviving boyhood memories of "The Song of Marion's Men," and, if the English have no such close analogue to these partisan chieftains, they, none the less, are giving them a splendid and wholly spontaneous ovation. The case is surely rare in history—the generals of a beaten nation passing freely within a few months of their surrender among their conquerors, and everywhere greeted with courtesies from the Government and cheers from the populace. It is hard to believe that it is the same English people which, only two years ago, had no word too bitter and contemptuous for the defenders of the veldt. One may feel sure that the warmth of the Boer leaders' reception rests upon something more substantial than the mere good nature which victory brings. If only the joy of success were involved, the visit of the Boer generals would be merely the final adornment of a triumph. Such an idea, it is safe to say, has occurred to no Englishman, from King to costermonger, and the spontaneous tribute of admiration to these brave foes does much to condone a former bitterness which was wholly un-English. One would like to credit the report—if an invention, a happy one—that the King, on receiving the generals, spoke of the humanity with which the Boers had treated wounded British prisoners. But whatever may have been the terms of the meeting on board the royal yacht, it is certain that the dignified, manly, and loyal attitude of the Boer chieftains will remove any lingering doubts as to the temper of their people, while the frankly expressed admiration of the English people for a foe whose worth they have dearly learned, will go far to convince the Boers that they may count unquestioningly upon the generosity of their conquerors. In this way a popular enthusiasm—a case rare indeed—ministers to high statesmanship.

---

The ovation given to Lieut. Hildebrandt of the German army on his release from a brief confinement in a fortress, for the murder of a fellow-officer in a duel, is nothing less than shocking. Lieut. Hildebrandt's victim, it will be remembered, met his death for having "insulted" this brother officer when intoxicated. His apology went for nothing, and he was killed to satisfy the regimental "honor." The responsibility for the continuance of these savage practices rests with the Emperor personally. True, he has issued several orders against duelling, but whenever he has had a flagrant case like this one before him, he has nullified the orders and encouraged the practice by imposing light sentences or mitigating those awarded by the military tribunals. His power in the matter is absolute. Were he to make only one speech giving to duelling its proper name and character, and declaring that he would withhold his favor from any officer abetting it, the present state of affairs would be ended forthwith. It was only the other day that we were able to praise his speech against excessive drinking among students in the German universities. But his voice has never been raised against the demoralizing routs, of frequent occurrence in almost every officers' club, which often have just such tragic endings as that in which Hildebrandt figured.

---

As was to have been expected, the Emperor's dispatch to the Prince Regent of Bavaria offering to pay the Bavarian appropriation for fine arts has stirred up a veritable hornet's nest. The Vienna *Allgemeine Zeitung*, in calling him the "Telegraph Kaiser," has given him a name which will stick, just as the term "Travel Kaiser" has clung to him since he first began his flying trips in all directions. A large part of the Munich press finds it a peculiarly trying case of purely gratuitous interference in the domestic concerns of a sovereign state. There is every likelihood that the telegram will give rise to some frank talk in the Diet, and that it will strengthen the already too-powerful Centre in its opposition to the Prussian and Protestant influences, as well as the Separatist feeling which has never even begun to die out in Bavaria as it has elsewhere. The Emperor has steadily strengthened his reputation in the last four years by his growing conservatism and marked ability in appreciating the needs and opportunities of the Empire. It is, therefore, the more astonishing that, by so hasty and ill-considered an action, he should have deeply offended a part of the Empire where conciliation and a proper tolerance are especially called for.

*DREAMS OF EUROPEAN FEDERATION.*

Another German professor is just reported as believing that Europe will be forced into an economic federation to withstand the United States. His plea recalls an interesting study by the Russian Novikoff of "United Italy" as a model for his cherished plan of European federation. His article appeared in a recent number of the *Vita Internazionale*, and the writer begins with a bird's-eye view of Italy about the middle of the fifteenth century. The twenty states into which that country was divided resembled the division of the modern political states of Europe in their varying differences as to wealth, power, civilization, and geographical extent. The kingdom of Naples, with its extensive boundaries, but an archaic and unprogressive government and a population miserably circumstanced despite a fertile soil, greatly resembled modern Russia. The Florentine republic derived its immense power from its wealth and its industrial and commercial conditions. It was the centre of active capital, not less than of art. Its resemblance to the France of to-day is striking. The duchy of Milan in the north, with its rich and well-cultivated Lombard fields and the constant conquests of its rulers, the Visconti, occupied in Italy a position not unlike that of Germany in the Europe of to-day. On the other hand, Venice, whose strength lay in its sea power, bore a strong resemblance to modern England, while the Genoese Republic, in its small size, its vast possessions, and its important commerce, reminds us of modern Holland. These, with the Papal States, constituted the five "Great Powers" of Italy, around which the others gravitated.

The political tendencies of these Cinquecentist states of Italy, whether republican or monarchical, were all towards territorial expansion or conquest, which is the political spirit of modern Europe. France looks longingly to the Rhine; Austria to Servia and Macedonia; Germany has her eyes on the Baltic provinces, which are Russian, and Russia hers on Galicia, which is Austrian. Such a spirit of expansion, in the fifteenth century as to-day, sought an outlet in distant places whenever checked at home. Venice and Genoa fought their hardest fight for the commercial supremacy of the Black Sea, on the economic sophistry, so honored even in our time, that the prosperity of one people can be achieved only by shutting off competition and causing detriment to another. Hence to-day we see Europe fighting for the markets of the East.

Territorial expansion at home, on the part of the larger states of Italy against the smaller ones, was checked by the same method which we call the "balance of power" in European politics. When the Visconti sought to extend their dominions, they were met by the coalition of Venice, Florence, Savoy, and Naples —the same in essence as that of Prussia, Austria, Russia, and England, which, centuries later, curbed the ambitions of France. By 1450 it became clear that there could be no "universal monarchy" in Italy, as no single state had the power to conquer the others. Thereupon wars of conquest, as was natural, ceased. A sort of equilibrium was tacitly established, and the conquest of the weak by the strong, such as that of Siena by Florence, became more and more difficult. A similar condition was reached by Europe about 1870, when its component parts seem to have settled into irreducible units. Through the necessities of the balance of power, none of the great states can ever hope, and hence none aims, to absorb the lesser ones.

With the elimination of the forces of territorial expansion at home, the Italian states after 1450 began to develop friendly relations among themselves. Means of communication in the peninsula increased, commerce became diversified, and capital circulated more widely. Artists and literary men travelled from place to place. Italy had but one literary language and a common civilization. Hence grew the feeling that Italians were all bound together by a community of political, intellectual, and economic interests which distinguished them from other people, such as the French or the German. We see a similar condition in modern Europe. There is to-day an enormous exchange of merchandise and capital among its states. Men and ideas circulate rapidly. It takes about as long to go from London to St. Petersburg, Vienna, or Berlin to-day as it took in the fifteenth century to travel from Venice to Milan, to Florence, or to Rome. Likewise, all Europe has a sense of solidarity in its common civilization which differentiates it strongly from the Asiatic nations.

It must be remembered, however, that though bound together by intellectual ties, the Italians of the Cinquecento had no thought and no desire for political union; and, indeed, looked upon such a possibility as a great calamity. It was an age of brute force, which could not imagine political unity except by the Roman method of conquest and the consequent destruction of liberty. Moreover, great lovers of art and science as they were, they had learned that violent annexation always resulted in the death of intellectual culture. But the day came when Italians saw that their hope of progress and greatness lay in the complete union of their peoples. At a fearfully bloody cost this was obtained, and modern tendencies helped to fuse the five great powers of Italy into one. Has such union resulted in those evils which her statesmen of the Cinquecento saw in such an event? Venetian and Genoese ships carry their commerce without detriment to each other, and each city has advantages of its own as a port of entry to the benefit of both. Nor has the much dreaded abolition of customs duties between Italian states affected the national production. Tuscany, Piedmont, and the other principalities endeavored when they were separate entities, by governmental means, to diminish imports and increase exports. Who regulates commerce there to-day? Economic laws, which work magnificently and which increase the national wealth.

The statesmen of Europe to-day are troubled by the fears of their Cinquecentist brethren in Italy. They imagine that European federation will mean the annihilation of the liberties of each state; that the establishment of juridic relations between them will be the beginning of the end. What, asks Novikoff, made Italy one? It was that the ideas of the fifteenth century gave way to better ones. When the foreign invaders brought destruction into their land, patriots and statesmen understood that, if Italy had been united, this could never have been. This idea gradually became a passion and ideal of the people, and Italy was made one. So will it be, Novikoff claims, with European federation. The misery of the proletariat will be found remediable only through the union of civilized peoples. Such union, however, will not be—and no reasonable man would wish it—on such intimate lines as that of Italy. "It will not be a 'Pan-European monarchy,' but a federation in which national characteristics of language, customs, religion, law, literature, and art will mean only the establishment, outside and above the various national governments, of a common institution which will assure the independence, the security, and the welfare of all states."

*EDUCATION IN THE PHILIPPINES.*

In a recent number of the *Independent* Mr. James A. Le Roy, private secretary to Professor Worcester of the Philippine Commission, makes an authoritative concise statement of what has been attempted and what accomplished among the Filipinos along educational lines. This is the twelfth month since eight hundred American teachers began the work of making English the national language of the Filipinos. To expect great results in this short period would be to demand the impossible, even if the undertaking were an easy one. But so important an educational enterprise will repay watching at every stage of its progress.

Dr. Atkinson, the "General Superintendent of Public Instruction," early divided the archipelago into eighteen districts for the purposes of his highly centralized school system. Each one of these divisions is presided over by a trained educator from the United States, who is in turn at the head of a cen-

tralized free public-school system. Commissioner Bernard Moses is Secretary for the Department of Education, and therefore the supreme head in matters scholastic. But Dr. Atkinson outlines the courses of instruction and determines the kind of school buildings to be constructed, while his division superintendents name their teachers and fix their salaries. Some attempts have been made to give the Filipinos representation in an advisory or auxiliary way by appointing two or three in a district to places on local school boards. The central Government assumes a large share of the cost of the system, and pays the American teachers at the rate of $1,200,000 a year, while it distributes English readers, geographies, copy-books, arithmetics, slates, United States flags and halliards, and many other incidentals of education in wholesale lots. The towns must supply the buildings and furniture and pay the native teachers their modest ten or fifteen dollars a month, which are received without complaint of the higher salaries of the American pedagogues.

The latter spend four hours a day in teaching the children—largely through the sign language, we presume—give one hour of instruction to the native teachers, and instruct night schools in which governors of provinces, presidents of towns, and all classes are found enrolled. In Manila the five night schools have an attendance of over 2,000 an evening, and the enrolments of all the schools increase steadily, despite the statements in the publications of the friars that the United States is spending its money for nothing. It is noteworthy, too, that Dr. Atkinson finds the Filipino children "unquestionably quicker to learn on the average" than American children, which is largely due to their maturing so much earlier. But the attendance in the day schools leaves much to be desired, for "crops, weather, pupils' disinclination, or parents' wants" are responsible for many absentees—some 60 per cent. of the total enrolment at times.

Dr. Atkinson has wisely not attempted to start more than one high school until his primary schools are well under way, despite the fact that what the Filipinos cry for is colleges and universities. "There is not yet," Mr. Le Roy explains, "a general and intelligent comprehension of popular education, of the genius of a republican free-school system." But one grammar or high school has begun work in Manila, and others are being started or planned in the various provincial capitals. Every school is to have some manual training, and a manual training institution in Manila is to be under the charge of a special superintendent already on the ground. Agricultural schools, too, are planned. In short, "the aim is to bring the Philippine educational system eventually into harmony and affiliation with our system at home," and it is plain that the frame of such an educational structure is being rapidly erected.

To many people, Mr. Le Roy says, the ultimate success of the undertaking would seem to lie in the solution of the question whether the Malay mind has or has not definite limitations, and whether its processes are the reverse of our own, as is contended, or the same. Dr. Barrows, one of the American officials, speaking for the Manila native instructors, says: "I am confident that they will shortly be found to be a competent and deserving band of teachers." To us, however, the really vital question is whether the whole attempt to force the language of the Anglo-Saxons upon the Filipino people is not, to speak plainly, a farce. While ready to concede altruistic motives to the Administration in rushing its eight hundred American teachers to the Philippines, we must none the less challenge its wisdom. Mr. Le Roy cites the fact that, after 300 years of Spanish rule, only 5 per cent. of the civilized natives use Spanish in their homes, as an argument against attempting to teach the Filipinos through a Latin tongue. In his 'Psychology of Peoples,' written before Dewey sailed into Manila Bay, Gustave Le Bon examines every historic instance in which the grafting of the language of a masterful people upon a weak one has been attempted. "The most powerful means of action at the disposal of Europeans—education, institutions, beliefs," he declares, were absolutely inefficacious "as a means of changing the social state of the inferior peoples." He then says:

> "Since all the elements of a civilization correspond to a certain well-defined mental constitution created by heredity in the course of a long past, it is impossible to modify them without changing the mental constitution of which they are the outcome. Such a task is beyond the power of conquerors, and can be accomplished only by the lapse of centuries. We have shown that it is only by a series of successive stages, analogous to those traversed by the barbarians who destroyed Græco-Roman civilization, that a people can rise in the scale of civilization. If it be sought, by means of education, to spare a people these stages, all that is done is to disorganize its morality and its intelligence, and to reduce it in the end to a level inferior to that it would have reached if it had been left to itself."

It must be noted, too, that the English have, neither in Egypt, in India, nor in South Africa, attempted to force their language on the peoples under their control. Even the Boers are to be allowed to keep their form of speech and to have their Dutch teachers and schools. In our own Porto Rico we have built up and encouraged the Spanish schools, while giving opportunities to those who desire to acquire English. In a few years it will be possible to see whether in turning our back on these examples, instead of going more slowly and educating the Filipinos in their own tongues, we have been able to demonstrate our ability to succeed where all other conquering nations have failed.

---

### *THE ART OF UNLOADING.*

Ordinary people may be excused for a certain bewilderment in contemplating the operations of "high finance" nowadays. Even a plain man can understand what Disraeli called "the sweet simplicity of the three per cents"; but when it comes to such complicated flotations of variegated securities as we are now seeing every day, the enormous mass of them, with their intricate methods, might well make the observer cry out, with the seller of revenue stamps who was perplexed at Mr. Gladstone's alterations of the law, "He is too much for my head." Yet the patient spectator gets now and then a gleam. He perceives a sort of *rationale* running through all the manipulation of watered securities. Perhaps he cannot quite put the thing in words himself, but he joyfully sees the point when some veteran banker or experienced broker tells him privately, "Yes, my son, you are on the right track. The whole art of hundred-million finance is the art of unloading."

As razors of the tale were not made to shave but to sell, so the highly capitalized industries of the day are primarily intended to unload. Only last week, for example, we read of the successful disposal of the Bethlehem Steel Company to the United States Shipbuilding Company. We are not bound to accept the published figures of the sale as literally correct. The water may have been 40 or 60 per cent., the paper profits $5,000,000 or $20,000,000; the principle remains the same. It is, that the owner of the Bethlehem Company did not acquire it to hold or operate, but to dispose of. His original intention, unless all the reports at the time were misleading, was to unload it on the United States Steel Corporation. But *dis aliter visum*, which, being interpreted, means that Morgan would not have it. Thereupon, the ingenious seller discovered that the corporation which really needed his plant was the Ship-building, not the Steel Trust. Mr. Schwab cleverly adopted the verse of Matthew Prior, with slight alterations, and sang:

> "The merchant, to secure his treasure,
> Conveys it in a borrowed name;
> The Steel Trust serves to grace my measure,
> But Ship-building's my real flame."

But, of course, the final unloading has to be done on the investing public, and there's the rub. It is all very well for corporations and banks to pass on the inflated securities from one to the other, but all is in unstable equilibrium unless a final resting-place be found in the small purchaser, who cannot, in turn, unload. So the great quest of speculative finance is the private investor: the widow with small savings; the clergyman with a tidy sum laid up for a rainy day; the executor with trust

funds to place where they will yield a secure return for the orphans under his guardianship. "Oh, that I knew where I might find him," is the sigh of the would-be unloader, longing for the small buyer in great numbers but not of too great perspicacity. The art of running him down, of soothing him, and of inducing him to take a part of the load on his unsuspecting shoulders—he who has thoroughly mastered that strategy is the true Napoleon of finance, for he alone is in a position to reap the ultimate fruits of victory. Of what avail is it to have heaps upon heaps of common stock, which you got as a bonus, unless you can unload?

Unfortunately, there are sometimes too many unloaders. This leads to very curious results. Concerns with much watered stock which they are anxious to part with, have been known to say hard things of new consolidations that suddenly come forward to throw their fresh mass of securities upon the market. It is like confusing gudgeons with too great a profusion of bait. How can the stupid creatures be expected to bite if they see tempting morsels dangled on every side? The suddenly conservative views about the folly of overdoing the business, which some speculators have developed, are not a little comic. They are indignant at the reckless overcapitalization of other enterprises, as long as their own diluted stocks remain unsold. They are eloquent on the insensate course of disturbing the money market, and straining the absorptive power of the purchasing public, by attempting to float fresh millions of securities before their own are unloaded. Such jealousies are, however, natural in the celestial minds of promoters. When they fairly jostle each other in their eagerness to find a safe place to dump their loads, they can scarcely be expected to agree like birds in their little nest. All that we say is that if these recriminations between the loaded are leading to sounder financial views, a general breakdown in the vast plans of unloading (and it is not impossible) would do still more to promote saner and more stable conditions.

---

### *AIDS TO GENTILITY.*

Prof. William James, in his recently published Gifford lectures on 'The Varieties of Religious Experience,' reduces the typical religious experience to the following ultimate formulas:

> "(1.) An uneasiness.
> "(2.) Its solution.
> "(1.) The uneasiness, reduced to its simplest terms, is a sense that there is something wrong with us as we naturally stand.
> "(2.) The solution is a sense that we are saved from the wrongness by making proper connection with the higher powers."

Since receiving a three-volume work on 'Correct Social Usage' and perusing the circular of the New York Society of Self-Culture, which publishes this treatise and issues certificates of membership at a price, it has come home to us forcibly that the processes of social and of religious regeneration are strikingly similar. We proceed, in the interests of both sciences, to develop the analogies. Perfect frankness requires us to state at the outset the single striking difference between social progress as displayed in the circular before us and religious progress as analyzed by Professor James. He represents man as feeling spontaneously an "uneasiness," and as trying to strike hands with the "higher powers"; in the case before us it is the "higher powers" who try to produce "an uneasiness" among the socially unregenerate, and to seek a connection with the uneasy which is symbolized in possession of the book and in membership of the New York Society of Self-Culture. Since, then, the initiative comes from these higher powers, their authority should, first of all, be weighed.

A very little scrutiny suffices to establish it beyond cavil. Of the sixteen authors of 'Correct Social Usage' only two are men. But one of them is "the best dressed clergyman in New York and Newport" (evidently two shrines) "and one of the lineage aristocrats of America"; the other is "a New York clubman and the famous 'Him' of *Vogue*." What mythus lies *perdu* in this "Him" we must, pending further investigation of the deeper mysteries of this polytheism, decline to elucidate. That it is a most respectable one, the more circumstantial description of the feminine higher powers fully assures us. One is a "dictator of social form," another is a "poet of the household," a third a "famous woman orator," still another a "famous author, poet, and interpreter of human nature." Finally, to shorten the list, one is the "leader of the musical smart set in New York." Enough is said to prove that this cult has higher powers of no mean authority.

The method by which the higher powers bring about an "uneasiness," which in turn induces a desire to become possessed of 'Correct Social Usage' and to be enrolled under the banner of self-culture, is notable for its simplicity and directness. The Society publishes, immediately before the details of its certificate and fees, an elaborate *questionnaire*, with the challenge: "Can you answer these questions correctly? Try." The implication, which he who runs may read, is: If you can answer all these questions, you are a just person who needs no repentance—*anima naturaliter urbana;* if you cannot, you need the aid of the higher powers. The whole process is not unlike what the Puritans and their descendants call "searching of soul." A thoughtful reading of these questions is an infallible purge for social pride. "If one of your family should die, do you know how you should want the funeral conducted?" Few could answer this on the spur of the moment, and the late Judge Hoar's cynical solution of staying away, but "approving of it heartily," cannot be admitted by a pantheon which includes "a poet of the household." Again, "If an accident should take place during a dinner, would you know exactly what to do and say?" He who in this case trusts in his powers of impromptu epigram might well ponder if he can confidently answer this question, "Do you know just what to do to appear in public to the best advantage?" But are not the real miseries the little ones? How shall one facing alluring blanched stalks coldly decide whether asparagus is or is not "a finger food"? It is at a pass like this that only the "higher powers," the three-volume work, the certificate of membership in the Society can relieve that awful "uneasiness." And if any "lineage aristocrat" believes herself exempt from the submission in which the humble find lightness of heart, let her honestly ask herself, "Do you know the art of making every one happy at your social affairs?" The haughtiest, we venture to say, cannot face this question for a season of "social affairs" and remain careless of the appeal of the New York Society of Self-Culture. How otherwise shall she learn that "a host or hostess is privileged to introduce himself or herself, at a ball or reception, to a guest who appears to be shy or lonely"?

But it is pleasanter to dwell upon a perfected state than upon the heartrending processes which may have led thereto. In the world generally, a woman favored at a cotillion is liable to shout, chant, sing, snarl, vociferate, intone her thanks. In the world of "correct usage," a woman "murmurs her thanks on receiving a favor." In the substrata of society the dancers are often brutalized by some violent leader. How different in the world to which we all aspire!—"Only an amiable and authoritative person should attempt to lead a german. The dancers must be kept in bounds, but they must never be rudely commanded, rebuked, and pushed about." Here is, indeed, balm for bruised souls. It is only in this world of self-culture that complete self-approbation triumphs over all material infelicities—that, after a musicale, however cacophonous in execution, "the guests wend their ways homeward with the consciousness of having attended a swell entertainment." It is only there that "the correct position at table," which "brings the waist line within eight or nine inches of the board," is faithfully practised.

Even more engaging than the high standard which the Society for Self-Culture sets for itself is its genial willingness to admit good in other men, and its generous hope that, through its own

agency and the "uncovenanted mercies," we are all being raised to a higher plane of social consciousness and conduct. Says "the best-dressed clergyman in Newport and New York": "The *bon mot* I once heard uttered in the Waldorf-Astoria" (apparently the temple of the cult) "that a New Yorker could, at a glance, tell a man from the provincial cities by his hat, is, I am happy to record, growing every day more untrue."

## COEDUCATION AT THE UNIVERSITY OF CHICAGO.

CHICAGO, August 17, 1902.

The discussion which for some months has been agitating the University of Chicago in regard to the status of women in that institution, is of more than local or ordinary significance. While every institution of learning has, of course, a general right to regulate its policy and internal affairs in its own way, without particular accountability to the public for its decisions, its attitude on certain subjects is bound to become, whether it will or not, more or less a matter of public concern. In the case of the few great universities, particularly, decisions on controverted points, or on matters in regard to which the public mind happens to be sensitive, have an influence on educational methods and ideals far beyond the limits of the institution immediately involved. The University of Chicago has legitimately sought such a position of influence from the beginning, and it cannot avoid the consequent responsibility now that it faces, in a matter of peculiar importance, something very like a crisis.

When the plans of the new University were first made public, a dozen or so years ago, the announcement that the charter made provision for furnishing "opportunities for all departments of higher education to persons of both sexes on equal terms," caused widespread satisfaction among the friends of higher education for women. Further, while not disparaging the work of colleges exclusively for women, or ignoring the weighty reasons, principally financial, which had led Harvard and other older institutions to attempt a solution of the problem by means of an "annex" system, there was a tolerably general feeling that no new university, particularly in the West, could be established on any other basis than that of coeducation. The course of the University of Chicago, so far at least as the public had knowledge of it, was from the first such as to inspire the belief that coeducation, fundamental in its theory of education, was sincerely accepted as both right and expedient. No distinction was made between men and women in any department or line of work, while the few regulations for the social intercourse of the two sexes were merely such as obtain among intelligent and cultivated men and women everywhere.

After ten years of successful operation, the University finds itself in the peculiar position of questioning the wisdom of further university coeducation, and of seriously proposing to substitute, for a part of its work, something akin to the "annex" system. The question seems first to have come before the Senate, some months since, in the form of a tentative inquiry as to whether a gift of money for the erection of a quadrangle for women, with the understanding that the women should be therein separately taught, ought to be accepted. Naturally, the Senate did not take kindly to action which might be construed as an acceptance of a bribe. Thereupon the Trustees, not satisfied, apparently, with the way in which the question had been raised, requested the Senate—the highest academic body of the University—to consider the question of educational policy involved in the inquiry. The discussion in the Senate developed from the first strong and earnest opposition to any change in the existing system. In order, however, that the expression of opinion might be general, the matter was referred to the Junior College faculty—the work of the so-called Junior College corresponding to the freshman and sophomore years of the ordinary college course. If the experience of coeducation had been so unfavorable as to justify the University in seriously considering doing away with it, the evils, it was thought, would probably be most manifest in the younger classes.

The consideration of the question by a committee of the Junior College faculty resulted in the submission of two reports. The majority recommended "that, in the development of Junior College instruction, provision be made as far as possible for separate sections for men and women," while the minority recommended "that the system of coinstruction be continued as heretofore." The vote as announced by President Harper was 17 to 11 in favor of "segregation," as the proposed separation of the sexes was called. By a vote of 24 to 7, however, the Congregation, an advisory body composed of the faculties and delegates from the alumni, disapproved the action of the Junior College faculty; but a reconsideration by the latter again sustained "segregation," this time by a vote informally announced as 25 to 18. The Senate, after further serious debate, decided to take its vote by mail, in order not only to reach members absent on vacation, but also to give each member an opportunity to explain his vote in writing. The result of this vote, which was to be completed July 25, has not been officially announced, but is understood to have been largely in favor of separation.

In a circular of protest issued by two representatives of the Chicago alumnæ of the University, a strong reflection is made on the action of President Harper in connection with the first vote of the Junior College faculty, June 14. The circular says:

"The committee's majority report was disapproved by a vote of 19 to 14. After the adjournment of the meeting, President Harper spoke to two members of the faculty, and their votes were then changed from negative to affirmative, making the vote 17 to 16 still against separation. President Harper himself then voted, and threw out the opposing votes of six other persons. This was done on the ground that they were disqualified because they were on one-year appointments only—a rule of the University, so far as can be ascertained, never before enforced. The President then, several hours after adjournment, announced the final vote as 17 to 11 in favor of separation of sexes."

The implication that President Harper juggled with the vote in order to secure a result favorable to his side may, it is to be hoped, be dismissed without serious comment. The rejection of votes was not solely upon the ground complained of, and was in apparent accordance with a published rule regulating faculty membership. It must be said, however, that while the action of the President appears to have been technically justifiable, the procedure was unusual, and the circumstances such as necessarily to leave an uncomfortable feeling.

With President Harper, who has had a greater opportunity than any other university president has ever had to form an institution after his own heart, now favoring "segregation," and using all his influence to bring it about, one is naturally curious as to the reasons which are thought to dictate so great a change. If one looks only at the history of the University during the ten years of its remarkable existence, it must be confessed that satisfactory reasons are hard to find. It is true that the women students at Chicago have increased in numbers proportionately faster than the men, but it requires a vivid imagination to see, in view of all the circumstances of the case, any danger of a "feminization" of the institution. If such a process has actually begun, those who fear it have been not only singularly slow in discovering it, but singularly unsuccessful as well in pointing out its tangible signs. In matters of scholarship the women have continued to prove themselves at least the equals of men, in the same subjects and grades, while the scholarly standards of the University show as yet no signs of decline. Throughout the University there is a vigorous and refreshing spirit of work on the part of men and women alike. As to moral deterioration, that, happily, may be dismissed at once. The University of Chicago has had neither suspicions nor scandals.

In the list of reasons for "segregation," most of them either trivial or of temporary importance, it is difficult to see any other clear indication than that of fundamental opposition to coeducation *per se*. The advocates of the change, to be sure, are insistent that they feel no such hostility, but it is noticeable that there has thus far been a dearth of arguments capable of adequate justification on other grounds. Naturally, therefore, the affirmative argument lacks novelty. True, it is urged that "segregation," being confined to the students of the Junior College, will affect but a comparatively small part of the student body, and that coeducation will still obtain in all the more advanced courses and departments. It is much to be hoped that such a prophecy—for so it must be regarded—will prove true, and that the separation of the sexes now proposed will not later be urged for other departments also. There are not wanting, however, those who fear that the present movement will prove to be only an entering wedge.

With the final vote of the Senate, already referred to, the decision of the vexed question is now in the hands of the Trustees. That there is among them a sharp difference of opinion seems to be generally understood, but a decision in favor of "segregation" is probably to be looked for, unless action can in some way be deferred. The fact that "segregation" is the policy of the President will, of course, have great weight, as it doubtless has had weight in determining the action of the faculty. Neither the Trustees nor the President,

however, have been left without enlightenment. Numerous petitions from graduates and friends of the University against separation have been sent in, together with a memorial signed by fifty-eight members of the faculty, including a number of heads of departments, asking for time for further consideration. The feeling of the women students is naturally bitter. It is significant that, in this so grave a matter, no official statement of the grounds of the proposed change has yet been offered by the authorities of the University.

In estimating the importance of such decision as may be arrived at, the peculiar position occupied by the University of Chicago must not be forgotten. The range of influence of the University is now enormously wide, particularly in the central West, Northwest, and South. Outside of the Atlantic Coast, the broad fact of the case is, that public opinion overwhelmingly favors coeducation, and President Harper gauged public opinion correctly when he built his great institution on a coeducational basis. An abandonment of this position, after ten years of successful operation under it, by the university which is unquestionably the most influential educational institution in the West and South, would be a backward step of serious moment, not because it would jeopardize coeducation, but because it would almost certainly be attributed to unworthy motives. At present the University stands for education in the sense of sound scholarship and practical serviceableness to the community. It has not as yet, however, won great social prestige, nor does it draw largely from those (particularly young men) who go to college mainly for social reasons. It is broadly hinted in Chicago that the itching desire to cut more of a social figure, and to secure in consequence a patronage, in students and money, not so easily obtainable under present conditions, has had something to do with this sudden change of front in the matter of coeducation. Yet every one who knows anything about the interior life of many Eastern institutions knows how deadening is the effect of wealth and "society" on the intellectual tone and moral robustness of the student body. In the case of the University of Chicago the ascription of motive, at the present stage of the controversy, can be only conjectural, but it will be lamentable if the University, beguiled from an allegiance no less imperative now than a decade ago, unwittingly joins the ranks of those institutions of learning in which other interests than those of scholarship have chief place.

## THE MEMOIRS OF AIMÉE DE COIGNY.

PARIS, July 29, 1902.

Poets have the privilege of conferring immortality. André Chénier, in a single poem, "La Jeune Captive," conferred it on a young woman, Aimée de Coigny, who was shut up with him in prison during the Terror. Among the last victims of the bloody period which preceded the downfall of Robespierre, few deserve more regrets than the young poet who united a sort of Greek purity and charm with modern ideas. Chénier, as a poet, always reminds me of a painter, Proudhon, who, like himself, combined all the charm of the expiring eighteenth century with a classic and Greek ideal of form and beauty. The "Jeune Captive" is known by heart by every schoolgirl and student in France:

"L'épi naissant mûrit, de la faux respecté;
Sans crainte du pressoir, le pampre tout l'été
Boit les doux présents de l'aurore;
Et moi, comme lui belle, et jeune comme lu,
Je ne veux point mourir encore."

When Chénier wrote these lines in the prison where he met Aimée de Coigny, he thought she would soon be brought to the scaffold. Aimée was saved, and survived him. The legend, says M. Étienne Lamy, who has just published the 'Memoirs of Aimée de Coigny,' "is fairer, as usual, than history. The 'young captive' was a young woman who had been married for eight years; she did not mount the scaffold, and she died in her bed in 1820."

Aimée de Coigny was married in 1784, at the age of fifteen, to the Marquis de Fleury, who was a month younger than herself, and who soon afterwards became Duke de Fleury. Marriage ties were very light at the time, and the Duchess de Fleury enlisted among her lovers the famous Lauzun and Lord Malmesbury. The Duke de Fleury emigrated at the beginning of the Revolution; the Duchess fled first to London, where she found Lord Malmesbury. Lauzun had become Gen. Biron. He commanded French troops on the Rhine, but he kept up a correspondence with Madame de Fleury.

In January, 1793, in the very midst of the Terror, the Duchess returned to Paris, in company with Malmesbury, who, after having been arrested and set free, thought it wiser to return to London. Madame de Fleury had been secretly confined in England, and returned to Paris after her confinement (the child did not live). She did not much miss Malmesbury, but sent letter after letter to Lauzun, asking him for his protection; he needed protection himself, and left her letters unanswered. "Such was," says M. Lamy, "the ugly end of their passion; begun in folly, it ended in selfishness which exhibited the hypocrisy of the woman, the brutality of the man. They both threw a last look of contempt on each other. They had no more to say to each other." These few lines will perhaps give you an idea of the not unpretentious style of the editor of the 'Memoirs of Aimée de Coigny,' who was certainly not marked out by his earlier writings, which are of a very severe character, as the biographer of a very light woman.

Lauzun died at Montrouge on the 1st of January, 1794, at the age of forty-six. Madame de Fleury remained alone. She was arrested on the 4th of March, 1794, and taken to the prison of Saint-Lazare. Chénier had been arrested ten days before her, and was for four months her companion in captivity. Did he fall in love with her? Did horror of the present, and the almost certainty of coming death, inspire one of those sudden and unexpected passions which become all the more violent as their time is measured? Who knows? The famous poem of "La Jeune Captive" sheds no light on this point; it is the mere expression of immense compassion. Chénier had an interesting and very intellectual face, but he was not handsome. The Duchess de Fleury was less occupied with him during her captivity than with the young Montrond, who was twenty-four years old and had the reputation of an "homme à bonnes fortunes." Montrond (who became almost famous afterwards as a confidential instrument of Talleyrand) took the best means of saving Madame de Fleury and himself. They were both, with Chénier, on the famous lists of Fouquier de Tinville. With a bribe of a hundred louis, Montrond obtained the erasure of Madame de Fleury's name and his own; Chénier's remained on the list.

Four months afterwards Montrond married the Duchess de Fleury, who was officially divorced from her husband, still living among the *émigrés*. Montrond was a poor gentleman of Franche-Comté and was happy to attach himself to a great family and a large fortune. He was just the man for the régime which followed the Terror, a man of pleasure, without principles, ready for anything. He introduced his wife to the new society made up partly of politicians, army contractors, speculators, partly of some remains of the old régime. His scepticism was appreciated by Talleyrand, and he became one of his tools. Aimée de Coigny seemed to have a vocation for infidelity; she tired soon of the impertinence and scepticism of Montrond. Orleanist with Lauzun, aristocratic with Malmesbury, she became republican with Garat, a member of the Tribunat. She did not do things by halves, and went boldly to live with him. She had hardly been a month or two with him when Bonaparte turned him out of the Tribunat. Garat was but a poor actor, fond of repeating phrases of Rousseau's 'Contrat Social'; when he had to leave the stage, he was soon forgotten. Aimée remained with him six years; he first tired of her, and abandoned her, who had believed in him, had considered him a civic hero, capable of resisting the tyranny of Bonaparte. Garat was a very ordinary man, whose name is now known only by those who are intimate with the political history of the first years of the nineteenth century.

The Marquis Bruno de Boisgelin, captain of dragoons in 1789, had emigrated and returned to France during the Consulate. He was, in 1812, a man of forty-five years, of a fine countenance, an open intellect, and a noble character. Aimée de Coigny made his acquaintance; they soon became very intimate, and Boisgelin became the successor of Garat. The 'Memoirs' are wholly occupied with him; there is no mention in them of his too numerous predecessors. These 'Memoirs,' strange as it may seem, are almost entirely filled with political considerations. They begin with a sort of philosophy of the French Revolution. Aimée forgets what she has suffered from it, and seems to think only of what France has suffered from the old régime. Boisgelin was very hostile to Napoleon; he remained a royalist at heart, though he felt that a restoration of the monarchy could not be a restoration of the old régime. "At the rate things are going," he said one day (during Napoleon's expedition in Russia), "the whole world will fall upon us, and who will support us? What shall we do with the vanquished hero?" Talleyrand was no longer in favor; he was discontented. He knew Aimée de Coigny well, but he spoke little of politics to her. She understood his silence, however. "If Talleyrand said that speech was given to man to conceal his thoughts, he proved that, in order to make his thoughts understood, silence sufficed to man."

After the retreat of the Grand Army from Russia, Talleyrand became bolder. In a moment of confidence, he said to Aimée de Coigny:

" 'We must destroy him [meaning Napoleon], never mind how. . . . This man is no longer good for what he might do; his period of strength against the Revolution is passed. . . . He has destroyed equality—that is well; but liberty must remain to us; we must have laws. With him, it is impossible. Now is the time to upset him. You know the old servants of liberty, Garat and others; I can bring over Sieyès. We must rekindle in them the thought of their youth; it is a power. Their love of liberty may return.' 'Do you expect it?' I said. 'Not much,' he replied; 'but we must try.' "

Napoleon came back from Russia, and arrived at the Tuileries. Talleyrand became silent again. Madame de Coigny's visits to him recommenced only in 1814, when Napoleon was entering on the campaign of that year. One day, Talleyrand said to her: "Madame de Coigny, I am willing to have the King, but . . ." She threw herself on his neck, without letting him finish.

" 'Well, Monsieur de Talleyrand, you save the liberty of our poor country by giving it the only way of being happy—with a fat and feeble King who will be obliged to grant and to execute good laws.' He laughed at my enthusiasm, and then said to me: 'Well, I am willing, but I must let you know how I stand with that family. I could accommodate myself tolerably to M. the Count d'Artois, because there is between him and me something which would explain much of my conduct. But his brother does not know me at all: I don't want, instead of thanks, to expose myself to a pardon or a justification. I have no way of reaching him.' "

Here Madame de Coigny interrupted him, and told Talleyrand that M. de Boisgelin was in correspondence with the King, and had just written a long letter to him; would Talleyrand consent to hear it? He consented, fully approved the terms of the letter, and recommended a continuation of the correspondence. The 'Memoirs of Aimée de Coigny' were written chiefly to show the degree of collaboration which she and M. de Boisgelin had in the restoration of the Bourbon family; they throw some light on Talleyrand's personal sentiments and action, and in that respect they may be considered an historical document.

Madame de Coigny, when she wrote the 'Memoirs,' probably intended to add much to what is now given us by M. Lamy. We do not know for what reason she abstained from expressing her views on the early years of the Restoration. Perhaps it was because Boisgelin had ceased to see much of her; he had become a peer, and was a favorite at court: in working for the King, Madame de Coigny had worked against herself. She was a divorced woman, and divorces had been abolished; she was a free-thinker, and the Church had become dominant; people remembered her past life, and she did not find in the new court the indulgence of the Revolutionary times.

# Correspondence.

## THE STUDY OF HISTORY IN THE SOUTH.

To the Editor of The Nation:

Sir: Let me, in thanking Professor Dodd for his kind words about my professorship of English at Randolph-Macon College, set him right in one statement. It was not "from this school," founded in 1870, "that the University of Virginia," in 1882, "secured its first professor of English." That honor was not mine.—Yours truly,

Thos. R. Price.

Llwyndéry, Lewisburg, W. Va.,
August 15, 1902.

To the Editor of The Nation:

Sir: The letter on "The Status of History in Southern Colleges," in your issue of August 7 last, is a beautiful example of writing history from inner consciousness without troubling about the facts. If Professor Dodd's words mean anything, he says in his third and fourth paragraphs that, before 1860, no Southern educational institution "had ever given any systematic courses of instruction in history." If he had looked into the State histories of education issued by the United States Bureau of Education, under the editorship of Prof. H. B. Adams, he would have found that Professor Adams says (p. 55, No. 1 of series) the following as to history in William and Mary College about 1830:

"Professor Dew gave the most thorough and comprehensive course on history of which the writer has found any record during this early period. When most colleges were teaching the subject merely by text-books and chiefly along classical lines of study, this man was lecturing systematically to his classes upon the Laws, Customs, Manners, and Institutions of the Ancient and Modern Nations."

If Professor Dodd had consulted the monograph on South Carolina, he would have discovered that the great publicist Lieber was elected "professor of history and political economy" in the South Carolina College in 1835 (p. 173). It is proper to point out that Professor Adams uses the term "systematically" for identifying the very thing that Professor Dodd asserts was not then to be seen in the South.

Again, the latter puts forward the positive claim that Trinity College, N. C., established in 1892 "the first independent department of history in the South." The catalogue for that year contains the "Professor of History and Political Science." This is the very same phrase used in the South Carolina College announcement for 1885-86. Whatever interpretation may be placed on the words, the South Carolina College is several years ahead.

Professor Dodd attributes this action of Trinity to the graduates of the Johns Hopkins University, who, "in a few years" after 1880, "began to clamor for the creation of chairs of history." We will let his "few years" run up to 1889. If he had turned to the Hopkins annual Register, he would have noted that, up to that date, there was one Hopkins doctor of history in Southern colleges below the Potomac. True, he was a large, hearty Kentuckian, and could have made a lot of noise if he had tried, but we must admit a case of terrible strain somewhere, either on his voice or on language, to say that he, alone, could raise a clamor over twelve or fifteen States.

If there is any "magazine of history and biography" in North Carolina, it is to be hoped that Professor Dodd will give the address of the publisher. It is hoped, also, that he will show what critical work has been done by that "coterie of competent critics" in Alabama, and will state his basis for classifying Southern institutions as "universities" and "colleges." So far as is generally known, no principle of division between the two has ever been found. Strictly speaking, the South has no university.

An earnest range over the general history of education in this country would have shown him many periods of "backwardness"—one in mathematics, one in English, one in modern languages, one in chemistry, one in physics, one in geology, one in biology, and even now one in experimental psychology. He could have hit upon the same explanation in the main for them all—that it is a matter of means; when the colleges have more money they get more chairs and more teachers.

C. Meriwether.

Washington, D. C., August 11, 1902.

[To save time, we submitted Dr. Meriwether's article in the proof to Professor Dodd, whose reply we subjoin.—Ed. Nation.]

(1.) Both Professor Dew's lectures (in book form) at William and Mary in 1830 and Professor Adams's account of them were before me when I prepared the article to which exception has been taken. The very title of Dew's lectures (upon "The Laws, Customs, Manners, and Institutions of the Ancient and Modern Nations") is enough to raise serious question as to their scientific value, and a close examination of them convinces me that the lectures were directed mainly against the tariff policy of our Government. I do not question the statement of Professor Adams that "Dew gave the most thorough and comprehensive course on history" then being offered in the South; but it was not scientific history, which is clearly the contention of my article. Professor Holmes, of the department of history and literature of the University of Virginia, would deserve to be mentioned if the work of Dew should rank so highly. Neither Dew nor Holmes can be called a professor of history in the sense in which I use the term. The word "systematic," for scientific, when one considers the connection, should not have been misunderstood.

(2.) While I must admit not having read Dr. Meriwether's monograph on South Carolina, I have long been familiar with the life of Dr. Lieber, even a very flattering 'Life' by a German admirer; yet there appears no good reason for ranking his work above that of Professor Dew's already mentioned. Neither at William and Mary nor in South Carolina College was history an independent or important subject.

(3.) As to the claim that Trinity College, N. C., was the first to establish an independent department of history in the South, I am frank to confess that I was in error; but the University of Texas, not South Carolina College, enjoys the distinction of priority. Trinity's "Professor of History and Political Science" of 1892 very soon became a professor of history alone; and the work of the department was from the first devoted almost exclusively to history, and was of such a high grade—truly scientific—that I do not think even the University of Texas will take my error as to the date very seriously.

(4.) There was no claim made in my original article that only the Hopkins "doctors" were engaged in the work of improving college curricula during the years 1880-'89. Many Southerners who went to that institution before 1890 took the degree of A.M. or A.B. They had seen the work of Professor Adams as they had that of others; and they had a share in the agitation which Dr. Meriwether would have us believe was to be done by the Kentuckian alone. There are many un-"doctored" Hopkins teachers in the South, some of whom the writer had the honor to know when they first began to ask for the establishment of history departments. Of course, other men cooperated and no doubt took the initiative in many instances.

(5.) Dr. John S. Bassett of Trinity College, N. C., is the editor and publisher of a first-class magazine devoted largely to history and biography, as the most cursory examination of its table of contents will show. Its last number has six articles on Southern history out of a total of nine, and in addition to this there has been a magazine of "history and biography" published at Trinity during five years past—"Publications of the Trinity College Historical Society"—containing work of a very high grade, "pioneer" too. I named North Carolina, Tennessee, and so forth only in a general way, and not saying or even implying that there were not equally important beginnings being made, say, in Virginia, South Carolina, or Mississippi; and I am sure the sons of these latter States will not take the omission as a personal affront.

To conclude: I was writing about history as a scientific study, if not as a science, asking recognition for it with the same status as Latin or Greek, confining my study of the question simply to the South, and basing my statements on the catalogues of twenty-four representative institutions, on personal observation, and on such literature as I had been able to gather from a good college library and from the Virginia State Library. What has been done in the North, or what has been done in other subjects, were not questions which presented themselves to my mind as pertinent. My conclusions were stated in the article of August 7. The plea of poverty cannot modify the facts, for where there is money for the classics there might also be some for history; the interest fails, not so much the means.

Judging from the letters I have received since the appearance of my article, I must conclude that no very serious errors have been made. A professor of history in one of our oldest universities thinks I have attacked the South, and says: "I certainly think any Southern man who would say that, under the conditions as they existed in 1861, he would not have followed Lee and Jackson, ought to be kicked out of a Southern school"—as if this had anything to do with the subject. Another professor of history, in an equally important institution, says: "I have read your letter to the *Nation* with great pleasure, because of the intelligence and wholesome spirit manifest in what you say. The South is waking, I am sure, to the value of the study of history, but it needs more of the stimulation that men of your stamp are trying to give it."

These quotations show clearly enough the two *Richtungen* in the teaching and writing of history in the South. There is no *via media*.

WILLIAM E. DODD.

# Notes.

A. C. McClurg & Co.'s autumn announcements include 'Standard Light Operas' and 'Musical Pastels,' by George P. Upton, the latter curiously illustrated; 'In Argolis,' a picture of family life in Greece, by George Horton; 'Catchwords of Cheer,' a compilation by Mrs. Sara A. Hubbard; and 'The Birds of the Rockies,' by Dr. Leander S. Keyser.

The Grafton Press will issue 'Some By-Ways of California,' by Charles Franklin Carter; 'The Worth of Words,' by Dr. Ralcy Husted Bell; 'By the Stage Door,' a collection of stage stories by Miss Ada Patterson and Miss Victory Bateman; and 'The Imperial Republic,' an anti-imperialistic drama by Miss Elizabeth G. Crane.

The Century Company have in preparation 'Caterpillars and their Moths,' by Ida Mitchell Eliot and Caroline Gray Soule, with striking life-size illustrations.

E. P. Dutton & Co. issue directly, 'Past, Present, and Future,' by Herbert C. Fyfe, a survey of submarine warfare.

'The Builders of the Republic,' illustrated, James Pott & Co. have nearly ready.

Mr. William Morton Payne has issued, through A. C. McClurg & Co. of Chicago, a new edition of his 'Little Leaders,' first published in 1895, and has at the same time collected another series of reprints from the *Dial*, under the title of 'Editorial Echoes.' The later volume, like the earlier, is divided into three sections of Literature and Criticism, Education, and In Memoriam. A considerable part of the first section is naturally occupied with a retrospect of the literary productions and tendencies of the nineteenth century. Mr. Payne's judgments are so well-informed and sane that they well deserve this republication, even though a few of the topics with which he deals may have lost their freshness. It is a pity that reviewers of the slap-dash type could not be compelled to make a study of these volumes. They might come away with a better idea of the wide reading and clear thinking necessary to the equipment of the critic.

Mr. Booker T. Washington is accustomed, on Sunday evenings, to talk to his Tuskegee students on questions of conduct. Thirty-seven of such addresses have been collected in a volume with the title 'Character Building' (Doubleday, Page & Co.). They contain some very plain-spoken warnings against the temptations which especially beset the negro temperament, with frank comment on the defects that have prevented the colored race from making the best of its opportunities. Mr. Washington, with characteristic good sense, does not think it beneath the dignity of his subject to lay stress on certain minor morals which his hearers are in danger of neglecting. He urges them, for instance, to keep their rooms tidy, to cleanse their teeth and finger-nails, and not to waste their money on cheap jewelry. The tone of all the instructions is wholesome and practical, and they are expressed in an easy, conversational style, appropriate to the homely topics discussed. Mr. Washington, who tells us in his preface that he has spoken in these talks as he would speak to his own children around his fireside, shows himself a better critic than his publishers, who, in a note printed on the wrapper, go a long way toward making the book ridiculous by their extravagant commendation of its literary quality, and their unwarranted assertion that "many of these addresses rise to eloquence."

Readers of the *Evening Post*, at least, need no information as to the characteristics of a second series of 'Home Thoughts,' by Mrs. James Farley Cox (A. S. Barnes & Co.). The quality that marked the first is here in all its sweetness and light. Mrs. Cox offsets the lamentable new with the praiseworthy old, but she does more. She does justice to all that is loveworthy in the new. Far from demolishing to reform, she aims at sweetening that which is over-reasonable, and bringing reason to bear upon that which is exasperating, but inevitable. If her language is more or less flowered, her counsel is ruggedly sound, dealing with practical issues practically, yet on the most exalted plane. An enthusiast for sanity, she is at all points sane.

Mr. Albert Cook Myers of Swarthmore College, author of a stout volume on the 'Immigration of the Irish Quakers into Pennsylvania,' on which we shall report hereafter, has issued a commendable list of 'Quaker Arrivals at Philadelphia, 1682-1750' (Philadelphia: Ferris & Leach). This list has been derived from the records of the Philadelphia Monthly Meeting of Friends, and consists of abstracts of the certificates of removal received at that meeting. After 1730, all these certificates are from foreign parts; prior to that date they are mixed, foreign and domestic. The arrangement is chronological, and an index affords the clue. The value of this compilation, both historical and genealogical, is patent.

Few devices for entertainment and instruction give more general satisfaction than a small aquarium. The variety of life, the strange habits, and the continual motion make it interesting to all. The small expense involved, the readiness with which a colony may be secured, and the ease with which it may be cared for, are making aquaria much more numerous in these latter days. As a consequence, inquiries in regard to the proper species and the proper methods for stocking them have come to be very frequent. Eugene Smith's 'Home Aquarium' (E. P. Dutton & Co.), aims to answer all questions that may come up in relation to building and keeping a small tank of aquatic plants and animals. It is written by an American, and should enable one to succeed in almost any part of the country. Desirable species for the colony are described and figured; the illustrations are generally recognizable, though in some cases so coarsely drawn as to give the pages a cheap appearance. Most of the sketches are fairly active; from this the fish scales, and the pectoral fins of the fish named "Chanchito," and those of the figures on the covers, are to be excepted. Snails, on which ordinarily so much dependence has been placed, are introduced as not so nec-

essary as has been supposed; they are interesting, but sometimes detrimental. The directions for building and collecting and the descriptions of the forms most available for purposes of stocking are fair, perhaps not always complete enough; but more attention should have been given to distribution. Species are treated as if common over the whole country, while in reality of very local occurrence. In the same connection an exception may be taken to the use of certain "common names" that are unknown out of particular localities, and are better out of print, for instance, "Dog-fish" and "Rock-fish," names usually given to several very different species of fishes, here applied to the pigmy Umbra, widely known as "Mud-fish." Another instance is that of "Rain-Water Fish," a name for a fish said to be found only in the salt water. The work is practical and will be useful.

The seventh section of the *Annales Internationales d'Histoire—Congrès de Paris*, 1900 (Paris: Armand Colin), deals with the history of the arts of design. It contains a number of papers in French and Italian which were read at the sittings of the Congress, and deal, for the most part, with rather infinitesimal points in art history, though a few are of more general interest, as those in which Signor Venturi announces the discovery of "A New Giorgione," or M. Jules Protat pushes back the invention of wood-engraving fifty years. M. E. Bertaux takes up the vexed question of the origin of Nicolò Pisano, and, by applying a new test and studying him rather as architect than sculptor, seems to settle the matter in favor of Apulia. The titles to the papers themselves are seldom the same as those given in the "Programme of Sittings," which is confusing. In one case the Programme is clearly right, for M. de Mandach's paper deals with the preservation of the *drawings* of the old masters, not of their portraits, as the title gives it.

The imagination of publishers in suggesting titles to their authors does not seem to be equal to the ingenuity of our novelists in weaving long tales out of scant material. The title of Owen Wister's 'The Virginian' differs in name by only one letter from Thackeray's famous novel, and it is strange that an authoress of such repute as Rhoda Broughton should adopt, as a title of the serial now coming out in *Temple Bar*, the name of a novel so popular a generation ago that all old readers are bewildered, till the suspicion of plagiarism is dispelled by finding that the "Lavinia" who gives her name to each book, is not the heroine of the charming Italian story by the author of 'Doctor Antonio.'

It is customary at the German universities to send to every professor or instructor copies of all the doctor dissertations of his own university. The consequence is that every academic teacher receives annually a considerable number of dissertations on subjects which are of no especial interest to him, and which he would gladly exchange for those in his own branch of learning issuing from other universities. Now, Dr. E. Bose, privatdozent of Göttingen, proposes the establishment of a central bureau, to which any scholar may send such copies of dissertations as he wishes to dispose of, and receive in return others falling within the range of his own specialty. This new kind of exchange, in spite of its rather formidable name—"Centralstelle für Dissertationenaustausch"—could be run at very slight expense, and we do not see why Dr. Bose's plan is not perfectly practicable. Possibly, members of American universities, also, might in some way profit by such an arrangement.

According to the latest educational reports published by the German States, there are in that empire 571 secondary schools which give their graduates the *testimonium maturitatis* that admits to all university privileges. Of these, 416 are regular classical gymnasia, the grade which formerly alone enjoyed the prerogative of admitting to all departments of the university; and 109 semi-classical Realgymnasia, and 56 non-classical Oberrealschulen. It is significant that since the graduates of these latter schools have been put on the level with gymnasia men, the universities are being compelled to offer beginners courses in the classical tongues, especially in Greek. According to the *Statistisches-Jahrbuch*, from which these data are taken, neither Saxony nor Bavaria has any purely scientific secondary schools with full nine-year courses.

Largely at the request of the Emperor, an organization known as the "Evangelical Institute for the Investigation of Antiquities in the Holy Land" has been established in Germany, with branch societies throughout the country. The central management is in the hand of the Eisenach Conference, an unofficial but very influential body composed of representatives of the various state churches of the country. Professor Dalman, of the University of Leipzig, and the greatest Christian Talmudist in Germany, has been appointed general director, and has resigned his professorship in order to reside permanently in Jerusalem. The chief purpose of the home societies is to collect funds and systematically engage in archæological researches in Palestine. The Sultan has in various ways already granted special privileges to German scholars in this work on account of friendship for the Emperor. One of the tangible results of this good will has been the gift of the contents of the so-called Jami and Kebir mosques in Damascus, consisting of some excellent old material for New Testament study. These the Sultan, at the request of the German Emperor, has presented to the Berlin Museum, where they will arrive in the near future to be closely studied. The most interesting manuscript in this collection is perhaps a translation of some of Paul's Epistles into the Syro-Palestinian dialect as spoken in the days of Christ; next, a translation of Psalm 78 into Arabic, but written in Greek characters, and hence important for the study of the pronunciation of the former tongue. These literary treasures are now in the possession of the German Ambassador to Constantinople.

The Nature-Study Exhibition held in London in July was a practical demonstration of the methods and results of the new departure in elementary education in Great Britain. The exhibitors were of every class and rank: from the village infant schools, from Eton and St. Paul's, from the Agricultural and Training Colleges. There were sent model maps, in plaster and colored, of the home districts; nature calendars in black and white; photographs showing geologic features; field diaries; illustrated notes on the development of plants, etc. The boys of St. Paul's contributed "cases showing every part of the life of a moth, from the egg to the perfect insect, all the plants, and stages of the larvæ, modelled in wax and correctly colored, cases of various tree-trunks with the insects which find [*sic*] protective mimicry on them attached, and colored plates and collections of butterflies." There were also exhibits by the Governments of Canada (where the whole system of rural education will shortly be remodelled), Australia, the educational authorities of New York, "who commissioned Dr. Bickmore, director of their Natural History Museum, to attend and speak," the Philadelphia Normal School, and the Department of Agriculture, which sent every procurable paper upon nature-study issued by every agricultural college and experiment station in the United States. At the opening exercises the Duke of Devonshire, the President of the Board of Education, described what had been done to introduce this new element into the national education, the most important step being the requirement "that nature-study from a practical and experimental point of view shall be taken as one of the subjects of the certificate examination" for teachers.

—The current quarter's gift of the Oxford English Dictionary (H. Frowde) is the beginning of the seventh volume—O-Onomastic—with Dr. Murray at the helm. Nineteen columns are required for the word *of*, one of the great possessions of the English language, now the twin brother of *off*, once identical with it, the cell-division (so to speak) not having become complete till after 1600, and, as everybody knows, being still incomplete in the writing of the illiterate. Among all its multifarious relations and regimens here displayed, the function of expressing the genitive might, we are told, never have arisen but for the need of interpreting the French *de*. An anomalous construction with certain transitive verbs is thus touched upon: "In these, by a kind of transposition, *of* introduces that which is removed, the person or thing whence it is removed being made the grammatical object: thus, a prisoner is said to be stripped *of his clothes*, when in reality the clothes are stripped *off* or *from the prisoner*." This is not queerer, perhaps, than that *object-matter* should be the equivalent of *subject-matter;* reminding us of some chemical substitutions. *One* was not assured, in pronunciation, of its initial *w* till a surprisingly late date. "The first orthoepist to refer to it was apparently Jones, 1701; earlier grammarians down to Cooper, 1685, give to *one* the sound that it has in *alone, atone*, and *only;* Dyche in 1710 has [ŏne] side by side with [wŏn]." In the impersonal use of *one* for "we, you, people, they," purists are found to insist on *one's, one* (obj.), *oneself* as the sole allowable corresponding cases; but, Dr. Murray observes, "for these the third-person pronouns *his, him, himself* were formerly usual, and are still sometimes used"—as they will continue to be at pleasure by all who prefer variety to monotony and stiffness. Perhaps the less indolent writer and speaker will prefer *one's self* to *oneself*, again reviving an older usage. And speaking of *older*, we wonder how many Americans would notice the use of "older" for "elder" brother—"only dialectic," says our editor;

and so of *oldest, eldest*. *Often* was "not common in standard English till the 16th century. The pronunciation [with the *t*], which is not recognized in the dictionaries, is now frequent in the south of England, and is often used in singing." How the word should be divided is not indicated here even by the printer.

—There are some curious examples of *habent sua fata verba*. The earliest observation of *obese* is in 1651, followed by 1654; then it is not caught again till 1822; but *obesity* has had a more continuous employment. *Occupy*, having vulgarly acquired the sense of 'to cohabit,' came to be avoided during the 17th and most of the 18th centuries. *Officer* is of earlier appearance in the navy than in the army. *Odor* offers standing-ground for American contention against -our, in this instance at least. Occasionally to be met with in Middle English, this spelling became obsolete in the 14th century, revived in the 16th by reversion to the Latin, was frequent in the 17th, "and is now usual in U. S." So our *offense* (for "offence") has an historic justification in the two Middle English words *offens* and *offense*, slightly different in meaning, from which our modern word is derived. "The spelling *offence* would regularly represent the former of these; it has been extended to both." We should have looked, by the way, for some notice of the changed stress when *offence* is contrasted with *defence*—as surely in the citation from Lubbock under 3. *Oat* stands alone among the names of grains in being obliged to express its mass by the plural; whence it is inferred that it originally denoted neither the plant nor the collective product, but the individual grain (like *groat, groats*). "This may point to oats being eaten originally in the grains and not, like wheat and barley, in the form of meal or flour." We stay our hand with the remark that *old field*, "land cultivated of old; especially, in U. S., cultivated by the Indians before the coming of the white men," receives no English illustration. Is the following an example, which we take from the newly published 'Salford Portmote Records,' of the Chetham Society, Manchester, volume i., p. 22?—"Noe burges or any other psone whatsoever haueinge growndes w'hin the Midle Fyeldes or Highe Ould Fyeld," etc.? The date is 1600—fifty-six years earlier than Dr. Murray's first quotation, from Braintree, Mass.

—The heavy, many-paged, and richly illustrated periodical of to-day has just appeared on the subjects of Genealogy and Heraldry. Number one of the *Ancestor* is a substantial volume of 282 pages (London: Archibald Constable & Co.; Philadelphia: Lippincott). Every article in it deserves to be read, and most of them must be read slowly and attentively. Notwithstanding its conservative name and appearance, its contents are revolutionary, not to say iconoclastic. Very little in it appeals to the general reader; most of it is written for the advanced specialist. J. Horace Round, author of 'Studies on Peerage and Family History,' carries on his favorite pursuit of shortening the pedigrees of prominent families, and begins a study of "The Origin of the FitzGeralds." A very interesting article of similar character is "The Grosvenor Myth," by W. H. B. Bird. The two most important articles are "Heraldry Revived," and "The English Gentleman." The former, by Oswald Barron, is a plea for the restoration of Heraldry, in both drawing and descriptive writing, to the simplicity of the thirteenth and fourteenth centuries, by the rejection of the absurdities and puerilities of the sixteenth and later centuries. Especially would the writer have good English words used instead of the professional French of the textbooks, which he pronounces a "dead language," while he shows the blundering misuse of some words and the needlessness of many others. Cheerfully can we endorse his "let us strive to use our own broad speech wherever it may displace a pedantry of the decadence." He is not too hopeful of the immediate future, and, while feeling sure of the approval of the antiquary, the architect, and the artist, he anticipates the opposition of "the Antiquarian," the real "enemy in the path." "The English Gentleman," by Sir George R. Sitwell, is by far the longest article in the number, and it is sure to receive serious attention and criticism in England. It is as abstruse as a chapter of advanced mathematics. One is fairly bewildered amid the old English, old French, and Latin which abound in it. Sir George rejects the definition of gentleman given in the New English Dictionary as "one who is entitled to bear arms," and boldly declares him to be "a freeman whose ancestors have always been free." It is to be regretted that he does not make a rough estimate of the number of such gentlemen in England, but he does decide that "quite twenty-five per cent. of our peers are not gentlemen."

—The enormous volume entitled 'Dangerous Trades,' edited by Dr. Thomas Oliver and prepared by a number of experts (London: John Murray; New York: E. P. Dutton & Co.), is, within its title range, a veritable encyclopædia of sanitary information. Like other encyclopædias, this is distinctly for reference; but it is crammed with facts of all sorts, generally set in very readable text carrying the latest knowledge. We extract at random two or three of those little known. The children of female lead-workers almost invariably die within the first twelve months, and lead suspends for the time the child-bearing functions. The gum of some foreign unused stamps bought by collectors carries tuberculous infection, as demonstrated by careful experiment; hence, youthful philatelists who wet their stamps with their tongues run serious risks. The women in English laundries are supplied with a ten or fifteen-minute "lunch of beer" twice a day between meals by "a beer man," who makes regular rounds from the nearest public house, or the beer is stored by the laundry. The time lost is made up at the end of the working day. The reporter, herself a woman, suggests that "intemperate habits will be encouraged" by the practice, but thinks that women employed on some days from thirteen to fifteen hours "may claim, with some show of reason," that a kind of spur is required. It does not seem to occur to those responsible that oatmeal gruel quenches thirst and supplies energy. Gas-stoves in British kitchens appear to be supplied through india-rubber tubing that is liable to leak. The harmfulness of yellow phosphorus, with its risk of causing caries, has been so thoroughly demonstrated that its use in match-making in the United Kingdom is greatly reduced and the operators' health correspondingly improved. These are trifles, but one may search from Acetylene to Upholstering and he will find valuable material all along the way under Agriculture, Explosives, Mining, Quarries, Rag-sorting, and almost every conceivable heading. The Introduction, by Dr. Oliver, and the Historical Sketch, by Miss Anderson, are particularly good examples of practical literature.

—We have received from the Bishop Memorial Museum in Honolulu part i. of volume iii. of the 'Fauna Hawaiiensis,' comprising a monograph of the Hawaiian Diptera by P. H. Grimshaw, with seventy-seven pages and three plates. The number of flies known from the islands previously was only about twenty-five species, of which nine were practically cosmopolitan. Owing to the researches of Mr. Perkins, though not especially devoted to this group, the number described in the present monograph is increased to 172, of which 106 are new to science, including 6 new genera. Of the total number, 134 have been obtained, so far, from only one island; the remaining species being either cosmopolitan, introduced, or common to two or more of the islands. There are no horse-flies or true crane-flies, but the *Limnobiidæ* are represented by nine species, one belonging to an interesting genus originally founded upon fossil specimens found in gum copal. Mr. Grimshaw considers the collection too restricted to base any geographical generalizations upon, but expresses surprise at the absence of species belonging to the prolific families *Asilidæ*, *Empidæ*, and *Bombylidæ*.

—The Museum has also issued the fourth number of volume i. of its memoirs, covering a description of 'Ancient Hawaiian Stone Implements,' by Prof. W. T. Brigham, the director. It contains 100 pages of text, with 97 figures, and 35 well-executed plates. The author has illustrated the genesis and variation of some of the local implements by figures of analogous tools from other portions of the Pacific, and the text is enlivened by numerous reminiscences of observations noted some forty years ago on the arrival of the narrator in the islands, where native customs and native rule, though decadent, were still in existence. Probably no one living is better qualified than Professor Brigham to throw light on all that concerns the early ethnology of the Hawaiian people, and it is fortunate indeed that the opportunity of preserving for science all that he may contribute is offered by the trustees of the Museum through its publications. The stone implements of the Hawaiians are almost destitute of ornament or non-utilitarian carving, and they are formed from the hard or ringing clinkstone, or the vesicular lava, as the use of the tool indicated. Hammers, sinkers, mortars, pestles, little cups for the oil of the kukui nut in which a strip of kapa served as wick, war-clubs, adzes, occasionally a file, knife, or chisel, slingstones, balls or disks for games like bowls or quoits, shallow dishes of various sorts—such were the articles in use by a race devoid of metal, bone, or large and heavy shells suitable for tools. The really characteristic Polynesian stone implement is the poi-pounder, of which each tribe has its special variety. An ingenious device is the stone mirror, of black, close-grained lava ground into small flat, circular plates, not, of course, polish-

ed, and when dry reflecting nothing, but, when immersed in a shallow dish of water, by their blackness forming a very effective means of reflection. A few rude idols and phalli are included among the objects illustrated, but the mass of such material is reserved for a future contribution on Worship. Professor Brigham warns the peripatetic collector against stone articles prepared for sale by the resident Portuguese stone-cutters, and often offered as antiques, sometimes even buried in likely sites to be dug up by archæologists who employ the deceivers, native or other, as guides for a consideration.

## THORPE'S ESSAYS IN HISTORICAL CHEMISTRY.

*Essays in Historical Chemistry.* By T. E. Thorpe. The Macmillan Co. 1902. 8vo, pp. 582.

The subjects of these eighteen essays, barring one or two, are all distinctly great. There is one upon Boyle, concerning whom nothing quite adequate has ever been written. Half-a-dozen relate to the better threshed-out subjects of chemists of Lavoisier's time. Five discourse of precursors of modern chemistry, Faraday, Graham, Wöhler, Dumas, and Kopp; two of modern chemists, Victor Meyer and Mendeléef; one of Canizzaro, who was not quite modern. The remaining three are sketches of general nineteenth-century or Victorian progress in synthetic chemistry, in British chemistry, and in technological chemistry. With the exception of Canizzaro, and perhaps Kopp, there is none of these subjects that is not a mine of instruction, although not much that is novel remains to be added about Cavendish, Priestley, or Lavoisier. One can hardly say that the author has extracted from any of his subjects its full lesson, unless it be from that of Victor Meyer. The portraiture of his character, life, and works is fine. To appreciate it, however, the reader needs to be familiar with the chemistry of the aromatic bodies.

Of nearly as much value is the long chapter about Graham, occupying nearly ninety pages, and composed of two independent papers. One would not antecedently suppose that so much not generally known remained to be said of so prominent a figure. It is shown that Graham was one of those who enter upon their experimental careers filled with some idea sufficiently fecund to produce great and inexhaustible work. This, in Graham's case, was the idea of atomicules in motion—an idea whose career has, at this day, perhaps not fairly been initiated. He was a pupil of Thomas Thomson, a disgracefully bad analyst, but a good vehicle for the dissemination of Dalton's doctrine, and, what is more, a discerner of men and of scientific genius. Thomson was impressed by Graham from the very first, and from the first treated him with something like deference. Such conduct on the part of a man of European celebrity—for such Thomson was—without a doubt greatly stimulated the development of his pupil's powers. Let the world pay its debt of gratitude to Thomson for this. The modern doctrine of valency virtually contents itself with a modification of the Berzelian idea that chemical forces are polar; and no doubt there is some truth in that, so far as it goes. Only it is pertinent to inquire how they come to be so. But Graham conceived that even the atoms of hydrogen, much more those of the other elements, were composed of many parts moving without absolute constraint. We need not say how much reason has since been found, some of it recently, for accepting that opinion. But it is difficult to imagine how, say, a thousand atomicules of hydrogen can be held together in one molecule without a chance agglomeration of a thousand and ten or more in another. Why should it be, then, that all the molecules of hydrogen, or any other simple gas, are equal or nearly so, as Graham's experiments proved them to be? As soon as anybody shall so much as suggest an adequate hypothesis to explain that fact and the observed approaches to Prout's law, the real quality of Thomas Graham will begin to shine out. Over his thought from boyhood there towered a misty shape which was always becoming compacted into the consistency of that puissant Jinn, the whole vast kinetic theory of matter. These reflections, and many others, suggested by Dr. Thorpe's account of Graham, lead us to accord a high esteem to that chapter.

The first chapter is on Boyle. An account of Boyle's broader conceptions, with their previous history, and that of their subsequent influence upon philosophy and upon science (which, in both directions, has been greater than is generally known), would have formed no small contribution to our comprehension of ourselves. But all that, if the author was able to furnish us with it, has been crowded out by long extracts from one of the most intolerably long-winded writers who ever abused our language. To the prolixity of garrulous conversation, Boyle added a pedantical choice of words whose only good excuse might have been that they effected compression. The 'Reflexions on a Broomstick' is hardly a caricature. Dr. Thorpe understands Boyle the chemist very well; but technical chemistry is quite the smallest side of that original and prepotent mind.

The essay on Scheele makes use of Nordenskiöld's book; and since few of us have time to go through that volume, this meagre account of its contents will not be unwelcome. This is not the only case in which Dr. Thorpe has drawn the substance of a sketch from a single well-known source, quite legitimately

Cavendish, Priestley, and Lavoisier, who, together, occupy considerably over a hundred pages, have all of them been pretty thoroughly understood for a long time. Of course, an irresistible inclination will induce a Frenchman to overrate Lavoisier or misground his appraisal. This manifests itself even in Berthelot, himself a great man, and as fair a Frenchman as could be found. Lavoisier never made an original experiment in his life, but he saw which the decisive experiments were, he repeated them with such high precision and such circumspect precautions that confidence was commanded, he coördinated them with a clear, scientific logic of which no contemporary was the master; thus he gave the death-blow to a theory of extraordinary vitality, and he enthroned in its place a theory, partly his own, which was mainly true. The account which Dr. Thorpe gives of him and of his work is perfectly just. Dr. Thorpe has no other explanation to offer of Priestley's adherence to phlogiston than the old one, that Priestley was incapable of placing himself in an unwonted point of view. We doubt whether the history of Priestley's opinions in metaphysics and theology sufficiently supports that explanation. There seems to be something worth considering in another view that has been broached, namely, that the vitality of the doctrine of phlogiston was, in some occult or subtle manner, due to the circumstance that it was true in its way.

One of the more striking of the essays is that on Jean Baptiste Dumas. It is largely drawn from Hoffmann's *Eloge* in the *Berichte*; but not so the following:

"If," says the author, "we compare the chemistry of to-day with that of the stirring times when Dumas, half a century ago, was matched almost single-handed against the German school—against such Titans as Berzelius, Liebig, Wöhler—we are amazed at the wealth of material which has been opened out. The change, thus directly or indirectly traceable to the labors and conceptions of Dumas, is as great or even greater than that achieved by the overthrow of the Phlogistians. If Lavoisier was the author of the first French Revolution in Chemistry, Dumas was the creator of the second."

Unquestionably, Dumas was a very considerable genius; and there is none of the many men of science who came into contact with him during the period of his secretaryship of the Academy of Sciences but must remember the delightful old gentleman with warmth and with a sense of obligation. Nevertheless, truth is truth; and even so much as a claim that his relation to the present conception of a chemical compound molecule was that which his baptismal name might suggest, would be definitely inadmissible. But was he not the author of the doctrine of substitution? So Dr. Thorpe represents him to have been; and there is just this much truth in it, that, while it had previously been known that chlorine could drive hydrogen from various compounds, it was Dumas who first showed that this happens if almost any organic body is treated with chlorine; and he added that an analogous reaction would occur if the body was exposed to the action of bromine, of iodine, *or of oxygen.* But when Berzelius attacked him for maintaining the monstrous proposition that chlorine could behave like hydrogen, Dumas replied:

"M. Berzélius m'attribue une opinion précisément contraire à celle que j'ai toujours émise, savoir que, dans cette occasion, le chlore prendrait *la place* de l'hydrogène. Je n'ai jamais dit rien de pareil. . . . Si l'on me fait dire que l'hydrogène est replacé par du chlore qui joue le même rôle que lui, on m'attribue une opinion contre laquelle je proteste hautement, car elle est en contradiction avec tout ce que j'ai écrit sur ces matières."

Thereupon he goes on to say very explicitly that the opinion attributed to him is neither more nor less than a ridiculous (*outrée*) theory which has been urged by one Laurent. He means Auguste Laurent, who, in fact, had said:

"Un composé organique constitue un ensemble, formé par la réunion d'un nombre d'éléments simples ou composés, éléments que l'on peut remplacer à volonté dans ce composé par des groupes analogues [the context shows that he means what we should now call groups of the same valency], sans altérer la physionomie générale, l'harmonie, ou *le type* de ce composé."

It was this Laurent who, in consequence

of the bitter resentment of Dumas against the man who had ventured so to modify *his* doctrine, died, as has often been said, and with little exaggeration, substantially of inanition and almost at Dumas's door, and who, by the above sentence, voluminously expounded and elaborated, has established his clear title, with clear-headed chemists, to being considered the father of the leading conception of modern chemistry.

The truth is, that in all the several scenes of life in which Dumas was busy, he ever showed himself to be an adroit man. He introduced the word "substitution" into chemistry, while loudly proclaiming his rejection of the only meaning that word was fitted to convey. *He*, one of the Forty—*he*, the fastidious selecter of words—did this. So, then, should it turn out, in process of time, that there really *was* a substitution, it would be remembered that he had first said so, and his disclaimer would be forgotten (just as we see Dr. Thorpe forgetting it); while, should it turn out that there was *no* substitution, the inappropriateness of the word would be lost sight of when it had become familiar, and at all events his declaration would be borne in mind. Just so, in regard to Prout's law, Dumas managed to take up such a position that both parties claim his support. But he was a little too adroit on the day when he bethought him quietly to appropriate certain results of Liebig's, for he found himself straightway transfixed, nailed to the counter, without a reply to make. As for his waging war, single-handed, against all the chemists of Germany, it is as easy to understand Dumas's looking upon the situation in that light as it is St. Thomas Aquinas's anticipating as a chief felicity of heaven the triumph of looking over the battlements upon rivals to sanctity frying beneath; but the one is as near a true religious aspiration as the other is to a true scientific sentiment. He was so far from arguing single-handed, that he tardily adopted, and endeavored to pass as his own, Laurent's "outrée" doctrine.

We have endeavored to impart to our readers a sufficient prenotion of the matter of this volume. We ought to add one word of warning against not a few small misstatements of facts of chemistry and chemical history, mistakes utterly trivial and hardly worth more than the mere mention, were it not a curious psychological fact (or must we, nowadays, say a *psychical* one?) that so excellent a chemist as Dr. Thorpe should make so many indisputable slips. We will just mention one as a specimen. The author has been saying how brilliant for England in chemistry were the first two decades of the nineteenth century. So they were, since Davy's work and Dalton's were done then. But he goes on to give two or three instances by way of proof, and among these he names the discovery of acetylene, although it has only recently been brought to the attention of chemists and non-chemists that acetylene was first discovered in 1836. But the author probably had it in his mind that acetylene was discovered by Davy, momentarily forgetting that this Davy was not Sir Humphry, but his obscure protégé Edmund, otherwise known principally for some early activity in applying chemistry to agriculture.

## LINN'S STORY OF THE MORMONS.

*The Story of the Mormons.* From the date of their origin to the year 1901. By William Alexander Linn. The Macmillan Co. 1902. Pp. xxiv, 637.

Mr. Linn's elaborate volume on the Mormons we are inclined to call the best that has appeared. None shows itself to have been written in such a special library, with extracts on every page from original witnesses. Nowhere do we find their testimony more compactly stored, or more fairly interpreted and weighed. The bibliothecal sources of knowledge were a collection of which our author might have said more. His readers would gladly have learned that it was accumulated by Miss Helen M. Gould during her crusade which did so much to prevent the seating in Congress of the polygamist Roberts, and that, she having presented it to the New York Public Library, it is now garnered in the Lenox branch. Its contents were 451 books, 325 pamphlets and 52 volumes of newspapers. These figures seem strangely similar to those of a collection in the same line in the Wisconsin Historical Society's Library, where the books are catalogued 448, newspaper files 43, periodicals and pamphlets more numerous than in New York, making in all 1,273 titles. A bibliography of his sources, as well as more guiding dates, is what we most desiderate in Mr. Linn's all-round monumental monograph.

Mr. Linn, so far as we perceive, never mentions the name of Gibbon, and yet often reminds us of that historian. Like Gibbon, he abounds in citations, with references to verse as well as chapter in the originals. Like Gibbon, he enlivens dull pages with pat and sprightly scraps from French favorites. Yet he is most of all Gibbon-like as the lord of irony. His sneers are so solemn that what he says in jest will be construed by some as sober earnest, or near it. In tracing the progress of Mormonism, while making no allusion to Gibbon's notorious secondary causes of the growth of Christianity among pagan Romans, Mr. Linn brings forward many analogous facts, and those pointing the same way. Thus, belief in miraculous gifts was no less prevalent and influential in Latter-Day Saints than among those of the primitive era. Mormon apostles rivalled scriptural miracles as Pharoah's magicians rivalled, or mocked, the mighty works of Moses, "doing also in like manner with their enchantments." Brigham's gulls, which fulfilled his prophecy and ended the plague of crickets (p. 400), is a type of countless others which, if they did not convert sceptics, satisfied credulous simplicity. The undeniable virtues of the first Christians were also of power to draw outsiders into their communion. "A generous intercourse of charity united the most distant provinces, and the smaller congregations were assisted by the alms of the more opulent" (Gibbon, xv., 141, note). Equally magnetic were the good lives of Mormons, who were noted for peace with surrounding Indians, for lives of labor, for charities to the poor and helpless among themselves, so that these never became a public charge. In 1869, a city of over 12,000 souls with no gambling hells, no obscene dance-halls, and scarcely a single whiskey saloon, satisfied the writer as well as other visitors that Mormonism, though its "iron was mixed with miry clay," retained, at least, truth enough to make a lasting lie.

Again, the doctrine of life beyond life brought many to join the early Christians because their faith was firm that a foretaste of its beatitude was at hand in the millennium which would begin, in their judgment, before their own generation had passed away. This identical tenet was equally widespread and operative among Latter-Day votaries. No wonder the Mormon temples or head-centres and the homes of all around them were transfigured, through plausible declamations or fond imaginings, into paradise regained; and that most of all among converts on the farther shores washed by the farthest seas. Distance lends enchantment. A pilgrimage to such a heaven on earth stirred up an enthusiasm not surpassed among mediæval crusaders. The fortitude of the brigade which, at Brigham's bidding, pushed their handcarts through a thousand-mile wilderness to reach their New Jerusalem, was a supreme test of the more than electric omnipotence of an ideal, no matter how illusive. The further west the saintly van advanced, the more who perished by the way, the more it was disencumbered of impostors and apostates, and the nearer it came to the Islands of the Blessed to tell of which demanded the hyperboles of millennial apocryphas.

Another secret of Christian success among pagans in Gibbon's eyes had been organization. Order, and government to enforce it, began with the gathering of the first church. This initiative, fertilized by persecutions, rapidly developed into a system which has made itself immortal, and a propaganda through all ages and continents. As embodied in the Catholic hierarchy, it was copied or mimicked by Mormons in those features best suited to their era and conditions. In this worldly wisdom, which some would call devil-wit, they outdid whatever had been achieved by the orthodox. Their prophets inspired their followers with a faith (*sancta simplicitas*) greater than had been felt in bishops or even popes. Through this subtle persuader they mastered and manipulated their property. They ruled them with a rod which no political boss, no general of the Jesuits or general military, could wield. They extorted services exhaustive, dangerous, hateful, and even criminal. Mormon increment has owed and still owes much to its hierarchy. Its prophets were without honor in their own country, and so compassed sea and land for proselytes. Converts have been mostly made at a distance—a large percentage beyond seas, and through the press as well as by preaching. The capital indispensable for working this machinery demanded for raising it a despotic executive. Viewed as an immigration agency, the missionaries were a success. The labor of the converts, however unskilled, was worth more than their transportation had cost. They had bread enough and to spare, and their change of worlds was uplifting—a physical blessing.

The migrations of Latter-Day Saints which, as we follow them on a map, appear a mighty maze and all without a plan, Mr. Linn contends have never been so clearly accounted for as by him. The exodus from the Missouri to the mountains, within three years after the first prophet's death,

if not a lucky blunder, was a masterstroke. But for this change of base, the Nauvoo temple would have been the last headcentre. All Mormon factions or sections would have dispersed to nought, as several did in Michigan, Wisconsin, and Texas. Their necessity in Utah was Brigham's opportunity to grasp a tyrant's strength and use it as a tyrant; above all, at Mountain Meadows, where, through Danite assassins, he wrought "the most arch act of piteous massacre that ever yet this land was guilty of." Brigham's omnipotence showed its might in establishing the dogma that polygamy is a sacred duty. The practice originating in the lust of leaders was only gradually connived at in others. Five years had elapsed after the migration to Utah before plural marriage was proclaimed a duty (August 28, 1852). It must have been foreseen by the dictator that this decree would fall like a bombshell into his camps, nor was he surprised when 4,000 devotees in England became at once apostates. Nevertheless, he judged it expedient. Not only did it promote peace in his own harem, but he had a notion that, as an article in his creed, it would be a shield against criminal prosecution, because our national Constitution vetoes all laws to restrict the free exercise of religion. It was also clear that through plural marriage the cohesive attraction of his swarms in the wilderness would be intensified. His oasis in a vaster Sahara was a felicity of position which held his dupes like flies who stick on poisoned paper, unable to get away; but plural marriage was a better ball and chain. Fugitive polygamists were a stench in all nostrils everywhere, and in all States were subject to penalties, and consequently must wander men without a country.

While hopeless elsewhere, no people have proved more hopeful than Mormons at home. On the 24th of July comes a sunburst, as was seen by the writer in 1869. On that anniversary the auditorium, seating 9,000, was crowded and well "filled" by a stentorian orator whose first words were: "Twenty-two years ago to-day, 143 men, 3 women, and 2 children entered this valley ; to-day we are as many thousand [86,786]; and twenty-two years hence we shall be as many millions." Hymns equally optimistic were thunderous as pealed forth from the megaphonic organ and the congregational myriad, *ad majorem gloriam* Brigham, who was enthroned on high, clad all in white.

That the author of the 'Book of Mormon,' published at Palmyra, in 1830, could not have been Joseph Smith, jr., a dozen lines concerning his antecedents would satisfy the average reader. In fact, however, we here encounter fifty pages, with cumulative and often amusing evidences that the revelator, "if his new Bible was not divinely revealed," must have stolen his thunder from scholars every way his superiors. But these pages will not be lost. They must make the scales fall from the eyes of some ignorants who are yet studious; a class who are daily beguiled by Mormon emissaries the world over.

---

*The Varieties of Religious Experience:* A Study in Human Nature. By William James. Longmans, Green & Co. 1902. Pp. xii, 534.

It is safe to predict that the incomparable style and freshness of Professor James's new book will assure the position of a classic as rapidly to this (his Edinburgh Gifford Lectures) as to his 'Principles of Psychology,' and his many admirers may well hope that it will prove no less epoch-making. For behind the fascinating flow of his narrative Professor James's art conceals far-reaching novelty of method, of temper, and of philosophy. His method may seem to be merely that of empirical psychological description applied, in masterly fashion, to the typical, and therefore extremer, forms of personal religious experience; but it is a considerable innovation to import scientific methods into fields hitherto abandoned to *à priori* dogmatizing about what the religious consciousness must be and contain. Hence, even though Professor James has only begun the psychological study of religious facts, it is evident that their variety will have henceforth to be treated with the proper respect by subsequent writers.

In the temper of his treatment, Professor James's catholic sympathy and generous appreciation—which even lead him to classify "mind-cure" under the "religion of healthy-mindedness," and, unegotistically, to praise it as the sole original American contribution to philosophy—seem no less remarkable; and though he dwells by preference on the brighter features of his subject, he seems equally remote from the fanaticism of the apologist and of the reviler of religion. As regards philosophy, we get, it is true, only tantalizing glimpses of that new "Pragmatism" which, he assures us, is so native and congenial to the Anglo-Saxon mind, and seems so well calculated to bridge the gulf between knowledge and action, and to expel the paralyzing intellectualism to which so many of our theologians and metaphysicians seem to be enslaved. But Professor James promises to complete his message to the world by a formal statement of his philosophy, and all his readers will echo the wish that health and opportunity will be granted him for the full accomplishment of this design.

The significance of Professor James's present performance will appear even from a brief survey of his topics. He begins by dismissing the appeal to *origin*, which, once used to accredit religions, has now fallen into the hands of medical materialism and serves to *discredit* them as essentially morbid. But, like science, religion must be judged by its present *value*—by its fruits, not by its roots. It is next explained that religious phenomena may differ psychologically in different men, and that their first-hand personal expression is to be studied rather than the ecclesiastical institutions which are built upon the bones of the martyrs. The following chapters describe the immediate consciousness of the unseen, the "healthy-minded" religion of the optimists, the "sick soul" of the "twice-born," whose "divided self" requires to be unified by "conversion." This last symptom is psychologically traceable to what is primarily subliminal feeling, even though the religions may ultimately be right in deriving it from a divine source. In "saintliness" we see the best fruits of the religious experience, and a type of character abstractly higher than that of the strong man, and socially invaluable, even though its forms must change with the times. We may note here a striking plea for accepting poverty rather than war as the proper satisfaction of the ascetic and strenuous instincts, and the warning that "the fear of poverty among the educated classes is the worst moral disease from which our civilization suffers" (p. 369). The mystical states of consciousness, though psychologically analogous to intoxications, especially by nitrous oxide, yet indicate our soul's continuity and union with something higher. Authoritative for those who experience them, they prove to others that the normal rational consciousness is surrounded by potential other types which "have probably somewhere their field of application and adaptation." The value of philosophic theory for religious life, on the other hand, is entirely secondary. Its real source is feeling, which uses the intellect to formulate arguments for its convictions. As proofs, these arguments lack cogency, either logically or psychologically, and leave behind irreducible divergences of opinion.

Thus the psychological survey leads to the conclusion that when what is common to the various manifestations of the religious spirit is extracted and what is due to differences in time, place, phrase, and temper eliminated, it would seem (1) that the world is part of a spiritual universe, whence its chief significance comes; (2) that union with it is our true end; (3) that in prayerful communion there is a real influx of spiritual energy, which (4) infuses a new zest into life and conveys an assurance of peace and safety.

All this no doubt is biologically valuable, but is it objectively true? Professor James answers that at least our continuity with something wider, in which our ideal impulses originate, seems indisputable. But what is the source of these infiltrations from the subliminal, remains a matter for "over-beliefs," as to which men naturally differ. He himself claims to share the "piecemeal supernaturalism" of the plain man, and holds it meaningless to call "God" an absolute Whole, which cannot be conceived to change in response to our action, and makes no difference to any concrete particular fact; he believes that the larger power is real, that in the "faith-state" and "prayer-state" we really interact with it, and that by our reaction its action may be modified and facilitated. The very fact that this larger power is useful, active, and partial (in both senses of the word) renders it finite, and leaves comparatively unimportant the question whether it should be conceived as "God," or as "possibly a larger self of which the present is only a mutilated expression." For the decision of this question, as well as for the systematic account of his "pluralism," we must await Professor James's promised work on metaphysics; meanwhile, one wonders how much longer it will be possible to maintain the traditional ambiguity in the term "God." Professor James has clearly indicated the necessity of a choice between the finite power which satisfies him and the impotent Absolute of Mr. F. H. Bradley, and if the brilliance and suggestiveness of his writing can evoke a popular demand for such a choice, his book may easily come to mark a new era in the history of thought.

*Japan To-day.* By Alfred Stead. E. P. Dutton & Co.

At the banquet given to the first embassy ever sent abroad by the Emperor of Japan, at the Grand Hotel in San Francisco, in 1872, Mr. Hirobumi Ito, then a dapper young man of thirty-one, made a genuine "American speech," outlining the progress of his nation, and concluded with these words:

"'The red disk in the centre of our national flag should no longer appear like a wafer over a sealed empire, but henceforth be in fact what it is designed to be, the noble emblem of the rising sun, moving onward and upward amid the enlightened nations of the world."

Mr. Alfred Stead's new volume, bound in white linen, has on it the bright red disk and expanding stripes which are intended to represent the rising sun. Unfortunately, by limitation on the book cover, the effect suggested is that of sudden glare rather than steady radiance. When read, his hasty monograph proves to be a literary poster with only flat color effects and wholly lacking perspective. The Marquis Ito furnishes a benevolent preface which concludes with "warmest wishes for the unparalleled success of the undertaking." The "undertaking" consists of thirty-two chapters dealing with things on the surface, as they are in the current year. The transparent purpose of the work is to inform the British taxpayers concerning their new ally. Two great men are especially set before us, without regard to space, and with fulsome praise lavished on each. One is Shibusawa, the unofficial leader of finance, and the other is Ito, whom the author calls "the creator of a nation"; and no one will deny the ceaseless activity and brilliant powers of the "Father of the Constitution," who has a genius for building upon the work of the statesmen who went before him and getting the whole credit of it, and for taking adroit advantage of every opportunity. In picturing Ito's colleagues, Mr. Stead displays more sanity and proportion.

On most subjects about which information is not to be got by hasty interviews over a lunch table, or through the medium of pidgin English, the author writes wildly. Two statements on page 56 are specimens. When Mr. Stead says, "There are some 4,000 foreign missionaries in Japan," he is furnishing rhetoric rather than facts, unless he counts in the children and babes of the alien teachers. When he declares, "At the time of the Restoration there were about 8,000,000 adherents of 'Bushido,'" he is about as near the truth as when he attempts to describe what Bushido (the Knightly Way, or Mirror of Chivalry) is. In further announcing that "if all of these 8,000,000 were to make an effort to spread 'Bushido,' it would be a comparatively easy task to do it," he reveals his sanguine temperament and the worker with the nib, rather than the toiler in the processes of centuries of education.

Mr. Stead is right in emphasizing the unique power of the Emperor. It may be even true that, for the present at least, "he is greater than the Constitution itself." Next to him in influence are the "elder statesmen," that is, the survivors of that noble band who wrought the restoration of the Mikado to his ancient authority and to vastly more power than he or they could then dream of, in the civil and military campaigns of 1868. To the Emperor himself, no one can quite take the place of these veterans, and in this fact lies one of the best of the national safeguards. It is probably true, also, despite all the outward show and the boasting of the younger men abroad, that, although the Japanese have a constitutional government, "his mere word outweighs the whole Constitution, and can change the course of events more easily than years of effort by however eminent a statesman. . . . To the general mass of the people the Emperor takes the place of the supreme deity and has reverence accordingly." While the elder statesmen and the Emperor have any mental vigor, it is probable that the younger men will have slight chance of accomplishing anything which the former do not approve. It is this condition of affairs, long well known to Britain's rulers, that has inspired such trust in the Government of Japan, in the soundness of its statesmanship, and in the value of an alliance.

When Mr. Stead is not taking us into his confidence, by "revealing" wonders (communicated largely through servants), as he so often does, he is quoting freely from translations of native authors and newspapers that are apt to be ultra-patriotic. One does not get much real knowledge from his chapters on modern charities and philanthropy, because of the simple fact that, so far as these exist, they have been very largely instituted by the initiative or at the suggestion of aliens. To the discussion of the labor problem, however, he brings illuminating facts and figures. Early in this very year a great mass-meeting of workmen, "some 30,000 in number," was held to urge the making of proper labor laws, the protection of child and female workers, and the right of voting at parliamentary elections. It was resolved that "the 3d of April every year shall be the appointed day for the Japanese workingmen's grand social gathering." The chapters on education are sketchy and very thin, but on commerce, industry, patents, inventions, finance, and merchant shipping, the military and naval service, the author speaks with better knowledge, for here the statistics are easily accessible and the facts are patent.

While Mr. Stead does not hesitate to acknowledge some weak spots in the body politic, his general tone is highly optimistic. He considers that, allied to England, "Japan is now *the* great Power of the Far East." Being insular, her chances of successful invasion are materially reduced, and her situation enables her to deal promptly and effectively with affairs outside her borders. Her fleets are near their base, and are secure of their coal supply. On the whole, we may agree with him that, "with Japan openly allied to Great Britain, the Far Eastern world will no longer resemble a powder magazine, around which the flames of war are ever flaring."

---

*The Story of Cairo.* By Stanley Lane-Poole, Litt.D., M.A., Professor of Arabic at Trinity College, Dublin. London: J. M. Dent & Co.; New York: Macmillan. Pp. xx, 340. 32 illustrations.

Inclusively and exclusively, Cairo, past and present, is a mediæval town. It was founded at the beginning of what we obscurely picture to ourselves as the Middle Ages; its period of glory as an imperial city fell within these bounds, and to-day it is a survival of a dead past, pursuing its old life unchanged in the very current and vortex of the dominant and intolerant present. For in the East it is the people which survives. The Cairene—and he is Cairo—lives on, untouched by the centuries, unsympathetic in his soul with all this rush and change around him, ready to fall back in a year or a month into the dream life from which he has been shaken. His buildings may drop into rubbish heaps or melt into the mud of the Nile, but he, as unchanged as the pyramids, listens unmoved to tales of railways joining him with the Cape, and of dams to double Egypt. And so it comes that Cairo, unlike Toledo and Pisa—dead and mummied relics of a vanished Europe, preserved in their great stone sepulchres—is of the Middle Ages only, and yet still lives, and with no galvanized vitality, into our day.

The right of Cairo, then, to enter among Messrs. Dent's "Mediæval Towns" is safe, even though the common binding of the series, with its mitre and knightly helmet, its crozier and jousting lance, goes strangely with the city of Saladin and the second home of the 'Arabian Nights.' Such symbols Cairo has known only briefly and hastily, though perhaps Sir John Maundeville, when he served with the Soldan, may have amused the streets of Babylon with a display of a hot northern panoply. Equally safe, too, was the choice of Professor Lane-Poole to write this little book. As an authority on the art, architecture, and history of mediæval Egypt, he has no English-speaking rival. And the book which he has produced is as charming as it is thorough, a book to dream over and yet to study. In the skeleton of an analysis its glamour must vanish, but a few names may show the air here breathed. We have the story told of the successive cities which rose from the time when Amr, the conqueror, pitched his tent and founded the armed camp hence called Fustat, through its gradual growth of faubourgs, till at last the very name Cairo was given to the newer palace-town founded by the conquering Fatimids. Again another period of growth followed, closed by Saladin's citadel and walls. Last came the Grand Cairo of the 'Arabian Nights,' the city whose streets have been trodden in dreams by every European child. It was the creation of the Mamluks, and meant Cairo as it stood till, in the last fifty years, a European suburb grew up to stand beside the old, mediæval town.

Such, dryly, has been the history. But all, as here described, is instinct with turbulent vitality; splendid periods of art and science, of luxury and corruption, of cruelty and refinement, alternating with equally splendid anarchy and destruction. Life as it was really lived in the valley of the Nile, with all its products of hand and brain, opens before us in glittering, colored, fantastic, changing series. It is small wonder that the Cairene finds his Cairo now of a deadly dulness, and would easily exchange an immaculate police force of drab respectability for the old exciting times when the head was loose on the shoulders and a heavy-handed man had a chance. We are left with the question, Does the East really want the security and justice after which Europe toils? Is the problem of Plato's

'Republic' really as fundamental to the Oriental mind?

But over the value of this delightful little book there can be no question. The only pity lies in the size, and that the illustrations could not have been more full.

---

*History of the Church of England from the Abolition of the Roman Jurisdiction.* By Richard Watson Dixon, D.D. Vols. v., vi. 1558-1569. Oxford: Clarendon Press; New York: Henry Frowde. 1902.

*The Elizabethan Prayer-Book and Ornaments.* With an Appendix of Documents. By Henry Gee, D.D. Macmillan. 1902.

Dr. Dixon's earlier volumes, which appeared in 1877, 1880, 1885, and 1890, traced the fortunes of the English Church, its progress and retrogression, from Henry's quarrel with the Pope to Mary's death, 1529-58. Ecclesiastical history is not the most alluring of subjects, and, when dealt with on so large a scale, appeals to but a limited audience; but this work deserved and won praise for research, fairness, and good English. Its author was a canon of Carlisle from 1868, vicar of Hayton, Cumberland, 1874-83, and thenceforth of Warkworth, Northumberland; his degree came from Oxford, just before his death. Poetry was something more than his recreation, and he put forth at least four volumes of verse; but his fame will rest on his historical labors, which were strenuous and most conscientious. "Frail in body, and remote from the great collections of manuscripts," he followed the modern methods of investigation with a diligence and capability which are likely to leave his book for some time in possession of its field. His use of the original sources led him to differ frequently from Strype, Burnet, and others of his predecessors. He died January 23, 1900, having just finished his sixth volume, which reaches the twelfth year of Elizabeth's reign.

The new Queen's course was predetermined by circumstances. Whatever her preference for old ways, she was constrained to stand for so much of progress and liberty as was the needful support of her throne. A contemporary poem recites the list of Marian martyrs, and ends each (or most) of its numerous stanzas with the ardent refrain, "We longed for our Elizabeth." Prerogative was much nearer Elizabeth's heart than Protestantism, *per se*, but the two had to stand or fall together. Yet boldness must be tempered with caution and tact, for nearly all the clergy and most of the people were yet unreformed; the bishops had to be endured for a brief season. The completion of the house-cleaning, like its beginnings under Henry, was to be mainly political in its motives and secular in the means employed.

Dixon refutes the old story that the bishops would not attend the coronation on January 15, 1559. Oglethorpe of Carlisle (who was deprived with others five months later) did the crowning. By this time all was ready for the great acts which fixed the character of this reign. When blamed for fostering heresy, the Queen showed her wisdom and manliness (that is the appropriate term) by calmly replying, "I am a heretic." The litany, epistle, and gospel had been read in English on New Year's day. Parliament was convened January 25; the House of Commons "was an assembly of nominees of the crown." Here was promptly introduced the Act of Supremacy, "to restore to the crown the ancient jurisdiction over the estate ecclesiastical and spiritual, and abolishing all foreign powers repugnant to the same." It was passed on February 25. The Act of Uniformity, based on two similar acts of Edward VI., and restoring, with a few alterations, the English service of that reign, took a little longer, for the bishops and their adjutants made their last fight here, but on May 8 the session ended; four days later the Prayer-Book was introduced in the Queen's chapel, and in all the churches June 24. In it the Ornaments Rubric, taken from the final clause of the Act, preceded the Order for Morning Prayer, and restored such ornaments (*i. e.*, vestments) as had been used in the second year of Edward VI.

Other events of that period are dwarfed by the supreme importance of these enactments. In May (apparently) the "Evangelics" (not yet called Puritans) offered to the Queen a Declaration of their doctrines, based on the Forty-two Articles of Edward. This document, which "has received little notice in history," should appeal to theological antiquarians. Less unfamiliar is the embarrassing position of the bishops. The new Oath of Supremacy required nothing more than some of them had submitted to under Henry and Edward; but since then the Smithfield fires had raged with their active or passive coöperation, and they perhaps felt that dignity assigned a limit to Vicar-of-Bray mutations. On May 30 Bonner and Dean Cole of St. Paul's refused to take the oath, and were deprived. Five bishops followed their example on June 21, and others later; Kitchin of Llandaff alone complied, after granted delay. Chiefly to secure conformity, a Royal Commission was established June 24, to be succeeded July 19 by the Court of High Commission. Melancholy results, in part inevitable, followed. Nearly two hundred clergy refused the oath and were deprived. Their places, and especially those of the bishops, could not be filled at once. Scenes of vandalism and iconoclastic bigotry succeeded; the vacant sees were plundered, and during the first years of this reign there was wholesale destruction of church "goods." Official "visitors" led in this bad business; on August 24, 1559, "two great bonfires of roods and of Maries and Johns and other images" blazed in London. Yet the ejected clergy were far less numerous than a century later, under both Commonwealth and Restoration; and the Marian prelates and dignitaries were treated with exemplary lenity. When church and state are united, one or other has to be on top; and while the spirit is abstractly superior to the body, a spiritual organization has usually shown itself less to be trusted than one of humbler pretensions.

The earliest events of Elizabeth's reign were the crucial ones. Next in importance was the filling of the bishoprics, and especially the primacy. Parker was consecrated December 17, 1559; the Nag's Head tale was first published in 1604, and has long been classed with the Protestant fable of Pope Joan. Convocation met in 1563 and revised the Articles of Religion, reducing them to 39. Here it was proposed to dispense with the surplice, to abolish organs, most festivals, the sign of the cross in baptism, etc., and to say the prayers facing the people. Some of these motions were nearly carried. The Church was in a way to be Calvinized or Lutheranized, when the Queen stepped into the breach with sharp orders to her bishops to restore or enforce uniformity. If her influence did not anticipate the attempts of Laud and the Oxford movement long after, it at least pointed in that direction.

Dixon's sixth volume traces the rise and growth of Nonconformity, a subject not unfamiliar. The differences concerned not doctrine, but discipline and worship. Beyond 1570 the history has yet to be written on this scale and with equal clearness and freedom from prejudice. Time was when the annals of church or sect meant axe-grinding, the support at any price of assumed tenets. Canon Dixon's aim was to recover the facts, to set them forth simply and luminously, and to draw such inferences, if any, as the facts might justify.

Dr. Gee, who saw Dixon's closing volumes through the press, differs from his friend on one point. Dixon, following Strype, held that Elizabeth's Prayer-book was a new or revised book; Gee holds it to be a mere restoration of Edward's second book, 1552. The matter is complicated by a contemporary blunder; the appendix or proviso to the Act of Uniformity enforces the "ornaments" of Edward's first and second years, 1547-1549, the Elizabeth book those of Edward's second manual, 1552; moreover, one lays stress on retention, the other on use. Here, then, was an "ornaments" rubric—having been changed in the printed copies to conform with the proviso of the Act—in direct opposition to the tone of the rest of the Prayer-book; and here was matter for a fierce and envenomed controversy. All this may be read at length in Dr. Gee's book, with Guest's letter, on which it is supposed to hinge, and much more that is of interest to students of liturgics, if not to those who share F. W. Robertson's large contempt for "litany makers." The appended documents—"Device for Alteration of Religion" and others—are important as those on which much of the history of that pregnant era is based.

---

*Das Alte Lied vom Zorne Achills* aus der Ilias ausgeschieden und metrisch übersetzt von August Fick. Göttingen. New York: Lemcke & Buechner. 1902.

Nearly fifty years ago an attempt was made in Germany to reduce the dirges sung over Hector's body in the last book of Homer's Iliad to symmetrical form—preferably into strophes or stanzas of three verses each. This attempt was not unreasonable because of the lyric character of the lament, which approaches melic poetry. About the same time, another German scholar assumed for the original form of the Homeric Catalogue of Ships stanzas of five verses, urging that the catalogue would be remembered more easily and accurately if each of the geographical and political districts enumerated were in a definite frame. For such a division considerable support can be found in the text, though it cannot be carried through without violence. Other Germans have sought to show that the dialogue of Greek tragedy was composed not only symmetrically, but on certain basic numbers, of which the number thirteen has

been much used in these discussions. The theory is a pretty one at first sight; the Greek tragedians were not content with symmetry and correspondence in their choral odes, but sought also a balance between the different parts of their dialogue. Such correspondence or balance of speeches Ritschl had pointed out in the "Seven against Thebes" of Aeschylus, and others have made the like clear in the same poet's "Prometheus." The comparison between the structure of a Greek play and that of a temple, or a pediment group of statuary, became more obvious. Those who discovered the principle were tempted to carry its application too far (though this does not hold of Ritschl), but the truth remains that the Greek poets at times attached more importance than poets of to-day to the exact balance of parts of their work.

In 1887 Fick published his two "discoveries," that the poems of Hesiod were composed in a dialect free from Ionic peculiarities, and that they were arranged in groups of three verses or in multiples of three. So the 'Theogony' was reduced from the 1,022 verses of ordinary editions to three groups of 144 verses each, or 432 verses in all, while from the same poet's 'Works and Days' three poems were formed—two of 72 verses each and a third of 144 verses. As if this were not sufficient ingenuity for a single work, in an appendix the author announced his further discovery that eleven is the basic number of the Homeric poems, and that the number of verses in the larger or smaller divisions of the original, primeval lay on the Wrath of Achilles is eleven or a multiple of eleven. His arguments and illustrations in support of this thesis have been repeated and augmented, with some modifications, in Bezzenberger's *Beiträge*, one of the most recondite of German philological publications.

Fick now presents his theory to the cultured public, offering a German translation in hexameter verse of the original Wrath of Achilles, as he conceives it to have been composed by Homer. The whole makes a poem of 1,936 verses, in four books, each of which is divided into two lays, in stanzas of eleven verses each. The first lay has twenty-five stanzas in five sections—Introduction, 9 stanzas; Beginning of Quarrel, 7 stanzas; Athena's Interference, 5 stanzas; Nestor's Attempt at Reconciliation, 3 stanzas; Achilles's last word, 1 stanza. What could be more symmetrical than this pyramid—9, 7, 5, 3, 1? But this is not all. The first reviser (the *Erweiterer)* exactly doubled the original work, making eight books instead of four; and, of these eight, half had each 517 verses, and the others each 451 verses, or 3,872 verses in all. The second reviser (the *Erbreiterer)* again exactly doubled the work which came into his hands, making sixteen books instead of the eight of the *Erweiterung* and the four of the original Wrath, of precisely the same length, amounting to 7,744 verses in all. Our author calls attention to the fact that this second revision, the *Erbreiterung*, if doubled like its predecessors, would give an extended form of 15,488 verses, which is only 306 less than the number of verses in our ordinary texts.

Fick is a veteran scholar in the field of Indogermanic scholarship. His 'Comparative Lexicon of the Indogermanic Languages' reached a fourth edition a dozen years ago. He has made an admirable book on Greek proper names which has reached a second edition. He has translated the Homeric poems into the Æolic dialect, and thus furnished a practical test of his theory. But even this Æolic translation of the poems, learned and laborious though it was, seemed in places hardly serious, and Fick is reported to have said that the work at least was great fun ("Es hat mir aber Spass gemacht"), and in these more recent Homeric investigations his laborious ingenuity seems clearly to have been misplaced. If the undertaking had not been so colossal and extended over fifteen years, we should consider it a mere *jeu d'esprit.* Whatever we may think of the probability of a poet's working in the manner proposed, and of his finding two successors to double and quadruple the work on the same principles without varying a line, a single consideration appears to be fatal to the theory. This assumes that every verse of the original poem has been preserved with not more than three or four exceptions, while we have good reason to believe that successive revisers of the poem, as they developed the work, substituting a longer passage for a shorter, not simply added but also removed. Thus we cannot assume that all the verses of the original Wrath have been preserved. Such an assumption is far more difficult since new light has been received on the Homeric tradition from the papyrus fragments found in Egypt. Another objection to the work is that it disregards all but strictly linguistic tests, and the convenience of the theory, for the age of a verse or a passage. Thus, although the author reaches an original Wrath which differs little in length from that of the Original Iliad which the recent work of Robert of Halle proposes, the two scholars agree only in the first and eleventh books and a few brief passages besides. This difference is the more marked since any such theory must accept the greater part of the first book of the Iliad as the foundation for the rest of the story.

Most of the conclusions which Fick draws with regard to early Greek mythology and archæology are naturally without weight for those who decline to accept his premises. His freedom in drawing inferences can be illustrated from his discussion of the numbers of the military forces before Troy. Of the twenty-nine contingents of the Greek fleet, two have each twelve ships. This number Fick accepts at once as normal, and reduces the fleet of Menelaus from sixty to twelve boats, without hesitation. To reduce Agamemnon's force from one hundred to twelve seems rather heroic treatment, and he allows the possibility that he may have had a double quota, or twenty-four. In a similar fashion, the number of contingents is reduced from twenty-nine to seven, and a total of eighty-four ships is reached in place of 1,186. The number of men in each boat is again reduced from seventy-five or eighty to twenty-two, and thus the number of Greeks on the expedition is made to be about two thousand—with possibly two hundred more if Agamemnon furnished a double quota of ships—instead of 100,000, which has been the usual estimate. The Trojans and their allies, also, are reduced from the Homeric 50,000 to 1,600. In these numbers, Fick is doubtless nearer the actual truth than the Homeric poems as we have them, but he might more reasonably and scientifically have guessed at 2,000 and 1,600 at once than have reached them by such manipulation as he uses. Certainly he might better have allowed each contingent but one ship with seventy men. He sustains his arguments on this point, by the way, with the quotation of a statement about the site of Troy which was printed before the true Trojan city had been identified, and which no scholar acquainted with the facts would have made since the identification.

The work is handsomely printed. The translation is scholarly, of course, and is often admirable, so far as a foreigner may judge.

---

*Reconstruction and the Constitution.* By John W. Burgess. Charles Scribner's Sons. 1902.

We have so recently considered Mr. C. H. McCarthy's work, 'Lincoln's Plan of Reconstruction,' as to make it unnecessary to examine Professor Burgess's essay at length. He certainly tells his story very well; the book is decidedly readable. We see no reason, however, for including in it an account of the Treaty of Washington and the Geneva Convention. They can hardly be said to have any relation either to Reconstruction or to the Constitution. It is not in good taste, we should say, to refer to President Johnson as a person of low birth, in view of President Lincoln's origin; but Professor Burgess certainly states Johnson's merits with convincing force, and goes so far as to declare that the nation "should write his name in the book of its heroes." On the other hand, he denounces, sometimes with positively violent language, the leaders of the Republican party who forced the disastrous "carpet-bag" governments on the Southern States. It seems clear that they will occupy a very different position in the judgment of history from that which was for a long time given them in the party platforms. They could hardly have made a more dismal failure of the work of reconstruction than they did, as Professor Burgess shows conclusively. His exposure of their reckless and unprincipled legislation is the best part of his book.

Curiously enough, Professor Burgess really belongs, politically, with the men on whom he heaps contumely. He is to a considerable extent incapacitated to appreciate the situation, from the fact that his mind is preoccupied with a definition of the "State" obtained from German sources, the application of which throws the whole subject of the war and reconstruction into confusion. According to his theory, the States of our Union never should have been called States; they were not States when they seceded, and it was absurd to treat them as States when they were restored. Of course this theory simplifies matters amazingly. All Constitutional difficulties are removed, and reconstruction becomes as easy as organizing a government for Porto Rico.

But, unfortunately for the theory, American statesmen have not been trained to think politically as they do in the German universities, and the peculiar views which they held of the nature of our States were the cause of the trouble over reconstruction. The theory on which the Northern States engaged in the war was that the Southern States were still members of the Union. Their governments were in the hands of usurpers, it was true, but the

States were in the Union, and could no more get out of it than a minority of stockholders can dissolve a corporation. As Mr. Lincoln said, to assert that the Southern States were no longer in the Union was to make the fatal admission that States, whenever they please, may, of their own motion, dissolve their connection with the Union. The Union, he thought, could not survive that admission, and he declared: "If that be true, I am not President; these gentlemen are not Congress." This theory, whether correct or not, was the original theory of the loyal North. Mr. Lincoln was right; had it not been believed that the Southern States continued to be States of the Union after the ordinances of secession were passed, the North would not have employed "coercion" to preserve the Union and the Constitution.

The furious passions aroused by President Johnson's arbitrary proceedings eventually caused this theory to be disregarded. The violent partisans who controlled the Congress and overruled the President were driven to act as if they held Professor Burgess's theory of statehood, and practically declared that there were no Southern States. The representatives of the Northern States really created a number of new States out of the territory formerly occupied by the Southern States, just as they might have created new States out of the territory conquered from Mexico. Professor Burgess, of course, does not complain of this. As there never were any Southern States, in the proper sense of the word, it was idle to talk of their rights. What he does complain of is that the work of setting up new local governments was scandalously botched. Few will differ with him on this point, and, as we have said, he tells the story well, But, for the reasons assigned above, those who wish to understand the Constitutional questions involved will not find that this book meets their requirements.

---

*The Evolution of Sex.* By Profs. Patrick Geddes and J. Arthur Thompson. Revised edition. New York: Charles Scribner's Sons; London: Walter Scott. 8vo, pp. xx, 342, illustrated.

Book I. treats of male and female—of primary and secondary sexual characters and differences, and of theories relating to them. Book II. treats of the analysis of sex—of organs, tissues, cells, hermaphroditism, sex elements, egg cells, male cells or spermatozoa, and a theory of sex, its nature and origin. Book III. treats of the processes of reproduction—of fertilization, parthenogenesis, asexual reproduction, and alternation of generations; and Book IV. treats of the theory of reproduction, including facts of growth, special physiology of sex and reproduction, organic immortality, psychological and ethical aspects of sex, laws of multiplication, and the reproductive factor in evolution.

By means of gleanings from the conclusions reached, something may be shown of the character and inclusiveness of the work. A fundamental idea in it is, that male and female differ in regard to protoplasmic changes (metabolism); the female being less active, longer lived, and more given to construction or upbuilding (anabolism), and the male being more active and more affected by disruptive changes (katabolism). With the origin of sex two more or less divergent lines of variation are thus introduced. Sex originated as the cells developed from the protoplasm, one cell well nourished and quiescent becoming an ovum, another more hungry and more active becoming a flagellate sperm. A primary difference of male from female lies in the relative preponderance of katabolic changes, disruption. The idea that the cell nuclei alone are of importance in fertilization, the cell substance being considered a mere adjunct, is not favored. Fertilization is supposed to benefit the species in a continuance of its vitality, a sort of rejuvenescence, and it may be that it is an important source of variation. Parthenogenesis is said to be a degeneration from ordinary sexual process. Asexual reproduction occurs in many degrees, from continuous budding to discontinuous multiplication; it occurs in many types, from polyzoa to tunicates. Alternation of generations may be described as a rhythm between a relatively anabolic and katabolic preponderance. At the limit, at the maximum or optimum of size, cell division restores the balance between mass and surface; but the actual mechanisms of the process are at present beyond analysis. Reproduction may ward off death in the protozoa, the nearest to immortal of all organisms, but it helped to cause it in the simplest metazoa.

The intellectual and emotional differences between the sexes are correlated with the deep-seated constitutional differences. Egoism and altruism have their roots in the primary hunger and love, or nutritive and reproductive activities. Emotion and activity have a common origin. Spencer's conclusion that man's future evolution must continue mainly in the direction of psychical development, decrease of fertility keeping pace with increase of individuation, is accepted. The greatest step in nature, from single-celled to many-celled animals, though bridged by loose colonies, was made not by selection of the more individuated and highly adapted forms, but by the union of relatively unindividuated cells into an aggregate, in which each became diminishingly competitive and increasingly subordinated to the social whole. These authors read creation's law as not a struggle but as love; they are not at all ready to accept an advantage or utility, ascertained or supposed, as sufficient explanation of a fact; they go farther toward the origin. Their book is an improved edition of a good work; it is a monograph which could hardly be more abridged, unless, perhaps, it might be somewhat in the amount of attention given to particular theories much discussed in the past, but now of only traditional importance.

---

*Traces of the Elder Faiths of Ireland:* A Folklore Sketch. In two volumes. By W. G. Wood-Martin, M.R.I.A. Longmans. 1902.

This latest work of Mr. Wood-Martin, in two rather handsome volumes, is based in part upon his earlier book, entitled 'Pagan Ireland.' The new and much enlarged treatise constitutes one of the most ambitious efforts that have yet been made to deal with the life and religion of the ancient Irish people. Ranging all the way from "speculative geological archæology" to contemporary folklore, it professes to set forth the present state of knowledge with regard to the course of Irish paganism from the earliest times till its absorption by Christianity. This was a large undertaking, and we are bound to say that it has not been attended with much success. Perhaps the time is not ripe for such a treatise; at all events, Mr. Wood-Martin's book is so amateurish in character that it neither sets forth competently the present state of knowledge in its field, nor makes any very solid additions to such knowledge. At the same time it exhibits broad and various information based upon prolonged studies. It might be not improperly termed a learned work, and the author, by virtue of his wide acquaintance with the subject and his earlier contributions to its literature, is at least a veteran among amateurs.

Since Mr. Wood-Martin was writing for the general public, he tried to be thoroughly popular in method; and he has succeeded to the extent of being very readable. In the matter of clearness he has not done so well, and his earliest chapters especially are disorderly and confusing. In attempting to avoid the cumbersome methods of a scientific treatise, he has erred on the side of laxity, and allowed himself freedoms which are to be regretted. Thinking it too pedantic, for example, to cite his authorities in footnotes, he has left his readers with no direct means of tracing his most interesting statements or of checking his more doubtful ones. He has a way of inserting long passages of commonplace matter, enclosed between marks of quotation, without any indication of the source. At the same time he usually labels citations from Shakspere and Milton, and he credits a familiar sentence from the "Urn-Burial" to the authorship of Sir John Browne! This last lapse—and later correct references to the great English prose-writer show that it was only a lapse—leads us to add that we have seldom seen so many inaccuracies in a book so handsomely published by a good house. Some of the errors reveal positive ingenuity. Bartholomew Anglicus (I., 185) appears as "Angelicus"; Gay's Fables are assigned to "Gray" (I., 359); and "primitive rights" is once printed where "rites" must be meant (II., 315). We do not intend to give a list of the misprints we have noted; but the number of these inaccuracies, taken together with a peculiar looseness in style and paragraph structure, gives the impression that the copy was made from dictation, and never competently revised or corrected in proof.

We have spoken of certain inexcusable blemishes in Mr. Wood-Martin's work, but, judged as a scientific treatise, it has more fundamental faults. It is characterized throughout by lack of critical method. Instead of going himself to the ultimate available sources of knowledge, the author is too often contented with second or third-hand information. Thus, we are told (I., 340) that "Dr. P. W. Joyce says [Dianrecht] had a son, and a daughter Armedda, more skilful than himself." We have much respect for Dr. Joyce, but we should not quote him as if he were a contemporary of Tigernach, or somehow otherwise possessed of information unknown to the modern world. We should as soon think of saying, "Professor Goodwin declares that Pallas Athene was born from the head of Zeus!" As a result of this rather indiscriminate use of sources, Mr. Wood-Martin's material is a good deal impaired in value; and his habit of mentioning no authorities for many

statements (or else of citing vaguely an Irish manuscript of uncertain date) makes it hard to distinguish the true from the false.

In the treatment of his material, too, Mr. Wood-Martin shows the same lack of proper method. In chapter iv. he discusses Oriental elements in Irish tradition, and mentions Eastern analogues to Celtic tales; but his parallels are not all significant, and he subjects them to no critical examination. Again, in the chapter on St. Patrick (I., 245), the various problems that concern the life of the saint are altogether too summarily dismissed. The author's inability to deal with mythological problems may be inferred from the following short paragraph (I., 346):

"Irish gods were apparently but deified mortals, celebrities of their day, taken indiscriminately from the three so-called colonies of the Formorians [*sic!*], the Dedannan, and the Milesians."

This is of course nothing but the euhemerism of the old Irish annalists served up anew as mythological theory. But the most extraordinary example of Mr. Wood-Martin's capacity for going astray appears in the following passage about the ancient Irish hero, Cuchullin:

"Regarded from another standpoint Cuchullin is, to a certain extent, a mythical and mythological being, as the account of his life given in written records has apparently been remodelled on that of Christ. Cuchullin's age at death is thirty-three. He has an immortal father and a mortal mother of the royal line; he is born in a district remote from Emania, the Irish Jerusalem; when a child of ten he steals away from his mother with his little wooden shield and sword of lath to contend with the hero youths of Emania, as the boy Jesus went into the Temple to argue with the Jewish Doctors; in fact, his deeds, as a youth, are a mere adaptation of the recorded early life of Christ in the Apocryphal Gospels. He is brought up by Culand the artificer, as Christ is brought up by Joseph, the carpenter; he is employed defending the weak against aggression; the last three years of his life are full of trouble and misery; he dies, after being pierced by a dart, after taking a drink, exclaiming, 'The Gods of Erin have deserted us,' standing erect with his back to a pillar-stone to which he had tied himself; other coincidences might be given."

From the preceding quotation alone it ought to be apparent that Mr. Wood-Martin cannot be deemed a trustworthy authority upon the subject with which he deals.

We have felt bound to criticise him frankly, because it would be a pity if his theories should be taken too seriously. It now remains for us to say that his book has its uses, and that, in spite of its faults, we do not regret its publication. Judged as an uncritical collection of material upon Irish folk-lore, it is both of value and of interest. It represents a long labor of compilation, and the bibliography alone (comprising over nine hundred entries) would merit grateful recognition. Mr. Wood-Martin seems to have explored very fully the books in his list, and he has put together an elaborate account of the beliefs and practices of the modern Irish peasantry. His work thus furnishes a valuable supplement to the older Irish writings, on the one hand, and on the other hand to such treatises as Rhys's 'Celtic Folklore,' which deals chiefly with the British Celts. An abundance of local legends are cited to illustrate the survival of ancient customs and superstitions. Some of the chapters (like that, for example, which deals with the "hag" in Irish tradition) are full of suggestive matter. In a word, the Celtic scholar will find much to repay him for working through Mr. Wood-Martin's pages, and the excellent index will lighten his labors. By thus serving the convenience of scholars, 'Traces of the Elder Faiths' may prove in the end to have helped considerably toward a better knowledge of Irish paganism. But in itself the book cannot be called sound or scientific investigation.

---

*The Life and Times of Alfred the Great.* By Charles Plummer. Oxford: Clarendon Press; New York: H. Frowde. 1902.

Mr. Plummer here prints his six Ford lectures, delivered at Oxford last year, with a certain amount of additional material and copious but unobtrusive foot-notes, in a most agreeable and satisfactory little book. It would be impertinent to dilate on the author's competency. His editions of the Anglo-Saxon Chronicle and Bede's 'Ecclesiastical History' are the standard editions, and have given him a place among the most distinguished students of early English history. The present work not only sustains that reputation, it also shows that Mr. Plummer is a first-rate popular expositor. The book is full of interest for the general reader, and a valuable monograph for the historical scholar. In two hundred pages it tells us everything that is known about Alfred the Great, with abundant references to previous discussions of debatable matters, and acute comments on all points of controversy. It is not to be expected that everybody will agree with everything in a discussion so beset with difficulties, but it is safe to say that none of Mr. Plummer's opinions can be neglected or waved aside by his successors.

The treatment is so compact that a thorough review would take much space. We can advert to only a few of the many interesting questions discussed. The examination of the Latin 'Life of Alfred' which passes—not without challenge—as the work of Bishop Asser, is specially noteworthy. Mr. Plummer began his investigation in an incredulous frame of mind, but has come to the conclusion that the document, though corrupt and interpolated, is probably authentic in substance. His arguments are ingenious, and some of them are hard to meet. It is unlikely, however, that they will be universally accepted. We must wait for Mr. Stevenson's long-expected edition, which will probably settle the question. The account of Alfred's own works is by far the best that has yet appeared. The translation of Bede is confidently claimed for the King (and his literary bureau), despite the Mercian dialect and the comparative literalness of the rendering. Many good Anglo-Saxonists will dissent, but we are inclined to think that Mr. Plummer has established a strong probability. The history and the topography of the Danish wars are set forth with extraordinary clearness, and the sketch of Alfred's internal administration is appreciative and moderate. The author has succeeded in bringing out the king's personality with a good deal of vividness, and with no appearance of effort.

The informality of style, due to the fact that the lectures are printed substantially as they were delivered, is a distinct relief from the stiffness of most historical monographs.

# THE LITERATURE OF AMERICAN HISTORY

EDITED BY

## J. N. LARNED

WITH the editorship of Mr. J. N. Larned, forty scholars and critics, each an acknowledged authority in a particular field of American history, have selected the 4,000 works here presented, and given them brief descriptive and critical notes, so that for the first time the literature of American history is charted for the behoof of the reader and student, with frank and impartial criticism of books which do not seem to deserve the acceptance they enjoy. The chief historical societies of America are named, together with their most important issues. The sources of American history are outlined by Mr. Paul Leicester Ford, so that the student may pass directly to first-hand authorities and pursue a special research as far as he pleases. Much of the best biography, many of the most instructive and entertaining works of travel, of ethnological investigation, of scenic and scientific description of America are included. Canada, the West Indies, Central and South America have departments.

Professor Edward Channing, of Harvard University, appends lists for A SCHOOL LIBRARY, A TOWN LIBRARY, A WORKING LIBRARY.

This GUIDE will not become out-of-date. This autumn will be issued a supplement, edited by Mr. Philip P. Wells, librarian of the Yale Law School, in which will be offered a selection from the literature of 1900 and 1901, with notes. Thereafter this continuation will appear at intervals to be duly announced. (Terms on application to the Secretary American Library Association Publishing Board, 10½ Beacon Street, Boston, Mass.)

**THE BAKER & TAYLOR CO.,**
33-37 East 17th St., New York.

A Story of the
THOSE BLACK DIAMOND MEN.
Anthracite Miners

**By SILVER, BURDETT & COMPANY**

**The First Year of Latin**
By W. B. GUNNISON, Principal of Erasmus Hall High School, Brooklyn, N. Y., and WALTER S. HARLEY, Instructor in Latin, Erasmus Hall High School. *Just ready.*

The direct value of this new text is distinctive, for it gives to the beginner a thorough fundamental knowledge of Latin grammar, and in such a way as to make easy the transition to the reading of Caesar in the second year.

**Judith, Phoenix and Other Anglo-Saxon Poems**
Translated from the Grein-Wülker text, by J. LESSLIE HALL, Ph. D., Professor of English in the College of William and Mary. Pp. 128. 75 cents.

A companion volume to Dr. Hall's "Beowulf," containing five of the most famous of our primal poems, translated with metrical movement. *Marginalia* and foot-notes make this a most serviceable book of sources, for the non-technical reader as well as the scholar.

*LATEST TEXTS*

*For Sale by all Booksellers. Send for Catalogue.*

**OXFORD UNIVERSITY PRESS (American Branch), 91 and 93 Fifth Avenue, New York**

## AN INTERESTING LETTER.

GENTLEMEN:—I have examined Dr. Merkley's text book of Modern Rhetoric very carefully for those evidences of working character which the teacher usually seeks for in vain in works treating of the subject, and am well satisfied with the result.

Rhetoric, under Dr. Merkley's treatment, is relieved of the odium that has hitherto clung to it so tenaciously, and has now a fair chance of accomplishing the ends it is primarily intended as a class-subject to serve.

Dr. Merkley's book is marked throughout with that clearness and conciseness of statement which, though continually insisted upon in others, is seldom practiced by the authors of works on the subject of Rhetoric.

The illustrations are apt and well chosen, and the exercises calculated to impress the principles of the subject firmly upon the pupil's mind.

Dr. Merkley deserves the hearty congratulations of both teachers and students. Very truly yours,

WM. COBHAM,
Stewartstown (Pa.) Collegiate Institute.

Messrs. NEWSON & COMPANY,
15 East Seventeenth Street, New York.

## AMERICAN LITERATURE

By J. W. ABERNETHY, Ph.D.,
*Principal of Berkeley Institute, Brooklyn, N. Y.*
510 pages, 12mo, cloth. Price $1.10.

The author's long and conspicuously successful experience as a teacher, and the time and thought he has devoted to the work encourage us to believe that this book will be particularly adapted to the varying needs of his fellow-teachers.

The plan of the book includes a brief account of the growth of our literature considered as part of our national history, with such biographical and critical material as will best make the first-hand study of American authors interesting and profitable.

One of the most interesting features of the book is the supplementing of the author's critical estimates of the value of the work of the more important American writers with opinions quoted from contemporary sources. Other strong points are the attention given to more recent contributions to American literature, and the fact that Southern literature is accorded a consideration commensurate with its interest and value.

The pedagogical merit of the book is indicated by the care which has been given to the production of a teaching apparatus which is at once simple and entirely adequate.

## Notable Announcement of TEXT-BOOKS for Schools and Colleges

### Frieze's Virgil's Aeneid

**First Six Books...$1.30** **Complete...$1.50**

With Introduction, Notes, and Vocabulary. By HENRY S. FRIEZE, late Professor of Latin, University of Michigan. Revised by Walter Dennison, Professor of Latin and Roman Archæology in Oberlin College.

This popular edition of Virgil has here been thoroughly modernized, both in contents and appearance. The introduction contains many special features of help to the student; the notes have been thoroughly revised and include many additions. The convenience of the two-form edition will be especially desirable for students who read more than the minimum college requirements. Both volumes are printed on very thin opaque paper, thus making each an extraordinarily compact and useful book.

### Harkness and Forbes's Caesar's Gallic War..... $1.25

With Introduction, Notes, and Vocabulary. By ALBERT HARKNESS, Ph.D., LL.D., Professor Emeritus, Brown University. Assisted by CHARLES H. FORBES, Professor of Latin, Phillips Academy, Andover, Mass.

While remarkable for its simplicity, this book includes everything needed by the student in reading the Commentaries. The introduction contains an outline of the life of Caesar, a description in brief of the scenes of his military operations, and a short treatise on the military system of the Romans. The notes are sufficiently helpful, and the illustrations are appropriate yet unique.

### Babbitt's Grammar of Attic and Ionic Greek... $1.50

By FRANK COLE BABBITT, Professor of the Greek Language and Literature, Trinity College, Hartford.

This book is in all respects the most modern Greek grammar published. It states the essential facts and principles of the Greek language in a concise form with only so much discussion as may reasonably be demanded for a clear understanding of the subject. It therefore meets the wants of secondary schools, and at the same time is sufficient for all ordinary demands of the college course. In many particulars it departs from the conventional grammar, being simpler and much more comprehensible.

### Flagg's A Writer of Attic Prose.....$1.00

By ISAAC FLAGG, Professor in the University of California.

A book on Greek composition which furnishes models from Xenophon, exercises and guide, and a vocabulary of Attic Prose usage. The selections from Xenophon make the student acquainted with the best modes of Attic expression, and afford excellent models for imitation. The English exercises are based each upon corresponding Greek passages, and are accompanied by Greek explanatory notes.

### Heidel's Plato's Euthyphro.....$1.00

With Introduction and Notes. By WM. A. HEIDEL, Ph.D., Professor in Iowa College.

This book, the first to appear of a series edited by Prof. Smyth of Harvard University, is the only edition of the Euthyphro of Plato ever published in America. It is particularly well adapted for college reading, inasmuch as it affords by far the best introduction to the Apology of Socrates and so to the study of Plato. The Notes are sufficiently full and the introduction furnishes much information helpful to the understanding of the text.

### François' Advanced French Prose Composition, $0.80

By VICTOR E. FRANÇOIS, Instructor in French in the University of Michigan.

This book is designed for the third and fourth years in high schools and for the second year in colleges. It contains exercises, grammar reviews, verb lists, French texts, transposition work, questions in French, and English passages for translation. The new rules of pronunciation are also included. Any complete grammar may be used for reference.

**Lessing. Nathan der Weise** (Diekhoff) ..... $0.80

**Daudet. Tartarin de Tarascon** (Fontaine)..... .45

**La Brète. Mon Oncle et Mon Curé.** (White)..... .80

**Moser. Der Bibliothekar.** (Cooper) ..... .45

# The Nation.

*NEW YORK, THURSDAY, AUGUST 28, 1902.*

## The Week.

President Roosevelt went further at Boston than he had gone at Providence. He did so by arguing for national regulation not only of Trusts, or of great combinations, or of corporations doing an interstate business, but of all corporations whatsoever. His words were, "Remember, I say corporations. I do not say merely Trusts, merely combinations of corporations, or corporations under certain peculiar conditions." This means that he would have the national Government sovereign and directive in the case of every corporation doing business anywhere in this country. That sounds revolutionary, but really it amounts to no more than asserting that the United States ought to have what England has—a Companies Act. A national corporation law would be on all fours with a national bankruptcy law. Whether we shall get it or not, is another question. We ourselves do not think that we shall for many years to come. A Constitutional amendment would almost certainly be a necessary preliminary, and to talk about what we shall do after the Constitution is amended is very like predicting our action after larks have fallen from the sky. As the Senate is now constituted, it would be impossible to induce it to agree to an amendment limiting the powers of corporations in any radical manner. Practical and actual reform, we think, therefore, is more likely to come in other ways. By improving and harmonizing the corporation laws of the various States, so as to make them conform to the Massachusetts type, and to destroy those snug harbors which piratical speculators find in the lax laws, limply enforced, of certain States, we are more apt to make real progress than by dropping everything to go in for national control. If State courts, furthermore, were to assert a more continuing sovereignty of the State over the corporation which it creates, it is easy to see that an effective step in advance would be taken.

---

The President's words on Saturday about the mischief of "great fortunes not used aright," and about the "ugly baldness" of the follies and vices displayed by "the wicked who prosper," will find an echo in many hearts. They fall fittingly at a time when ostentation by the vulgar rich has been reaching its acme of offensiveness, when the gambling spirit, both in finance and in high play by the admired plungers at Saratoga, has been rampant, and when press and public have stood staring or been running agape at every rumor or authentic report of luxury surpassing all records for fantastic or barbaric forms. It is good to have a Chief Magistrate to whom all this is so frankly repellent, and who lets it be known that it is. In view, however, of the very obvious lurch to luxury which this country has taken since the Spanish war, we think that Mr. Roosevelt and others of his way of thinking and talking about the discipline of war would do well to revise their theories. They held up war to us, it will be remembered, as the great moral tonic of which a luxurious age was in need. It was to prevent our fibre from deteriorating. It was to make us live laborious days. Under the sharp appeal of military duty, the nation was to cease to think about the comforts and elegancies of life, was to give up reckoning happiness in terms of the bank account, and was to scorn all delights except the stern joy of the warrior. This theory always seemed to us bizarre psychologically and ludicrous historically. Being brutalized or else made sybaritic by the luxury which always sweeps in with new floods in war-time, has been the historic danger of war. Capua is never far from Cannæ. Napoleon's wars did not exactly make the French a modest, simple people, despising the pleasures of sense. Even a struggle so essentially heroic and ideal as our civil war was attended and followed by an invasion of insensate displays of new-found wealth. George Ticknor was no Cato the Censor, yet he wrote to a friend abroad in the days of the desperate fighting between the Rapidan and Richmond in 1864, "Meanwhile, luxury reigns as it never did before in Boston, New York, and through the North generally."

---

Mr. Roosevelt rendered a public service at Hartford on Friday, when he administered a deserved rebuke to sundry "first citizens" who had tried to snub the Mayor of the city because he was only a salesman in a clothing-store when he was elected. The natural and proper thing, of course, would have been to pursue the same course at Hartford in the reception of the President as at New Haven earlier in the afternoon—that is, have the chief magistrate of the city meet him on his arrival and accompany him in his carriage. This would have been done if the Mayor had been a "leading citizen"; but, as he is not, he was thrust aside at the railroad station and put in the third carriage, while a rich and prominent business man was called upon to act as host for Hartford. As soon as Mr. Roosevelt learned the situation, he sent word to the Mayor that he should be pleased to see him at the house where he was to stay, and in opening his speech that evening he took pains to mention the Mayor by name and to recognize him as the official who represented the city on such an occasion. Altogether it was a most proper rebuke of a discourtesy which discredited all who were responsible for it.

---

Study of the Congressional conventions which are now being held from week to week in different sections of the country continues to be highly interesting. The reprehensible tendency in both parties towards a "go-as-you-please race" in the various districts has reached its climax in Wisconsin. In the Milwaukee district of that State the Democrats have just nominated a young lawyer for Congress, and adopted no declaration of principles whatever. The attitude of the Democrats is less important in Wisconsin, which is Republican by a large majority, than in Nebraska, where the Opposition now have four of the six Representatives, and there will be much curiosity in the East to know what questions are pushed to the front there. The Democratic convention in the district which includes Omaha nominated a candidate for Congress on Saturday week, and adopted a platform presenting the issues considered most promising in that region. No allusion is made to the matter of Cuban reciprocity, which is the burning question in the neighboring State of Kansas—it must be remembered that Nebraska has a number of sugar-beet factories; nor is there any reference to the Philippine issue. The Fowler banking bill is condemned as "designed to build up a gigantic banking Trust, and to place in the hands of a few great banks the control of the banking facilities and finances of the country"; compulsory arbitration is favored in disputes between capital and labor "in all cases where the public becomes a sufferer," and such legislation as may be necessary to secure this is favored. But chief stress is laid upon "the tremendous growth and multiplication of Trusts under Republican rule, and the enormous tribute those Trusts have wrung from the American people"; and, as a means of securing relief, it is declared that "we favor legislation by Congress which shall remove tariff duties on Trust-made goods, and place under Government supervision and control corporations which have acquired monopoly powers in the business world."

---

While public interest in the revision of the tariff is obviously more general and keen beyond the Alleghenies than in the Eastern part of the country, there are indications in New York and New England that Republicanism is disturbed by the issue even in those States most

strongly wedded to the protective system. There is, for example, a growing agitation among the shoe and leather interests of New England for a removal of the duty on hides, which they find it increasingly hard to endure. Still more significant is the recent breach in the American Protective Tariff League, which has its headquarters in New York city. When the question of Cuban reciprocity became acute, the board of managers held a meeting, and a majority, with characteristic stupidity, decided that the League must oppose any such measure because its constitution declares the object of the body to be the protection of American labor by a tariff on imports "which shall adequately secure American industrial products against the competition of foreign labor." Thereupon Cornelius N. Bliss, who was one of the founders of the League, and its president for seven years, resigned from the Board of Managers, and five other members of the League went out with him on the same issue.

---

Republican party organs in Illinois are making efforts to explain away the recent revelations concerning the 5 per cent. assessment of State employees, but they are finding their task a difficult one. Even the Chicago *Tribune*, which, while strongly Republican, can hardly be described as a party organ, makes a feeble attempt to show that the real blame for the whole unfortunate state of things rests with the late ex-Gov. Altgeld, who, the *Tribune* says, devised the assessment system, and left it in full operation to his Republican successor, Gov. Tanner. Gov. Tanner, it appears, weakly fell into a temptation so alluring, and passed the system on to Gov. Yates, who evidently received it with enthusiasm. The plea of the strictly party organs is less apologetic. The "contributions" were "voluntary," they declare, and the expenditure was "legitimate"; the money, "generally speaking," having been used to subsidize a long list of country newspapers through the "yearly subscription plan." The Chicago *Evening Post* remarks that this logic is good enough for some of the inmates of the Kankakee asylum, and it swells the general demand that the next Illinois Legislature shall pass a law prohibiting this barefaced violation of the principles of civil-service reform.

---

The navy game of 1902 is most likely to be remembered for Rear-Admiral Higginson's excellent parody of a historic surrender. "Keep your sword, sir," he said to Commander Pillsbury, who had sailed plump into the defending fleet—"keep your sword. I could not take the sword of so gallant and noble a foe." It is doubtful if the event deserved any more serious treatment. The manœuvres have proved what everybody already knew, that it would be almost impossible for a hostile fleet to effect a landing on our coast; that an inferior fleet sailing regardlessly up to a superior one sails to destruction; that two fleets may operate in the same waters for a week without either knowing of the other's movements. In fact, these elaborate preparations have, so far as a mere layman can see, merely enforced the trite lesson of the limitations of naval foresight. We shall not be suspected of belittling the performance of the week if we say that the result seems very meagre when one takes into account the number of honest North Shore folk kept up o' nights, the tons of paper that have been blackened, and the waste of amateur strategy that has been involved. Pending the official report which will tell us how much or how little the fiasco off Thatcher's Island has contributed to naval theory, the mock gravity of the two commanders seems the most felicitous comment upon the battle of the fleets.

---

There is a gospel hymn which bids us all "scatter seeds of kindness." Nowhere is this injunction more faithfully acted upon than in the Department of Agriculture at Washington. In fact, for a long period the Department scattered only this kind of seed. As seed, it used to be alleged that it rarely grew—indeed, that cotton seed was often sent to Maine and buckwheat to Alabama—but it served equally well as a remembrance from one's Congressman and as an assurance that Uncle Sam had a tender care for his farmer boys. The reception of a package was supposed to give to the farmer the kind of thrill that Thackeray had in walking with a lord, or that a British tradesman feels in fingering the card of his M.P. The Department of Agriculture no longer plays this farce, but at least distributes seeds that will grow in the locality to which they are sent. It may be said that this is perilously near converting a courtesy into a dole; the seeds that never grew were, of course, no more useful to a farmer than a carload of cut flowers is to a débutante, and might be accepted without loss of self-respect. It is possibly to evade some scruple which the improvement in the quality of Congressional seed might arouse, that the Department has invented a brand-new method of scattering these seeds of kindness. Small packages containing a selection "suitable for the window-box or small garden," will be distributed to the schools, for the purpose of leading the children into a love for "nature study" and a knowledge of the rudiments of agriculture. Thus every Congressman has a ready means of showing his yearning for the children of his district, and through them of reaching the affections of all mothers who are amateurs of window-boxes and small gardens. It is only when seen from the vantage-point of the Department of Agriculture that practical politics has this idyllic look. The image of those blooming window-boxes fragrantly winning votes is as pleasing as any evoked by the reading of 'Evangeline' or 'Hermann and Dorothea.' To be sure, it costs a matter of $270,000 a year to scatter these seeds of kindness. But what is cash when sentiment is involved?

---

It is a curious sequel to Mr. Chamberlain's conference of Colonial Premiers that Premier Bond of Newfoundland should take just this occasion to return to the long-suspended Blaine-Bond Convention—a treaty which would constitute an additional obstacle to the incorporation of Newfoundland in the Dominion of Canada. And yet Premier Bond is undoubtedly right in preferring a present good to a remote and dubious benefit, while in this matter Newfoundland has little reason to be grateful to the Dominion. In 1890 Premier Bond negotiated with Mr. Blaine a reciprocity treaty which may briefly be described as the exchange of free bait for free fish. Newfoundland was to waive the various taxes and restrictions concerning the sale of bait, which had long been a source of vexation and unnecessary expense to American fishermen; the United States was to admit fish from Newfoundland free of duty. It would be hard to conceive a fairer exchange. Their bait was indispensable to our fishermen on the Grand Banks; our markets were valuable to their fisheries, which, however, threatened no formidable competition to our own. When the Blaine-Bond Convention was disapproved by Lord Salisbury, at the instance of the Canadian Government, it was understood that the negotiations were merely suspended until the Dominion should complete a similar fisheries arrangement with the United States. Practically, Canada soon occupied a dog-in-the-manger position. Twelve years have passed, and the varying attempts at a general reciprocity agreement between Canada and ourselves have failed. It is clear that the British Government could no longer with any semblance of right prevent Newfoundland from pursuing her independent policy.

---

We learn that a controversy has arisen in Canada as to whether frogs are fish or game, and that the question has to be decided, "owing to the fact that the exportation of frogs to the United States has become a big business." It seems that if frogs are game, the close season for them must be determined by the Provincial authorities, while if they are fish the Dominion authorities must decide. The question whether they are fish or game concerns Canadians only, but if the exportation of frogs to the United States has become "a big business," we are glad to have our atten-

tion called to it, and we want to know what is going to be done about it. We have spoken of this matter before, and pointed out that the only protection given the American frog is a miserable 10 per cent. customs tax on the imported product, carelessly classified among "articles not otherwise enumerated." This has got to stop! Are we so weak that we must consent to stand idly by while "a big business" is going on in Canada, furnishing frogs for our markets, and all the time our own domestic frogs hopping around without the slightest attention from our statesmen? What are Secretary Shaw and Congressman Cannon talking about? Of course, we must have tariff revision, and that speedily. The tariff must be revised in favor of the American frog.

---

The friendly suggestion of a German newspaper that the United States should "clean up" Hayti, and "enable white men to do business in that country," shows, first, that our qualities as good house-cleaners are beginning to be recognized, which is gratifying; and, second, that the aim of all interference with backward nations for their good is "to do business with them." And yet the Government at Washington is likely to feel that such a suggestion is rather "academically correct"—Secretary Shaw's term for impracticable tariff reduction—than of immediate importance. A little experience of the cleaning-up process has shown us its difficulties, particularly when the cleansing has been applied forcibly to those who prefer their own manner of life and are careless of doing business with the nation which is chastening them for their good. Then, if we once started on the cleaning-up process in the Antilles and in Central and South America, where could we stop? Colombia and Venezuela both have revolutions on hand; Chili, Argentina, and Peru have several outstanding quarrels; while even Bolivia and Brazil are more or less at odds over the "rubber state" of Acre. Possible the German counsellor who would see us start out on a tour of sanitation through the backward American republics, beginning with the "exclusive black régime" of Hayti, forgets that we have a very pretty race problem of our own, for which business in remote regions must wait. If there has been any reflex good from the heedless expansion of recent years, it has been this, that painful experience with other people's house-cleaning has at last recalled certain old-fashioned notions about setting our own house in order. But a German critic could hardly realize how little the American people can to-day be caught by the Imperialist chaff for which its appetite was unlimited, two years ago.

---

In the *Économiste Français* of August 2, M. Leroy-Beaulieu gives a review of the business situation of the world, two months after the conclusion of peace in South Africa. The expectation of renewed prosperity in consequence of the termination of the war has not been fulfilled. In fact, it ought not to have been expected. The business of war is slaughter, cessation of industry, and destruction of property. It is the reverse of everything which makes "good times." The results of two years of fighting and the unproductive expenditure of a thousand million dollars are not to be erased by signing a treaty of peace. Time alone can restore the useful things which war has swept away. Even the Transvaal gold mines will require two years' trial and a hundred million dollars of fresh capital to put them in as good a position as they were in when the war began. Although the business situation in Europe is not now brilliant, it is, in Leroy-Beaulieu's opinion, highly encouraging, because it promises continued peace. In Turkey alone is there any cause of inquietude. As to the United States, he thinks that speculation has been going at too rapid a pace, and that the scaffolding of our gigantic Trusts does not possess the solidity that might be desired. "It would not be surprising," he says, "if, in the course of a year or eighteen months, there were a strong reaction in the United States, if not even a panic."

---

The selection of M. J. J. Jusserand as successor to Ambassador Cambon at Washington is in every way a happy one. M. Jusserand has been long in the diplomatic service, and represents the best traditions of the French Foreign Office. He is also an accomplished littérateur, the master of an eloquent English style, and the author of many learned and delightful books on English literature and antiquities. It is these extra-diplomatic qualifications which will make his incumbency at Washington notable. His appointment constitutes a recognition of the strong and increasing comity between French and American scholarship. Personally he will merit and will undoubtedly receive the kind of welcome that England has given to the long line of literary American ambassadors at the Court of St. James's. It is a most graceful sequel to the Rochambeau centenary to send us a man who combines in himself so much that is admirable in French diplomacy, scholarship, and letters; and the news that M. Jusserand, now at Copenhagen, consents to suspend his Scandinavian studies in favor of the American Embassy, will be heartily welcomed.

---

The announcement that the German Emperor has decided to move his headquarters for the manœuvres from Posen to Frankfort-on-the-Oder will inevitably give rise to the belief that the political crisis in Prussian Poland is far more serious than has been suspected. Only a few weeks ago, it was announced that the Emperor would march into Posen at the head of 100,000 men, like some conquering hero of the Middle Ages, in order to overawe his dissatisfied Polish subjects. Now it appears that the fears of his court officials, who were known to be opposed to his going into so excited a community, have prevailed, and the Emperor and his many guests will be lodged in a city about whose loyalty there can be no doubt, and in which the secret police will have a much easier task. The latest German newspapers are full of the case of a financial official, Herr Löhning, who was removed from his position in Posen because, it was said, he had married a sergeant's daughter. The Government organs which have defended his removal are now attributing the discharge to "pernicious activity" in the Polish agitation. That a large and enthusiastic meeting of protest against the Government's policy should have been held by the Poles in Berlin is also proof of the popular excitement in the matter, which will not be decreased by the Emperor's change of headquarters. Meanwhile the Government is carrying out its plan of fighting the Polish influences by encouraging the immigration of Germans from other portions of the Empire. *Colonization gegen Polonization* is the apt popular characterization of this elaborate scheme.

---

Mr. Balfour's Ministry got another facer on Friday in what was morally an overwhelming defeat in a strong Conservative constituency. In the by-election in Kent the Tory majority of two years ago was cut nearly 4,000 votes. It is obvious that any such proportionate loss in a general election would drive the Conservatives ignominiously from office. Of course, they still have their large majority in the Commons, which legally is good for five years yet; but a government must have prestige and signs of popular favor behind it, as well as a Parliamentary majority, and such a succession of defeats as the new Ministry has already encountered is terribly damaging. The chief grievances alleged are the Education Bill and the corn tax, but the indications are that the party majority has in general gone stale. It was secured under something very like false pretences in 1900, with the cry that the war was "over"; and now that nothing is really left of the war but its burdens and miseries, the reaction is in full tide. It is a critical period for Mr. Balfour's leadership, and the autumn session of Parliament will show whether he is able to read aright the signs of the times. One may imagine the Right Hon. Joseph Chamberlain experiencing just now, as he contemplates the plight of Mr. Balfour, the truth of the French saying that there is something agreeable in the misfortunes of one's friends.

*THE PRESIDENT ON HIS TRAVELS.*

President Roosevelt's speech at Hartford on Friday was, for the most part, a rather tedious example of what the Imperialists so greatly deprecate—a harking back to the dead past. Glorification of our motives and of our deeds in the Philippines, albeit with some confusion as to the facts of history, is so easy that we should think a man who so loathes the "easy" as the President does would not so monotonously fall into it. He pointed to our treatment of Porto Rico as the true way to administer our island possessions. But why did he not specify? Why did he not frankly say that the great reason of the Porto Ricans' prosperity and content is that they enjoy free trade with us? Almost at the very moment he was speaking, Gov. Taft was telling the Filipinos in Manila that they deserved free trade and would soon get it. Why could not the President be equally precise, instead of resorting to vague platitudes? The only apparent reason is, that the Republican party is just now torn to pieces over the tariff, and that if Mr. Roosevelt were to say explicitly that we ought to grant free trade to the Philippines, as we have granted it to Porto Rico, he would be rubbing salt into the party's wounds. But surely he cannot go on preferring what he calls "the easy and lazy thing," which would be, in this case, to be silent about an issue which is coming to have the first place politically.

The President's speech at Providence on Trusts was evidently prepared with care and deliberation beforehand, as befits the importance of the subject and the position of the speaker. Although it contains nothing really new, what it says acquires new character and increased force when spoken by the President of the United States. It is a matter of consequence, too, that Mr. Roosevelt's words are not spoken to-day in order to be forgotten to-morrow. Moreover, they do not say, "Good Lord, good devil." Although defective in an important particular, which we shall point out, they compel the Republican party either to adopt an aggressive policy toward Trusts and industrial monopolies, or to confess itself unable to deal with the most momentous question of domestic policy, and therefore unfit longer to govern the country. How this deliverance strikes the "money power" may be learned from the comments of the New York *Sun*, which not obscurely classes the speech with the utterances of Charles E. Littlefield, Eugene V. Debs, and Job Harriman, while it observes that in some ways it goes beyond those of William J. Bryan.

The President declares that the evils of industrial monopoly have reached a point which demand a stronger control than any heretofore employed. The powers of the separate States are either inadequate, or are rendered nugatory by their dispersion in so many different hands. Congressional power is alone capable of dealing effectively with the questions at issue. Whether the needed powers are available under the Constitution as it now stands, is open to some doubt. If they cannot be exercised, then the Constitution should be amended in a way to accomplish the desired end of national control over these industrial combinations. Meanwhile the President believes that Congress has power to enforce publicity upon all corporations doing an interstate business, and that this power should be exercised to the full extent. All the facts relating to Trusts and combines should be exposed. Such publicity, he thinks, would cure many of the evils complained of, but he would not stop there. He would not stop anywhere short of the subjugation of the Trusts to national control.

It has been manifest from the beginning of Mr. Roosevelt's Presidency that he must either take the lead in the campaign against monopolies or resign it to the Democratic party. The case is analogous to that which existed when the two parties were confronted by the Cuban question. If the Republicans did not take the lead in declaring war, the Democrats would become the war party and gain an advantage in the next election. That was the reason why the "stop-watch" was held over President McKinley's head by the party leaders, as the late Mr. Boutelle described. That was the reason why the leaders could not wait a few months to let Spain withdraw from Cuba with dignity. The reason why President Roosevelt cannot hold his peace, even if he wished to, in the presence of the railway mergers and the billion-dollar Trusts, is that the pesky Democrats will not allow him to rest quietly. We do not say, nor do we imply, that he would like to rest. His temperament is of the stirring kind, as he has proved on more than one occasion, and especially when he carried the franchise-tax law through the State Legislature. But if he were ever so fond of his ease, he could not indulge the sedentary habit now.

It is fair to say also that the Trust fabricators and managers are not exactly free moral agents. They, too, are impelled by circumstances. In the case of the great railway merger, it was clear that if the properties concerned were not brought together by these men, they would be manipulated by somebody else somewhat later. In short, we are in the presence of a new irrepressible conflict of opposing forces. None the less must the conflict be fought out to the end. That society will triumph over the Trusts finally, we have no doubt. The problem is to secure the triumph with the least possible violence to sound principles of government.

The glaring defect in President Roosevelt's Providence speech was his failure to take notice of the tariff as an instrument by which the industrial combines, or a portion of them, maintain their power. The very same newspapers which print his speech contain the news that contracts have been made in Chicago for iron and steel from England, because our own furnaces cannot supply the demand. Every pound of material so imported has to pay a heavy duty for the benefit of the Steel Trust and all other home producers. It is needless to say that this duty is unnecessary and is a sheer gratuity. It is needless to say that Congress has the power to repeal this duty, and by so much lessen the power of the Steel Trust. Nor can the President plead ignorance of the public desire for this method of dealing with the Trusts when the conventions of his own party in Iowa, Idaho, and elsewhere are demanding the abolition of such restrictive and unnecessary taxes. So long as Mr. Roosevelt ignores this branch of the question, he leaves his flank exposed to a fire which must become more and more galling as the fight proceeds.

---

*SECRETARY SHAW ON THE TARIFF.*

To sustain the Republican contention that it is ridiculous to talk of the tariff as an issue this year, and that Grover Cleveland was a thick-head for saying it is, the Secretary of the Treasury made on August 19 a second speech to the Republicans of Vermont, all about the tariff. It was mostly devoted to explaining that the Iowa Republicans meant nothing in particular when they declared, in State Convention, for tariff revision, and especially for the abolition of all duties that serve to "shelter monopolies." This was only "academic," says Secretary Shaw, and will lead, and was intended to lead, to nothing whatever. We consider this pretty long-range shooting. Mr. Shaw had better go out to Iowa and say it to their faces. The Republicans of his State, when they insisted on overriding in their platform the timid counsels of Shaw and Allison and Wilson, asserted that they were in dead earnest about tariff revision, and especially about shearing away the protection afforded to Trusts. To learn now by way of Vermont that they were only gammoning, will make them wonder if Iowans speak the truth only when away from home.

The Secretary protested, however, that it was a mistake to "quote" him as against tariff revision. He is for it—under certain circumstances. But those circumstances are so impossible of realization that it remains true, unfortunately, that Secretary Shaw is against tariff revision. He is against, that is, any particular change at any particular time. But if the tariff is ever to be revised, the work must be begun at a given time and in a given place. Mr.

Shaw lays his hand on his heart and vows that he has never "opposed a readjustment of the tariff." But listen to his explanation: "Whenever Congress reaches the conclusion that the friends of protection are strong enough to conservatively modify certain schedules, so as to meet changed conditions and at the same time successfully resist the efforts of the Opposition to revise the entire tariff law, thus paralyzing business for a season, I shall be in favor of it." Now that is only a roundabout way of saying "never."

Thus we see that Secretary Shaw confesses the helplessness of the Republican party before the tariff problem. It does not defend existing schedules—oh, no! the Secretary protests against that charge almost tearfully. He admits that there are unjust duties, schedules that are fairly crying out for revision. But he takes a great deal of satisfaction in saying again and again that neither he nor his party is "committed" to any of these tariff taxes. But might they not as well be committed to them if they do not propose to touch them or allow others to touch them? If we were a tariff beneficiary, we should not care whether our legal favors were given to us and continued to us by a party that was not committed to them, and would not defend them, or not. The only question we should ask would be, "Will the party secure us in the possession of our plunder?" As long as Secretary Shaw's party does that, the monopolists can afford to snap their fingers at such solemn talk as his in condemnation of an unfair tariff which, nevertheless, he asserts cannot be revised.

In such frankness of public speech as Mr. Shaw's there is, however, a great benefit. He is an unconsciously severe critic of the protective tariff. Almost naïvely, he exposes it as a system of confederated selfishness. By hook and by crook, by log-rolling and by bargaining, by promises and by threats, and by cash payments for value received, powerful interests succeed in writing into the tariff the particular legislative favors they most desire. Then they take their stand firmly on the principle, "honor among thieves." That is, they fight, tooth and nail, every attempt to abolish even a flagrant tariff injustice, on the ground of "one for all and all for one," since the whole system would be brought to the earth if any man's peculiar spoils were to be imperilled. Just that, in fact, is what Secretary Shaw means when he says that you cannot modify certain duties without bringing on a general revision. In each case, the alarmed and angry beneficiaries say, "Oh, you mean to take away my pet little protection, do you? Well, I want you to understand that if you touch a penny of my plunder, I will smash your whole tariff, do you hear?" Thereupon follow expressions such as Mr. Shaw's about the danger to "prosperity" of any "protracted debate" on a corrupt tariff, and the dividers of the spoil go off chuckling, in the certainty that the Republican party has again been frightened into doing nothing about the tariff.

How inevitably a protective tariff plays off one selfish interest against another, is shown in the Secretary's assertion that the Iowa farmers would favor no tariff revision that affected their products. This is probably correct. Protection has been educating the whole country to think of tariff taxation as a game of grab, and Iowa could not be expected to lag behind other States in this national school of selfishness. Into such narrow and inconsistent notions do we necessarily drive people when we make them think of taxes, not as a means of raising needed revenue, but as an ingenious method of taking money out of one man's pocket to put it in another's. But, fortunately, men's minds become opened to the injustice of this. We believe the Iowa farmers are astir about the tariff, not so much because they think it hurts them in pocket, as because they see in it a form of public inequity. This is the thing to make the Republican leaders quake. Let the people once come to perceive that tariff taxes are used as a means of class favoritism, of giving one man an unjust advantage over his neighbor, and of destroying that equality of all men before the law which is the breath of life in the nostrils of democracy, and they will find a sure and rapid road to tariff revision. If the Republican party plaintively urges that it would like to do the work and will, but only at the Greek Kalends, another party will speedily be put in power which will not only refuse to defend tariff injustices, but will rectify them.

The Idaho Republican State Convention met just after the Republican Secretary of the Treasury had informed the nation that there is no warrant for the theory adopted by the Iowa Republicans that the tariff may "shelter monopoly," and had argued that it is a bad thing to talk about revision because it is likely to "paralyze business." Yet the convention declared boldly and clearly for this policy, announcing that "we favor a revision of the tariff, without unreasonable delay, which will place upon the free list every article and product controlled by any monopoly, and such other articles and products as are beyond the need of protection"; and giving this reason for the demand—"that many of the industries of this country have outgrown their infancy, and the American manufacturer has entered the market of the world, and is successfully competing with the manufacturers of all other countries."

The Idaho Republicans did not adopt this clear-cut deliverance because they want to snub Secretary Shaw, or to break with such other party leaders in Congress as Representatives Grosvenor of Ohio and Cannon of Illinois and Senator Hanna of Ohio, who agree with the Secretary. They did it only because forced to do so in order to have any chance of carrying their State this year. Idaho, like other Rocky Mountain States, went for Bryan by a tremendous majority in 1896, his vote being 23,192 and McKinley's only 6,314; but by 1900 there had been such a readjustment of party lines in the larger population that, on a total poll nearly twice as large, Bryan's vote was only 29,414, while McKinley's rose to 27,198, and in the Congressional fight the Fusion nominee had a plurality of but 1,227 over the Republican candidate. As the tide appears to have continued running in favor of the Republicans since 1900, there should be a good chance of the party's carrying the State this year—provided it does not affront public sentiment. It was clear that the Democrats would advocate tariff revision, and there was nothing for the Republicans to do but commit their candidate for Congress (the State has only one Representative) to a radical position; so we have the thoroughgoing demand for revision, and even the open sneer at the "infant industry" humbug.

## *STICKING TO THE POINT.*

Ashfield has built up for itself, during the many years that Professor Norton has gathered high-minded friends about him there, a peculiar name among Massachusetts towns. More truly than in former years to Marshfield or to Quincy, do the people look to it for a certain order of political deliverances. These are not in the direct line of party. They have not upon them the *cachet* of those holding great office. But they are the utterance of men to whom, as to William Penn, "it ought to be a part of a man's religion that his country shall be well governed," and who are ready with Lowell to give that supreme proof that they love their country—namely, that they loathe her shame. So it has been that voices at the Ashfield annual dinner have often been weighty with that higher statesmanship which compels the tardy obedience of statesmen. There Curtis spoke year after year. The politicians broke into their customary guffaws at his fantastic ideas of a reformed civil service, and the ephemera of the press buzzed about his head, just as they will about the men who addressed their countrymen at Ashfield on Thursday; but time showed that Curtis's fearless scrutiny of the present swayed the future, and so it may be with these fresh reminders of our shortcomings and of our duty in the Philippines.

The peculiar value of the Ashfield speeches of Messrs. Ehrich and Smith, and of Professor Norton himself, seems to us to lie in a sharp recalling of the people's attention to the main question:

that is, not how we got into the Philippines, but what we are doing there, what is to be the aim and motive of our stay, and what the signal for our withdrawal. We must stick to the point. We must not allow ourselves to be confused by minor issues and side questions. The armed insurrection is put down; true, but what answer have we for the Filipinos who urgently ask what their present status is, and what their future fate is to be? It will not do to point them to our schools, to our measures of sanitation. Certainly they will not be reassured by being referred to the swarms of exploiters and concessionaires from the United States, who are seeking their lands and their forests, their mines and their franchises. All that we can point to with pride, all that we have to allude to with shame, in our administration of the islands, goes for nothing beside the main questions: "Do we mean to hold the inhabitants as purchased chattels? Are they citizens, or are they slaves? Is their right to free and independent self-government to be admitted or to be denied?"

There is much fallacious talk about keeping an "open mind" on this subject. "Let us wait and see; let us suspend judgment; let us advance step by step." But that, as John Morley said about the proposal to give Ireland home rule "step by step," is a mere phrase and nothing more. Step by step to what goal? That is the question. If we are stepping towards Filipino independence, we must know and declare that fact before we can move our feet intelligently. The end not simply crowns the work, but determines the work. This is elementary in human conduct. We must know what our end is, or else we cannot rightly choose our means. If every extension of local government in Ireland signifies a preparation for complete home rule, well and good. If, on the contrary, it means throwing a sop in a fright to agitators, it is statesmanship that will curse its victims, and surely return to plague its inventors. The same political philosophy applies to the Philippines. We cannot go forward, as the Republican party appears to desire to do, in a state of non-committal. It is either freedom or despotism that we are laboring for, and we must make up our minds which at the start, and stick to our single purpose all the way through.

It is said that the people have lost interest in the Philippine question. Well, if they have, it is a powerful argument for our leaving at the earliest day a place where we never should have gone. If we do not let the natives manage their own affairs, and refuse to be bothered with their government or their welfare ourselves, the demonstration of our unfitness for an Imperial career is complete. But a state of apparent indifference in public sentiment may mean much or little, may indicate one drift of opinion or quite another. One thing it surely does disprove, and that is the theory that there is any general and hearty acquiescence in the notion that this republic should set about governing over-sea colonies permanently after the fashion of an empire. That would be a mighty change in our standards and in our policy; and such a change, as Burke said, would surely be accompanied by many visible signs and by great and widespread popular agitation. But nothing of that sort is perceptible. If there is, as the Imperialists gleefully allege, seeming apathy about their Philippine venture, that is the last thing in the world on which they should congratulate themselves. They are proposing a radical departure, a sharp break with our past; and they ought, if they are to succeed, to be finding vivid interest and enthusiastic support among the people. Indifference means inertia; and it must not be forgotten that American inertia is wholly in favor of free men and independent government.

What we, for our part, see in the present quiescent state of the Philippine question is evidence that this matter is being worked out apart from the confusion of war and the violent strifes of party; that the people are still trusting, as Mr. Ehrich said, in the upright intentions, as well as in the hopeful words, of President Roosevelt; that they believe the American spirit of fair play and American principles will conquer in the end. Meanwhile, the patriotic attitude is one of vigilance, to seize upon every development of the problem as it presents itself, and press its teachings home; and of continued readiness to raise at every juncture the question that will not be put by: "Is our future to copy fair our past, or are we to impose upon others a yoke which we ourselves fought to shake off, and attempt to govern 8,000,000 men across the ocean without their consent?"

---

### *THE NEW BRITISH ACADEMY.*

In order to understand the scope of the institution recently chartered by the English Crown, one has only to repeat its official style. The forty-nine scholars who last winter applied for a charter now constitute the British Academy for the Promotion of Historical, Philosophical, and Philological Studies; and each of these gentlemen is, we presume, entitled to write after his name, F.B.A.P.H.P.P.S.—a dignity which deprives their reported waiver of the title of "Immortals" of much of its merit. Mr. Herbert Spencer has probably found in this case more than usual justification for his habitual refusal of academic honors. The significant omission of the word literature from the name of this Academy, the specification of the studies which it desires to promote, the list of original fellows—all show very clearly that this new body is in no way comparable to the French Academy, but rather to the affiliated academies which make up the Institute of France.

In other words, the British Academy will make no pretension to literary authority, but, whatever its immediate ambitions may be, will very soon take on the usual functions of a learned society—namely, the fostering of research, the holding of stated meetings, the publication of transactions, etc. It is well to recognize at the outset—for there has been some confusion of mind about the matter—that the eminent historians, metaphysicians, and philologists who make up this body cannot in the nature of the case form a tribunal of taste. They have been chosen strictly from the point of view of their eminence as specialists, and not at all for their general reputation in the world of British culture. It is a fortunate chance that Mr. Balfour the theologian, Lord Rosebery the historian, and Sir Leslie Stephen the biographer, have also a place in literature; but this is accidental. Many of the members are mere names to the intelligent Englishman. Literary eminence has been severely disregarded in making up the roll of fellows, or we must have had at the very least Mr. Swinburne, Mr. Meredith, and Mr. Hardy, with a selection from Mr. Stephen Phillips, Mr. William Watson, and Mr. W. B. Yeats. The Academy as it stands represents very adequately the historical scholarship of the Empire, but is not likely to have any large influence upon the cultivated public at large.

It might well be asked, then, why the project has been the subject of so much general discussion. It is simply due to the expectation aroused by the word "Academy." These same gentlemen organizing a "Society" for the promotion of their chosen studies would have been an object neither of tender solicitude nor of invidious comment. But the word Academy, which we feel they used ill-advisedly, immediately recalled Matthew Arnold's plea for a literary authority, as well as the long and distinguished sway of the Académie Française. This was an expectation which the learned men who make up the British Academy cannot possibly fulfil, and there is even danger that some painful antiquary who has not been asked to join may disinter from Cotgrave's Dictionary the participle, '*Académié*. Besotted, puzzled or plundered with too much skill, or studying."

But the grievance against the new Academy is merely a verbal one. One may predict for it a very honorable career in the way of coördinating historical research and of setting higher standards for metaphysical and philological investigation. It should do something to break up the excessive provincialism and individualism of English scholarship. But all this is likely to be apart from the main currents of British activity. The grievance of those who desire to see a genu-

ine British Academy is less with these gentlemen who have inadvertently borrowed the name, than with the English writer and the English reader who desire neither counsel nor guidance. From the middle of the seventeenth century to the present day the dream of setting up an Academy to put an end to literary anarchy in England has haunted certain superior minds, and literary anarchy has continued to prevail. When one recalls how easy it was for Richelieu to dragoon an unwilling club of literary men into the service of the state, and how cheerfully the authority of the French Academy was recognized from the first, and its purpose of assuming the control of the French language fully approved, then one gains some conception of the kind of national temperament that desires official warrant for its tastes, and authority for its intellectual recreations. This, we need hardly say, is not the British temperament.

That England would be the gainer by establishing, after the French precedent, an official aristocracy, or oligarchy, of letters, many have plausibly maintained. The history and present condition of such an institution in the field of the fine arts —the Royal Academy—does not, however, show that the English have the gift of this kind of regimentation, and many will learn with a certain relief that the Royal charter, just announced, creates merely a learned society of exceptional dignity, not in any proper sense a British Academy.

*OPERATIC DIVISION OF LABOR.*

Italian journals announced, not long ago, that the well-known Milanese music publisher, Sonzogno, had once more offered a big prize—$10,000—for the best one-act opera. Composers of all nationalities may compete, and while the libretto must be Italian, the addition of the German Humperdinck, the French Massenet, and the Belgian Jan Blockx to the list of judges guarantees that the music will not be regarded too much from the Italian point of view. Sonzogno's first competition, twelve years ago, resulted in the selection of "Cavalleria Rusticana," which, for a year or two, was sung more frequently than "Faust," "Carmen," or "Lohengrin," and carried Mascagni's fame to all parts of the world. On the strength of that triumph, he succeeded in securing the performance, on profitable terms, of half-a-dozen subsequent operas, though all of them proved failures. His engagement for a series of concerts and performances of his operas in this country, next autumn, is also, obviously, a consequence of his one success.

Generally speaking, the composing of music is about the least profitable business in which a human being can indulge. Financial success, indeed, means more even than it does in literature, but it is extremely rare. In Germany, during the last two or three decades, the only composers who have made anything worth mentioning out of their operas are Nessler, Brüll, Humperdinck, and perhaps Goldmark. Yet Germany has about seventy opera-houses, and dozens of new operas are tried on the public every year. In Italy the number of new works is as great, if not greater, and France also contributes a considerable number; yet a reasonably lasting addition to the European repertory is made only once or twice in a decade.

The question is often asked, "Why do not our American composers write grand operas?" The answer is: Because there is about as much encouragement for them as there would be if they wrote treatises on trigonometry in Anglo-Saxon or Sanskrit. One of our very best musicians, Professor Paine of Harvard, spent about ten years in writing the libretto and the music of an opera. Perusal of the vocal score shows that it is an excellent work—far better than nine-tenths of the operatic novelties. Yet there is no possibility of getting it produced in America, France, or Italy. In Germany there is a possibility, but very little probability. Some years ago, Eugene D'Albert, famous both as pianist and composer, complained in a Leipzig music journal that even well-known musicians seldom succeed in getting their operas on the stage unless they are willing to pay $5,000 or more out of their own pockets. There are numberless difficulties to surmount, chief among which are the disinclination of famous singers to spend time on a work which may have only two or three performances, and the unwillingness of managers to buy a sumptuous scenic outfit for an opera which is almost sure to prove as unprofitable as its predecessors.

Such is the discouraging situation. A ray of light, however, has suddenly come from what seemed at first a mere calamity. When the Stuttgart Opera-house burned down, a few months ago, the singers and players were confronted with the alternative of taking a long vacation, which they could not afford, or going on the road. They chose the latter. In the United States a travelling opera company is an annual phenomenon. In Germany it was a novelty, which had only one notable precursor —the Neumann-Seidl performances of the Nibelung Tetralogy after the first Bayreuth Festival. But the Stuttgarters pursued a very different policy from Mr. Grau's. When our Metropolitan Opera-house company travels, it limits its repertory to six or eight of the most familiar popular operas. With such a policy the Stuttgarters would have come to grief, for the popular operas are in each German city "worked for all they are worth" by the local manager. Therefore they tried an experiment. Their repertory included certain new operas which had not yet been produced generally. The Berliners, for instance, had not heard "Orestes," although its composer, Weingärtner, is one of the most prominent musicians in that city; nor had the opera-goers of Munich had a chance of hearing "Lobetanz," by their gifted fellow-citizen, Ludwig Thuille. By producing these operas in the Prussian and Bavarian capitals respectively, the Stuttgarters insured abundant newspaper notice, and greatly increased the interest in their visit, as well as their profits.

This experiment suggests a reform of the whole operatic situation. Why should there not be a division of labor in the production of operas, as in every other business that aims at success? Why should not each company learn five or six new operas every year and, after singing them a few times at home, visit other cities and give them there? This would obviate the necessity of rehearsing the same untried opera in several cities, and would effect a great saving in the expenditures on scenery. It would, no doubt, happen frequently that operas which had aroused only a languid interest in one city would in another enjoy a brilliant success, and this would react on the home audience and cause it to revise its verdict. This was the case even with two such master-works as "Carmen" and "Faust," and there is excellent reason for believing that other fine operas have been lost to the world because no such opportunity was given for revising a first hasty verdict. In any case, if managers could produce their novelties in half-a-dozen or a dozen different cities, they would be sure to get back the money invested in them, and this would make them more willing to try new operas, whereby the composers and the public also would be benefited. Such a plan, to be sure, could be followed only in countries like Germany, France, and Italy, where there are many opera-houses in cities not too far apart. But in the end American composers, too, would be benefited, because the demand for new operas would be greatly increased, and if an American opera should win a brilliant success in a dozen foreign cities, Mr. Grau would, no doubt, be glad to produce it at the Metropolitan Opera-house and take it on the road as far as San Francisco.

MONTALEMBERT'S LETTERS.

PARIS, August 12, 1902.

The agitation going on in France at the present moment on the subject of the execution of a recent law on the religious congregations, lends unusual interest to a correspondence of Montalembert's which has just been published. Montalembert was among the first apostles of the liberty of teaching, as opposed to what was once a monopoly of the University created by Napoleon. Together with Lacordaire and La-

mennais, he founded in 1830 a Catholic organ, *L'Avenir*, which had extraordinary success. It took for its device "God and Liberty"; its aim was to reconcile Catholicism with democracy. It went so far as to demand the separation of Church and State in order to secure complete independence for the Church. Some of its doctrines frightened the bishops, who felt themselves sufficiently protected by the Concordat signed by Napoleon and the Pope. They brought some of the doctrines of the *Avenir* before Gregory XVI. Lamennais, Lacordaire, and Montalembert went in person to Rome to defend themselves; after some delays, the journal was condemned and disappeared in 1832.

Montalembert's reputation was made. Although he bowed before the decision of Rome, he continued to defend such doctrines of the *Avenir* as had not been specifically condemned, and chiefly engaged in the defence of the liberty of teaching, which he believed to be one of the "necessary liberties," to use an expression of Thiers. We find, in a letter written on the 8th of April, 1839, to a friend of his, the Abbé Delor:

"The liberty of teaching which so justly preoccupies you is the object of my constant wishes; under its banner I entered public life when I had hardly emerged from infancy [Montalembert entered the House of Peers when he came of age], and I will never desert it. But I have little hope as long as the bishops, the clergy, and the Catholic heads of families follow the present system—that is to say, as long as they keep aloof, isolated from the social movement and the political habits of the country, expecting the return of an order of things which I believe is gone for ever, instead of descending into the arena. . . . There is nothing to hope. The Government will maintain a monopoly which it thinks precious; false liberalism will not claim a liberty which would be profitable only to Catholicism, and the isolated voice of a few royalistic Peers or Deputies will be lost in the storm of egoistic and noisy passions which dominate the Chambers. The question of the liberty of teaching is entirely in the hands of the bishops."

The Abbé Delor, to whom this letter was addressed, lived at Limoges; he died only in 1899, at the age of ninety years. The letters which Montalembert addressed to him during a long period have just been published. In 1841, M. Villemain, who was then Minister of Public Instruction, presented to the Chambers an Education bill. It authorized the opening of free schools, independent of the University, under certain guarantees of culture and morality. The masters were to have diplomas, conferred after examination. The law applied to the seminaries where the young priests were educated and were so far under the control solely of the bishops. This last clause provoked the opposition of the episcopate, and, after long discussions, the bill was withdrawn. Montalembert took a prominent part in the discussion, and his letters to the Abbé Delor bear traces of it. We also find allusions to an affair which made much noise in 1844. A certain Mademoiselle C——— of Tulle had entered a Carmelite convent against the will of her parents. The municipal council asked the Government to close the convent, and the Prefect of the Corrèze was inclined to use violence and to disperse the Carmelites forcibly. The Bishop, Monseigneur Berteaud, wrote to the Minister of the Interior, Martin du Nord: "You have the power to do so; but the doors will not open themselves—you will have to break them in, and you will find me behind them in my sacerdotal robes."

Montalembert was Deputy after the Revolution of 1848. Under the Republic, as under the monarchy, he remained at the head of the party which placed religious interests above political. He writes to his friend: "The Catholics, like all other Frenchmen, adore success. After having saluted, with a haste as servile as it is inexplicable, the advent of the Republic, many are tempted to look with distrust on the soldier who, faithful to his device and to his habit, tells the truth to the new powers as he spoke it to the fallen powers, without fear and without hope." He had not identified religion with royalty; he no more wished to identify it with democracy.

M. de Montalembert took a very active part in the discussion of the law still known under the name of "the Falloux law," from the Minister who proposed it. It established freedom of secondary instruction. The Catholic paper, the *Univers*, attacked M. de Falloux's bill, which the editor, Louis Veuillot, did not consider of a nature to satisfy the Catholics completely. From that date there arose a constant state of opposition between Montalembert and Veuillot. Montalembert represented what may be called the liberal wing of the Catholic party; Veuillot was hostile to all liberalism. In 1852 Montalembert wrote to his friend:

"I have remained what I was, the humble soldier of the Church, but also the firm friend of Liberty. It is under her shield and that of Truth that I have so resolutely struggled since 1847 against the wretches who, under cover of her name, have propagated the democratic and social revolution. But now I see that the Catholics who follow the *Univers* don't want any more of Liberty, which has helped them to so many successes [the Falloux law]; they bow to force and victory. . . . I want to remain erect, and I have ceased to be the man of the present movement."

By this he means the reaction which culminated in the establishment of the Empire. Montalembert did not refuse support to Prince Louis Napoleon when he was elected by the vote of the people; he hoped to enlist him among the supporters of his views. The Prince had seen him many times, and had given him hopes which were bitterly disappointed. The anger of Montalembert, who was of a very passionate disposition, was equal to the sympathy which he had felt for a time. He is very bitter, after the proclamation of the Empire, against "the mean Catholics who burned their incense before Liberty, when they believed her triumphant, and who now sacrifice her without remorse or embarrassment to the new influences and to the fashion of the day." He speaks of himself as "shipwrecked."

Montalembert, thus hostile to the Empire, was in opposition to L. Veuillot, who continued to support the Empire till the Italian policy of Napoleon alarmed him for the temporal power of the Papacy. The Catholic world was divided till the Roman question was opened. In 1860 the Romagna was detached from the States of the Church, and some French bishops, who had long been silent, entered a protest against this curtailing of the Papal territory. Montalembert applauded their efforts loudly.

"Nantes," said he, "Poitiers and Perpignan [meaning the bishops of these towns], and others, have been admirable. They have said things which cannot be surpassed; but the accent of Tulle has been supplied by nobody else. A little thunder and lightning was necessary. . . . I am in anguish, in desolation, in all the bitterness of powerless wrath; what despicable blindness everywhere! I long thought that when their houses should burn, people would see. They are burning, and people won't see."

The houses did burn, and the temporal power found few defenders. In 1860 Montalembert asked M. de Persigny for permission to found a paper, in which he meant to defend the temporal power; but it was refused. "The Minister," he said, "tried to reassure me as to the designs of the Government; he did not succeed—far from it. How ignorant they are, how blinded by pride, how entangled in their own nets!"

Montalembert wrote a curious letter to his friend the Abbé Delor, who had expressed to him the hope of seeing some day on the throne in France a friend of the Church of Rome:

"You see the salvation of the Church and of society in I don't know what kind of orthodox Cæsar. This dream is completely foreign to the spirit which presided over the Catholic movement of 1830 and of 1850—a liberal spirit to which I remained faithful, and which will not seek in Utopias for the solution of present difficulties. I know in the history of France but two orthodox Cæsars, Charlemagne and Cæsar. Charlemagne left behind him only the pitiful race of the Carlovingians, reduced to a happy impotence by the liberal spirit of the Germanic races: Saint Louis had for his grandson Philippe le Bel, whose fatal germ survived in all his successors."

In 1863, Montalembert was a candidate for the Legislature, but he was attacked by the Government and defeated. He had stood only with reluctance, and he writes to his friend: "I have encountered so much treachery and meanness in contemporary France, especially among the Catholics, that I have no great desire to enter again into public life." He adds: "I should like enlightened and sincere priests like yourself to ask themselves, How is it that the French clergy, which, in 1848 and 1849, succeeded in having 180 Catholic Representatives elected, could not have a single one in 1863? How are we to explain this incredible political and social diminution of influence?" He attributes it himself to the set of Catholic journalists whose tactics have set the nation against them. He denounces their defamation of the vanquished and the weak, their adulation of the strong, their constant and systematic denunciation and proscription of reason and of liberty. He has eloquent words against the influence exercised over the clergy of France by the Catholic press proclaiming itself the only interpreter of Catholic truth.

These letters of Montalembert's deserve to be read, and I have read them with melancholy; the past throws its light over the present, and the present has much to learn from the past.

## Correspondence.

### THE STUDY OF HISTORY IN THE SOUTH.

To the Editor of The Nation:

Sir: Dr. Dodd has done a real service to the South in showing how greatly the

teaching of history has been neglected there. His statement may surprise many people, but it is not materially erroneous. It would perhaps be valuable if the discussion were carried further and the whole subject given a thorough examination. Many Southerners would be glad to see such a discussion, and it could not fail to bring up in a variety of views much real truth.

The South has had too few of the benefits of full discussion. The fathers of most of us were Confederate soldiers, but that does not mean that we ought to believe that their political views were correct. The mere acceptance of their views as an act of loyalty stands for an impoverished state of thought on the part of the children. Tradition weakens thought. If the *Nation* can, therefore, make itself a means of bringing out counter opinions on this subject, it will deserve the thanks of all right-minded people. It will also strengthen the group of independent investigators to which Dr. Dodd has referred.

The most conservative force in Southern history is the politician. In this part of the Union he has always had great influence. He dominated most phases of thought. It has suited his purposes to glorify the men of the past and to flatter those of the present. He has created in the popular mind an unreal historical spirit. He is not necessarily insincere. He got his views of history in the same school in which he has taught them, and they frequently seem to be honestly held. But whether he is sincere or not, he is sagacious enough to see that if, through independent historical research, men should come to modify their views of politics, his own chances of success would be lessened. He has, therefore, defended the old ideas. Any attempt to introduce new notions will arouse his opposition; and his influence is such over public opinion that conditions may become very uncomfortable for the apostles of new ideas.

This condition of affairs has a vital relation to Southern institutions of learning. Most of these institutions depend for their success directly on public opinion. They must have either legislative appropriations, or popular contributions, or tuition fees. They are, accordingly, very prone to be conservative. It suits them to have history taught in a colorless and nerveless manner. The real secret of the spirit of independence at Trinity College is the fact that it has received liberal donations of equipment and endowment, and is liberated from the power of existing public opinion. It has thus been able to take its own course and to develop a new spirit in its own community. Other institutions will doubtless do the same thing as soon as they are financially able.—Very truly,

JOHN S. BASSETT.

TRINITY COLLEGE, DURHAM, N. C.,
August 23, 1902.

MARGARET FULLER AND "THE DIAL."

TO THE EDITOR OF THE NATION:

SIR: Will you kindly pardon me for giving you a little word of information? In your paper of August 7 you have an article on that book of Thoreau which has lately been published. You say something about Margaret Fuller, "then one of the editors of the *Dial*," and about Emerson as the associate editor. Now, by reference to T. W. Higginson, Kenyon West, and others who have written about Margaret Fuller, as well as by reference to the biographies by Clarke, Channing, and Emerson, you will see that, during the four years of the *Dial's* existence, Margaret Fuller was its only editor for two years. She was its first editor, receiving no help from Emerson except as he was contributor, the same as Alcott and others. When she finally gave up the editing, it was because she had been overtaxed, had many burdens, and had received no pay. We must be just to the memory of the noblest woman of letters that America has yet produced.—Sincerely yours,

F. L. H.

DARK HARBOR, ME., August 17, 1902.

---

PROPERTY IN LETTERS.

TO THE EDITOR OF THE NATION:

SIR: I have recently had my attention called to what is perhaps an isolated case of a breach of academic ethics, and one which is not, I hope, likely to become general.

The case is that of a young man who was an unsuccessful candidate for an academic appointment in one of the larger universities. He sent in with his application such testimonials as to character and ability as he had himself received from friends and instructors, and requested others to write to the President of the university direct in his behalf. In such cases the candidate is entitled to receive again all the papers he has sent in, but in this case—and here comes my point—he received not only his own letters, but those addressed to the university President in his behalf. Perhaps the notion that a letter is the private and exclusive property of the one to whom it is addressed *and the writer of the letter*, is old-fashioned and out of date, but all honor to those who believe they have no right to make public the contents of a letter without the consent of the writer.—Most truly yours,

LOUIS N. WILSON, Librarian.

CLARK UNIVERSITY, WORCESTER, MASS.,
August 15, 1902.

THE "SWEAT BOX."

TO THE EDITOR OF THE NATION:

SIR: In a Chicago paper of recent date we read:

"The attempt to wring a confession from the prisoner by putting him in the 'sweat box,' it is expected, will result," etc.

And again:

"The prisoner has become almost a physical wreck under the 'sweat box' ordeal, and appears as if he might break down at any time."

Much outcry is being made, and justly, against the cruelty and barbarism of the "water cure" and other atrocities practised by our army upon the benighted Filipinos; yet here at home, in our own Christian land, under the shadow of church spires and university domes, we tolerate the unlawful and inhuman custom of torturing persons arrested on suspicion of being principals in or accessories to a crime. This torture is inflicted without sanction or authority of law, and in conflict with all Constitutional rights and guaranties. It is done for the purpose of extorting confessions of guilt from the suspected persons. As "no person shall be compelled, in any criminal case, to be a witness against himself," these extorted confessions cannot be used as evidence against him. The ruse is, however, to introduce them as "voluntary" confessions; and thus, by an abuse of authority and disregard for law and right, by means of duress and torture, a prisoner under the law is forced to renounce the protection of the law, and, contrary to his constitutional right, is compelled to give incriminating testimony against himself.

And by whom is this illegal process conducted? By the most petty and subordinate officers of the law—policemen and jailors; men whose only recommendation to the offices they hold is, frequently, their brutality. What right have these men to "try" or in any way interfere with prisoners? The person held by them is entitled to "a trial by jury," and what man can deprive him of that right? The duty of a policeman is merely to bring the person "by lawful authority" into the custody of the law; and a jailor's business is to "keep him safely" until a "speedy and public trial, by an impartial jury," shall be had.

As you would abolish lynch law and all other relics of barbarism from our system of jurisprudence, I beg of you to help abolish also the unlawful, inhuman physical tortures administered by means of the "sweat box" or "third degree."

MARGARET IRVING HAMILTON.

AUGUST 16, 1902

---

# Notes.

Fisher Unwin will soon bring out 'Lombard Studies,' by Countess Evelyn Martinengo Cesaresco, whose 'Italian Characters,' 'The Liberation of Italy,' and 'Cavour' are well known.

Thomas Whittaker's autumn list will embrace 'Makers of Modern Fiction,' by W. J. Dawson; 'Cameos from Nature,' by Mrs. J. T. Gumersall; 'The Church and its Social Mission,' by Dr. J. Marshall Lang, Principal of the University of Aberdeen; 'The Story of Catherine of Siena,' by Florence Witts; 'Up and Down the Pantiles,' by Emma Marshall; and a 'Robert Browning Birthday Book.'

From Scribners we are to have a posthumous volume from the pen of Frank R. Stockton, 'John Gayther's Garden and the Stories Told Therein'; and 'Views and Reviews, Essays in Appreciation—Art,' by W. E. Henley.

'Recollections of a Player,' by James H. Stoddart, is in the press of the Century Co., together with a Bible for children edited by the Rev. Francis Brown, D.D., of the Union Theological Seminary.

The Outlook Co. are to publish 'The Tragedy of Pelée,' by George Kennan, illustrated.

'The Philosophy of Despair,' the reply of Science to pessimism, by President David Starr Jordan, is announced by Elder & Shepard, San Francisco.

The Baker & Taylor Co. have in preparation a compilation of coffee history, coffee anecdote, and coffee verse, by Arthur H. Gray, with "recipes for the making of coffee from the leading chefs of the country."

We have received from the office of the *Publishers' Weekly* the two volumes of the 'Reference Catalogue of Current Literature,' the British analogue of our 'American

Trade List Annual'—*i. e.*, a congeries of publishers' catalogues bound together and indexed. It is needless to say more, yet the bulk of this issue is notably greater than that of 1898. Every library and every enterprising bookseller needs this tool.

'Our Literary Deluge' seems an odd title for a book condemning the multiplication of books, especially when made up of transient articles which have already seen the light in various periodicals (Doubleday, Page & Co.). The author, Francis W. Halsey, has a chapter on "Biographies that are Histories," in which his measure of comparison is Gibbon's 'Decline and Fall.' That a single life covering the Scriptural age of man should require two-thirds as many words as Gibbon's twelve centuries of the civilized world's history, is made to appear monstrous; but what of a voluminous historical novel like 'War and Peace' covering only five or six years? And may not mercy be craved for a single work, itself an historical source, and final for its subject, by contrast with dribbling biography like that welcomed for Stevenson, Ruskin, Rossetti, or Carlyle, or with dribbling history like that of the Oxford Movement? Mr. Halsey's time-and-space standard would lead to a *reductio ad absurdum*. Each age demands great fulness for its own history, and cannot dispense with it. Not that biographers must not be called and strictly held to account; but there may be volume without prolixity and without padding, and where there is controversy in the subject there must be volume if the rectification is documentary.

The Chetham Society of Manchester, in publishing the "Remains, Historical and Literary, connected with the Palatine Counties of Lancaster and Chester," arrives in its forty-sixth volume at the 'Portmote or Court Leet Records of the Borough or Town and Royal Manor of Salford' (1597-1669). These have been laboriously and conscientiously transcribed by J. G. de T. Mandley, and in the present (first) volume come down to April 18, 1632. The matter is monotonous enough, but pictures effectively the habits of the time—dunghills and middens out of place, foul drains, unringed swine, unmuzzled "mastiths," untrimmed hedges, neglected pavements, tippling, scolding, "carding," broils and tuslements, receiving strangers of doubtful solvency, etc. The proper names of persons will attract the genealogist. Of more or less frequent occurrence are Higginson, Mather, Bancroft, Parkhurst, Radcliffe, Pendleton, Bolton, Holden, Mosley, Nugent, Burgess, Pilkington, Hutchinson, Blagden, Holland, Percival, Hollins, Beck, Worrall, Bowker. The laxity of government is shown in the number of old offenders against sanitary and other ordinances. Needless to add that odd spellings and strange terms for the antiquarian abound.

The little 'Onward and Upward: A Book for Boys and Girls [from ten to fourteen],' by Hugh H. Quilter, B.A. (Oxon.), of which Sonnenschein and Dutton are the respective London and New York publishers, is noticeable chiefly as an unsectarian contribution to popular education at a time when the sectarian features of the Education Bill are exciting so much contention in England. Morality is sought to be inculcated without supernatural sanction, through the medium of natural history and a comparison of "human beings with other members of the animal world." We think the author has not done justice to the moral evolution of the brute creation. He has also raised without firmly satisfying questionings about the use of animal food, and of animal pelage for clothing and ornament, and about the keeping of animals in confinement. Mr. Quilter frowns on menageries.

'Registering of Title to Land,' by Jacques Dumas, Procureur de la République at Rethel, France (Chicago: Callaghan & Co.), is a series of five lectures delivered before the law department of Yale University in April, 1900. The Storrs Lecturer of that year was a French magistrate who has won distinction by some scholarly works on problems of landed property. The system of registering title which he describes is quite recent in this country, having been adopted by only three States—Illinois, Ohio, and Massachusetts. In this book, which practically repeats the lectures, one need not look for any new facts on the system of registering title; but the student of law, as well as the general reader who has heard of the Torrens Act and is interested in these matters, will find in Mr. Dumas's work a clear and entertaining exposition of the systems of registering title in various countries. The book, which was written in English by a foreigner, has not suffered from that fact. It reads well, and has the French quality of clearness, and the dry recital of facts is enlivened by some of those "idées générales" of which the French are so fond.

The fifth volume of Publications of the Mississippi Historical Society (Oxford, Miss.) is notable as a survey, required by law, of the materials relating to the history of the State from the earliest times. It has been edited by Dr. Franklin L. Riley, Chairman of the Historical Commission appointed *ad hoc*. It contains calendars of collections of books, newspapers (even to loose copies), and manuscripts (see the valuable section entitled "An account of manuscripts, papers, and documents in private hands"), and devotes nearly eighty pages to extinct towns and villages. The small Indian tribes of the State are commemorated. The negro cuts no figure here. The "collectors and students" whose specialties are enumerated at pp. 269-286 pass him wholly by. Shall we infer that this people which "has no history" is therefore happy, according to the proverb? The "Mississippi plan" and Reconstruction are equally ignored by collectors.

Slavery is the opening subject in the seventh volume of Transactions of the Kansas State Historical Society (Topeka). The President tells of "The Passing of Slavery in Western Missouri." C. E. Cory answers the question: "Were there ever slaves in Kansas?" John Brown, of course, makes a frequent appearance in these 600 pages. The Society has one large volume of his personal letters "concerning his actions in Kansas and at Harper's Ferry." That he had any association with Quantrill is denied in the paper on "The Early Life of Quantrill in Kansas." A sketch of the life of Col. Richard J. Hinton is furnished by William E. Connelley. We remark also a chapter on Lincoln in Kansas in December, 1859. His first speech was made on the eve of Brown's execution. He could not approve of the Harper's Ferry raid, or of any but a peaceful anti-slavery propaganda; but "John Brown has shown great courage, rare unselfishness, as Governor Wise testifies." Among Lincoln's notes for his Kansas speeches is this interesting one: "Last year Gov. Seward and myself, at different times and occasions, expressed the opinion that slavery is a durable element of discord, and that we shall not have peace with it until it either masters or is mastered by the free principle." At pages 472-486 will be found explanations of the origin of county and city names in Kansas.

The second volume of the seventh series of the Collections of the Massachusetts Historical Society (Boston) offers a third portion of the Trumbull papers in its archives, from 1777 to the peace of 1783. Letters *to* Jonathan Trumbull predominate. The scarcity of bread and provisions in Plymouth, Newport, and Nantucket in 1779 is noticeable among the topics of this correspondence, and for want of flour Yale College, as President Stiles writes, had to be prorogued. Roger Sherman's use of a singular verb with the subject "Congress" is contrary to the prevailing use: Congress . . . they, writes Silas Deane; Congress seem, writes Henry Laurens; Congress are, writes Titus Hosmer. The index to this volume leaves much to be desired.

The current issue of the *Goethe-Jahrbuch* contains some interesting personalia, not the least important among these being fresh confirmation of the fact that, in 1772, the doctor dissertation of Goethe was refused by the faculty of the University of Strassburg, chiefly for religious reasons. Two letters to this effect from Professor Staeber had been known, in which some doubt was expressed as to the complete sanity of young Goethe, and the statement was made that the dissertation had been suppressed by the law faculty *ex capite religionis et prudentiæ*. The new evidence is found in a hitherto unpublished letter of Doctor Medicinæ Metzger, dated August 7, 1771, which states that student Goethe, reputed to have been diligent in his work in Göttingen and Leipzig, had in Strassburg (having been thoroughly saturated with the wickedness of Monsieur Voltaire) defended the thesis "Jesus auctor et judex sacrorum," in which the proposition was maintained that Jesus Christ was not the author of the Christian religion, but that this system had been contrived by a number of wise men and then ascribed to the Nazarene. Metzger further states that the University authorities had refused to give Goethe permission to print this heretical dissertation.

Among the historical manuscripts published in the August Bulletin of the Boston Public Library is a report by Wait Winthrop of a committee appointed to consider the affairs of the Free Grammar School of Boston in 1710. He recommends the appointment of Inspectors, "Gentlemen, of Liberal Education, Together with some of the Revd. Ministers of the Town. . . . At their said Visitation, One of the Ministers, by turn's, to pray with the Schollars, and Entertain 'em with some Instructions of Piety, specially adapted to their age and Education." It is interesting to note that in a license for a tavern on the "Isles of Sholes," dated 1684, it is specially stipulated that the keeper "shall well behave himself. . . . without suffering unlawful games or meetings or other disorders, & without selling any strong liquour to any

Indian whatever; & that he shall put in every barrell he shall brew two bushels of good malt." There is also a detailed description of the impressment, in 1758, by British soldiers, of a servant of Thomas Dawes on his return from Evening School.

The Quarterly Statement for July of the Palestine Exploration Fund announces the beginning of the excavation of Tell Jezar. This is the site of the Philistine town Gezer, one of the few places whose continuous life connects prehistoric times with our own days. Three of the tablets found at Tell el-Amarna were from the governor of this town begging for assistance to put down a rebellion. A Pharaoh burned it and gave the site to his daughter, the wife of Solomon, who rebuilt it; and here Saladin encamped during his negotiations with Richard Cœur de Lion. Hopes are entertained that the excavation will throw light not only upon Biblical problems—as, for instance, whether this Pharaoh was an Egyptian king or a ruler of the North Arabian land of Musur—but also upon the nature and extent of Mycenæan influence on Palestinian culture, and upon the ethnological affinities of the Philistines and other coast dwellers. Among the other contents are remarks by Sir C. W. Wilson on the topography of Jerusalem at the time of Christ, with a plan, and some notes by Professor Clermont-Ganneau, in which he describes the fragment of a slab with a Greek inscription, an official document that apparently contained "valuable details regarding the geography and administrative organization of Palestine." An interesting side light is cast on the life of a small town by the discovery of some forty stones inscribed with imprecatory prayers. Mr. Macalister, who is in charge of the work at Gezer, deplores the fact that a "syndicate of fellahin, peddlers, and tourists are rapidly making Palestine archæologically a desert."

M. Brunetière writes in the *Revue des Deux Mondes* for August 1 on the "Error of the Eighteenth Century," and protests against the belief "that the moral question is a social question." As an historical essay the article is interesting, even though the reader's tranquillity be occasionally ruffled by the critic's method and ultra-conservatism. Admitting that morals (*la morale*) cannot properly be subordinated to social utility, we fail to see consistency in Brunetière's statements, on the one hand, that morals are absolute and can be conceived of only *sub specie æternitatis*, and, on the other, that "their character of eternity is no more opposed to their progress than the immutability of the laws of nature is opposed to the progress of science"—unless we may understand that morals vary with time and place, which M. Brunetière denies. "C'est une mauvaise plaisanterie que de dire que, selon les temps et les lieux, les mêmes actions ont été diversement jugées." We fear there is some hair-splitting in these arguments, but recommend the article to students of moral science.

For four years now the great French Language Association called Alliance Français has been conducting annual "vacation courses" on a large scale, through which foreigners have had the opportunity of perfecting themselves in the French language and literature. At the end of each season a commission, consisting of university professors, examines the students and gives them their *diplômes de capacité*. The ordinary testimonial is given to those who have acquired the ability to speak and write the language thoroughly, while a higher certificate makes the recipient eligible to the position of a teacher of French abroad. The courses are open to all natives and foreigners. Not only are they being held this year during the two summer months in Paris, but also in Bordeaux, Nancy, Luc-sur-Mer, Caen, and Lyons. They are immensely popular, last year's enrolment containing 208 German, 74 American, 50 English, 149 Russian, and other foreign names. During the present year the courses are in charge of Professor Brunot of the Sorbonne and Professor Huguet of Caen, who act under the direction of a counsellor of the French Academy. Prominent teachers of languages from the universities and lycées constitute the teaching force of these vacation schools.

A correspondent reminds us, apropos of the statement in our Paris letter last week that Lauzun died at Montrouge (his country seat) on January 1, 1794, that he really perished by the guillotine in Paris and on December 31, 1793.

—The Editor's Study, in the September *Harper's*, continues its interesting confession as to editorial ideals and policies, recurring to the question of organic unity of contents, which had been considered in the July number. We do not yet find any very clear definition of the unifying principle, and can hardly conceive of any considerable number of readers with a culture broad and deep enough to have a relish for each and every one of the viands provided for the *Harper's* monthly banquet, and to assign to each its fitting place in a unified scheme of intellectual dietetics. We get, however, some interesting principles of exclusion. Banishing from the start partisan politics and subjects of religious or sectarian division, closing the bars at a later date against a class of special educational literature abundantly provided elsewhere, it has now become the editorial policy of this magazine to exclude the "timely" article also. Attention is specially called to the fact that it is the one magazine which has had nothing to say during the past few months concerning volcanoes or Edward VII. It would be no loss to the cause of letters if this determination to avoid the special province of the newspaper should prove contagious. In the realm of science all questions of practical application and commercial interest are tabooed. With these exclusions the editor considers that his magazine will henceforth be more free for its proper scope—"for its appeal to the most essential interests of that culture from which it is itself nourished." As to the brevity of its average article, to which we called attention two months ago, the editor disclaims any arbitrary curtailment, but holds that the newspapers and reviews have relieved the monthly magazine of its obligation to provide elaborately complete articles on subjects of weighty concern. Mr. Howells, in the Easy Chair, discusses the results of his inquiry of last spring as to whether poetry is still read and loved as of old. Only seven letters of reply were received, but these were all favorable to the muse, and the editorial comment is decidedly hopeful.

—Robert T. Hill and Prof. Israel C. Russell continue in the September *Century* the discussion of the recent West India volcanic eruptions. The difficulty of arriving at demonstrable truth in such a matter is seen in the varying conclusions of these two expert geologists as to the essential character of the destruction of Martinique. Dr. Hill regards the evidence as practically establishing the fact of a terrific aerial explosion within the cloud after it had erupted from the mountain. While no proof of the composition of the gases causing this explosion is as yet available, he thinks it likely that "either sulphuretted hydrogen or sulphur dioxid was criminally implicated." He leans strongly to the hypothesis that there were two clouds erupted; one, from the summit, floating southward horizontally, and developing violent electric discharges, the other bursting from some clogged-up ancient vent at a point lower down, and carrying with it a heavy load of gases, which this closed vent had held in confinement. The electric discharges passing from the upper cloud into the lower, he thinks, would have produced just such effects as are actually found in the ruins. Professor Russell, on the other hand, attributes the death of the people of Martinique to the inhalation of dust-laden steam, and regards the appearance of the dead bodies as inconsistent with the supposition that they were exposed to a blast of burning gases at any time during the eruption. Sylvester Baxter continues the subject of civic improvement, devoting his attention to streets and highways. The famous Long Meadow Street of the Connecticut valley, the Beacon Street boulevard of Brookline, Grove Street of Medford, and the Essex Woods Road near Manchester-by-the-Sea, are among the successful efforts at improvement cited and described. The article is full of good practical suggestions, and, at a time when improvement is in the air and money plenty, it ought to contribute to important material results.

—As a rule, the presumption is strong against a new text-book, and still stronger against a new grammar for use in schools. To change old formulas is dangerous for the pupil, and inconvenient for the teacher; to change references is a vexation. But the Doctor of Philosophy is not permitted to be mute and inglorious; it is his destiny to publish, and to treat afresh old matter which may have been better treated before by a much abler and better scholar. He must, therefore, "dree his weird," and he must not be held too closely to account for the doom of necessity. It is a pleasure to be able to add that these remarks do not apply to 'A Grammar of Attic and Ionic Greek,' by Prof. Frank Cole Babbitt (American Book Co.). This little book is well worthy of being associated with the memory of the eminent scholar, Prof. F. D. Allen, to whom it is dedicated, and by whose advice it was undertaken. About fifty pages were actually accomplished with his collaboration; the credit of the remainder belongs entirely to Dr. Babbitt. The general aim of the book is to include all the essentials for work in school or college. Attic forms and Attic syntax are presented in the body of the work; Ionic forms and Homeric syntax are given in smaller type at the foot of each page. The same mode of distinction is carried out in the list of irregular verbs, and the result is to impart constantly to the learner a very clear concep-

tion of the difference between Attic and Homeric forms and usage. The latest researches in philology and in textual criticism are also applied in a conservative manner so as to help the memory rather than burden it; and the pupil is introduced to historical syntax just so far as it is calculated to clear up the usage of the language and to aid his mastery of principles. The classification and treatment of the subject of syntax is particularly luminous; it is in some respects novel and original, and brings light and order to a very complex subject. Explanations are frequently added of anomalies or of syntactical phenomena, such as the teacher himself might give (and sometimes does give), but which the pupil is constantly liable to forget. Every device of typography has been ingeniously employed to clarify the presentation of the facts. As a working manual, the many merits of this book and its brief compass should commend it to the serious attention of teachers.

—The 'Companion to English History (Middle Ages),' which is edited by Mr. Francis Pierrepont Barnard (H. Frowde), is a book to be most heartily commended both for its main idea and for its execution. What the "source-book" would fain do in one direction, this volume aims at accomplishing in another. We do not mean to say that the editor suggests such a comparison, but in both cases there is the same purpose of securing thoroughness and at the same time of arousing interest. What manner of work the 'Companion' is may best be gathered from a synopsis of its contents. To speak briefly, it is a series of separate essays on subjects connected with the social, domestic, intellectual, artistic, and commercial life of England during the Middle Ages. Architecture comes first in the scheme of arrangement and bulks largest in respect to space. Ecclesiastical Architecture is treated by the Rev. Arthur Galton; Domestic Architecture by Mr. J. A. Gotch; and Military Architecture by Mr. C. W. C. Oman. The other sections and authors are as follows: Costume (Mr. A. Hartshorne), Heraldry (Mr. F. P. Barnard), Shipping (Mr. M. Oppenheim), Town Life (Miss Lucy Toulmin-Smith); Country Life (Mr. G. P. Warner); Monasticism (Rev. Augustus Jessopp); Trade and Commerce (Mr. I. S. Leadam); Learning and Education (Mr. R. S. Rait); Art (Mr. G. McN. Rushforth). The average length of a section is about thirty pages, and there are nearly a hundred illustrations. What a help this book will be to teachers in the higher schools and in colleges of almost every degree will be apprehended at a glance by every one who has the least experience in such matters. Every topic, with the possible exception of heraldry, is of high consequence, and it might be contended that, as a factor in a book of this kind, heraldry is the most important of all, because its rules and conventions are so little understood by people at large. In two ways especially is a connected series of articles like this notable and admirable. Apart from the fact that the contributors are experts, a large amount of rich material is turned into appropriate form, and placed within easy reach of those who can make use of it in the daily instruction of their classes. Secondly, it supplements the text-book at a point where the best of text-books can hardly fail to be weak. It goes beyond the limits of political epitome, and shows, by the very character of its topics, how broad and how deep a subject history is. "Although," says the preface, "this volume is designed primarily for higher educational purposes, it is believed that it will also prove of interest to the reading public at large." Should this forecast prove incorrect, so much the worse for the reading public.

—The question whether Catholicism contains the progressive elements necessary to adapt itself to every real advance of mankind and thus become reanimated by the spirit of the age, has recently excited considerable discussion in Germany. In proof of this, we need only refer to such works as 'Der Katholicismus als Princip der Fortschritts' and 'Die neue Zeit und der alte Glaube,' by Professor Schell of the University of Würzburg; 'Reformkatholicismus,' by Dr. Müller of Munich, and the series of "Kirchenpolitische Briefe," by the late Prof. F. H. Kraus of the University of Freiburg in Baden in the *Beilage zur Allgemeinen Zeitung*, since 1895. The latest publications of this kind are 'Der Katholicismus und das Zwanzigste Jahrundert im Lichte der kirchlichen Entwicklung der Neuzeit,' by Dr. Albert Ehrhard, professor in the University of Vienna (Stuttgart: Roth); and Prof. Friedrich Jodl's "Gedanken über Reform-Katholicismus,' just issued by the Neuer Frankfurter-Verlag. The sensation created by Professor Ehrhard's work is evident from the fact that the first edition was exhausted in ten days, and that the twelfth has just appeared. He asserts that, however much the papacy as a secular power may have promoted culture and exerted a wholesome influence in the Middle Ages, the temporal sovereignty of the Pope is now obsolete, and, if restored, would be a serious hindrance to the Catholic Church in the fulfilment of its mission. Another obstacle is the order of the Jesuits, whose supremacy in the Vatican must be utterly overthrown. Professor Jodl, who has the chair of ethics in the University of Vienna, and is an exceedingly liberal-minded and sharp-sighted thinker, commends Ehrhard's courage and conscientiousness and the nobleness of his purpose, but holds that the proposed reform would involve such radical changes in the essential character of Catholicism as to be equivalent to its extinction as an ecclesiastical organization. The arguments in support of this view are presented with admirable clearness, and are likely to be accepted by all unprejudiced readers as conclusive. We may add that the theological professors and their clerical allies in Vienna rendered Ehrhard's position there so unpleasant that he resigned, and was then called to a professorship in the University of Freiburg in Baden.

—Petrarch, it is well known, between the years 1343 and 1373 inclusive, was honored with five embassies from various potentates, civil and ecclesiastical—to Naples, to Venice, to Prague, to Paris, to Venice again. The first three were in the nature of political negotiations; in the last two the poet's part was purely ornamental. A sixth embassy had altogether escaped notice till brought to light at the Paris Congress of International History in 1900. It was discovered by Monseigneur Fraknoï, inspector-general of museums and libraries in Hungary. This scholar, as one may read in the first volume of the *Annales* of the Congress just published by Armand Colin in Paris, while engaged in the Vatican archives in researches on Louis the Great, King of Hungary, discovered a letter of Pope Clement VI. to the lord of Verona, Martino de la Scala, dated Avignon, November 13, 1347. Louis was preparing a descent upon the kingdom of Naples to avenge the assassination of his brother Andrew, and the Pope's letter begged Scala to refuse transit through his domains to the King's forces. He accredits to him, "pro parte nostra," "dilectus filius magister Franciscus Petrarchi clericus Florentinus." It was already common knowledge that Petrarch quitted France in November, 1347, for Italy, for literary purposes, *e. g.*, to make a collection of Cicero's works. Several letters written by the way are preserved, the most noted that to his friend Cola di Rienzo, dated Genoa, November 27, 1347, intimating that it had been his intention to proceed to Rome, but that the news meanwhile received of Cola's actions, unauthentic though it might be, decided him to turn his steps elsewhere. "Flecto iter."

—The importance of the document now revealed lies in the inconsistency involved in Petrarch's holding a commission from the Pope who had on October 7 declared Cola a rebel, and was aiming, in the embassy to Scala, against the Roman tribune as well as against the King of Hungary, and the patriotic impulse heretofore ascribed to Petrarch on setting out from Avignon—namely, to ally himself at Rome with Cola. The latter was, as the Curia well knew, in negotiations with Louis. Monseigneur Fraknoï concludes that we must view the letter as a purely literary production, "addressed to the general public of amateurs of this kind of prose." Parallel cases might easily be drawn from the epistles of Erasmus. ("He *must* be literary," says his biographer, Professor Emerton; "he *might* be accurate.") At all events, Petrarch proceeded straight to Verona, with the poor luck that attended all his other serious missions. On December 4, Louis was received at Vicenza by Scala's brother and son, and conducted with pomp to Verona, where he was sumptuously entertained for four days.

## THE MASTERY OF THE PACIFIC.

*The Mastery of the Pacific.* By Archibald R. Colquhoun. With maps and illustrations. The Macmillan Co. 1902.

Early in the sixteenth century the Portuguese swept south and east from Goa and seized Malacca, on the Malay Peninsula, and ten years afterward occupied the Moluccas, the Spice Islands of commerce. But nearly all of their acquisitions have been absorbed by the Dutch. Almost simultaneously the Spaniards, under the foreign Magellan, discovered Cebu in the Philippines, and fulfilled the Papal condition for possession by converting all the inhabitants in eight days. Forty years later, Legaspi, with the aid of the Augustinian friars, after a six years' campaign, actually overpowered and took possession of the islands that lay north of Mindanao; and ever since Spain has nominally ruled the whole archipelago and the unimportant Ladrone and Caroline groups, although until

within the last decade the Moros remained vigorous protestants. In fact, at the time of our own invasion, our predecessors were still engaged in extending their authority among those people by force of arms.

Three hundred years ago the Dutch, by arms and trade together, began their Pacific dominion, which, after various fortunes, now embraces a compact group of mighty and productive islands. These are held and managed purely in the commercial interest of Holland, with a supervision that is a curious mixture of interference and neglect, not always as radical or as remunerative as more nervous nations might employ. Java, as is well known, became a garden by a peculiar system of forced labor now somewhat mitigated, which compelled the natives to work a certain part of each month without payment, after the feudal fashion. For the rest of the time, either they were paid by the Government or their privately raised produce was sold by compulsion at a fixed price. Their natural sloth was overcome by coercion, but the native chiefs were the medium through which this discipline was enforced.

We cannot intelligently discredit the author's opinion that the hold which Holland as a nation has upon the great Netherland India is gradually relaxing, nor his prediction as to the ultimate fate of both. He believes that the retrograde assimilation of the colonists with the natives is weakening the home ties, and that the negative attitude of the national Government towards those possessions foreshadows their loss. Even the prolonged Achinese war is prosecuted by the colony, not by the nation, and is absorbing the revenue that otherwise would go to The Hague. In Mr. Colquhoun's view, Germany will hold the mouths of the Rhine ere long, and with them will secure a tropical island empire which neither the courage nor the obstinacy of the Dutch may suffice to defend. As outposts the Carolines, the Bismarck archipelago, parts of the Samoan group and of New Guinea, are already under the German flag. The prophecy may come true. France, with her ineptitude for colonizing, is negligible, notwithstanding certain insular possessions and her foothold on the continent of Asia. The Japanese hold the north and west of the Pacific. These spirited, artistic people, more acute than profound, the Latins of Asia, may hereafter emerge at the head of the yellow race in a struggle for commercial and material preëminence. But that prospect is now remote, and they have not yet demonstrated their qualification as colonists. Formosa, a trophy of war, is a trial ground for foreign command where their immediate success is not conspicuous. The Chinese, whose continent is washed by the Pacific under other names, are emigrants but not colonists. They show no disposition to create new Chinas, but, with characteristic conservatism, preserve their own qualities, neither making proselytes nor adopting the ways of others. Submissive to government, they appreciate justice and fair dealing, meet oppression with guile, and make no attempt to govern others. But they maintain a rigorous system of authority and of mutual assistance among themselves wherever they may be, and in that sense they organize well. With their commercial instincts and their undeveloped resources, adequate administration might cover the ocean with their fleets and make them masters of its trade. But this would require such an awakening as only Japan has shown possible.

The great South Pacific Power is the Australian Federation, a better example than even Canada (for it is homogeneous) of what Britons can do with themselves when away from home and under their own flag. A colony in name, it is a nation in fact, and, despite the imperial glamour of yesterday, which led her to waste men and money on the South African veldt in a quarrel in which she had no concern, we may be pretty sure that, when Australian interests clash with those of Britain, the latter will be disregarded. Race feeling may make Australia a British ally in emergency; it will not keep her subordinate when she thinks she has the right of way. Two pressing problems there are those of tariff and labor. Regardless of her home teachings and practice, the colonial Federal Government insists upon a tariff midway between one for revenue and one for protection. This operates against New Zealand, which declined to enter the Federation, as well as against more unrelated countries, and draws its circle of exclusion closely about the island continent. But as a policy it may be open to debate, for the State of New South Wales contains a strong free-trade party. The labor question seems settled determinately against the admission of the dark-skinned races. People who are not white are not wanted, and the Australians are about to exclude through education tests even their fellow-subjects of India. The end of 1906 is the date fixed for the departure of any Pacific Islander who may then be present.

Our own vital concern in this Pacific problem lies with the Philippines, and here we find the author an intelligent, well-informed historian and critic, who is sympathetic and friendly, neither exaggerating nor making light of our burden. There is none of the exultation which the English sometimes show over our entanglement in extra-continental expansion. "This ends the Monroe Doctrine," and "Now you are practically by our side," are common expressions and commoner sentiments among the Britons of controlling grade in the East, who see logical inconsistency in maintaining that America is only for Americans when we absorb outlying lands of Asia. Mr. Colquhoun is thoroughly, but not offensively, British when he discusses our affairs, whose importance he marks by devoting to them the principal section of his volume. We find there the views of a sagacious and experienced observer, a distinct well-wisher, whose mental equipoise and long acquaintance with that side of the world give those views great value. That he should have some bias towards ways that have brought success to Britain is natural, and may readily be discounted at the final settlement. He cannot feel, as an American must, the full pressure of the unfamiliar problem; but, relieved from immediate responsibility for action, he is the better equipped for observation and advice.

Our author does not concern himself with how or why we went to the Philippines, but only with the actual and probable consequences. Of these, space permits merely the briefest abstract. He insists with authority that "no such problem has ever presented itself to Great Britain or any other colonizing Power as that which confronts the United States in the Philippines." The essential requirement is to fit the Filipino character for the administration of American democracy. This involves either the regeneration of a race, or the forced adaptation of a political system to absolutely repugnant conditions. As studied by Mr. Colquhoun, the Filipino lacks certain civic essentials without which a state cannot stand. Thus, he has no public spirit in the wide sense. The peasant will follow a personal leader, but not from patriotism. Brave and reckless when properly led, bright and hospitable in his private relations, he lacks the spirit that welds together a people into homogeneousness. Individually and collectively his characteristic is "untrustworthiness, added to the power of deceiving the most vigilant." "He is a half-civilized, clever, irresponsible child, who has warped ideas of right and wrong." "He is never honest, as we count that virtue, never truthful, and never industrious or persevering." "The Malay is the laziest of Orientals, and the Filipino is not the least lazy of Malays." Mr. Foreman, the highest authority, declares: "The best of the natives neither appreciate, are grateful for, nor seem to understand a spontaneous gift."

Mr. Colquhoun does not concede his distrust of our efforts "to thrust the results of centuries of struggle and progress [as found in America] ready-made upon the half-fledged Filipino." "If the little brown brother were altogether simple and amenable, the danger would be less, though still considerable." "If unnaturally stimulated, he may grow up into a Frankenstein." He frankly insists that the introduction of modern education to overcome at one stroke for the next generation the evil tendencies of the Filipino, half hereditary and half following misgovernment, will be futile because, beautiful as is the theory, "it involves an entire subversion of the laws of nature," for the education which creates character "cannot be crammed in a few years." He foresees that there will be let loose "a mass of half-educated, conceited natives . . . who will turn their attention to promulgation of sedition or equally undesirable practices," and cites India in illustration. He by no means deprecates education, but looks with the utmost favor upon our costly and extraordinary efforts in that direction, which have no parallel, provided too much reliance is not placed upon it; and he urges, as a *sine qua non*, that the civil service should be pure, firm, and intelligent from top to bottom. Inasmuch as a system of quasi-independence, which he does not approve, has been instituted, his final advice, as one "who has seen a good deal of government in Oriental countries, is to interfere as little as possible with the customs, prejudices, and religion of the Filipinos, and to keep a tight hold." That we may relinquish the islands, even to themselves, does not seem to occur to him as possible.

The Anglo-Japanese alliance had not been made when this book was written, but the author hoped that Japan might pursue a policy in common with the aims and interests of Britain and America, which he assumes will coincide. He foresees the geographical importance of Japan, and would align its policy with those of the English-speaking countries in whose keeping he confidently rests the "Mastery of the Pa-

cific." The true mastery of the Pacific is commercial supremacy, which implies neither armies, colonies, nor aggressive fleets. Men-of-war there must be for patrolling distant waters; there need be none for challenge. The example of a self-contained continental nation, secure in moral strength, with recognized ability for defence, whose commerce reaches every land, and whose learning and good-will are the common property of humanity, tells further as a world-power than an arm outstretched for conquest.

Regardless of questions of state, or rather because of them, this volume, the discussion of which has been unavoidably delayed, is heartily commended as the clearly expressed views of an expert whose feelings are those of a cosmopolitan Briton with American impulses. Excepting that the author makes a Chinese fleet towards the close of the thirteenth century escort Marco Polo "from China to Europe" (p. 15), his facts are as trustworthy as his descriptions are lucid.

## CHEYNE AND HASTINGS.

*Encyclopædia Biblica.* Edited by the Rev. T. K. Cheyne and J. Sutherland Black. Vol. III. L—P. The Macmillan Co. 1902. Pp. xviii, 650.

*A Dictionary of the Bible.* Edited by James Hastings. Vol. IV. Pleroma-Zuzim. Charles Scribner's Sons. 1902. Pp. xii, 994.

With the closing volume of one, and the second last of the other, of these encyclopædias their relative importance, their objects and values have become fairly clear. That they do not compete with one another as a whole or in any exact sense is abundantly evident. Yet precisely where the differentia lies is not so evident. Part is undoubtedly the contrast of the theological as opposed to the historical. The Hastings dictionary is theological not simply in that it includes articles on theology—in this volume, notably on Predestination, Promise, Psychology, Salvation—but also by general attitude. So the thing had to be and is; not, as in Cheyne, so it historically was. Part, also, is due to the personality of the editors. Dr. Hastings might easily have exercised a greater control over his contributors and levelled up the quality of their work; to Dr. Cheyne this was evidently an opportunity for the freeing of his soul, and he has certainly freed his soul to an extent which probably no other editor has ever dared to approach. In the present volume, besides numberless small articles, he has written sixteen articles of importance and collaborated in as many more. On his contributors, too, his hand has clearly been heavy in guidance and annotation. The only province which Dr. Hastings, on the other hand, has claimed for himself is that of the obsolete and obscure words used in the English versions. Part, again, can be ascribed to a different standard of scholarship. But this aspect could easily be pushed too far, and it would certainly not be correct to assert broadly that Hastings is intended or suited for the plain man and Cheyne for the professional student. For there are articles in Hastings which no scholar can afford to disregard, and if often it gives no sign of a difficulty, often also it gives the materials to judge more soberly of the difficulties raised in Cheyne.

The advantage to the student of the many-sidedness of view thus produced cannot easily be overestimated. For example, the article on Put in Hastings is by W. M. Müller; in Cheyne by Dr. Cheyne himself. Yet generally W. M. Müller has charge of the Egyptology in Cheyne, to the great advantage of that book. Contrast, for example, his with Driver's Potiphar—a good article in itself but somewhat second-hand. Why Dr. Cheyne, in this case, elected to write on Put is most obscure, unless it was in order to get in Jerahmeel. Other examples of such weighty articles in Hastings are Budde on Poetry (11 pages, and much better than Duhm in Cheyne), Davidson on Prophecy and Prophets (20 pages), Sanday on Son of Man, and Driver on Son of God (9 and 10 pages), Wolff Baudissin on Priests and Levites (30 pages; the corresponding articles in Cheyne are short). As in the former volumes of Hastings, the articles showing most precise scholarship are the theologically non-contentious. Here Nestle has been a tower of strength, and gives 17 pages to Septuagint, 7 to Syriac versions, 9 to text of N. T., and 12 to Sirach—all admirable. Further, H. J. White gives 17 pages to Vulgate; Strack 6½ to text of O. T.; Kenyon 13 to Writing. On the other hand, the Hastings articles on separate Biblical books are notably feeble and hesitant. A good example is W. T. Davison's treatment of Psalms, and an outstanding exception is F. C. Porter's 26-page article on Revelation. Another source of weakness in Hastings is the preference, over professional students, for writers whose training has been of a practical kind in Palestine. Thus, G. Post of Beirut on natural history gives good general information based on present conditions, but exhibits lamentable scholarship, and draws most dubious Biblical conclusions. The writers in Cheyne are often less ample and picturesque in description, but are evidently on firmer ground. The same holds of Sir Charles Wilson's geographical articles. Even F. J. Bliss, first-hand authority as he is, does not give as good an account of Pottery as the more stay-at-home J. L. Myres.

Turning now to Cheyne, it is more than hard to give any adequate conception of the wealth of learning and ingenuity which this volume displays. The outstanding characteristics are the same as before. Articles most happily compounded abound. In other cases the suspicion will not down that behind the compound lies editorial history. As before, the 'Britannica' articles of Robertson Smith have been brought to date, if not ahead of it, by Dr. Cheyne himself. In some cases the supplement is so extensive that the stem might well have been omitted, or the reader referred to the 'Britannica' itself. Thus, on Psalms, Dr. Cheyne adds a wholly admirable sixteen pages to the original seven. Prophetic Literature is an equally admirable but entirely new article of twenty-four pages. It is highly and hardly intelligibly compounded, being written by Cheyne, Guthe, Paul Volz, and, for Christian Prophets, J. A. Robinson. A good example of the advantage of the compounding method at its best is the article on Purim. In it, instead of one hypothesis, we are given three, by C. H. W. Johns, J. G. Frazer, and Cheyne; the last regards not only Mordecai, but Daniel, as corruptions of the omnipresent Jerahmeel. On this whole question of Jerahmeel an open mind must clearly be kept until the appearance of 'Critica Biblica.' It is to be trusted that that book will amply justify Dr. Cheyne's critical methods. At present, to the profane, his use of Jerahmeel cannot but seem like Mr. Dick's obsession by King Charles's head. There is hardly an article written by him into which it does not find its way, and, apparently, almost all the corruptions of proper names in the Old Testament have sprung from a rooted hostility to it on the part of the Hebrew scribes.

But, in estimating this and other matters in Cheyne, due weight must be allowed to the avowed attitude and plan of the editor. His desire, reiterated in this volume at many points, is not to give assured, accepted results, but to shake up the old, to discard, to suggest. For him, explicitly, the new is best even if uncertain. He seeks to give a collection of problems, a collection of material for solving them, and of possible, even if varying, solutions. "Even to be mistaken," he says, on col. 3949, "would have been less misfortune than to be thrown back on the dim, colorless exegesis of Hupfeld and his school." Granted the legitimacy of such an attitude in an encyclopædia, the destructive, querying character of the present book can be amply justified.

Further, in the present volume, it is again on New Testament rubrics that we find the most revolutionary articles. The Dutch school has now formally taken possession; Van Manen comes to support Schmiedel. His article, Old-Christian Literature, in its very title, is a challenge, and is followed up by a thoroughly negative treatment of Paul. In this latter case, it is true, we are given a choice of the less radical criticism of the Tübingen school in a reprint of the late E. Hatch's article from the 'Britannica.' Beside these, Dr. Cheyne's own article on Moses, which reduces or expands him to a tribe, is mild. On Names also Dr. Cheyne writes, and adds a long paragraph in defence of his many criticisms of the tradition of proper names in the Hebrew text. Having thus relieved his mind, however, the way is clear for Nöldeke, Kautzsch, and G. B. Gray to contribute a monumental treatise on Names in thirty solid pages. Another most weighty monograph which must be mentioned is Ed. Meyer's seventeen pages on Phœnicia.

To sum up: the professional student will use Cheyne first and last. He will refer to Hastings to see if it by chance contains an article of weight. Such search will often repay him. The plain man, and for this purpose the term must cover the enormous majority even of clerics, will be compelled to the use of Hastings. Much of Cheyne will be unintelligible to him; more will be misleading. If he has the instinct to avoid these two dangers, then his gain also may be great. Certainly no just view of the Biblical science of to-day can be attained without the use of both. Is it symptomatic of the position of the said science that, to appearance, an adequate encyclopædia of it—an encyclopædia, that is, in the ordinary sense—cannot yet be written? Hastings marks a past stage; Cheyne marks a period of chaos; the time is clearly not yet ripe.

*The Poem of the Cid.* Edited and translated by Archer M. Huntington. Vols. I. and II. G. P. Putnam's Sons.

Spanish scholarship in America has an illustrious history. The first of our great scholars in point of time, George Ticknor, is still the first historian of Spanish literature in point of excellence; Longfellow's graceful translation of the 'Coplas' of Manrique has made it almost as familiar here as on its native soil; while Lowell—"unable to speak the language, though knowing more of it than almost any of them," as he proudly boasts in one of his letters—has, alike in prose and in verse, given evidence of his admiration for the genius of the Spaniards and his knowledge of their historic culture. There was something in our own romantic past and in the heroic imagination which saw the savage stretches of the West dared and conquered, that gave us kinship, and a more than intellectual sympathy, with the race whose valor and energy drove back the Moorish invader step by step, unified a mass of divergent kingdoms, and, in another hemisphere, won for itself the gigantic fruits of its own discovery. These are the three great stages of Spanish history—the victory over Islam, the unification of the peninsula under the hegemony of Castile and Leon, the discovery and colonization of the Americas; and the first of these stages, with some foreshadowing of the second, has received literary expression in one of the noblest monuments of Spanish poetry, the famous 'Poem of the Cid.'

The 'Poema del Cid' is for Spanish literature what the 'Chanson de Roland' is for French and the 'Niebelungen Lied' for German, and in date of composition it falls approximately half way between the two. The firm touch of the French epic it does not possess; but in the rapid narrative succession of its events, in the splendid epic spirit which transfuses it as a whole, and in the simplicity of its heroic ideals, it expresses, as no other Spanish work of the imagination has succeeded in expressing, its age, its race, and its country. Lope and Calderon are mirrors of their own time—both are typical Spaniards of the seventeenth century; but only the 'Poem of the Cid' and 'Don Quixote' express in every age and clime the genius of the Spanish race.

It is this remarkable poem which Mr. Huntington seeks to introduce to a wider American audience in the two ornate volumes under review. The first, which contains the Spanish text, was published several years ago, and attracted some attention among scholars; the second, with a metrical translation of the poem into English, has just appeared; and a third volume, with critical and explanatory notes, is expected to complete the whole work. Until this last volume appears, it will be impossible to place any final estimate on the nature of Mr. Huntington's scholarship, but his interest in things Spanish has been known to cultivated readers for some time, and any contribution he may make to his favorite studies must at least receive respectful attention.

The 'Poem of the Cid' has been preserved in a single manuscript of the fourteenth century; the scribe was a careless one, and the poem as we have it is irregular in metre, often obscure in sense, and teeming with errors; but all critical texts must of necessity be based on this unique copy, which is now in the possession of a private gentleman of Madrid. Three editions before the appearance of Mr. Huntington's were based on a careful study of the manuscript, that in the "Colección de Poesias Castellanas anteriores al Siglo XV." of Sanchez, that of Janer in the "Biblioteca de Autores Españoles," and Vollmöller's, published in 1879. Of these the last is by far the best, and Mr. Huntington has in the main followed Vollmöller's reading of the poem. In fact, Señor Menéndez Pidal, the latest editor of the epic, asserts that Mr. Huntington has not departed from Vollmöller's text in a single essential point, and a careful comparison of the two has tended only to corroborate this statement. Mr. Huntington has not contributed any significant emendation of his own or added anything to our better understanding of the poem; and for philological purposes his edition cannot compare with the more recent one of Menéndez Pidal, which is an exact palæographical transcript of the original manuscript.

As a translator, however, Mr. Huntington has rendered more important services. As early as 1808, John Hookham Frere published, in an appendix to Southey's 'Chronicle of the Cid,' translations of a few selected passages from the poem, and these were reprinted in 1874 with several interesting additions, in his collected 'Works.' Frere's renderings are remarkable for their spirit and dash; and their flowing and colloquial verse has been praised by judges as competent as Southey and Ticknor. The passages selected are typical, but they do not cover more than a fifth of the entire poem, and the long, barren stretches of epic recitation are left unrepresented. They suffer chiefly, however, from looseness in translation; as in his famous Aristophanic renderings, Frere has attempted to give the spirit of the original rather than to translate it with literal accuracy. A second version, that of the late John Ormsby, appeared in 1879, with an introduction and notes. This is more complete; all the important passages appear in metrical translation, and the rest of the poem is represented by condensed prose paraphrases. Better work, so far as it goes, could not be looked for. Ormsby is a faithful and spirited translator, and has performed his task with a gusto that is contagious.

Mr. Huntington has rendered the whole poem, line for line, in blank verse, and his is therefore the first complete English translation. For the most part accurate, it suffers from the medium which he has chosen for its rendering. The metre of the original, in the corrupt manuscript which we possess, is very irregular, but the norm may be said to be the line of seven iambic feet. This is our own ballad metre, and the rhythmical effect is not unlike that of Macaulay's "Lays of Ancient Rome." Both Frere and Ormsby have therefore used the ballad metre, and the result in general is splendid. The dignity of blank verse wholly fails to give the spirit and rush of the original versification, though the freedom from rhyme makes the task of literal translation simpler. Yet the lack of rhyme seriously affects the interest of Mr. Huntington's version in the prosier portions, and in the more vivid passages spoils some of the poem's dash and simplicity. Frere's happy but careless methods are shown in the following passage:

"The story of the lion should have taught you shame at least.
You rushed out at the door, and ran away so hard
You fell into the cesspool that was open in the yard.
We dragged you forth in all men's sight, dripping from the drain;
For shame, never wear a mantle, nor a knightly robe again."

This is vigorous verse; but, as Ormsby has pointed out, there is no "cesspool" or "drain" or "dragging" in the original. Diego Gonzales is taunted with having hidden behind the beam of a wine-press, and spoiled his beautiful garments so that he will never be able to wear them again. Ormsby's and Mr. Huntington's versions of the passage follow:

"For you to boast! the lion scare have you forgotten, too?
How through the open door you rushed, across the courtyard flew;
How sprawling in your terror on the wine-press beam you lay?
Ay! never more, I trow, you wore the mantle of that day."

"Shouldst not forget the story of the lion!
Didst through the portal fly and place thyself
Within the court, didst go to hide behind
The wine-press beam, but ne'er again didst wear
Thy cloak nor tunic."

Ormsby has here corrected the more obvious errors of Frere without losing the latter's vigor and spirit, but Mr. Huntington's is even more faithful to the original. Diego did not mount the wine-press beam, but hid behind it (*tras la viga lagar*), and not only his mantle, but also his lower garment (*brial*) was spoilt for ever. Both Ormsby and Frere, however, give a more vivid impression of the surging flow of the original, with its ballad metre and its resonant rhyme. But it is no slight merit, after all, to have rendered the whole of a great work like the 'Poem of the Cid' into English verse for the first time, and to have performed the task with fidelity and distinction.

In conclusion, attention should be called to the beautiful dress of these two volumes, which represent the final excellence of the work of the De Vinne press. The full vellum binding, the clearly marked typography, and the photogravure illustrations of Spanish scenes are alike to be commended, though the curved lines placed at the end of every verse seem to us an innovation of doubtful merit, both trivial and distracting.

---

*Music in the History of the Western Church.* With an Introduction on Religious Music among Primitive and Ancient Peoples. By Edward Dickinson, Professor of the History of Music in the Conservatory of Music, Oberlin College. Charles Scribner's Sons. 1892.

Nothing in this book is more remarkable than the inequality of its workmanship. We easily distinguish two strata of work, one which, taken alone, would make an excellent book, and another of very inferior quality. It seems clear that a group of well-studied essays on portions of the author's subject has been enlarged to the supposed necessary bulk by adding extraneous and superfluous matter neither original nor well compiled. These two portions of the work might have been written by two several authors. The larger shows a careful student using well-digested material and displaying clearness of thought, originality, and a pleasing though somewhat careless literary style. In this part Mr. Dickinson is

perspicuous, even when discussing subtle matters of theory; rich and sometimes graceful in illustration, temperate in phrase-making and in the use of epithets. In the other part he is obscure, wordy, abounding in hollow phrases and conventional art jargon, and staggers under a load of ill-chosen, vague, and needless adjectives. *Nihil fuit unquam sic impar sibi.*

Whatever fault we have to find with this book must be understood to belong chiefly to its superfluous portions. One criticism, however, which applies in some measure to the whole, concerns a habit acquired, no doubt, in the course of teaching. A lecturer is not expected to give his authority for every statement; but when he turns his lectures into a book, he should cheerfully submit to a law which the profoundest scholars have respected, and support by reference to accepted authorities all assertions of facts not readily ascertainable. An assertion, for example, that the myths of Greece represent the gods as dancing, and the ritual dance as an imitation of theirs, might not need to be proved to scholars familiar with the Homeric hymns, if Mr. Dickinson counts on many such; but the statement (p. 6) that the myths of *many* nations do so, needs support for almost any reader. So, too, the assertion (p. 8) that the Hellenic ritual dance was *adopted* by the Romans, a conjecture intrinsically improbable, even if we did not know that the Italians had ritual dances of their own long before they ever came in contact with the Hellenes. The reader might ask for proof, or at least authority, as to any recognized use in the early Church of dancing round the altar (p. 8); as to the symbolism of ancient Egyptian and Hindu music (p. 11); for the assertion that much of the musical art of the Greeks came from Egypt, and for a good many others of the same absolute sort. The lecturer may reasonably claim from his audience a frequent *acte de foi* such as Edmond About wittily defines as "l'opération d'un homme qui ferme les yeux pour mieux voir." He is permitted to adopt the principle of "Open your mouth and shut your eyes, I'll give you something will make you wise"; but the modern reader of serious books does not want to be treated to kindergarten methods.

As to this writer's peculiarities of language and style, we must really leave it mainly to the reader to discover them. It will suffice to mention a very few. To say nothing of such a monstrosity as *orchestik* (p. 8), the reader will be rather staggered, we conceive, by such expressions as "*drastic* descriptive literalism" (p. 179), "*lustrous* sound tints," "quick to *sense* devotional demands" (p. 387), "changes in *spiritual emphasis*" (p. 388), "the ruling *postulate*" (p. 139, referring to demands of public taste), "periods of *relapsed* zeal" (p. 79), and the qualification of Gounod (p. 216) as "so *liable* or perhaps so neutral in his art."

The habit of phrase-making, so dear to the art critic, and a certain tendency to enter into the enthusiasms and opinions of the author he may be momentarily using, betray Mr. Dickinson into frequent inconsistencies. Thus, we learn (page 11) of the symbolism of Egyptian music; on page 39, Music has "no associative symbolism, like poetry." On page 80 we hear (with no little amazement) of the "*terse* embodiment" of ideas in the Roman liturgy; but on page 83 the Mass is "an elaborate development" of the Last Supper. On page 85 all parts of the Mass "are designed to . . . prepare the officers" (meaning the officiants) "and people to share in" the eucharistic sacrifice, "and to impress on them its meaning and effect"; but on pages 90, 91 the service is logically in Latin "because the Mass is not considered as proceeding from the people, but is performed for them and their name." How, being in Latin, it can impress any meaning on the people we are not told. Again, on page 95, the liturgic chant is "a sort of religious folk-song proceeding from the inner shrine of religion," while on page 109 Gevaert is approvingly quoted to the effect that it is derived from the purely secular κιθαρῳδία of Roman private life.

We cannot always commend Mr. Dickinson's logic. The argument, for instance, on page 21, that the Hebrews invented no musical instruments because theirs are all found among nations older in civilization, would prove that sewing-machines were not invented in America because they are used in Japan. On page 82 he first postulates that a Universal Church must have a universal form of speech; his next assumption is that this "must inevitably be the Latin." There is no attempt to prove either proposition, though the reader cannot be supposed to forget that the only church which ever had the least claim to be called universal, the original church of Jerusalem, was notoriously Greek, as was also, for that matter, the original church at Rome. These views of our author must be classed, we suppose, with his surprising enthusiasm for the decrees of Trent (p. 156), his admiration of Ignatius Loyola, the founder of the Jesuit order (*ibid.*), and his absurd claim (p. 62) that the Papacy dates back to the fourth century—mere echoes, we will hope, of the books consulted while writing on the Roman liturgy.

We turn with real pleasure to the agreeable duty of giving Mr. Dickinson the praise which he deserves for many excellent things. When on his own ground, he can be exceedingly interesting. His history of the Sequences (p. 121, *seq.*) and his chapter on Organum and Discant are sure to delight and instruct readers not acquainted with systematic histories of music. Still more pleasing is the account of the birth of modern opera; and the author's views on Palestrina, on the Cantata and Passion Music, and the chapter on Bach are very good and profitable reading. We may also commend the chapters on Mediæval Chorus Music, on the Lutheran Hymnody, on Anglican Church Music, and on the Congregational Song of England and America. The last chapter, on Problems of Church Music in America, will be found of unquestionable value. When at his best, Mr. Dickinson often rises to a plane of really excellent writing. On page 163 he makes a beautiful comparison of the gently shifting harmonies of certain music with the play of light on a sunlit, breeze-swept meadow. He has also a decided aptitude for epitomizing history in a philosophical way. We regret that space will not permit us to quote his acute characterization of the Anglican Reformation (p. 325) and some other thoughtful passages which we have found most suggestive, even when not convincing. Readers who may have read with surprise the statement (p. 229) that Lutheran congregational song is derived from an ancient habit of ejaculating "Kyrie Eleison, Christe Eleison" chorally on solemn occasions, may be interested to know that the fact is confirmed by a passage, overlooked by Mr. Dickinson, in that curious ninth and twelfth-century poem, "Reynardus Vulpes," where, on p. 38 of Mone's edition, we read that (the multitude)

> "Salve festa dies" cantabat, ut usque solebat
> In primis feriis, et "Kyrl" vulgus "ole";

where the *tmesis* of Kyriole (*i. e.*, Kyrie Eleison) in the pentameter will amuse the classical scholar.

---

*A History of the Peninsular War.* By Charles Oman, M.A. Vol. I. 1807-1809. With maps, plans, and portraits. Henry Frowde. 1902.

The question which will arise in the mind of every one who sees this title, may as well be answered at once and in Mr. Oman's own words:

> "More than one friend," he says, "has asked me during the last few months whether it is worth while to rewrite the history of the Peninsular War when Napier's great work is everywhere accessible. I can only reply that I no more dream of superseding the immortal six volumes of that grand old soldier than Dr. S. R. Gardiner dreamed of superseding Clarendon's 'History of the Great Rebellion' when he started to write the later volumes of his account of the reign of Charles I."

In this passage Mr. Oman terms Napier a "grand old soldier," but it becomes quite apparent from what follows that he holds his illustrious predecessor guilty of gross partiality. As a narrator of the incidents of the war, Napier is unrivalled; but when he wanders off into politics, English or Spanish, he is a less trustworthy guide. Those who have read the recently published letters of Lady Sarah Lennox will be quick to apprehend the chief point in Mr. Oman's criticism of her son. For example, the quotation which we gave from her letter regarding the death of Lord Edward Fitzgerald shows how deep was her sympathy for the popular cause as well as for a beloved and unfortunate kinsman. The same liberalism (and it may well have been strengthened by her friendship with Fox) was communicated to her sons. Charles Napier had more than a little of it, and in the case of William it took a most unusual form. Himself a soldier in the bitter struggle of which he wrote the story, he had something like hero-worship for Napoleon. At a time when Nelson was bidding every midshipman hate the French as part of his duty, Napier saw in the national foe a true apostle of liberty. It is related of Lord Raglan, who served his apprenticeship in the Peninsular War, that before Sebastopol he spoke of the enemy as "the French," even when he was in conference with his French allies. Napier had none of this feeling. He disliked and despised the Tory administrations which were conducting affairs during the Peninsular War. He even seems to have anticipated the view of Napoleon's character which arose in France at the time of the Bonapartist revival under Louis Philippe. We are not surprised to encounter a "Populist" estimate of the Emperor in the pages of Mr. Watson, but there is some

ground for wonder when we encounter it in the work of a British historian who risked his life a hundred times and was wounded almost unto death, in the Peninsula. Mr. Oman is only recalling facts when he says:

"In his preface, Napier goes so far as to say that the Tories fought the Emperor not because he was the dangerous enemy of the British Empire, but because he was the champion of Democracy, and they the champions of caste and privilege. When the tidings of Napoleon's death at St. Helena reached him (as readers of his 'Life' will remember) he cast himself down on his sofa and wept for three hours."

To carry out a comparison between Napier and Mr. Oman would be a long matter, and such a contrast is quite unnecessary. The differences of situation will occur to those who have not read the present work, as well as to those who have. During the past two generations a vast amount of new material has been disclosed, and upon this Mr. Oman's history is largely based. The author trusts that "it will not be considered presumptuous for one who has been working for some ten or fifteen years at the original sources to endeavor to summarize in print the results of his investigations." A particular reason which has had to do with the writing of this book may also be mentioned. Sir Charles Vaughan, the diplomatist, collected at the time and on the spot a great amount of information which has never been used. In the manner of Thucydides and Froissart, he sought out leading personages, asked them questions, and set down what they told him when the events were fresh in mind. After many years his papers have come by legacy into the possession of All Souls College. Apparently they have never been opened since his death. Having these to start with, and the Record Office to fall back upon, Mr. Oman has essayed to write a new, exhaustive, and accurate history of the Peninsular War. He promises a bibliography in the next volume, but there is enough already to show that he has not set out in any light-hearted spirit to supplement the eloquent and classical work which all the world knows.

Mr. Oman is much more friendly towards the British Governments of 1808-1814 than Napier was, and speaks a bold word on behalf of "Castlereagh's splendid service to England." He is likewise more lenient towards the Spaniards, despite "the cruelties of the guerrillas, the disgraceful panic on the eve of Talavera, the idiotic pride and obstinacy of Cuesta, the cowardice of Imaz and La Peña." He listens to the representations of Arguelles, Toreño, and Arteche on behalf of their countrymen, and will not accept any statement of fact which does not regard the Spanish as well as the French contention.

If we were to pronounce judgment upon the work from the evidence of the first volume, we should lay special stress upon the statistical and topographical excellence which it displays. Should the same standard in these respects be maintained throughout, Mr. Oman will deserve to be ranked high among the historians of intricate campaigning. For most readers the centre of interest in the first volume will be the last section, in which are described Sir John Moore's advance to Sahagun, his retreat before Napoleon and Soult, and the battle of Corunna. Mr. Oman, viewing Moore as a general rather than a man, can see a good many shortcomings that are concealed from Napier. For instance, he lays stress upon a certain over-conscientiousness under responsibility, the moral effect produced by fear of losing "not a British army, but *the* British army." On the other hand, he has warm praise for Moore at his best. "He was a man of courage and honor, and at the critical moment recovered the confidence and decision which was sometimes wanting in the hours of doubt and waiting."

Mr. Oman thinks that Napoleon interfered in Spanish affairs because he thought himself a second Charlemagne, rather than because he was trying to "force the Continental system upon every state in Europe." But we are unable to take up in detail either the military or the political features of this important book. It is enough to say that it enhances the reputation which Mr. Oman has already made by his 'Art of War in the Middle Ages.'

*Le Mécanisme de la Vie Moderne.* Par le Vicomte G. d'Avenel. Paris: Armand Colin.

This is the fourth volume of the series of sketches which M. d'Avenel has been writing, at the request of the *Revue des Deux Mondes*, on some aspects of modern life generally neglected by the historian. Having heretofore studied the big department stores and the organization of horse races, the financial companies and the manufactures of paper or silk, he gives us, in the present book, some first-hand information on the great dressmakers and milliners of Paris, the advertising departments of the press, the theatrical business in all its ramifications, and the money-lending institutions, both public and private.

M. d'Avenel's method is easily explained. He generally starts out knowing little or nothing about the institution or the business that he expects to describe. Like a conscientious reporter, he goes, pencil in one hand and note-book in the other, to visit the principal places of interest; he interviews the men who know all about it, and gathers from them as many facts, figures, and characteristic anecdotes as he can. When he has done that, he thinks of giving a little historical background to his essay. Being skilled in historical research (he is the biographer of Richelieu), he looks up the old documents and always finds interesting facts on the origin of so-called modern institutions. At last, since he has a philosophical bent of mind, he meditates somewhat on the why and wherefore of things, and, with this mixture of facts, figures, anecdotes, philosophical remarks, and witty sayings, he makes up those entertaining and instructive articles which he gathers under the happy title of 'Mécanisme de la Vie Moderne.' In this latest group of studies, those who do not care to penetrate the mysteries of the dressmakers' shops of the Rue de la Paix, or to know how many rabbits it takes to manufacture our hats, will find a chapter full of information on the business aspect of the press of to-day, and a very complete and readable sketch of the French theatres. The future historian of the nineteenth and twentieth centuries will be grateful to M. d'Avenel for his exemplifications of our modern civilization.

## Recent and Forthcoming Works in History and Modern Languages

FROM THE LIST OF

# Henry Holt & Co.

29 WEST 23D ST., NEW YORK
378 WABASH AVE., CHICAGO
Branch for text books only.

**Seignobos's Roman People.** Translation edited and brought down to Charlemagne by Dr. WM. FAIRLEY. With maps and numerous illustrations. 528 pp., 12mo, $1.25 *net.*

"Messrs. Henry Holt & Co. have done a real service to the classical student in issuing this excellent translation. . . . The narrative is distinctly readable, and although crowded with information, possesses that charm of leisurely ease which is so typically French. . . . Ought to find a quick and cordial reception in our schools and colleges, as well as by the general reader."—*New York Commercial Advertiser.*

**—— Feudal Régime.** Translated by Prof. E. W. Dow, University of Michigan. 70 pp, 8vo, paper, 50c. *net.*

**Bemont and Monod's Mediæval Europe, 395-1270.** Translation edited by Prof. G. B. ADAMS, of Yale. 534 pp., 12mo. (*Sept.*)

**Gordy's Political History of the United States.** Vol. II. 1809—28.
12mo $1.75 *net* (postage 14 cents).

"May be read not only by beginners, but by almost anybody with profit. Written in a clear and simple style, and entirely non-partisan."—*Nation* on Vol. I.

Vol. I., 1783-1809, is a well-rounded history of the Federal period. $1.75 *net* (postage 14c.).
Vol. III., 1819—60. (*In Preparation.*) Vol. IV. 1860 to Cleveland's election. (*In Preparation*).

**Pancoast's Standard English Prose.** About one hundred selections (most of them complete in themselves) from Bacon, Walton, Sir Thomas Browne, Faller, Milton, Jeremy Taylor, Cowley, Bunyan, Dryden, Defoe, Swift, Addison, Steele, Johnson, Goldsmith, Burke, Coleridge, Southey, Lamb, Landor, Hazlitt, De Quincey, Carlyle, Macaulay, Newman, Froude, Ruskin, Thackeray, Matthew Arnold, Pater, and Stevenson. 676 pp., large 12mo (*early in September*).

**Alden's Specimens of English Verse.** By Prof. RAYMOND M. ALDEN author of "The Art of Debate." (*In Press*)

**Thomas and Hervey's German Reader and Theme Book**
By Prof. CALVIN THOMAS and WM. A. HERVEY, Columbia. 438 pp. $1.00 *net.*

*Prof. J. H. Gorrell, Wake Forest College, N. C.:*—"A thoroughly practical reading-book containing fresh selections and admirably graded. The exercises based upon the text form a welcome combination of the grammatical applications of the familiar exercise-book with the advantages of the use of the natural method in exercise work."

**The Life and Works of Schiller.** By Professor CALVIN THOMAS. *Student's Edition. Without illustrations.* 483 pp. 12mo. $1.50 *net.*

"The first comprehensive account in English of Schiller's life and works which will stand the test of time. . . . It can be enjoyed from beginning to end."—*Nation.*

**The Poems of Schiller.** Translated by E. P. ARNOLD-FORSTER. 361 pp. 12mo. $1.60 *net.* (Postage 12c.)

A new and comprehensive edition of Schiller's poems, exclusive of his dramas.

"The book looks well, and the versions are the best there are—the best, I should think, that any one will ever make."—*Prof. Calvin Thomas of Columbia.*

**SUPPLEMENTARY EXERCISES TO WHITNEY'S INTRODUCTORY GERMAN READER.** By MARIAN P. WHITNEY, Hillhouse High School, New Haven. 28 pp. 16mo. (*In press*).

**TEXTS.**—FULDA'S DER TALISMAN. Ed. by Dr E. MEYER, Western Reserve Univ. (*Sept.*).

—— UNTER VIER AUGEN and BENEDIX: DER PROZESS. Ed by WM. A. HERVEY. WITH VOCABULARY. 135 pp. 35c. *net.*

KLEIST: MICHAEL KOHLHAAS. Ed. by Dr. WM. KURRELMEYER, Johns Hopkins. XXV.+149 pp. (*August*).

WIEDEMANN: BIBLISCHE GESCHICHTE. Ed. by Prof. L. A. RHOADES, Univ. of Ills. (*Sept.*).

**François and Giroud's French Reader.** By VICTOR E. FRANÇOIS, University of Michigan, and Prof. PIERRE F. GIROUD, Girard College. (*In Press.*)

For very early reading. It includes composition exercises.

**TEXTS.**—AUGIER: UN BEAU MARIAGE. Edited by Prof. W. S. SYMINGTON of Amherst. (*In Press.*)

MALOT: SANS FAMILLE. Abr'g'd. Ed. by H. P. THIEME, Univ. of Mich. With VOCABULARY ix+219 pp. 40c. *net.*

MÉRIMÉE: QUATRE CONTES. (*Mateo Falcone, L'Enlèvement de la Redoute, Tamango,* and *Le Coup de Pistolet.*) Ed. by Prof. F. C. L. VAN STEENDEREN, Univ. of Iowa. WITH VOCABULARY. xiii+122 pp. 35c. *net.*

RACINE. ANDROMAQUE, BRITTANICUS and ATHALIE. Ed. by Prof. F. M. WARREN, Yale. (*Oct.*)

**Ramsey's Spanish Grammar.** WITH EXERCISES. By Prof. M. M. RAMSEY of Leland Stanford University, author of *An Elementary Spanish Reader*, etc. 610 pp. 12mo. $1.50 *net.*

THE NATION, which has not yet reviewed this book, said of the author's earlier and larger "Text Book of Modern Spanish": "We mention it because of the very great advance it shows over all existing Spanish grammar in English. This applies to almost every detail of the work."

**YALE STUDIES IN ENGLISH.** 8vo., Paper.—A STUDY IN EPIC DEVELOPMENT By DR. IRENE T. MYERS. 159 pp. $1 *net.* THE SHORT STORY. By HENRY SEIDEL CANBY. 30 pp. 30c. *net.*

**THE AMERICAN DIALECT SOCIETY'S PUBLICATIONS** (list on application) have been taken over by Messrs. Henry Holt & Co.

*AN INSPIRING BOOK.*

## The TEACHING of CHEMISTRY AND PHYSICS IN THE SECONDARY SCHOOL.

(*American Teachers Series. New Volume.*)

By ALEXANDER SMITH, B.Sc., Ph.D., Associate Professor of Chemistry in the University of Chicago, and EDWIN H. HALL, Ph.D., Professor of Physics in Harvard University. With 21 Diagrams, and References and Bibliographies. Crown 8vo, about 380 pages, $1.50.

LONGMANS, GREEN, & CO.,
**Publishers, New York.**

## Chief Justice Marshall.

Photogravure with fac-simile of autograph on plate paper, size 19x24 inches, with India tint and plate mark, $5 each.

Copies will be sent securely packed, with charges prepaid, on receipt of price.

**F. GUTEKUNST, Photo., 712 Arch St., Phila.**

*An unsolicited opinion of Justice Mitchell, Supreme Court of Pa.*

"MY DEAR SIR—Inman's Portrait, painted for the Phila. Bar, is the only one that was considered by the contemporaries of the great jurist as a representative likeness, and your photogravure from the original painting reproduces it with exact fidelity of feature and expression.

"Of all the very numerous copies, it is by far the best and most satisfactory to those who value fidelity of likeness as the prime requisite of portraiture.

"Yours truly,
"JAMES T. MITCHELL."

"F. GUTEKUNST, Esq."

# Text-Books of Importance

## A HISTORY OF ENGLISH LITERATURE

By WILLIAM VAUGHN MOODY and ROBERT MORSS LOVETT, of the University of Chicago. 12mo, 431 pages. $1.25 *net.*

*The Sun* says:—"'A History of English Literature,' by two young professors of the University of Chicago, both Harvard men, William Vaughn Moody and Robert Morss Lovett, seems to be a remarkably good and practical text-book. The authors have stuck to their subject, the writers, and their works, and have carefully avoided the amateur 'social history,' philosophy, philology, and other adjuncts with which such books are usually padded. They tell about the authors of real importance and they stop with the men whose reputation was established a generation ago. The plan of the book is excellent and the statements clear and expressed in good English."

## LITERARY HISTORY OF AMERICA

***(SCHOOL EDITION)***

By BARRETT WENDELL, Professor of English in Harvard University, and C. N. Greenough, Instructor in English. (In Preparation.)

The Publishers take pleasure in announcing this abridged edition of Prof. Wendell's remarkably successful "*Literary History of America.*"

## SCRIBNER SERIES OF SCHOOL READING

***TWO NEW VOLUMES***

### A CHILD'S GARDEN OF VERSES

By ROBERT LOUIS STEVENSON. With illustrations. 12mo. 60 cents *net.*

No comment is needed beyond stating that this edition contains all the poems of the original edition and many of the illustrations by Charles Robinson which have proved so attractive both to young and old.

### SOME MERRY ADVENTURES OF ROBIN HOOD

By HOWARD PYLE, with illustrations by the author. 12mo. 60 cents *net.*

A school edition of this exceedingly popular book which, while not containing all the adventures recorded in the original, nevertheless has all those which appeal most strongly to boys and girls from nine to twelve years of age.

## CHARLES SCRIBNER'S SONS

NEW YORK Educational Department, 153 5th Ave., N. Y. CHICAGO

## *Travel.*

### A BOOK ABOUT CALIFORNIA.

It is Easy and Inexpensive to Go There Now that the Railroads Have Reduced their Ticket Fares.

During the winter months, while those in most parts of the country are suffering from extreme cold and disagreeable weather, California, the land of sunshine, is radiant with fruits and flowers and everything that is green and beautiful.

Formerly a trip to California was an expensive luxury, but now that the railroads have very greatly reduced the price of tickets, and particularly since we have introduced the "Personally Conducted Excursion" idea, you can go to California in a comfortable through car by the choicest route and for a very moderate sum.

Is it worth while to fight through the winter at home when you can so easily go where the perfect climate will keep you strong and vigorous? The saving in doctor's bills likely will pay for a California trip. Send six cents in postage for our handsome little book about California. It is intensely interesting, and is beautifully illustrated. Address P. S. Eustis, Passenger Traffic Manager, Chicago, Burlington & Quincy Ry. Co., Chicago.

VOL. LXXV—NO. 1940. THURSDAY, SEPTEMBER 4, 1902. PRICE TEN CENTS

*IMPORTANT NEW BOOKS NOW READY*

**A Novel by F. HOPKINSON SMITH**

## *The* FORTUNES *of* OLIVER HORN

THE early part of this novel, which should prove one of the most popular of the year, sketches the end of a civilization—that of the old South, where the hero was born, and from which he is transferred to New York. The chief part of the novel deals with the career of an artist in New York, and so gives Mr. Smith the opportunity to picture the artistic and literary life of New York during the last thirty-five years, a period and environment with which he has been so thoroughly familiar as a worker. The story exemplifies to the highest degree the author's remarkable powers of humor and pathos.

*With Illustrations by Walter Appleton Clark. $1.50*

**An unusually important novel by HENRY JAMES**

## THE WINGS OF THE DOVE

HIS ripest work, in which he returns to the interest of plot and character that distinguishes his most important productions. It is the story of a peculiarly insidious temptation which assails the hero, who is, nevertheless, innately superior to it; and the narrative of the moral drama in which many characters, strong and weak, are involved, is one of great variety and imaginative suggestiveness. Mr. James has done nothing of similar scope and range since the days of "The Tragic Muse."

*In two volumes, $2.50*

### Views and Reviews

*SECOND SERIES*

**Essays in Appreciation—Art**

**By W. E. HENLEY**

A volume of crisp, penetrating, and illuminating comment on the art and the artists of the last century, and in particular of the Romantic School, so arranged as to become, also, an invaluable handbook of reference, containing also an essay on Romanticism which leaves little to be said on the general subject.

*$1.00*

**Now Issued in ONE VOLUME**

**EDITH WHARTON'S**

*Distinguished Novel*

### The Valley OF Decision

Following its great success in two volumes and in response to persistent demand, we now publish this novel in one volume.

**In one volume, $1.50**

### Aspects of Fiction

**AND**

**Other Ventures in Criticism**

**By BRANDER MATTHEWS**

A new edition of these standard essays uniform with Mr. Matthews's other volumes. Enlarged from the second edition by the inclusion of new papers waiting to be bound with the essays on "The Gift of Story Telling" and "The Penalty of Humor."

(LL.B. after three years.) Graduate Classes lead to LL.M. Tuition, $100. For circulars address L. J. TOMPKINS, Registrar, Washington Square, N. Y. City.

**Girls' Classical School**
**Indianapolis, Ind.** 21st year opens Sept. 17. Best equipment for College Preparatory and Academic work. Separate buildings for school and residence. Gymnasium. Household Science. Year Book. Address
**MAY WRIGHT SEWALL, Principal.**
**Theodore L. Sewall, Founder.**

## *A Quaker Experiment in Government*

*By ISAAC SHARPLESS, LL.D., President of Haverford College.*

IT is long since a book on Quaker history has been issued which has even approached the popularity of this work. It has gone through three editions in as many years, and has received the weighty commendation of the learned and critical as well as the appreciation of the reading public. Extended by addition of a later volume to include the Revolutionary period, it became a complete History of Quaker Government in Pennsylvania, and has recently been sold under this title. The illustrated edition of this work, the beautiful ***Haverford Edition***, includes all the matter of earlier editions, together with a special preface and an appropriate concluding chapter. Handsomely illustrated with over forty full-page plates, beautifully printed on fine deckel-edged paper, and luxuriously bound, it is an ideal gift for any Quaker or any Haverfordian, or for any lover of fine books. *Half Morocco, $7.50; full Morocco, $10.00 net.*

**NEW $1.50 POPULAR EDITION.—NOW READY.**

This contains all the matter of the two-volume edition (except the special matter of the Haverford Edition), and is printed from the same plates, but on slightly thinner paper, to admit of its compression into one volume.

FERRIS & LEACH, PUBLISHERS, 29 N. Seventh Street, PHILADELPHIA.

***The Nation, in reviewing the Popular Edition, said it was extensively abridged. The Nation was for once mistaken, however. The above assertion upon this point is correct, as anyone interested may easily determine for himself.***

## *Educational.*

**RESIDENCE CLASSES FOR THE STUDY OF ENGLISH.**

Special subjects: The Critical Study of Literature, Composition and Literary Art, Historical and Modern English Grammar. For adult students, teachers, writers, special students of English.
Instruction and residence in the family of Dr. and Mrs. Charles Davidson, per school year, $600.

## SCIENTIFIC PUBLICATIONS

### Materials of Machines

By ALBERT W. SMITH, Professor of Mechanical Engineering in Leland Stanford Junior University, California. 12mo, v + 142 pages, 17 figures. Cloth, $1.00.

This book is the result of an effort to bring together concisely the information necessary to him who has to select materials for machine parts.

### A Philosophical Essay on Probabilities

By PIERRE SIMON, Marquis de LaPlace. Translated from the Sixth French Edition by FREDERICK WILSON TRUSCOTT, Professor of Germanic Languages in the West Virginia University, and FREDERICK LINCOLN EMORY, Professor of Mechanics and Applied Mathematics in the West Virginia University; Mem. Amer. Soc. Mech. Eng. 12mo, iv+196 pages. Cloth, $2.00.

### The Gunner's Catechism

Compiled by Captain WM. R. HAMILTON, Artillery Corps, U. S. A., Assisted by Lieut. PAUL STANLEY BOND, Engineer Corps, U.S.A. 18mo, x + 163 pages. Cloth, $1.00.

### A Manual of Assaying:

*The Fire Assay of Gold, Silver, and Lead, including Amalgamation and Chlorination Tests.* By ALFRED STANLEY MILLER, A.M., E.M., Ph.D., Professor of Mining and Metallurgy, University of Idaho. Second edition, revised and enlarged. First thousand. 16mo. viii +142 pages, 47 figures. Cloth, $1.00.

### Cyanide Processes

By E. B. WILSON, E.M. Third edition, rewritten. Increased from 122 to 214 pages. 12mo. Cloth, $1.50.

### Diagrams of Mean Velocity of Water in Open Channels

*Based on the Formula of Ganguillet and Kutter.* Prepared by IRVING P. CHURCH, C.E., Professor of Applied Mechanics and Hydraulics, College of Civil Engineering, Cornell University. 9x12 inches. Paper, $1.50.

### The Mechanics of Engineering

Volume II.—Being the Twelfth Revised Edition of "The Stresses in Framed Structures." By A. JAY DUBOIS, C.E., Ph.D., Professor of Civil Engineering in the Sheffield Scientific School of Yale University. xxiii.+609 pages. Illustrated with Figures in the Text and Folding Plates. Small 4to. Cloth, $10.00.

### Problems in the Use and Adjustment of Engineering Instruments

By WALTER LORING WEBB, C.E. Fourth Edition. Revised and Enlarged. 16mo, vii+136 pages. Morocco, $1.25.

### Locomotives: Simple, Compound and Electric

Being the fourth edition of Locomotive Mechanism and Engineering. By H. C. REAGAN, Locomotive Engineer. *November.*

### Heating and Ventilation of Buildings

By R. C. CARPENTER. Fourth edition, mostly rewritten and enlarged. xvi.+562 pages. 8vo. Cloth, $4.00. *Just ready.*

### A Text-Book of Ordnance and Gunnery

Prepared for the Use of Cadets of the U. S. Military Academy by Captain LAWRENCE L. BRUFF, Ordnance Dept., U.S.A., formerly Instructor of Ordnance and Gunnery, U. S. Military Academy. 2d edition. 8vo, v+677 pages, 401 figures. Cloth, $6.00.

Revised by Captain F. E. HOBBS, Captain C. C. JAMIESON and Captain G. G. HEINER.

### Lectures on Explosives

A Course of Lectures Prepared Especially as a Manual and Guide in the Laboratory of the U. S. Artillery School. By Capt. WILLOUGHBY WALKE, U. S. A., Instructor. 3d Edition Revised. 8vo. Cloth, $4.00. *October.*

### An Elementary Text-Book of the Kinematics of Machines

By R. J. DURLEY, Professor of Mechanical Engineering in McGill University, Montreal, Canada. 8vo. Cloth. *October.*

### Organic Chemistry

By A. F. HOLLEMAN, Professor Ordinarius in the University of Groningen, Netherlands. Translated by A. JAMIESON WALKER, Ph.D., Head of the Department of Chemistry, Municipal Technical College, Derby, England; assisted by OWEN E. MOTT, Ph.D., Demonstrator in Chemistry in Municipal Technical College. 8vo. Cloth. *October.*

### Principal Species of Wood: Their Characteristic Properties

By CHARLES H. SNOW, Professor of Civil Engineering in the University of the City of New York. 8vo. Cloth. *November.*

### Inorganic Chemistry

*With the Elements of Physical and Theoretical Chemistry.* By J. I. D. HINDS, Professor of Chemistry in University of Nashville, Tenn. 8vo. Cloth. *September.*

### Chemistry by Induction

*A Laboratory Manual for Students.* By J. I. D. HINDS, Professor of Chemistry in University of Nashville, Tenn. 12mo. Cloth. *September.*

### The Design of Simple Roof Trusses in Wood and Steel

With an Introduction to the Elements of Graphic Statics. By MALVERD A. HOWE, Professor of Civil Engineering in the Rose Polytechnic Institute, Terre Haute, Ind. *September.*

### Engineering for Land Drainage

By CHARLES G. ELLIOTT, Editor of the Drainage Journal, Indianapolis, Ind. 12mo. Cloth. *October.*

### Lead Smelting

By MALVERN W. ILES. 12mo. Cloth. *September.*

### A Treatise on Roads and Pavements

By IRA O. BAKER, Professor of Civil Engineering in the University of Illinois. 8vo. Cloth, about 600 pages. $5.00. *December.*

### The Elements of Steam Engineering

By H. W. SPANGLER, Professor of Mechanical Engineering in the University of Pennsylvania; A. M. GREENE, Jr., Professor of Mechanical Engineering in the University of Missouri, and S. M. MARSHALL, Instructor in Mechanical Engineering, University of Pennsylvania. 8vo. Cloth. *December.*

### Ancient & Modern Civil Engineering and the Isthmian Canal

By WM. H. BURR, Professor of Civil Engineering in Columbia University in the City of New York. 8vo. Cloth. *December.*

### The Improvement of Rivers

By B. F. THOMAS, Engineer, U. S. Army, and D. A. Watt, Engineer, U. S. Army. 4to. Cloth. *December.*

### Field Astronomy for Engineers

By GEORGE C. COMSTOCK, Director of Washburn Observatory, University of Wisconsin, Madison, Wis. 8vo. Cloth. *November.*

### Stereotomy: A Practical Treatise

By ARTHUR W. FRENCH, Professor of Civil Engineering in Worcester Polytechnic Institute, Worcester, Mass., and HOWARD C. IVES, Instructor in Civil Engineering, Worcester Polytechnic Institute. 8vo. Cloth. *October.*

### The Principles of Animal Nutrition

By HENRY PRENTICE ARMSBY, Director of the State College of Pennsylvania, State College, Pa. 8vo. Cloth. *October.*

### An Introduction to the Theory of Algebraic Equations

By LEONARD EUGENE DICKSON, Associate Professor of Mathematics in the University of Chicago. 12mo. Cloth. *November.*

### A Short Text Book of Analytical Chemistry

By Doctor F. P. TREADWELL, Professor of Analytical Chemistry in the Polytechnic Institute at Zurich, Switzerland. Volume I., Qualitative Analysis. In two volumes. Authorized translation from the second enlarged and revised German edition by WILLIAM T. HALL, Instructor in Chemistry in the Massachusetts Institute of Technology, Boston. 8vo. Cloth. *December.*

### Sewage Works Analyses

By GILBERT J. FOWLER, M.Sc. (Vict.) F.I.C., Superintendent and Chemist, Manchester Corporation Sewage Works. 12mo, vii+135 pages, 11 figures. Cloth, $2.00.

# JOHN WILEY & SONS,

*London: Chapman & Hall, Limited*

*The Most Important Whist Book in Many Years*

# THE PRINCIPLES AND PRACTICE OF WHIST

**By LENNARD LEIGH and ERNEST BERGHOLT.**

**With EXAMPLES of ILLUSTRATIVE DEALS, CRITICAL ENDINGS, MATHEMATICAL CALCULATIONS, TABLES OF PROBABILITIES, etc., etc., including an Essay on PROBABILITIES, by WILLIAM H. WHITFIELD, M. A. Cantab.**

"The book is admirably planned for the student. It is a very important and valuable addition to whist literature."—FISHER AMES, author of "A Practical Guide for Whist."

"A better guide for the learner or book of reference for the expert could hardly be devised."—CHARLES E. COFFIN, author of "Gist of Whist."

"I believe it will be of great benefit to whist players and to the game of whist."—The late GEN. A. W. DRAYSON, author of "The Art of Practical Whist," after seeing MS.

"Precisely what was required by the whist world to bring the grand old game into thoroughly healthy grooves."—COLONEL B. LOWSLEY, author of "Whist of the Future."

"You have produced a work on whist which will prove serviceable both to the beginner and to the advanced player."—N. B. TRIST, author of "Whist."

"An exceedingly valuable addition to whist literature."—WILLIAM S. FENOLLOSA.

"It is the best work on the game ever issued in this country, and for completeness in giving everything a whist student could require is the most satisfactory and best gotten up work ever offered to the public."—ELLWOOD T. BAKER.

"I have no hesitation in pronouncing the book the soundest, most thorough and convincing exposition of basic whist principles that has ever been written."—W. A. POTTER, Whist editor of *Providence Journal.*

"No book on the game has ever been praised so generally and so highly. We strongly recommend it to all whist players; the poor players will be instructed, the good ones will profit by it, and the experts will find it a never ending source of enjoyment."—W. H. SAMSON in the Rochester *Post Express.*

**Crown 8vo. Cloth, extra gilt top. Net, $1.50; by mail, $1.68**

*"As dainty, as finished, and as beautiful as a miniature."*

# THE WESTCOTES

**By A. T. QUILLER-COUCH**

**Illustrated by J. L. GEROME-FERRIS**

***12mo. Cloth, $1.00***

THE WESTCOTES has been running as a serial simultaneously in "The Era" in this country and "Blackwood's Magazine" in England. The London "Spectator" and "The Speaker" both give it high praise. It is a charming tale, with all Mr. Quiller-Couch's delicacy of touch and high literary quality.

"It is very rare to come across a book which so fully satisfies the demands of the fastidious reader."—London *Bookman.*

"Admirably written romance."—London *Spectator.*

"There is a charming old-world courtesy about this book, a faint and rare fragrance emanating from it, a mellow, a fine tone sounding through it."—*The Academy*, London.

"A delightful story, told in his usual felicitous style."—Chicago *Journal.*

"A sweet and tranquil idyll, fluttered, but not overwhelmed by genuine passion."—N. Y. *Tribune.*

"Treated with infinite delicacy."—London *Saturday Review.*

"It has quite as much literary distinction of manner as any of its author's books."—*The Outlook*, N. Y.

"The book shows that the author has progressed in his art to a position warranting a belief in his permanence."—N. Y. *Times Saturday Review.*

"A tale of rare delicacy and feeling."—Detroit *Free Press.*

## LONGMANS, GREEN, & CO.'S NEW BOOKS

### HISTORY

### The Principles of English Constitutional History

By LUCY DALE, late Scholar of Somerville College, Oxford. Crown 8vo, pp. xii.-509, $1.50.

### Seven Roman Statesmen

**Of the Later Republic: The Gracchi, Sulla, Crassus, Cato, Pompey, Cæsar.**

By CHARLES OMAN, M.A., Deputy Professor of Modern History at University of Oxford, Author of "A History of Greece," etc. With Portraits and Illustrations. Crown 8vo, pp. iv.-348, $1.60.

*HARVARD HISTORICAL STUDIES.—VOL. IX.*

### The Anglican Episcopate and the American Colonies

By ARTHUR LYON CROSS, Ph.D., Instructor in History in the University of Michigan. 8vo, pp. x.-368, $2.50.

### PHYSICS AND CHEMISTRY

### The Teaching of Chemistry and Physics in the Secondary School

***American Teachers Series***

By ALEXANDER SMITH, B.Sc., Ph.D., Associate Professor of Chemistry in the University of Chicago, and EDWIN H. HALL, Ph.D., Professor of Physics in Harvard University. With 21 Diagrams, References and Bibliographies and Index. Crown 8vo, pp. xiii.-377, $1.50.

### A Text-book of Physics

For use in Technical Schools, Advanced Science and Art Classes, Engineering Schools, Universities, etc. By W. WATSON, B.Sc., Assistant Professor in Physics in the Royal College of Science, London; Assistant Examiner in Physics, Science and Art Department. With 564 Illustrations. Large crown 8vo, $3.50.

### A Text-Book of Inorganic Chemistry

With 146 Illustrations. By G. S. NEWTH, F.I.C., F.C.S., Demonstrator in the Royal College of Science, London, etc. Seventh Edition. Crown 8vo, $1.75.

"My examinations confirm my previous opinion of the book, that it is probably the best more comprehensive text-book of inorganic chemistry for American students, especially when it is desired to have presented the more elementary principles of physical chemistry."—W. E. HENDERSON, Ph.D., Ohio University, Athens, O.

# The Nation.

*NEW YORK, THURSDAY, SEPTEMBER* 4, 1902.

## The Week.

When President Roosevelt last week told the citizens of Augusta, Me., that "this continent"—an obvious slip of the tongue when he meant hemisphere—"is no longer to be regarded as a colonizing ground for any European Power," the sentiment excited only the conventional enthusiasm. Everybody realized that it was the turn of the Monroe Doctrine, and nobody attached any especial importance to the verbal form of the President's remarks—on these well-worn subjects he notoriously says whatever occurs to him at the time. Least of all did anybody for a moment imagine that he had suddenly heard of any particular colonization, or that the "war game" was likely to be the prelude to a serious mobilization. It took an Austrian newspaper, the *Neue Freie Presse*, to make out of the President's platitude an international affront. The Austrian editor apparently believes that the President virtually has served notice on England, France, and Holland to relinquish their ill-gotten colonies, and warns Germany off from South America. This latter view is shared by the rarely well-informed Vienna correspondent of the London *Times*. In England the speech fell as quietly as it did here—beyond the limits of Augusta, Me.—and it will be something of a surprise to the British Foreign Office to learn, by way of Vienna, that Mr. Roosevelt has been "waving his bony fist against England, because the Boer war published to the world the poverty of Great Britain's resources." All this to-do—simply because the President, on his way to Augusta, and wondering what he should give the people, remembered Blaine, and gave them the Monroe Doctrine—suggests that to the various fallacies already registered we should add the telegraphic fallacy. It must be grateful to the indignant shade of Blaine to hear this passing mention of the Doctrine reverberating through the capitals of Europe.

---

Among the echoes of President Roosevelt's speeches which come from abroad, we note that the *Kreuz-Zeitung* rebukes him for speaking in a tone of "arrogance." This it explains, however, by saying that such haughtiness is a result of "the Puritanical belief in the God-given mission of the United States." So it may be, but we seem to remember a similar confidence expressed of late years by German public men. Bismarck was nothing if not pious, and would never have dared to set about aggrandizing Germany by unscrupulous diplomacy had he not believed that the divine sanction rested upon his labors. The Kaiser himself has pretty steadily assumed, in his public speeches, that he was deep in the counsels of the Almighty. God and the Hohenzollerns together were to be a match for anybody. There is nothing surprising about this. Any great and growing and prosperous country, like Germany or the United States, is tempted to see in mere bigness and success a signal proof of the favor of Heaven. This is not exactly the Scriptural view of the matter; it is not even a view which a sober reading of history will confirm; but it is very human. God on the side of the biggest battalions; right the sure concomitant of might—that has been the implicit belief of every nation that has been exalted unto heaven, as a preliminary to being cast down to Gehenna. "Well," said an unctuous clergyman to Lincoln in the dark days of the civil war, "I am certain that the Lord is on our side." "What bothers me," said the President, "is the question whether we are on the Lord's side."

---

It is evident that President Roosevelt has made more speeches in his recent tour than he had conned over before he started. His remarks on the Trust question were carefully prepared. Whether reduced to writing or not beforehand, they had been well thought out. Quite different was his talk on the Monroe Doctrine on Labor Day in the town of Proctor, Vt., where he said:

> "Remember that the Monroe Doctrine will be respected as long as we have a first-class, efficient navy, and not very much longer."

This, in face of the fact that the Monroe Doctrine was formulated in the year 1829, and has been respected by every Power on the globe—with the temporary exception of France under Napoleon III. —from that day to this, although we had no such navy as the President describes, and during a large part of the time nothing that could be classed as a navy. Our navy was very near its lowest point relatively to that of Great Britain at the time when President Cleveland sent his Venezuela message to Congress. It is true that we had begun to build a new navy, but it was in no condition to uphold the Monroe Doctrine or any other doctrine that any strong naval Power, which had sufficient coaling stations on this side of the water, might see fit to dispute. Only England and France were thus equipped, and either of them could have annihilated our navy at that time. No Power ever had such provocation to dispute the Monroe Doctrine—if it be conceded that that doctrine was really involved in the Venezuela controversy—as Great Britain then had. It was Heaven's blessing to both countries that she did not dispute it; but how strange it seems, in the light of that event, to read from a successor of President Cleveland that the Monroe Doctrine will be respected only as long as we have a first-class, efficient navy. Have we a first-class, efficient navy now? If we have, why are we building more battle-ships?

---

The announcement that Gen. Miles is to be permitted to make an "inspection trip" to the Philippines will be received by the friends of that officer as a substantial victory for the commander of the army. Last winter his application to go, with or without his baker's dozen of Cubans and Porto Ricans, to proclaim American justice and right-doing, was rejected by the War Department. Since it was Gen. Miles who helped to bring out the water-cure facts, and who officially stated that the American troops had conducted the war "with undue severity," the Administration and the War Department were not at all anxious to have him indulge his propensity to talk to reporters on conditions in the archipelago. Doubtless their change of front is due to a desire on the part of the War Department to be well rid of Gen. Miles during half of the remaining year of his active service, and perhaps to the belief that the situation in the Philippines is now so peaceful as to render it little likely that Gen. Miles can do any "harm" by his inspection trip. But the necessity for such an inspection will occur to no one. Inspector-General Breckinridge, a most capable officer, Adjutant-General Corbin, Paymaster-General Bates, Quartermaster-Gen. Ludington, and other War Department lights, have had their chance at inspecting—with what result the public knows not. Gen. Breckinridge's doubtless voluminous reports have not been given to the press, and there are no signs that they will be. Gen. Miles's may easily have the same fate. In this connection it is interesting to note the statement of the correspondent of a leading New England daily, who declares that no department in Washington gives out Philippine news or information except that which reflects favorably upon our colonial experiment. Everything unfavorable is carefully hidden from the representatives of the press.

---

The announcement that the forthcoming report of Prof. J. W. Jenks of Cornell upon industrial and labor conditions in the Philippines will contain an urgent plea for Chinese laborers, will surprise few who have studied the question of the development of the islands. Whether his statement that coolies are absolutely es-

sential to the industrial development of the archipelago will influence the Administration or Congress, is quite another matter. The discreditable Chinese legislation to which President Roosevelt gave his signature last winter placed the Philippines and our other colonial acquirements under the exclusion laws, despite numerous protests from Americans and Filipinos. But Congress could not find time really to apply itself to the solution of this question, any more than it could give its best thought to the Philippine money problem. It is interesting to note that the Germans, next to ourselves the youngest colonizers, are finding the question of labor in their colonies quite as serious as it is in Rhodesia and elsewhere. Some German writers and newspapers would have forced labor—that is, a "mild slavery"—or, as an alternative, severe taxation of the natives, to be paid in natural products. This seems to be the trend, the world over, whether in Egypt, in South Africa, or under the disgraceful rule of the Congo State. Who can say for certain that the exclusion of the Chinese from the Philippines will not give rise to threats to make the lazy natives work in Anglo-Saxon style?

---

The first break in President Palma's Cabinet has come, and it is more than usually significant. When Minister Terry of the Department of Agriculture first offered his resignation, press and public in Cuba regarded it as an ominous event, and strong influences were brought to bear upon him to induce him to reconsider his determination. He held the matter under advisement for a few days, but in the end persisted in his purpose to withdraw from the Government. This is a grave symptom of political trouble in the young republic. It shows that Señor Terry has become convinced of the failure of his plans to aid Cuban agriculture, and is disgusted at the way in which the radical and irresponsible elements are getting the upper hand. A man of wealth and high standing himself, his willingness to cast in his lot with that of his friend, Estrada Palma, was rightly thought to argue well for the moderation and stability of the new Government. His peremptory resignation now will naturally, therefore, be taken as an alarming sign. It was so interpreted in advance by the conservative Cuban newspapers.

---

The following statement was given out by the Department at Washington on Thursday:

"Secretary Shaw recently invited some of the largest national banks in the principal cities to order additional amounts of circulating notes to be printed. National banks are entitled to issue circulation to the full amount of their capital. This aggregate capital is $700,000,000, but the banks have only outstanding $358,000,000. His suggestions have met with very favorable response. It is not his intention that they should issue this additional circulation except in case of actual necessity and emergency, should one arise. With this in view, the banks, which have made arrangements to deposit United States bonds as security for such additional circulation, have sent in their orders, and the Secretary has had all branches of the Treasury service busily engaged in expediting the preparation of the notes, pending a possible emergency."

Coupled with this statement was a rumor circulating in Wall Street to the effect that the Secretary had sent his invitation to the aforesaid banks, which hold large Government deposits, and that it was understood by them as an intimation that, if the suggestion were not complied with to the extent of $100,000,000, the deposits would be withdrawn from the non-assenting banks.

---

That is idle gossip assuredly. In order to "take out" $100,000,000 of new bank-notes, an equal amount of Government bonds must be deposited in the Treasury. At the market rate, there would be a premium ranging from 5 to 34 per cent. on the purchase, but, in fact, the bonds could not be obtained at all. Not more than $5,000,000 could be collected without raising the premium considerably. Probably the amount that might be secured by purchase, at any premium which would allow a profit on the resulting bank-notes, would be too trivial to bother about. More money can be made with a given amount of bank capital in other ways than can be made by buying bonds and issuing notes thereon. Attempts to force the banks to issue notes without the prospect of gain may be rightfully termed "tinkering the currency." Moreover, this is a species of tinkering that will do no good. If it is the aim of the Secretary to relieve the money market and furnish a new supply of currency for crop-moving purposes, the plan proposed will be a failure. The amount paid out for bonds with which to secure bank-notes might be better used directly for crop-moving purposes. The amount obtainable by the borrowing of bonds and the issuing of notes thereon must in any case be small, and subject to serious delays. It should be the aim of statesmanship to devise a better system—one which shall do its own work, and not need tinkering by Government officials at harvest time, or at any other time.

---

In substance, the circular issued by the Southern Railway's "voting trustees" to the shareholders amounts to this—that owners of the property are asked to deposit irrevocable proxies for the election of their officers during the next five years. Clearly, this is asking a pretty large concession, and it is incumbent on those who ask it to say what they have to offer in return. When voting power was thus conceded, for a term of years, at the reorganization of the various bankrupt railways, the position was that banking interests, able to put the reorganization through, were willing to undertake it only when assured of maintenance of control until sound conditions were restored. This was a wholly logical position; bankers could hardly be expected to devote their time and energies to the work while confronted daily with the possible passing of the property to a hostile ownership. But the present case is different. The limitations imposed by the trustees themselves have been attained. No one professes that the Southern Railway is not solvent, prosperous, and free from need of further direction by reorganizers. Under such circumstances, a request for another five-year surrender of the right to vote for the managers of their choice might appeal to shareholders in a somewhat different way.

---

The circular issued by the "voting trustees" gives the reasons which they have to advance. "The events of the last eighteen months in connection with railroad properties," they say, "have revealed the danger to which corporate properties are exposed of the control of their stock being bought up in the market by purchasers not identified with the property or permanently interested in its development and improvement." They add that "negotiations having an important bearing upon the interests of the Southern Railway Company" are now pending, which, it is inferred, might be overturned if control were left in the open market. The reference very plainly is to the roving band of millionaire speculators who, last April, with the help of accommodating banking institutions, managed to snatch control of the Louisville and Nashville system. It is pretty clearly hinted by the Southern Railway trustees that these Wall Street adventurers are still a menace, and that it will not be safe to give them another opportunity. This is an extraordinary situation, but it is a situation which exists, and which provides the only warrant for the request of the trustees. It may be compared to the course of events in the Middle Ages, when small proprietors placed themselves under feudal control of a powerful neighbor baron, as the alternative to perpetual spoliation from wandering robber bands. Whether the shareholders of the Southern and other companies will care to accept this mediæval tenure, remains to be seen. As a principle of general application, we are inclined to doubt it. Are they at all assured that the Wall Street rovers will, within the next five years, be disarmed or dispersed; and if not, will another five-year concession then be asked? Or is the present extension of the voting trust only designed to cover the period during which the Northern Securities suit shall be decided, and the way perhaps paved for a Southern Securities combination?

Mayor Low's weekly talks to the public are evidently something more than mere academic discussions of current problems. If proof were needed, it is supplied by the instructions given by President Wells of the Tax Board to his deputies, in which he directs them to assess real property in their districts at the full market value. This is one of the methods outlined by the Mayor through which the working capital of the city may be increased. The Constitutional debt limit is 10 per cent. of the taxable valuation of the city, and the addition of more than a billion dollars to this valuation means a large increase in the capacity to borrow, or, in other words, a large increase in the city's capital. It is quite certain that this change will not be carried through without opposition from many property owners. The increase of assessment must, of course, be accompanied by a corresponding decrease in the tax rate. The plan is that tax bills shall not be increased, but taxpayers will not be wanting who will fear that the rate will gradually climb again to the usual figures, while the valuations remain at the newly established level. Despite this, it must be admitted that the Mayor's plan, now to be carried into execution, is only a straightforward compliance with the law, and for this reason at least is desirable and commendable. It is gratifying to note that, in making the change, President Wells is intent upon correcting the evils of unjust, careless, and corrupt valuation. Under the new system the Tax Department, as never before, will need expert assessors who are both honest and capable. Blundering guesses at values can no longer be tolerated.

---

One effect of the new scheme of valuations will be to place this city squarely in line with the rest of the State in favor of the total abolition of the direct State tax, a change in State finance now almost achieved through the efforts of Gov. Odell. This change has already reached a wide popularity in the rural districts, for the very good reason that it has lifted a vast burden of taxation from the rural counties, which now, instead of paying considerable sums into the State treasury, pay only a trifle and receive back large amounts for the support of their academies and schools and for the improvement of their roads. The change has not, however, attracted so much interest and attention in this city because the burdens of indirect taxation fall heavily here. There has been no active opposition of any consequence to Gov. Odell's programme; it merely has been received with less enthusiasm in this city than in the rural districts. With our property assessments based upon full market values, however, New York city would undoubtedly suffer seriously from a resumption of the direct State tax. Rural assessments range from 40 to 50 per cent. of actual values, and in the spreading of the State tax a wholly unjust proportion would consequently fall upon the city. It is the nature of equalization boards to raise valuations, not to reduce them, and little or no relief could be expected from this source. But with the direct tax out of the way, the city has no such injustice to fear.

---

When Senator Platt says that the Republican State Convention will adopt a platform containing a very warm endorsement of the Roosevelt Administration, but not declaring for the renomination of the President in 1904, the head of the machine shows his teeth. It is true that there are no precedents in New York for suggesting a second term for a President two years before the meeting of the National Convention, but neither were there such precedents in Kansas, Iowa, Pennsylvania, and other States where Republican conventions have already declared for Mr. Roosevelt's renomination. It is not any regard for tradition which deters the Platt machine from passing a resolution on this subject in line with those adopted in several other States. It is simply the purpose to show the President that he cannot count with assurance upon the delegation from his own State in the National Convention of 1904.

---

Following the example of Harvard, the University of Pennsylvania rearranges its order of studies so that an ambitious student may attain the bachelor's degree in three years. This is brought about much as it was at Cambridge, by requiring a certain number of courses for the degree, and permitting the student to follow as many in any year as he is able and willing to undertake. By carrying twenty hours of classes a week, the required sixty courses are completed in three years. Furthermore, the University intends to accept the logic of this "unit" system, and let every man achieve his sixty units in his own time—be it three, six, or ten years. Certain practical implications of this change should be noted. The abolishment of "conditions," and the requirement instead that the deficient "unit" or its equivalent shall be made up another year, will greatly simplify college administration, and do away with the most ungrateful part of the professor's task. Finally, the presence of a large number of three-year men (in Harvard they are already a sixth of the whole) practically means the formation of an "honor school," and we shall soon see fully recognized the English distinction between honor men and pass men, which is not quite the American discrimination between "sports" and "grinds." That this innovation will greatly change the traditional leisureliness and solidarity of American college life, no one can doubt. But this life has already pretty well disappeared from the urban colleges.

---

The sudden application of the Crimes Act to five more Irish counties is difficult to account for. There has been no news which warrants one in believing that there has been any marked increase of crime in Ireland. The Nationalist members had no trouble in showing before Parliament that Ireland was in a condition of considerable tranquillity. The inclusion of the Borough of Dublin in the proclamation can have no other reason than that of regulating and perhaps suppressing the newspapers which represent the new Irish League. In this case the act is plainly used as a means of political, nay, of partisan aggression. To take such a step shortly after the activities of the *agent provocateur* Sheridan had been fully exposed, seems to us a tactical mistake of the first magnitude. No one can doubt that the general application of the Crimes Act is calculated to produce precisely the condition of disorder in view of which it was formulated. Pending an explanation of the bare dispatches, it seems that Mr. Balfour has committed himself to a policy of provocation. Those Unionists who imagine that the political propaganda of the Irish League may best be countered by coercion, may soon have as foolish a look before the country as Lord Rosebery and his fellow Liberal Imperialists, who professed to see in Irish reform an out-worn issue.

---

The visit of the King of Italy to Germany is somewhat in the way of tardy amends for the Russian excursion of a few weeks ago. It has given the Kaiser a chance to emphasize the importance and vitality of the Triple Alliance—a sentiment to which his royal guest gave only a conventional response. In fact, the immediate political significance of the visit is almost nil. The personal aspects of the meeting are, however, most interesting. We see in conference the two European monarchs who take the royal office most seriously, and who alone have the personal force to make a lasting impression upon the destinies of their people. One would give much if he could for a moment look into the very heart of these two ambitious young men. Does the Kaiser look forward to the peaceful triumphs of German science and industry, or does his mind work upon armies advancing through conquered or ceded territory? Does the King commit himself to the uplifting and education of those confused but mighty forces which are working in regenerated Italy, or has the dream of an Albanian overlordship and a Tripolitan dependency captured his imagination?—these are the questions which every observer of European politics would like to have answered.

### *RADICAL MEASURES AND CONSERVATIVE PARTIES.*

Attorney-General Knox expressed the opinion last week that Congress would surely act in consequence of the President's speeches regarding the regulation of Trusts. We are not so certain of that ourselves, but we are certain that Congress will be much more likely to act as a result of the bold attitude which Mr. Roosevelt has assumed in the presence of the people. For one thing, he will have done a great deal to crystallize public opinion. His words may not be always wise, or his recommendations happy; but he is setting the country to thinking, and the country's thought takes, in the long run, the form of legislation. But the greatest reason for expecting definite enactments to follow the President's appeals lies in the fact that he, in the act of urging radical measures, is the leader of a conservative party.

As a general rule, it is by the hand of the conservative party—call it Tory, the Right, the Centre, or Republican—that innovating and progressive laws are written upon the statute-book. The advanced party, the agitators, the Liberals, first take up the issue, work for it, alarm the country by their proposals, and lose political power. Then the "saviours of society" come into control of the Government, and proceed quietly to "dish the Whigs" by adopting their measure. It has been so in England in connection with the extension of the franchise, which the Conservatives stoutly withstood, only to go later, under the lead of the cynical Disraeli or the reluctant Salisbury, much further than their opponents had proposed. The capital instance, however, is Irish legislation. Since moving heaven and earth to defeat Mr. Gladstone's "revolutionary projects," the Tories have passed two acts for Ireland more revolutionary, in some respects, than anything Mr. Gladstone ever brought forward, certainly more radical than anything he ever enacted into law. We refer to Lord Salisbury's acts for expropriating Irish landlords and for setting up local government in Ireland. No wonder that the late Sir Charles Russell thought actual home rule would yet be granted by the Conservatives. They would call it by some more sweet-smelling name—"devolution of Imperial powers," or what not; but the *thing* they really may give Ireland, in the end.

There is a great deal of political philosophy and of human nature in this historic law of progress by means of the party that puts on the brakes. So much depends on who says a thing! In politics, as in theology, Pascal's doctrine of "another mouth" has constant application. "Dans une autre bouche," the proposition would have been orthodox; but anything that Arnauld said must be heretical, and so he had to be condemned by the Sorbonne for what a really good Catholic might have uttered with impunity. It is on this principle that Mr. Roosevelt can say with general approval what would awaken general dismay coming from Mr. Bryan's mouth. Such is the nature of political man! Character and reputation count, in these things, for more than mere language. Mr. Bryan had the name of a leveller, and when he talked about legislating against Trusts, people thought he meant an attack on all property, and were willing to give up a part of what they had to the Republican party in order to prevent the destruction of their all. But when Mr. Roosevelt says essentially the same thing, his record, his position, make all the difference in the world. He is a born and bred conservative, therefore there cannot be anything revolutionary in what he proposes. It is by such implicit reasoning that his speeches fall so gently upon an undisturbed public equanimity. "That's so," the very people say who have hardly got over their terror at Bryan. "The Republican President must be right."

It is largely in such ways, we must not forget, that political progress is possible. Through the infection of the conservative party with radical ideas, the English system and the American system show their superiority to the French. "We do not make reforms in France," said a French Senator to Richard Cobden; "we make revolutions." Our way is, fortunately, to peg away at that slow amelioration which we call reform, and not to shake society to its foundations in the hope of setting things right. And one reason we are able to do it is that even our staidest and most inert party cannot for ever remain stationary. When the time comes, it will be found "stealing the clothes of the Whigs." We do not say that Mr. Roosevelt is stealing the clothes of the Democrats, but their preliminary agitation has prepared the ground for his harvest. It is possible for him to do in the guise of a conservative what they never could have done as radicals. This is his advantage. It is the immense advantage which any chief of the conservative party has who adopts an innovating course. He disarms suspicion, and quiets vague alarm, by virtue of his very position. Mr. Gladstone was so keenly sensible of this truth that he besought Lord Salisbury in 1885 to strike hands with the Irish and carry through remedial legislation as a Conservative policy. He knew that he himself would have to dash his strength against rock-like prejudices which would not exist for the Tory leader. And if President Roosevelt shall prove able to secure a more stringent Federal control of corporations, it will be due in a great degree to the fact that he and his party can put their own label upon radical legislation, and make it pass current as the purest example of stable and conservative policy.

### *TARIFF REVISION AND PROSPERITY.*

Congressman Hopkins of Illinois is the latest Republican statesman to maintain that it is out of the question to touch a bad tariff in good times. He said in Washington on Thursday that it would be "suicidal" to think about tariff changes while we are enjoying such "great prosperity." Talk not to him of worn-out duties, of tricky schedules, of rates fixed by the Trusts for the Trusts, of needed readjustments in the interest both of trade and of political morality. All that he could see was a prosperous country, and might his tongue cleave to the roof of his mouth before he would wag it in favor of "disturbing business interests" and "unsettling present conditions" by means of tariff revision.

Mr. Hopkins, it is only fair to remember, has a Senatorial contest on his hands. He has been named by his party convention to succeed Mr. Mason as Senator from Illinois. Now a would-be Senator, it is not invidious to say, is under a certain amount of suspicion when he shows tender consideration for tariff beneficiaries. The Senate is the bounteous dispenser of tariff favors, and their sure bulwark against rash disturbers, whether by means of reciprocity treaty or outright amendment. But it does not necessarily follow that the Illinois Representative, en route to the Senate Chamber, is unconsciously influenced by the air which he expects soon to breathe. He may very well be only one more of the men who catch up the current cry that a movement to revise the tariff would be instantly fatal to American prosperity. It is, however, merely one of those catch-words which serve as an excuse for not giving attention to the real conditions of the problem. A calm examination of them will show, we are convinced, that the plea against tariff revision, on the ground that it will injure business, is essentially hollow and specious. It may deceive the unthinking, or be used as a cloak by the designing, but it has no support in the facts of the case.

To begin with, no one but a tariff lunatic can deny that the real basis of our present prosperity is in our succession of good crops. What was the market anxiously watching all the early summer months? What were foreigners persistently inquiring about? The condition and prospects of our staple agricultural products. As soon as it was known that our corn and wheat and cotton were practically secure for this year, everybody settled down and said, "Well, that means another year of prosperity." What did the London *Times* refer to the other day when it said that "the dice have fallen kindly" again for Americans? Had it heard that Cannon and Grosvenor were opposed to tariff revision, and did it therefore conclude that

American prosperity was to be uninterrupted? No; it studied the crop reports, and saw that we were to have abundant harvests again, which meant that prosperous conditions were to continue. Had our crops generally failed, of what avail would the tariff have been, revised or unrevised, to assure us prosperity? In much of the foolish talk on this subject we need to listen to the sarcastic warnings of Burke against attributing all good things to the contrivance of man, and allowing nothing for the bounty of Providence.

Passing on to details of the tariff itself, we have, first, some protective duties which confessedly no longer protect. That is, they are practically without any effect on business. How, then, can their removal disturb business? By taking away nothing can you reduce a figure? Next we have such tariff schedules as those on steel products and manufactures of glass. These are the ones to which Speaker Henderson referred, in a letter to an Iowa constituent, as crying out for revision, so grossly abused had they been in sheltering monopoly at the expense of the consumer. But whose prosperity would be impaired by cutting off those iniquitous duties? Not that of the general mass of the people. Yet it is their prosperity which the Republican party professes to be anxious to promote. They would get their steel and glass cheaper, and would not have the rankling sense that they were being taxed for the benefit of odious monopolies. As for the Trust beneficiaries, they might not feel either so prosperous or so secure; but an exclusive prosperity dependent upon special legislation is something which cannot be too soon impaired. We are bidden not to be envious of the prosperity of the wicked, and are assured that, even when they flourish for a time like a green bay tree, they will one day be found cut down and withered; but in this matter of a tariff stuffed with favoritism, we have the axe in our own hands, and the tree will be brought low as soon as the people determine to allow it to flourish artificially no longer.

It is when we put such specific cases as the ones we have mentioned that we see how much sham there is in the Republican unwillingness to injure prosperity by revising the tariff. If there is a log-rolling combine of plunderers who have the party by the throat, and tell it that it must not remove unjust duties on peril of having the whole system upset and the business world convulsed, then, indeed, there is a reason for Republican alarm and helplessness, though it cannot be confessed. But there is no honest reason against such a correction of tariff blunders, and such a revision of tariff inequalities and injustices, as we have suggested. The excuse for doing nothing is really a condemnation for not wanting to do anything.

We may add that this is a subject on which President Roosevelt cannot persist in keeping silent. He must speak to establish his own sincerity. The charge is freely made that his speeches about restraining Trusts are only declamation; that he knows nothing can be done; that his Constitutional amendment will take years to get, if it is ever secured at all. But in cutting away the tariff protection of Trusts, there is something definite that can be done immediately. The Republicans of the West are demanding that it be done. Unless the President is willing to rest under the suspicion that he is talking clap-trap, for political purposes, and that he has not really enlisted for a war against Trusts by every legitimate weapon, he will soon take occasion to say that he agrees with those ardent supporters of his in the West who are clamorous for the removal of the tariff duties that shelter monopoly.

*COMPARATIVE STUDY OF LAWS.*

No one will deny that it is profitable to compare the laws of different communities. Montesquieu's treatise may be said to be antiquated only in its materials; the method is sound. If there is anything to be gained by experience, or anything to be learned by example, it would seem that legislators were, above other men, in a position to obtain these advantages. Theoretically, they pass their time in deliberating concerning the interests of the people, inquiring into the measures which will best promote those interests, and enacting those measures in the best possible form. In such labors it is obvious that most valuable assistance will be afforded by studying the laws of similar communities; and this must be especially true when there are many coördinate States as similar as those which form our Union.

From the Library of the State of New York regularly issues a summary of the legislation of the past year. The plan adopted is to classify laws according to their subjects, and to obtain from various college professors and public officers reviews of the different classes of laws. A very few examples from the volume for 1901 will show what may be expected from such treatment. Residents of New York have reason to know that city government is a large and complicated subject. The charter of the city makes a good-sized volume, and even those who framed it cannot always tell what it contains. To comment on laws of this size requires space; and to comment successfully on all the laws affecting city government passed in a year in all the States would require a great deal of space. But in this review we find the topic dismissed, rather than discussed, in three pages. It might be possible to enumerate the statutes bearing on city government within such limits, but it is not possible to include a serviceable commentary.

The taxation of mortgages is a matter which has occupied much of the time of Legislatures, but here we find it treated in a sketch of four pages, confined to the situation in Missouri, with illustrations from California. The taxation of corporations is an excessively intricate subject, to comprehend which a vast quantity of matter must be examined. It is allowed eight pages here; half of the space being given to business corporations, and half to public-service corporations. In fact, when we consider that there are but 240 pages in the review, and over forty rubrics, we see that very little could be done in the way of exposition. In several cases what is done is surprisingly well done. In general, however, the criticism amounts to little more than the expression of the opinion of the writer, and the ordinary legislator, we venture to say, will care little for that.

The truth is that "comparative legislation" is one of the most difficult of all sciences, if it can be called a science. It is as intricate as biology, and requires abilities in those who pursue it as great as those of Huxley or Pasteur. We sometimes hear it said that our confederate form of government is very favorable for experiments in legislation. A law may be tried in one State, and the other States can look on, see how it works, and try it also if it seems to work well. But the inference is often very misleading. To see this we need only consider the drink and Sunday laws of the State of New York. The laws which suit certain parts of the State are altogether unsuited to the city, and the attempt to apply them produces the most injurious results. We can see the fallacy of the argument that because a sumptuary law "works well" in a small village in St. Lawrence County, therefore it must work well in the great city of New York. The same fallacy exists in the argument that an experiment in Colorado or California will be conclusive for Alabama or Massachusetts. There are reasons why a law that would answer its purpose in Vermont would not succeed in New Hampshire; and few would contend that a law reported to be effective in Mississippi or Louisiana would be adapted to New Jersey or Connecticut.

Yet in a compilation like this there is a certain amount of miscellaneous information from which we may get some notion of the drift of law-making. Evidently it is strongly paternalistic. There is a continuous multiplication of offices and raising of salaries. New commissions are created, new licenses are required, new taxes are imposed. The only checks to this tendency were in Massachusetts and New York, where a number of commissions were abolished or consolidated. In North Carolina a legacy may reach the legatee shorn of nearly 30

per cent. of its value; in Washington the rate is nearly as high; in Utah the tax may be practically even heavier.

The disposition to enable the politicians to monopolize the offices is marked. The "non-partisan," which means the bipartisan, commission, is in much favor. In Kansas and South Dakota independent voting, as well as fusion, is suppressed by laws which allow no person to be voted for except as the candidate of a single party. The labor unions show their political power in the Wisconsin law which allows no private person to conduct an employment agency without paying an annual fee of $500, and the bureaus of the State are prohibited from furnishing lists of unemployed workmen to proprietors of establishments where the workmen have struck. The statute-books are full of needless laws passed under the influence of gusts of feeling. Twenty-four States have passed laws against abduction, some of them of the greatest severity. But, surely, kidnapping was punishable as felonious assault! The student of social conditions may find food for reflection in the reduction of the term of imprisonment for horse-stealing in Arkansas from five years to one. Indeed, there is abundant food for reflection in this review of a year's laws; but it affords an insufficient basis for scientific legislation.

## *STRIKE INSURANCE IN AUSTRIA.*

Two plans for mutual strike insurance are discussed in the *Économiste Français* of August 2. The project of the German company incorporated at Leipzig yields in importance to the more comprehensive scheme under which the Vienna Manufacturers' Strike Insurance Company *(Verein zur Entschädigung von Industriellen in Streikfällen)* is being organized. Accordingly, we shall consider only the Austrian company. It will begin its active existence when it attains a membership of 250 separate establishments, representing an annual pay list of not less than 25,000,000 crowns (roughly $5,000,000), as certified by the Government Bureau of Compulsory Accident Insurance.

At a time when we are adding to actuarial estimates of marine, fire, and death-risks reliable percentages for accident and sickness insurance, it will not seem strange that the strike-risk should also be very closely computed. Official statistics from 1891 to 1897 give for Austria an annual average of 30,000 laborers on strike, and of 400,000 days of idleness on this account. On this basis the annual premiums of the members are fixed at 4-10 of one per cent. of the declared pay list for the year. So far, no minute discrimination of risks is provided for, and a rebate of 25 per cent. of the premium for long contracts or for enterprises in which the strike risk is notoriously slight, is the single concession from the established rate. Only experience will prove or disprove the solidity of these financial provisions.

Meanwhile the plan has many conservative features which inspire confidence in its framers. Neither the Vienna nor the Leipzig company will attempt to indemnify their respective members for the total loss caused by a strike. They propose instead partially to repay the actual disbursements of members during the shut-downs incident to a strike. The Austrian company, for example, pays half the registered wages of the striking workmen to the employer. But it continues the payment for not more than three months for a single strike, or six months in any one year. This, it will be seen, is a recognition of the principle that, whatever the circumstances, nothing should be done to prolong a deadlock between employer and employed—a principle which might find a most salutary application in the case of our present coal strike.

That the Austrian plan may have far-reaching social effects will be felt when it is explained that the indemnity is paid only in case the company judges the strike to be unjustifiable. Its statement of what it considers to be wrong grounds for a strike is of decided interest. First of all, a demand on the part of the laborers for the dismissal or engagement of any workman or employee is regarded as unjust. This is a concrete and unequivocal test, and it is based upon the impregnable argument of the right of labor to seek work freely and of capital to manage its own affairs. But in many cases the moral aspect of a strike is far more difficult to determine. Who shall decide whether the workmen have made "demands which the state of the business does not justify"? or whether their complaint has been made "in a form which threatens the authority of the management"? It is just these questions which arise in nearly every case, and it is the failure to meet these questions squarely and answer them promptly that brings about practically all the trouble. The originality of the Austrian scheme lies largely in the fact that it provides for an authoritative tribunal before which these questions are brought for settlement.

An executive committee of from nine to fifteen members has the duty of reporting promptly upon every strike, and declaring that the insured member is, or is not, entitled to receive the indemnity. At the earliest opportunity a member in whose mill a strike is impendng is bound to give this committee full information on the situation in general, on the demands of the strikers, on the offers of the employers, and, in short, upon all negotiations between the opposed parties. The central committee will ordinarily send a sub-committee to study the situation on the ground, with the intention not only of passing upon the strike, but also of bringing about an agreement between managers and men. When they have finally ordered the strike indemnity to be paid to a member, it means, first, that after careful examination they have found the men to be in the wrong; second, that they have exhausted all measures for conciliation. The moral value of such a verdict, we need not say, will be tremendous in any case; nor need we again indicate how it would have straightened out the tangle into which the coal-strike negotiations immediately fell.

For it should be noted that this committee, though composed of employers, has every motive for impartiality. It can no more afford to deplete the company chest to support a stupid or stubborn member, than it can safely desert a member in his need. If the sympathies of the committee are sure to be with a fellow-manufacturer, its interests are very largely with the strikers, and its tendency will be to push employers to the limits of possible concession. Indeed, a member who has the reputation of a stirrer-up of strife is as undesirable a policy-holder in a strike-insurance company as the amateur of arson is in a fire-insurance company. It would seem that organized labor in Austria could have no just grievance against an organization through which it will gain a permanent arbitration board maintained at the employers' expense, and it is easy to see that a prompt and competent report on all strikes will constitute a palpable check upon the malign activities of demagogues, and those grave injuries which it lies in the sullen power of offended capital to inflict. It is seldom that an economic innovation promises such immediate social benefits. This simple business project seems to offer nearly every advantage claimed for the vaunted conciliation and arbitration boards of the Australasian republics.

## *A COROLLARY TO NATURE STUDY.*

That minute observation of natural facts which Thoreau, W. Hamilton Gibson, John Burroughs, and others have exalted to the position of a cult is every day winning converts, and one may imagine a time when the "How to know" books will be unread, simply because everybody has made the acquaintance of the trees and birds and flowers. Nature-study in the schools is hastening this consummation. Following the admirable German precedent of teaching geography from the direct observation of the child's immediate vicinity, the schools of England and America—particularly the vacation and settlement schools—are pursuing this useful work. A fad in certain of its applications, no one can doubt the salutary effect of any training which makes against the tendency towards homelessness, and seeks as its end intimacy with all that is beau-

tiful, interesting, and instructive in one's natural surroundings. It is these numberless small associations which, after all, create the sense of home.

But we wish to point out less these obvious advantages of nature study in the schools than to inquire if such study has not possible bearings upon art education. At first blush, one would say, the very slightest, for the minute observation which is taught is, in some ways, foreign to art. The mere assembling of facts—the distinguishing of the kinds of insects, the discrimination of the calls of birds, the understanding of the growth of plants and the structure of flowers—is the smallest part of the artist's equipment. Correspondingly, save as it corrects slothful habits of vision, this various knowledge helps in no way towards the appreciation of a great picture or statue. For nature-study deals with natural facts, and art with natural appearances. The difference will be perceived in a moment if one will compare a book like Mr. John Van Dyke's 'The Desert: a Study in Natural Appearance' with any manual, however skilful, of the plants, birds, animals, or minerals of the marvellous region about the Colorado.

But the incompatibility between nature study and artistic seeing is not complete. Both have the same enemy—lazy and abbreviated habits of vision; both fight the same battle—to intensify the powers of observation. How languid the power of vision is in the average person was implied by Théophile Gautier when he made his proudest boast—"I am a man for whom the visible world exists." He meant that whatever knowledge of the world most people have comes through their fingers, their ears, and their noses, rather than through their eyes; and his paradox was wholly in accord with the most advanced psychology. It would not be too much to say that most people lack completely the power of active vision. They see just enough to identify objects—at most, some single characteristic which serves as brand or label—and they give over the task of seeing any object attentively and as a whole. There is probably a profound philosophy in this grudging use of the sense of sight. That sense is so painfully acquired by each individual—all recognition of dimensions, forms, textures, and distances being the gradual contribution of the other senses to a blurred retinal impression—that it is economized, as the chemist husbands some precious reagent. Then, for every-day purposes, mere identification of the passing object suffices. Only the artist and he who craves the larger enjoyment of the visible world need actually to see.

The Japanese show a sense of what the concentration of artistic vision must be when they refuse to draw from the model, looking fixedly at it instead, and, after it has been removed, drawing from the image in the memory. The contrary of this—a lax, short-hand vision—is the greatest obstacle to artistic appreciation. Nowhere is this more apparent than in the realm of color. It would hardly be an exaggeration to say that the great majority see no color in nature, or rather, that they see only what they think they ought to see, substituting dull formulas in the mind for the lovely tones that lie unperceived before their eyes. Only upon some such theory can we account for the universal acceptance of a dirty pink as "flesh color." Flesh actually, according to the natural complexion and the light and surroundings, will exhibit all the paler tones of the spectrum. So a "grass-green" is all that many of us ever see, whereas grass in sunshine may be brilliant yellow; in shadow or under evening skies, purple—and always is intershot with its complementary hue of red or violet. The mutability of color has been strikingly exemplified in a famous series of haystacks painted, hour by hour, through the day, and in the equally well-known series of Rouen Cathedral from dawn to dark. Whether one wholly agrees with Monet's interpretations or not, no one can dispute his fundamental principle that a haystack or a cathedral is a different object to the trained eye with every caprice of the sun and atmosphere, and that the range of variation is astonishingly great.

The practical question is, Can people generally, and especially children, be taught to eschew formulas and practise this truthfulness of vision? Undoubtedly, in a considerable degree; and the outdoor classes in nature study afford an admirable opportunity for this kind of teaching. It would chiefly be necessary to arouse the child's curiosity by challenging his conventional vision. Ask him the color of pine boles in the forest, and when he answers "Brown," show him that it is one of the lilacs; try him on a beech or a smooth maple, and when he answers "Gray," bid him look and see that the real color is one of the blue purples or violets. In many ways, without sacrificing the regular work in nature-study, children could be taught the art of seeing things as they actually appear. Of course, this presupposes artistic training in the teacher, and only to such as have this capacity is the experiment commended. We may add that Professor Shaler's essay, "Landscape as a Means of Culture," though it deals more with form than with color, would be suggestive to any teacher who wishes to broaden her course in nature-study, while that generally impracticable but wholly charming book, Ruskin's 'The Elements of Drawing,' gives some specific directions for ascertaining the natural appearances more eloquently described in 'Modern Painters.'

*WANTED: A STYLE FOR THE TIMES*
